FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, JANUARY 28, 1886.

VOL. XXVI.—No. 1.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year in advance; \$2 for six months; to a club of three annual subscribers, the rate is \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet Street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications,

ANSWERS TO CORRESPONDENTS.

THE HARTFORD PLAN.

A NOVEL method of selecting judges for its coming show has been adopted by the Hartford Kennel Club. The bench show committee have written to probable exhibitors, asking them to indicate their preferences for judges in the different classes, and stating that the judge receiving the greatest number of votes will be appointed.

This plan is entirely new, and it is wholly bad. It is wrong in principle. It is unjust to exhibitors, to judges, and to the Hartford Kennel Club. There is nothing to recommend it.

The wrong to the exhibitors lies in the fact that it gives each one an equal voice in the choice of the judge. That this should be a wrong may at first seem paradoxical, but that it is so will readily appear. The vote of a young fellow who owns his first dog, and who is receiving primary instruction in canine matters, should not count for as much as that of an experienced breeder, who owns a large kennel of the finest and best dogs. And yet the number of these old breeders is so small that their selection, which is reasonably certain to be intelligent, may be outweighed by the voices of a number of unintelligent, however well-meaning, voters. Thus unfit judges may be selected, whose decisions will work great harm.

The wrong to the judges is serious. It makes the position one for which votes are to be sought, and there are, no doubt, some people so anxious for the supposititious glory of this position that they will forget their dignity and canvas for votes among their friends. Moreover, every inexperienced exhibitor who has voted for the judge selected, will feel a sort of proprietary interest in him, and unless he receives what he imagines to be his just dues will forever after be very bitter against him.

But it is the Hartford Kennel Club which must suffer most severely. The attempt to please everybody will result, as such attempts always do, in pleasing no one. They will receive the hearty curses of all the disappointed exhibitors. A bench show committee should know enough about dogs and dog matters to be able to make their selection of judges without the aid of exhibitors. The number of good judges

in America is not so large that help is required to pick out the best ones.

The motives of the Hartford K. C. are of the best, we are sure, but we can see that if they carry out their plan as they have begun, they will meet a storm of insinuations of wrong doing, which will certainly be very unpleasant. After the show it will be easy for those who are dissatisfied to say that the votes were manipulated in favor of this or that judge, that pressure was brought to bear on weak-kneed exhibitors to make them change their votes, that the Hartford K. C. had not the knowledge or the independence to select and appoint good judges, and that therefore they called for votes; thus, while as a matter of fact they appointed whom they chose, yet they put the responsibility for the choice of men apparently on the exhibitors. These and such things as these are sure to be said, and though none of them be true, will not make it any pleasanter for the Hartford K. C. when they are said.

In all matters connected with dog shows, the interests of exhibitors are of the first importance. On the exhibitor the success of shows and so the improvement in form of our dogs depends. If they are not satisfied, if the judges are not men on whom they can depend, if they lose confidence in the management, they will not exhibit. It is eminently proper that they, or some of them, should be consulted on the appointment of the judges. There is a great difference, however, between consulting prominent and intelligent breeders and opening a poll at which the unintelligent public can vote.

The Hartford plan ought to be abandoned.

THE ADIRONDACK DEER.

TWO game law bills were introduced at Albany last Tuesday; one in the Senate by Mr. Parker, and the other in the Assembly by Mr. Barnes. Mr. Parker's bill prohibits jack-hunting deer; whether it allows hounding or not we have not been informed. Mr. Barnes's bill allows hounding deer and provides a penalty of \$100 for jack-hunting them.

The proposal to forbid the jacking of deer is in itself most excellent. Jacking is an abominable practice. It ought to be abolished *in toto*. All right-minded sportsmen would rejoice to see a law to that effect.

But while we have the fullest and heartiest sympathy with the proposal to forbid the jacking of deer in the Adirondacks, we understand perfectly the real motive of Mr. Barnes in introducing his bill. It is simply to restore hounding to its old place. It is the final step in the well-planned scheme of the Adirondack water butchers to harp on the evils of jacking, to concentrate public attention on that one practice, and to so magnify it that the other and actually greater evil of hounding may be lost sight of. So long as the Adirondack guides and *soi-disant* sportsmen were permitted lawfully to slaughter deer by the hound and by the jack, no voice was raised against jacking. But just as soon as their favorite cruel and destructive method of hounding was put an end to, they raised a great cry in chorus about the atrociousness of jack-shooting. The present agitation against night-hunting is not undertaken for the purpose of protecting the deer, the aim is to put the hound back.

Every resident of New York who is interested in the right preservation of the game of the North Woods, should understand the true meaning of this Assembly bill, and each one should use such influence as he can bring to bear on the representative of his district at Albany to thwart the scheme of the hounders.

Let jacking be forbidden; by all means abolish it if possible—but not at the expense of the present just and sensible law against the use of dogs.

A DEER LAW PETITION.

ON another page will be found a form of petition to the New York Legislature. It is a request to let a good law remain intact. The petition concerns not only sportsmen, but all residents of the State. The interests of the individual deer hunter are merged in the broader interests of the community. The two are identical. For them both the deer of the Adirondacks should be given reasonable protection. This means that the hounds must not be put on their trail to drive them into the water to be butchered.

The form of petition may be cut out and pasted on a blank for signatures. It should then be sent to Albany.

What is done at once is done with double the effect of tardy action. Prompt attention must be given to this matter. The deer hounding politicians are pledging members to vote on their side. The Legislature should be advised at once of the true feeling of the public on the subject,

THE SUSQUEHANNA DODGE.—The Pennsylvania fish wardens, who were appointed to enforce the laws relating fishing with nets in the Juniata and Susquehanna rivers, have faithfully performed their duties—to their own pockets. Their method of letting the fish go to the pot so long as money went into their own pockets was exposed in a New Bloomfield criminal court the other day. In the course of the trial of a man who was accused of unlawful fishing, the charge being brought by Fish Warden Josiah R. Dunbar, the Court was amazed at the production of several receipts for \$5 each, bearing the signature of the fish warden, which gave the holders the privilege of constructing fish baskets, etc., in the streams in question. It is alleged that similar receipts to the amount of hundreds of dollars are held by fishermen, and that the law is violated daily during the fishing season. During the last session of the Legislature Representative Sponsler, of Perry, boldly asserted that officers having in charge the enforcement of the fish laws were using their power, not for the protection of the fish in the streams, but for blackmailing purposes.

DAYS WITH THE DEVIL FISH.—The interesting accounts of recent adventures with the devil fish, published in our columns, are supplemented in the present issue by a charming reminiscence of a day's sport long ago. The devil fish is by no means extinct, but the pursuit of it for pleasure may be classed among the amusements of the past. In the palmy days "before the war," when the famous Sea Islands were the resort of a summer population intent on pleasure, the vampire of the ocean was recognized as a legitimate object of pursuit, and many were the exciting adventures of those who engaged in the exhilarating pastime of harpooning the monster. How the sport has been perforce abandoned because of the disappearance of the prey, has already been told. The devil fish is no longer to be found in its old Atlantic coast haunts; but it appears to be fairly abundant in the Gulf of Mexico; and as the Gulf coast of Florida in the winter time attracts sportsmen, as did the Sea Islands in old times, it is possible that the sport of devil fishing may be revived.

JACKING AND HOUNDING.—Which of the two is the more destructive of Adirondack deer? Here is one consideration which is a sufficient answer to that question. The men who are crying out for permission to hound deer are one class of city sportsmen and one class of Adirondack guides. Each of these classes are greedy and improvident; that is to say, they want all the deer they can possibly kill and kill now. They are, therefore, in favor of whatever method will bring them the greatest immediate booty. If jacking would do this, they would cry out for permission to jack. If hounding would do it, they would cry out for permission to hound. As a matter of fact, they do ask for hounding.

THE MICHIGAN SPORTSMEN'S ASSOCIATION will meet at Kalamazoo February 9. The Secretary is Mr. Mark Norris, Grand Rapids. Michigan needs a game warden system. The Legislature of that State is short-sighted in its treatment of the game interests. Petty parsimony is sacrificing the deer to the hide and venison dealers. The Association has tried repeatedly to secure an appropriation to pay for the services of a competent warden, but in every endeavor it has been blocked by the stupidity and penny-wise foolishness of the Legislature.

FLORIDA LANDS.—We have received several letters from Florida correspondents in response to our recent remarks on the sand swindles of that State, the writers urging that no wholesale denunciation of Florida should be made. We know that. Florida has tens of thousands of fruitful acres. But that is no special reason why the paper town lot swindlers should rob the gullible portion of the public. Good land will always find a ready market. Florida cannot be injured by an exposure of the robbers who deal in worthless sand.

THE WEATHER AND THE BIRDS.—Additional reports from the South and West show that a very large number of birds perished in the late cold weather. A correspondent writing from Jewell county, Kan., relates that the market-hunters had a bonanza when the cold wave came and killed the birds; one man went out in the morning and soon returned having two corn sacks filled with the frozen game. A press dispatch from Staunton, Va., reports that thousands of birds were frozen in that vicinity.

JECKYL ISLAND, Georgia, is to be converted into a winter resort for sportsmen.

TO THE WALLED-IN LAKES.

VIII.—BIG FISH ON LITTLE ROD.

ALL that night a fierce southerly gale shook the lodge, and in the morning it still blew hard. The waters of the lake were white with foam, and over them the skies hung dark and threatening. An Indian pack-saddle had been borrowed the night before from Back-in-Sight, and having put our blankets and the wagon sheet in a little pack on a spare horse, we set out soon after sunrise for the upper lake. We took a sack of bread and a little salt, and I told Yellowfish to tie a quarter of meat on the pack. We were going to a point where, according to my authorities, sheep were very plenty, but it has been my fortune more than once to travel for a day or two through a country where game was extremely abundant, and yet have no fresh meat to eat, so I thought it well to take some provision of this kind with us.

We crossed the river and turned up the lake, and before we passed the old camp I noticed that there was no meat on the pack, and on inquiry found that the Indian had forgotten to follow my directions about taking it. We had left a few drying fish on a scaffold near our former camp, and two or three of these we took with us. Before we reached the Inlet it had begun to rain furiously, and all the rest of the day this continued. Our progress up the lake on the west side was rapid, for the trail was in many places so good that we could gallop our horses. Now and then, however, we came to streams which spread out in marshy valleys of considerable width, over which grew a thick tangle of tough alders, and through these it was difficult work to force a passage. The pack occasionally gave us trouble. The cinch which held the saddle in place was merely a strip of rawhide a couple of inches wide, tied up by a stout leathern string, and with this primitive contrivance it was impossible to put the saddle on so that it would stay. Moreover the lash rope had no cinch to it at all, and we could not draw it tight without galling the horse's belly. The packing was left to Yellowfish, who tied up the bundle Indian fashion, swung it over the saddle, and then drew the ropes as tight as was possible. We were continually stopping to tighten them, but, as it happened, the only time that the pack fell off was when we were crossing one of those wide marshy valleys among the dense alders. I was riding behind, but could not get to the pack horse in time to keep the load from falling into the water, and so our blankets got wet.

The ridge which runs down from the mountain to the lake was reached not long after noon. Here it was necessary to camp, for there is no grass for the horses for several miles beyond, and indeed it is doubtful if horses can be taken much further up the lake along the side of the precipitous Goat Mountain, which stands next south of Singleshoot. We had nothing to eat except our half dried fish and some damp bread, and so as soon as the horses had been turned out, a fire started, and a shelter built to keep the driving rain from our bedding, we started out to hunt. Yellowfish took the south end of Singleshoot Mountain and Appekunny and I the north end of the Goat Mountain. The rain poured down with great violence as we started out to climb the mountains. Not very far from the lake's edge we waded the swollen stream, which pours down through the cañon between the two mountains, and there striking a deeply-worn trail, followed it up the ridge and on to the bench. It is steep, rocky and narrow, practicable for horses, but one would rather do it on foot and lead his animal than ride it. Having reached the top of the bench, we worked our way carefully along over the ledges, which were piled one on top of another until we had gained the forest above. We saw nothing, however, to indicate the recent presence of any game. There were no fresh tracks, and all the sign was that of last winter. Still higher we climbed up on to the mountain, skirting the deep but narrow cañon whose vertical walls dropped off sheer for nearly 1,000 feet, but work as carefully as we might, we saw no game nor any signs of game. At one point where we emerged from the timber, we could look across on to Singleshoot, and there a moving object caught our eyes. It was a long way off and at first one of us took it for a sheep, but a short inspection showed that it was our companion moving along up near the reefs in his quest for game.

Three or four hours of this extremely moist and unsuccessful hunting convinced us that, here at least, it was useless to hope to get our supper, and we turned back toward camp.

Down on the first bench above the lake we paused for a while to look about. Toward the foot of the lake was a veil of driving rain which hid all beyond, but where we were, for a moment the rain had ceased to fall. We could look across the lake and see the sombre gray wall that rose far above us and ended in a snow wreath, and could discern at its foot a curious level platform of rock, partly covered with pines and partly under water, about which there seemed to run a wall of rock separating it from waters of the lake which appeared to flow in and out through a narrow channel close to the shore on its southern side. Up the lake the dim shadows of half a dozen stupendous mountains could be felt rather than seen, and here and there above the water rose little islets, some of them bearing a few trees. Still further up the valley, as the mist for a moment cleared away, we could see that the lake again narrowed, and two slender tongues of land ran out, one from either side, and overlapping, seemed to end this lake, cutting it off from another beyond. This appearance has given rise to the statement, unfounded, that there are three St. Mary's Lakes. On the

west side of the lake, the Goat Mountain, so called because there are goats on its western slope, rises like a wall, and toward its southern end carries a great mass of bluish white which looks like a tremendous glacier. We had gazed but a little while when the rain clouds again lowered and shut out all the view, and we hastened toward camp. Arrived there, we found Yellowfish steaming before the great fire, but no red quarters of sheep hung from the trees. He had been no more successful than ourselves. He had seen nothing, not even a fresh track, and told us what we already knew pretty well, that there was no game in the neighborhood. We all agreed that as yet it must be back in the hills.

We were all uncomfortable enough as we stood about the fire with our damp clothing clinging to us, and gnawed at our unsatisfactory meal of scorched fish and soggy bread, and while we were eating, Yellowfish, after a prefatory speech in which he invoked bitter curses on all our heads for starting out so poorly provided, proposed to return at once and spend the night at the Kootenay camp, which, we had been told, was to be moved up that day to the Inlet flat. I was about to veto the proposition at once, when Appekunny spoke up and supported it. There is nothing that I dislike more than giving up anything which I have attempted to perform, but after thinking the matter over, it seemed to me rather selfish to keep the men out here in this wretchedly uncomfortable situation simply on my account. So, after a little thought, I said "Go," and we started. We rode rapidly, but did not find the Kootenay camp, and reached our own about 9 o'clock at night, cold, wet and hungry, having probably ridden forty miles and walked nearly ten since we started.

The next day was fair, though very windy, and Appekunny, Yellowfish and King went to the head of the lower lake, the two white men to bring down the boat and the half-breeds to lead back the horses. I remained in camp.

About 4 o'clock I heard shouts, and walking down to the lake shore, saw the boat coming down before the wind at a great pace. In the bow stood Appekunny holding his outspread coat, while King steered in the stern. When they reached the shore they handed out three fine lake trout, one of which weighed nine pounds. They had trolled most of the way coming down, and had had a number of strikes, but in most cases the fish had been lost. One or two very large ones, which they had brought almost up to the boat, had snapped the stout hooks off short.

While dinner was being cooked the wind went down, and an hour before sunset we went out again on to the water. I took my trout rod, and as we rowed slowly up the lake in fifteen or twenty feet of water, trailed a piece of the white belly of a lake trout behind the boat. The bait was large, and the hook very small, and when I had my first bite I struck too quickly and lost the bait. The next time I let the fish have it for a few seconds and then struck hard, and a moment later trembled for my tackle. The fish made a wild rush which caused the reel to fairly shriek, and I expected to have the line break, but he stopped before it was all off the spool, and going to the bottom sulked for a while. This gave us an opportunity to bring the boat nearly over him and enabled me to recover my line. Then a few pulls and twitches started him off again, and for a few moments he made lively work for us. Two or three times he headed straight for the boat, but on each occasion Appekunny, who was at the oars, managed to get out of his way so that he was led around the stern. At length the fish began to grow tired and to yield to the constant strain of the rod, and finally he was brought nearly to the surface of the water. But the end was not yet, and frightened at the boat he made other vigorous rushes which again obliged me to give him plenty of line. Finally, quite tired out, he was brought to the surface, the gaff was put into him, and I had the satisfaction of handling the largest fish that I had ever taken on this little rod. His weight was five and a half pounds.

In an hour's fishing I caught two more which weighed four and five pounds, and lost another which from the strength he displayed I imagined must be much larger than any we had seen. This fish after a few furious rushes sulked on the bottom, from which I could not start him, and devoted all his energies to sawing on the line, which he finally succeeded in cutting.

These lake trout are thought to be the same as the lake trout of the Adirondacks and the great lakes—*Salmo namaycush*. I have never seen this species in the East, but Appekunny, who is familiar with them in the Adirondacks, assures me that they are identical.

The following morning was again pleasant, though at times the wind blew down the lake with great violence, but the sport of the night before had somewhat whetted my ardor, and we were disposed to have a day with the lakereels. About 10 o'clock, when the wind went down, we started out. Our camp was on the river, about two hundred yards below the lake, and in the face of wind and current it seemed easier to cordelle than to row the boat up the lake.

So Appekunny got into the craft to keep her off the shore, and King and I took the long line over our shoulders and pulled on it stoutly, and in a short time we had rounded the point. Then all got aboard, and we pulled slowly up the west shore of the lake.

The lake trout lie in deep water, and it is said that the best way to fish for them is by means of a troll with a half-pound sinker attached, so that the bait will be from six to

ten feet below the surface as the boat moves along. We found, however, that on a bright day like this the fish readily came to the surface for the bait, which being three or four inches long and perfectly white, was easily visible in this clear water. I fished with my rod, but had taken the precaution to remove my trout line from the reel, and had rejected it by a somewhat heavier cotton line, for in trying to trout line the night before, after coming in from the fishing, I had discovered that it was somewhat rotten and weak, and I feared to trust it with these monsters of the deep. But, though we had as yet seen no very large ones, yet they grow to a great size. The previous autumn Appekunny had caught one in a whitefish net, which weighed fifty-five pounds, and there is a tradition of one caught years ago by a trapper which was so large that when its captor ran a stick through its gills to carry it over his shoulder, its tail dragged on the ground as he walked to camp. For such fish one would need salmon tackle at least.

For nearly a mile we rowed slowly along. The scene was fairly brilliant. Under the cloudless sky and the bright sun the clear waters of the lake played and sparkled, the foliage of the hillsides took on its brightest hues of green and gold; the rugged mountain tops, though so distant, showed each ravine and seam in their gray sides, and their mantles of snow threw back the sun's rays like silver. It was so lovely and peaceful a scene that one felt like dreaming over it; and yet the air was so fresh and bracing, so full of tonic and vigor, the boat danced about so lightly, and the waves leaped and dashed so merrily about us, that one could not dream. And he would be falling into a pleasant reverie the crest of a wave would strike the boat, and its cold spray, dashing in his face, would at once bring him back to the present.

We had rowed perhaps a mile when King, who was in the stern of the boat, gave a wild wave of the arm which held his trolling line. It tightened for a moment, and a heavy swirl appeared in the water fifty feet in our wake, and then the line suddenly yielded, and came in without resistance. A few seconds later my rod bent, and I struck the fish so that Appekunny gave a cry of caution: "Look out, o you'll smash your rod." But I had unlimited confidence, born of past experience, in the tough bamboo, and I wanted to set the hook fast. I did so. The fish did not at first make off as they usually do, but remained for a few seconds nearly in the same place, while he shook himself so furiously that I feared he would throw the steel out of his jaws. Then he made one or two short, fierce rushes, and once broke water, but after that seemed to give up the fight. Slowly I brought him to the surface at the boat's stern, and just as the gaff was put into him, we could see why he had yielded so easily. In his shaking, when first struck, he had waded and the line several times about his head, and his gills were fast bound down, so that it was impossible for him to breathe. He was a small fish, only weighing four pounds, but from his stomach we took a couple of young whitefish five or six inches long, with which we replaced our baits of fish belly. And always after that we looked for these fry in the lake trout that we caught, and invariably found one or more. They are the most taking bait for these fish that we discovered. The number of these which are destroyed must be something almost incredible. The lake trout are extremely abundant and voracious, and in a day each one must capture at least three or four young whitefish. What the total destruction is it would be impossible to compute.

We had gone but a little further, when Dick King struck a good fish and hauled him in hand over hand, in true blue-fisherman style, until he swung him into the boat and slapped him down on the floor. Then he took another in the same way, and then he had a strike, which gave me twenty-two minutes of very exciting sport, which my companions enjoyed as much as I, of the excited way in which they talked and danced about as any indication of their feelings. Four times the splendid fish darted off for the middle of the lake with an energy that was truly alarming, and four times, by giving him the butt when the line was so nearly gone that I could see the spool through the strands, I checked him and very gradually brought him back; a fifth time I tried to do this, but he would not stop, and when tip and butt had almost met, and I felt that a pound more would break the rod, I suddenly lowered the tip, deciding that it was better to let him carry away the line than to break the only rod I had. As I did so I found that he had stopped, himself exhausted by the struggle. The fight was a long and bitter one. Often I would get him within sight of the boat, but it was very difficult to bring him within reach. When nearly tired out he would sulk on the bottom, and nothing that I could do would start him to moving again. After a while the strong tension of the bending rod would slowly raise him from his secure depths, but when I tried to bring him to gaff, his rest would enable him to start off with renewed energy. At length, however, he came to the surface of the water, though still back up, and with his sullen, vicious eye glaring ferociously, as if he meditated fresh stratagems; but before he could put them in practice, King had the gaff in him and he was triumphantly lifted over the side. He weighed just a trifle under seven pounds.

All the morning we fished with varying fortunes. The trout seemed to favor particular localities, and we would row over one of these, noting as we passed along the points on the

shore, opposite which we caught our fish, and, when ten or fifteen minutes had elapsed without a strike, we would turn and row back, often getting as many fish during our second passage as we had the first.

So the day passed until the afternoon was well advanced, when the rising wind drove us to the shore and into camp. A feature of this day was the appearance on the lake of a great number of terns, apparently *Sterna hirundo*. They were seen busily fishing during the morning and evening, and hovered above the stern of our boat, evidently half inclined to make a plunge at the baits trailing in the water behind. Then toward midday they betook themselves to the gravelly points and bars which made out from the shores and sat there on the beach, plump, comfortable looking, and altogether enviable. These brisk graceful sea swallows and the slow-winged gulls seemed to get along very pleasantly together, and fished and rested in company.

Sometimes at night we would row along the shore, and it gave one an eerie, half-uncomfortable feeling to watch these white ghostly, indistinct forms as they seemed to rise out of the water, and then as we approached to see the spirits lightly take wing and for a moment flit about with faint, querulous murmurs, and then vanish away into the darkness.

AT SEVENTY-ONE.

By JEROME BURNETT.

The testimony of a genial angler of three score and ten, out in his boat with rod and line, busy with the bass, and now and then telling of his years from ten to seventy-one.

A CHECKERED life has been my share,
I've had good times as well as care,
While honors, too, I've come to wear,
And proud with what I'd won;
But memory ever brings to view,
Where'er I look my long life through,
The years I've fished, as now I do,
From ten to seventy-one.

The same glad impulse still I know
To go afield, to fish, and row,
As when, some sixty years ago,
The songs of youth I sung;
For though my life may go amiss,
And stale become what once was bliss,
'Tis true as truth, in joys like this,
My heart is always young.

The shade and sheen of wood and lake,
The tangled trail of fen and brake,
With hazards and the tests that make
The self-reliant man;
The out-door world of mountain gleams,
Of ocean shores and whispering streams,
Embellish still my waking dreams
As when my life began.

Ah, tell it as you may, my friend,
Most earthly joys untimely end,
Whatever fate may deign to send
Ere Time with you is done;
Whichever way you hold your dish,
Whatever you may will or wish,
The happiest days are those you fish,
Till you are seventy-one.

And so I say as now I view
The vista of my long life through,
In light and shadow, false and true,
Since I was young and bold,
Howe'er my lines have gone amiss,
Or faith has failed in hope of bliss,
The while I live in joys like this
My heart can ne'er grow old.

A DAY WITH THE DEVIL FISH.

Editor Forest and Stream:

I have just read my son's sketch, published recently in your spirited paper, and it recalled to my mind some of the pleasantest and most exciting recollections of ante-bellum sports. Let me add an account of a day's sport devil fishing, every word of which is strictly true.

In the latter part of June or first of July of that year I visited Bay Point, having obtained a few days' recreation from my studies in Charleston. It was the season for devil fishing, and my brother-in-law, Stephen Elliott (afterward General Elliott of Sumter fame), was in the midst of it. He was acknowledged to be the best fisherman and boatman among good fishermen and boatmen, as all the Beaufort young men were. He had been at the fish several times, and had even struck one, but as yet "had no luck." My vacation was so short that I did not intend to fish; the sun and salt water have a most unpleasant effect on a sensitive skin, and to present myself before my class with my face cracked and burnt was what I did not relish, so I was trying to make myself agreeable to the young ladies of the party on shore, and enjoying the delightful sea breezes in the lazy manner which any one who has marooned on the seashore knows all about. In comes General Elliott, arrayed in fishing attire—blue flannel shirt tucked in duck trousers, and a felt hat that Robinson Crusoe would have discarded, so many were the holes in it; but Elliott thought it the "luckiest hat" he ever wore, besides the holes kept his head and brains cool, a requisite in this kind of fishing. Said he, "Well, Hal, you must go fishing with me to-day. I appeal to you ladies to second my motion. I have been promising you a sight of a devil fish and have failed to kill one by myself. When we go together our luck has never yet failed us, and once we took two in one day." This appeal, strongly seconded by the ladies, was a little too much for a young man to stand; so rather reluctantly I slipped into my tent, changed my clothes, and met Elliott at the boat on the beach, a few hundred yards from our tents. It was a "shad

CAPTURE OF THE DEVIL FISH.—From the Illustrated London News, 1885.

boat," as they were called, 18x8½ feet, with sprit mainsail and jib; mast easily unshipped and laid along the thwarts; rowed by two hands when necessary; centerboard, and with a good broad platform at bow to stand on. The crew consisted of General Elliott, myself, and two hands, Bob and Jack. I had quite an affection for Bob, for he had once, at the risk of his own life, saved mine, when a coil of rope accidentally got around my ankle, but fortunately after the fish had almost made his run, and was exhausted. These two negroes enjoyed the sport as much as we did, and were perfectly familiar with every phase of it.

We jumped aboard, spritied out the sail, hauled up the jib and leisurely sailed for the Hilton Head shore. On the way across, about three miles, we busied ourselves preparing harpoon and lances. We always made it a rule to have a large supply of these ready. Our habit in striking was one to stand at the head, the other at the stern, both armed with harpoons; the one at the stern steering with his foot, but ready in case of an emergency to strike also. Reaching the mouth of Skull Creek, which bounds Hilton Head on the west, and empties into Broad River, we anchored near the shore, stowed useless things away, and arranged our weapons to hand, then "lay off" to watch for the fish, which generally showed themselves on the early ebb tide just at the mouth of Skull Creek. Can one fond of the water imagine anything to surpass this? The gentle roll of the boat, the constant dipping of the gulls, the wind blowing fresh and crisp, by this time having increased sufficiently to cap the waves in mid river beautifully, the landscape around presenting that peculiar smoky, quiet appearance so charming on a June day. Such a situation and sun would, under ordinary circumstances, induce sleep, but our eyes were strained for the first sight of the fish; and our inexhaustible supply of reminiscences of former days' sport—so pleasant to recall when another day is to be added to the long list—kept us on the *qui vive*. Besides Bob and Jack knew there was a drink for the one who first saw the fish; they would have it anyhow, but it seemed to taste better if they could say they won it.

Suddenly Elliott points to the starboard bow. "There is one, I think." "No boss," says Bob, "da porpoise." When the fish first shows the point of its wing it resembles the fin of a porpoise very much. Before Bob's words were well out of his mouth, the monster suddenly leaped entirely out of the water, coming down with a slap and splash that sent the foam in every direction; and as quick as thought another and another fish show themselves until the number reaches eight or ten.

Elliott is on his feet "Haul in the anchor, Bob; lay out the oars, Jack; and now, Hal, you strike."

In a moment I am at the head of the boat, the harpoon with a staff six or eight feet long poised evenly in my right hand, a coil of rope in my left, in order to give plenty of line when the harpoon is cast. The main coil is in the bottom of the boat, the end fast to something substantial, so if all the rope is paid out with the dash of the fish we will not lose both rope and harpoon. I am ready, and the hands are quietly pulling toward the spot where the tremendous boil indicates the monster's disappearance. Here he is to the left, about twenty yards off, cutting around in a circle, the point of both wings showing.

"Easy, boys, easy, and stand ready to help me, Bob, when I strike; leave Jack to look after the oars. Steady. Back water."

The fish has just turned his gigantic body over, about ten feet from me, the harpoon is raised and driven with all my strength into the center of his white stomach, which is just on the level with the surface.

"Good shot!" says Elliott.

Before the fish realizes the situation the head of the boat touches him. I reach out, catch the butt of the harpoon staff and force it entirely through the body, and jump out of the way of the rope which now begins to spiu out with a fearful velocity. "Mind your hands, Bob," for we are now catching at the rope and bending it over the bow whenever the chance offers, thus turning the head in the direction of the fish, assisted by Elliott at the helm. "Come and help us, Jack, for if the rope gets on the broadside we will capsize, certainly." "No danger," says Jack, who immediately adds his bony hands to the work, and although the smoke flies, and I lose some skin from my hands, the boat swings around and we dash away with a speed that almost takes away our breath; the spray pours over us and the head of the boat buries into the waves, seeming sometimes as if it would never rise again. For the time being I can use no other expression

than that we are drunk with excitement, there is nothing to equal it in the line of sport. To relieve the weight at the head Elliott and Jack pass the line down to the stern and sitting there, as we give the word, all haul together, for another harpoon must be placed in the fish as soon as his first dash is over. He is then gradually hauled nearer and nearer the surface. Gradually and cautiously we haul as he approaches nearer and yet nearer, Elliott catches up another harpoon, and coming to the head stands ready to hurl it into the fish as soon as it approaches near enough to the surface. We begin to see the black mass indistinctly at first, then more and more visible, until suddenly Elliott says, "Look out!" and lets fly his harpoon. It quivers as the staff is half submerged; and again the fish dashes down and down until eight or ten fathoms are paid out. We then steady him, and begin the hauling again. This time Elliott arms himself with a lance, and when the time arrives plunges it in and jerks it out rapidly. The blood spurts from the wound and we leave a bloody wake behind. The fish gradually becomes more and more feeble. His dashes are less and less violent, until he at length lies floating alongside gasping for breath. No time is to be lost. Quickly a bight of the rope is passed through a nostril into the throat. My arm is suddenly plunged into the mouth of the fish as he gasps. This feat must be performed rapidly, as it would be dangerous to have the mouth of the fish close on one's arm in a dying gasp. Then catching the rope I bring it out of the mouth. This performance is repeated with the second nostril, and we have the fish ready to be towed ashore, presenting his head to the resisting tide, which is still running ebb.

We have time to look around us now. We are about four miles outside of Bay Point, and it will take at least four or five hours to reach shore, notwithstanding the fact that we have a howling south wind to assist us. But we have more sport in store. The sharks begin to show themselves. These "vultures" of the sea have smelled blood, and their fins are seen flitting around in numbers. One fellow, coming up deliberately, takes hold of the thin portion of the wing of the devil fish, and throwing his body entirely out of the water, his tail just missing the boat, he cuts a clean half-moon out of the fish's flap. Our shark lines are rigged, baited with some small fish found in the bottom of the boat or a piece cut from the devil fish, and thrown overboard. They hardly touch before they are grasped as if another man was at the other end, and a trial of strength begins. But man brings mind to bear, and the shark is allowed rope, and is played; gradually his strength fails him, and a ten-foot monster is brought alongside. The lance plays a second part in dispatching the shark. We take nine of these fellows before we land, averaging from six to ten feet long.

We land at last toward sunset and are met by all on shore. The fish is hauled as near the beach as possible, and when the tide recedes is left high and dry. We measure him and he proves to be 18 feet from tip to tip of wings, 11 feet from nose to base of tail, and 4½ feet through. The next day he is cut up and sent to Elliott's place for manure.

We have hunted our old grounds since the war, but find no fish there now, and one of the grandest sports men ever enjoyed is lost to us. If they ever return and I am too old to strike, I will certainly go along and teach my boys how to kill a devil fish.

H. M. S.
BEAUFORT, S. C.

MICHIGAN ASSOCIATION.—Grand Rapids, Mich., Jan. 13. —The annual meeting of the Michigan Sportsmen's Association will be held at Kalamazoo, Mich., on Tuesday, Feb. 9, 1886, commencing at 7:30 o'clock, P. M. The headquarters of the Association will be at the Burdick House. A full attendance is requested, as business of interest and importance to the sportsmen of the State will be considered. Clubs, members and individuals are requested to send to the undersigned any information they may possess which will aid the Association in its endeavor to save the game and fish of this State from the rapid destruction now menacing it. The secretaries of all auxiliary clubs are requested to send the names of their officers and the number of their members to the Secretary for the information of the Association. Each auxiliary club is entitled to be represented at the annual meeting by five delegates. Individual members and others interested in the objects of the Association, are earnestly invited to be present.—MARK NORRIS, Secretary, 79 Lyon street.

CAMP FLOTSAM.

XXI.—CROW LAKE.

THERE was every promise that our quest on Crow Lake would be rife with sport. The sky was slightly overcast, and the wind from the southwest was sending a fine ripple over the water. This was not all; here were no fished-out waters, for ours were the only oars which had disturbed the lake in more than a year. The guide was an unknown thing, the hotel strangely absent, and the ubiquitous sardine box and tomato can had never been transported to its shores. No one but a woodsman or a camper can appreciate or understand the thrill of joy which so possesses one upon his finding a by-way where he has the forest and lake to himself, where his uprising and down sitting go unnoticed—and where no other craft than his own vexes the waters. In such retreats all about him sings of

"Larger constellations burning, mellow moons and happy skies,
Breathings of tropic shade and palms in cluster, knots of Paradise," until he imagines himself dwelling in a realm the like of which this weary world has never seen, and which a Prophet Warrior said, "Sleeps only under the shadow of the sword."

And, indeed, it was a region of beauty into which we had entered—one sufficient to entice the angler to lay aside his rod and dream away the day in watching the shadows drift over the water and chase each other over the distant billtops of forest out of sight, or listening to the lap of waves upon a beach where no one comes.

It was, perhaps, because our senses were dulled and the barbaric instinct to destroy was strong within us, that we broke the quiet of the lake with a vulgar cast into a pool formed by two projecting rocks, which were overhung with pine. And our savagery had its reward, for a splendid bass took the Lord Baltimore at the surface and, feeling the answering strike, threw himself clear of the water, and, with every fin aquiver in fright, took a headlong plunge, and dashed for the shadow of the boat. But the quick movement of the oarsman left the fish astern, when it again broke water and started back for the pool. Three times it made a circuit of the little basin before it wearied, then yielding to the continuous strain of the rod, came alongside, where, as if in shame, it darted under the boat. With line in hand it was led forth and then lifted over the side, as grand an old three-pounder as ever drew down the scales. But the fight was gone from that pool, and after a few fruitless casts we turned down the rocky shore on the west. From the base of a high rock, which stood back a couple of rods from the shore, a spring was sending a bright dashing stream downward to the lake. Just off the mouth of this we struck and landed another small-mouth of something over a pound, which was returned to the water, and then headed the boat toward the southwest, where, in a depression in the hills, we thought that we might find the outlet to the lake. It was a long pull, but as we approached, the cleft in the hills widened, and the lake ended in a narrow marsh. We followed along the shore over to the eastern side, where it looked so fishy that we were again tempted to try a cast. As we approached a point which ran out on the right, we were greeted with a strike which made us think for a moment that the flies had caught on a submerged rock. We were soon undeceived, for the line began to cut the water, and there was a lively movement toward the open lake. We brought the game to on the port side with a steady pull, and looked for a leap, but none came. Instead, there was a slow, heavy pull backward, which nearly doubled the rod before it was checked, when all the movement at the other end of the line suddenly ceased. We knew that we were still fast to something, and began to imagine lake bullheads and all sorts of ignoble things. A gentle stir-up set the old headstrong movement under way once more, and again we had to call halt by main strength. Do what we might we could not get the fish alongside. It was the longest, strongest, most stubborn and dead pull contest that we had ever had with a bass. Again and again we tried to bring the fish within reach, but without success. We had played it long enough to tire a dozen, so throwing the tip of the rod backward, we stripped off the line from the reel until it came within reach, and then began to bring in the game with long, steady pulls. Alongside it came, and lo! a three-pound big-mouth rose from the water. As with thumb in his mouth we lifted him over the side, the cause of the long fight was explained. There was more weight on the leader, and as we drew it in, a two-pound-and-a-half small-mouth was hanging on the tail fly. It was a magnificent catch, and our best score for the summer.

Suddenly from behind the point which we had believed was the main land on the east, a strait opened toward the south lined with rocks, which rose almost perpendicularly for fifty feet above the water, and half a mile beyond widened into another lake as large as the one behind us.

On the right, with a profile as perfect as though carved by human hands, a great stone face looked toward the east. Thirty feet above the water, and twelve feet from forehead to chin, it had rested there for unknown aeons, smiling in the sunlight and frowning before the storm, with a troubled look upon it as though the ages, in their silent flight, had propounded problems which it could not solve, but on which it must ponder forever. High on the left, in the granite walls, half a dozen tomb-like openings yawned over the lake below, like the graves in the vision of the Prophet, which could never be satisfied. The lower lake was a marvel of quiet beauty; shut in by the mountains, save on the narrow bay to the south. Where its waters found an outlet, after many windings, to the St. Lawrence, there was many a nook where the camper could find isolation from his race, and live unmolested with none but the wild beings that inhabit the forest for his companions, and where the glare of his camp fire would be seen by no human eye.

It was late in the afternoon before we completed the circuit of the lower lake. When we reached the strait, on our return, the mist was rising from the water and lying like a death cloth over the silent face above, and enveloping the shores in a cold, gray shroud. We crossed the upper lake and drew the boat up on the sloping beach, near the spring which we had passed in the morning, and prepared to bivouac for the night. It was midsummer, and there were no indications of a storm or bad weather, so we contented ourselves with a spread upon the hillside, with the boat near by for a covering, in case of necessity. The camp fire was soon under way, the coffee prepared, a hoe cake baked in the ashes, the fish cooked, and, supplemented by a lump of butter from our provision basket, we partook of our lonely supper. Then lying on the blankets we watched the night come on and the gloom gather over the forest, saw the great stars come out, one by one, listened to the loons on the water, and the melody from the woods about, and wondered

whether we had not attained the climax of our summer pleasure. It was a solitary camp, and void of the spell which companionship always brings, but we were under the grander spell which the lake, the forest and the woodland throws about the fugitive from civilization, and, rolled in our blankets, we went over the carry into forgetfulness.

The sun was shining brightly when we awoke, and re-kindling the fire, we prepared breakfast, thinking meanwhile of what should be the order of the day. Crow Lake had been well explored, and its fishing tried, so we determined to retrace our course to the camp on Heart Lake, and then to work over into Opinicon, a larger lake to the west. The luggage was again packed in the boat, and we bade a sad farewell to the pretty lake. Near the inlet we were treated to another exhibition by the loon that had greeted us on our entrance the morning before, while its mate grandly sailed about a few rods away. It was considerably after noon before we had worked through the rushes which lay between the two lakes, and were in sight of the first night's camp. The little tent was still standing on the point of rocks, so it was evident that our friends were somewhere in the neighborhood. When we reached it we found that the berry picking was over, and that everything was in readiness for a break up, and we preferred to forego the Opinicon rather than attempt finding our way back and getting over the carry alone; so, in company with the others, we turned our prow toward the old camp.

It was a toilsome journey to the carry, and over it to the stream above. The boats were lifted up the perpendicular bank, and the rest scrambled after as best they could into the woods above. The luggage was carried to the landing where the Sabbath Breaker was lying, as she was left two days before, during which time not a foot had pressed the rocky path over the carry. For an hour or more the party halted, lounging upon the rocks carpeted with velvety moss, and shadowed by the pines which overhung the gorge. The song of the breeze in the treetops was blended with the sound of the dashing waters which rushed, rose and fell over the barrier of rocks and logs, and then took a leap downward and disappeared amid a cloud of spray. The forest about was silent and deserted; delicate vines ran along the ground and clambered over the fallen trees, and hung from the rocks in graceful festoons. On the right a thread of water, glimmering like silver between the trees, marked the course to Loughborough. But the scribe of the expedition did not linger over the beauties about him; his eyes were heavy from the smoke of the smudge and the long morning's pull in the sun, and he spread himself upon a rock and was soon dreaming a mid-summer day's dream, mingled with up-floating visions, such as had often come in the quiet of the meadows of the bygone, when tired boyhood sank among the daisies and was hushed to sleep like this, by the hum of bees and the merry ring of the mower's rifle. But his slumber was broken and his dreams brushed away by the call of the boatman to get off, and the Pizen Ann was out of the creek and into the lake before the cobwebs were out of his brain.

A good home breeze was blowing up the lake, and we soon put the Sabbath Breaker astern. We held our way straight for the upper outlet, for it was Saturday night, and there was a probability that some mail had found its way in and was awaiting us; and a newspaper, a couple of weeks old, is a most delightful companion in camp for a Sunday forenoon. Besides helping one to lose all track of the day of the month, without which feat half the pleasure of an outing is lost, there is a deal of philosophy to be learned between the lines in the stale columns. Here you read of the unexpected demise of Peter Crabb, the great philanthropist and millionaire, and learn that a void has been created in commercial, railway and social circles, which will not soon be filled. That was two weeks ago; and while you read, Peter's heir is counting the shekels of his ancestor, and a lively contest is going on over the election of Peter's successor to the Presidency of the Underground Railroad. Financial circles abhor a vacuum too, and Peter is not going to be missed after all; two weeks have settled that.

Within the same period the unaccountable disappearance of Mr. Jenkins, concerning which suspicion of foul play has been entertained by his friends, and for whom the morgue has been searched daily, has ceased to be a wonder, for Jenkins was an eminent financier, and yesterday was registered at the Southern Hotel in Montreal. How little of all that the columns contain outlive in memory the dampness of the sheet; of what little moment it is to the world whether the individual lives or perishes; whether he be a citizen or a fugitive. The void is no more than that left on the beach when one has lifted a pebble and tossed it into the depths, where it will be seen no more.

Among the sparse mail we found a FOREST AND STREAM, to deprive us of which in camp would be a calamity only to be equaled by the loss of our rod. Much as we may prize it in summer on the shaded verandah, indispensable as it may be by the fireside of winter, the heart is made glad as though with wine, as it listens by the glare of the camp fire, to the revelations of the great Apostle gathered from half a world. It is like reading Tasso beneath Olivet, or Ossian by the moon of the Northern ocean.

It was night before we left the outlet and parted from our companions to the north. During the last few days the moon had been approaching her full, and as we shot from the dark, narrow creek into the broad sheet of water which laid between us and the tents, there was a golden ripple on the lake, and the wavelets were shouldering each other to catch the first kiss from over the eastern treetops. A mile down in front we could see the two tents gleaming in the moonlight against the blackness of the pines—a bright, radiant spot—the only place that we could call home. Slight and frail as it was, we could not but reflect that the four low walls had been adjudged by the wisdom of a thousand years to be a castle to its occupants, and that the bond sealed at Runnymede was a living fact even here.

Nothing had been disturbed during our absence; the camp fire was soon blazing bright, and a supper of coffee, fried bacon and potatoes disposed of, after which we rolled into the blankets, and dreamed a long dream of peace.

WAWAYANDA.

DECEMBER WOODCOCK.—A correspondent of the *Advertiser* says he saw a meadow lark about Christmas last sitting near the side of the road back of the Letchworth place. He also knew of a pair of woodcock which remained in this vicinity until the 1st of January. Two of Auburn's sportsmen were hunting partridges the middle of December and found woodcock signs which were not more than a day old. So the fall flight in this vicinity must have been very late.—*Auburn (N. Y.) Advertiser*.

EVENING HARMONIES.

IT is proverbial wisdom that to be healthy, wealthy and wise, one must sleep and wake with the birds. The old saw is founded, perhaps, on a belief that the lineage of man is traceable through a remote ancestry of feathered bipeds; but granting this to be true, it is not unlikely that the prehistoric owls may have formed a branch of our family, and that they may have bequeathed to us both wisdom and a love of the hours of darkness. Another old proverb informs us that "the early bird catches the worm." A modern reply to which is the statement, as yet undisputed, that "it served the worm right for being up so early." However, the proverb is a true one. He who rises to see the sunshine of a spring morning joyously welcomed by all the busy fields and forests, does indeed gain much. But if he goes to his slumbers when the deeper shades of twilight come softly over the landscape, he loses sight of Nature just as she arrays herself in mood most bewitching.

In the bright sunshine of daytime, the sight is charmed by the varied forms and colors that greet it and by pleasant scenes of every kind, but in the evening the eye may rest. It is no longer dazzled by brightness; but it throws wide its windows, and the few dim rays which enter form a faint and visionary picture that only soothes the weary sense. It is otherwise with hearing. Night is the time to feast the ear. In the day we are so intent on looking that we forget to listen.

Tender melodies are sweetest when heard in the quiet of evening. A swelling camp meeting refrain, echoing through the dark forest glens, sung by a throng of worshippers in the flickering light of a pine knot blaze. The melting notes of a guitar, coming faintly over the water out of the darkness to the campers on the shore of a mountain lake. In the dimness of evening each sound comes to us, full of its own message. It gently touches the silver cords of life and they echo back the harmony the spirit feels.

Our evenings from May to November are a festival of melody. It is one of the first signs that spring has come, the spring of bursting buds and emerald hillsides, when from every marsh and lake the chorus of the hylas arises. That which the reptiles begin the insects prolong, till the final chirp of the last October cricket. A night in dog-days is perhaps best for hearing the insects in full voice. Locusts, grasshoppers and crickets keep up a hum so monotonous that the ear soon ceases to notice it. Innumerable Katydids make vehement accusations of Katharine; the only answer to which is the unjust advice from the dark-winged bird rushing around in search of moths, to "chastise poor William."

After a long, hot summer day, everything seems to welcome the approach of night. The toilers in Nature's workshop go one by one to rest, and the nocturnal beasts and birds come forth. They are few in number, however, when compared with the bustling life of daytime.

One of the first of evening birds is the hermit thrush. When the sun is low in the West, from the deep recesses of the forest comes his sad plaintive notes, so clear, so mournful, and so full of hidden meaning, it seems impossible that it could have come from the throat of a bird. He is not properly a nocturnal bird, but sings at twilight or in the quiet dusk before a rain. He is an instance of Nature's harmony. His song would be out of place in the hot meadow, where the bobolink carols his gay melody; but when the shadows have spread to the hilltops and a quiet hush broods o'er the land, when body and spirit, weary with toil, welcome with half regret the twilight's fall, then comes from the enchanted woodland this sweet, sad song, a requiem for the dying day. Far unlike this song is that typical nocturnal sound, the too-hoo of the owl. It is a low bugle note thrice repeated; and we hear it, now here, now there, as the round-eyed fellow wings his silent way through the forest. With what a down and fluff are the owl's pinions invested! His warfare is the night attack, and he rows with muffled oars.

To know the full sweetness of the evening hour, one must spend it for weeks together in the fields and woods, and make his nightly couch with at most a canvas shelter over him. He who roams about in the dimness of evening finds a new world of sight and sound open to him. The familiar paths and scenes seem strange and uncanny. The imagination places beast or bird or reptile in the shadow of every bush. The rustle of a toad is a matter in which we are interested; for may it not be an extremely large snake instead of a toad? How surely does darkness beget fear! The most harmless things suffice to give us a little start. One unaccustomed to evening strolls, may be quite alarmed to see two balls of fire glaring at him from a thicket and hear the bushes rustled by an unknown beast, just as the sensational story writer depicts it. If he braces up his courage and finds his supposed enemy to be a peaceful calf or a sheep, he is apt not to rehearse his adventure when he returns to camp; nor will his heart beat quite so fast when next he disturbs the repose of flock or herd.

When one tires of seeking for Nature's treasures in the darkness, let him recline on some mossy knoll and perchance they will come to him. A bat may zig-zag over his head; a flock of sharp-winged night hawks hunt moths near by, or a herd of cattle, grazing in the cool of the night, may wander about him, while he listens to the luscious sound of their rough tongues cropping the tender grass. Nor are his eyes and thoughts confined to earth. In the darkest of clear nights, the constellations are celestial eyes returning one's own gaze.

To one fond of reverie the sky is always a good place for wool-gathering, but to watch a thunder storm on a dark and sultry August night is indeed much more than wool-gathering. The far away flashes over the western hills warn us of its approach, and soon we hear the low mutterings of the distant thunder. It seems to move faster as it nears us and its black fury creeps up toward the zenith, blotting out the stars one by one. Behind the dark veil the forked brilliancy gives us vivid glimpses of sky and earth and approaching tempest; while the crashes of rattling musketry and echoing artillery tell in ponderous voice the fierce battle of the elements.

Such scenes are deeply, truly sublime; but they are less typical of the true spirit of evening than the faint mystic voices that come to the listener on the still summer nights.

I recall a sultry September evening, when my hammock was slung on the border of a Green Mountain forest. I was listening to the melting notes of a white-throated sparrow, when my ear caught a far away rushing breathing sound, followed by a smothered thud. I had read with strange fascination, Thoreau's account of the fall of a tree on a still night in the forest; but I had never before heard it for myself.

A weird and strange sound it is, breaking in on the sultry stillness. I fancy that the ponderous hemlock, when smitten with age and decay, scorns to yield to the tempest's fury, with which it has battled and been victorious for a century. But as he feels that the time draws near when his aged frame must yield, his topmost branches wave gently for the last time in the soft breezes of sunset. As the evening hush and stillness fill the air and only the stars look down he relaxes the hold of his gnarled roots upon the soil or allows the decayed fibers of his trunk to give way. The great bulk sways, totters, and with a sad sigh goes rushing down to its final resting place in the forest mould. But anon the wood nymphs shall come and transform death to life, and the fallen trunk shall grow green with fern and moss and orchid.

The stroller who walks in the darkness must see with his feet to keep from stumbling. He must feel his way along the path and beware of hills and hollows. But when the moon sheds its silvery light on field and wood, walking is easier. The moonlight is a picture of daytime painted by an imaginative artist. Like the orb from which it comes, it is half darkness. However bright the one side of tree or rock appears, the other is hid in mysterious shadow. Objects in the distance, too, are only seen in faint and uncertain outline. These dim places are blanks for the imagination to fill with fanciful maybes. Bright moonlight is deceitful; it turns the commonest objects to gems. In it every dewdrop is a star, and the sand of the road is full of shining diamonds.

There are lights celestial and lights terrestrial, and though the latter be feeble compared with the former, they are by no means devoid of interest. Camped on the edge of a swamp in early summer, I have watched for hours the fireflies in their mazy dances; and as far as the eye could reach all was a field of flashing sparks.

There is will of the wisp, too, that strange uncanny phosphorence that has frightened superstitious people for ages, and given rise to many a ghoulish legend or ghostly tale. But while camped with a coast survey party on one of the peaks of the Green Mountains, I witnessed a light whose fairy-like beauty eclipses even the sparkling dance of the fire flies. Three of us one afternoon took a walk to the nearest village for supplies and mail. Our supper we carried with us, and at a point of the road which we judged we should reach by meal time on our return journey, we hid the luncheon in a raspberry thicket. Unexpectedly delayed we did not return to the spot till the darkness of a sultry, cloudy, dog day night had settled around us. We knew the locality by the bare branches of a dead tree near by, and now began a hunt for the hidden parcel, but the first one who parted the bushes gave an exclamation of delight. "I have found Fairyland," cried he, and bade us look for ourselves. Down under the rank growth, from decaying branches and twigs and leaves, sparkled and shone a thousand little gems of light. So might the lights of a great city appear to the observer in a balloon miles above. What possibilities did the imagination conjure up, of elves and gnomes, whose haunts we might be viewing, of a microscopic fairyland whose miniature beauties our eyes were too gross to discern. Nor had we perceived all that our eyes were capable of seeing, for now, as we looked closer, we saw that under our feet, all around us, and even in the mud, of the road, the faint lights shone.

So absorbed were we in this enchanting illumination that for a time our missing package was forgotten. But the hungry man of our party resurrected a match from a pocket which he had overlooked in his previous search, and by its light discovered the precious supper. I had often before noticed decayed wood glowing with a faint phosphorence, but never had I seen such an illumination from the forest mould. Nor was it confined to that spot. All the rest of the way to camp we walked upon a luminous pathway, and in the thick underbrush about us, millions of glowing lights that yet gave no light, formed an enchanting and never to be forgotten picture.

Strange and weird are the sights and sounds of evening! They have bred superstition, fable and mysticism; but in our more enlightened days they have an enchantment over the mind that, shorn of folly, leaves but a sweet peace.

And slowly a weariness comes over us. Happy is he who knows the perfect repose that comes to the healthy dweller in tents. Sight and sound fade to dim visions and whispers; and, on the wings of faint imaginings, the soul floats into that blessed dreamland where bright fancy reigns supreme, where all our hopes and wishes, though long since vanished in the mist of years, shall come back to us gratified at last.

CHARLES WHITING BAKER.

WINTER SNIPE IN COLORADO.—Yesterday, while taking a little jaunt on snowshoes with Mr. Slaymaker, a prominent attorney of this place, we ran across two Wilson's snipe, both of which we killed. Is it not usual to find them in this section, especially in the winter when the thermometer ranges anywhere from 20° to 30° below zero? We are located in the heart of the Rocky Mountains, at an elevation of 9,500 feet above sea level. When we first started the snipe they were feeding along the edge of the ice on a branch of the Animas River.—R. V. R. S. (Silverton, Col., Jan. 10). [It is not very uncommon to find Wilson's snipe in the Rocky Mountain regions in the coldest winter weather in the neighborhood of warm springs when there is open water and soft mud in which they can feed. As we have frequently remarked, the birds do not seem to care for the cold if only they can get enough to eat.]

BIRDS AND BONNETS.—Washington, D. C., Jan. 18.—Before furnishing the "Philadelphia correspondent," who "wishes to know of a heronry within 150 miles of that city," with the information which he desires, would it not be well to ascertain the purpose for which he seeks this information? Possibly he may be one of the unconscionable villains who "feather their nest" with heron plumes. I hope to see your editorials, concerning the nefarious business of slaughtering birds for their feathers, extensively copied in the newspapers throughout the country, but have little hope that any considerable public sentiment can be aroused against the business.—PATOKA.

ENGLISH SPARROW AS EGG ROBBER.—Shepherdstown, West Virginia, Jan. 20.—*Editor Forest and Stream:* I have taken and read carefully every line you have published since your first issue, and must say that while other publications of the same sort give an outline, you always give us the most complete information in regard to the sports we love so well. Hence I send to you for the information of all sportsmen, the following in regard to the English sparrow: Last spring I found a partridge (quail) nest with thirteen eggs in it. The old hen was sitting upon her treasures when a colony of sparrows discovered her nest, and it was not six hours before the little scoundrels had robbed the nest of every egg, and not only robbed the nest of its eggs but, under my own eyes, had eaten every one of them. I also witnessed the same flock of sparrows trying to break their way into some hen's eggs that were left in the nest as "nest eggs," but they were frightened off by the hens, else, I have no doubt, the birds would have succeeded in eating them. I have also seen the rascals wait patiently upon an old hollow pear tree for the northern sap-sucker to leave her nest, when they at once invaded her snug nest and robbed it of its eggs, which I saw them carry to the eaves of our house and devour at their leisure. I have been watching these little robbers for some years, and have come to the conclusion that they are the cause of the scarcity of quail in the Middle States. I would be glad to see some heroic measures taken to exterminate them. I am now watching a flock of sparrows and will let you know how they subsist through the winter.—E. D. BOWLES.

AN ALBINO QUAIL.—Yesterday Mr. H. C. Davidson received a white partridge, which was killed last Tuesday near Union Springs. It was presented to Mr. Davidson by Col. D. F. McCall, who says it is the second white partridge killed in the vicinity of Union Springs. The strange bird is perfectly white, without a colored speck or feather. It will be preserved as a curiosity by Mr. Davidson.—*Montgomery (Ala.) Advertiser.*

THE MASSACHUSETTS DINNER.

ABOUT eighty members and guests of the Massachusetts Fish and Game Protective Association gathered in the large dining-hall at Parker's last Tuesday evening to enjoy their annual dinner, President E. A. Samuels of the association acting as master of ceremonies. Among the guests were Lieutenant-Governor Ames, Hon. J. Q. A. Brackett, Speaker of the House of Representatives; Senator W. H. Tappan, of Essex; Representatives A. N. Doane, of Harwich; C. C. Smith, of Springfield; B. O. Atkins, of Provincetown; Cortez Allen, of Westport, and Isaac Young, of Wellfleet, and Fish Commissioners George W. Riddle, of New Hampshire; Herbert Brainard, of Vermont; E. G. Blackford, of New York, and E. A. Brackett and E. H. Lathrop, of Massachusetts.

Very appropriately, the menu was largely made up of fish and game, elegantly served; and its discussion occupied a long two hours.

In his address, preliminary to the after-dinner speeches, President Samuels said: Massachusetts, though far in the van in many ways, though she is and long has been the preceptor and model for other States in many things, is far in the rear of all of them in her laws for the protection of her game and birds. Our people are not yet sufficiently educated in right and wrong to obey our law, indulgent, too indulgent as it is. The calls made upon us usually demand instant attention. Complaints are made that certain dealers in Suffolk or Essex county are selling short lobsters; that other unprincipled persons are selling quail or woodcock or grouse at illegal times; that poachers are seizing Weymouth and Milton rivers, destroying the smelts by wholesale; that other poachers are killing deer illegally in Plymouth county; and others in Barnstable county, in defiance of the law, are slaughtering sea fowl with battery and sneakbox. All these calls upon us are urgent, and in responding to them we are obliged to spend our money and time without stint. As this work is done all over the State, its very diffuseness seems to prevent it from receiving the prominence and recognition that it would receive were the labor done in much more restricted territory, and for this reason we do not receive from well-wishers and friends that pecuniary assistance and encouragement which is often given other bodies whose doings are more noisily heralded. The work we have done the past year has been very considerable. What we have done we have done well, and I believe that we have convinced the poachers that the old Massachusetts Association not only still lives, but also that it is attending strictly to business. I have said that our law for the protection of our game and birds is a weak one; that section which relates to our song and insectivorous birds, our warblers and sparrows, and, in fact, all our native small birds, is simply atrocious. By its provisions almost any person can easily obtain a license to kill these birds, and so that he claims he is doing it for scientific purposes, there is no limit to his privilege of destruction. It is by these holders of licenses, largely, that the ten and hundred of thousands of our native songsters are annually destroyed to be sold and used for women's finery. This provision of our existing law could hardly be framed so that it would give our birds less protection, and it should have been expunged from our statutes long ago. On several occasions, both in and out of debate, have I heard members of the Legislature complain that our association comes to the General Court year after year, using up its time in "trying to have the game laws tinkered." Now it did not occur to those complaining gentlemen that instead of casting an odium upon us they really were giving the Legislature not the very best reputation for intelligence or sincerity of motive; for we have brought annually such convincing proof, such abundant evidence that our present law is a bad one, that the committee always has reported a new bill; sometimes embodying what we have suggested, sometimes not, but invariably recommending something that should take the place of the existing law, and the Legislature has failed to adopt it. Among the persons who opposed us last winter were market gunners and a few commission game dealers. The former struggled for the repeal of that provision of our law which says that possession of game during illegal times is *prima facie* evidence of illegal killing. You know and they knew that the moment that provision is annulled the law would be worthless; and this fact is so universally established that the pro-

vision appears in the game laws of almost every State in the Union.

Lieutenant-Governor Ames said he could not be considered as representing the Governor, as he was not out of the State, and, therefore, could only speak for himself. He could not say much about fish and game, but he could tell them about a half-pound trout which cost him \$600. He bought 200 trout and put them then into a pond which he had prepared, and after a time he found they had disappeared. On examination a pickerel was found in it. He was killed. Some 400 gold fish were then placed in the pond, and after a time he thought he would see if all the trout had disappeared. After draining the pond down as low as possible, and pumping out the water at a cost of \$500, he found one solitary trout. The original 200 trout cost him \$100, and \$600 was the actual cost of the last trout.

Speaker Brackett, after a pleasant opening, said that the association was entitled to, and should receive the encouragement of this State, and all other States, since their objects are similar—protection of human lives and interests on the one hand, and of the denizens of the forest, the air and the sea, on the other.

Senator Tappan, of Essex, a member of the Legislative Committee on Fisheries and Game, entertained the company with a narrative of adventures many years ago on the frontier, where elk, deer, bears, Indians, and occasionally army mules, were the principal kind of game hunted.

Commissioner Lathrop said that ultimately the game of the continent will be preserved in New England because of the lack of protection on the prairies, and the extermination by hunters and railroads. Legislation properly, honestly, legitimately enforced, is a practical question. We must meet the prejudices and antagonism of the farmers, educate them so as to overcome their prejudices and make them understand that their interests run parallel with ours. He heartily agreed with the President in his condemnation of the destruction of the insectivorous and song birds, and strongly urged efforts to destroy the interests of taxidermists, by whom so many birds are killed simply to furnish female adornments. And in that connection he suggested that the education of the community might very well begin at home, by instruction from the members of the association to their wives, sweethearts and daughters.

Hon. George H. Riddle, Fish Commissioner of New Hampshire, thought that the Fish and Game Association of that State had been of great advantage to it, and that more game now existed in that State.

Hon. Herbert Brainard, Fish Commissioner of Vermont, told many humorous stories, and what the Fish and Game Protective Association of that State had done.

Hon. E. A. Brackett, of Massachusetts, said that it is a patent fact that game will ultimately only be obtained in New England and the eastern protective States. The reason of this is the wholesale destruction of game life in the West. The buffalo has become almost extinct, and a tradition, the Rocky Mountain goat is being exterminated, and the farmers of the West annually destroy game bird life by firing the plains. The Legislature should give a legitimate and fair game law and enforce it. In considering such a law, it becomes largely a practical rather than a sentimental one. Opposition comes largely from the farmers who own the soil. Experience shows that they will be heard. They argue, not logically, that because they own the land, they own the game. The only way to avoid this difference is to educate the farmer up to the idea of the purpose of the game association. He believed that the insect-eating and song birds should be preserved. The business of every taxidermist in Massachusetts should be killed primarily. The people should be educated up to doing away with bird skins as ornaments. The speaker had noticed a woman on the Common the other day who had on her hat the head of a black-bird adjusted to the body of a dove. This is the quite usual consistency of milliners. They are millinery monstrosities. The game shot in Massachusetts should not be exported. So long as the markets are open, just so long it will be impossible to protect the game in Massachusetts.

Mr. E. G. Blackford, of the New York Fish Commission, said, in response to a call: "Regarding legislation for the protection and propagation of fish, I cannot do better than to quote from a recent article written to the *New York Journal of Commerce* by Mr. Wm. C. Prime, which exactly represents my view. He says: 'We who call ourselves sportsmen have extensive influence in literature, in books and periodicals. There is a very large population throughout the country, who have as great interest in game and game laws as we, who have little if any representation in the published literature of the subject. One class are in general residents of cities, towns and villages. The other class are residents of the country proper, many of them those on whose lands the game is bred, fed and killed. While both classes enjoy the pleasure of hunting and fishing, they look at game laws from different points of view. To the latter class the most prominent consideration is the value of game for food at home, or for sale as a country food or for product, while the prominent idea of the other class is to provide the best system of laws for preserving game, so that they, with breechloaders, may find an annual supply of game for enjoyment in shooting. Both regard the ultimate use of the game as for food, for no decent sportsman lives who kills game or fish unless they are to be eaten by some one. But one class think more about the game after it is dead, and the other more about the living game as something to be killed. * * * Obtain the intelligent voice and opinion of the people, city and country people, all who have interest in the subject of game and fish laws. Let all learn that their interests are considered; that they are represented in devising laws. Keep the laws scrupulously free from any special features for the benefit of any class of sportsmen. Diffuse intelligence and get information. Don't imagine that the wells of knowledge have been exhausted by you, and show others that they too have much to learn. Keep prominent the one great truth that the primary purpose of protecting fish and game is to furnish food and not sport. On this and no other ground can sport be defended.' As a member of the New York Fish Commission, I have always recognized this fact, and have regarded the propagation of fishes as a means of producing food for the people, sport being a secondary consideration. If fish are plenty the sportsman will get his share and the production of food fish is the only reasonable ground on which we can ask for an appropriation to continue our work. This appeals to the whole people and not to a special class."

Hon. Daniel Needham and several members of the society also made interesting addresses, and told fish stories.

The officers for the ensuing year are: President, Edward A. Samuels; Vice-Presidents, Hon. Daniel Needham, Walter M. Brackett, Charles W. Stevens,

Horace T. Rockwell, John T. Stetson, H. H. Kimball, Charles Whittier; Treasurer, Frederick R. Shattuck; Secretary, Henry J. Thayer; Librarian, John Fottler, Jr.; Executive Committee, Charles L. Woodbury, Warren Hapgood, William S. Hills, W. C. Taft, Edward S. Tobey, Jr., Edward E. Small, John P. Woodbury, Joseph W. Smith, John Fottler, Jr., B. F. Nichols, H. C. Litchfield, B. C. Clark; Committee on Membership, W. M. Brackett, H. J. Thayer, H. C. Litchfield.

SHOTS AMONG THE PRAIRIE CHICKENS.

HAVING little time and less money to spare last fall, but being—as usual—possessed of a very large desire to look at something over my gun barrels, fortune favored me one day late in September on meeting a friend who said: "I understand you have been out chicken shooting." I had been up north about eighty miles, where, I was told, I could find a few birds, and I found them few indeed—I tramped for three days—got up a flock of six and divided even with them, taking three for my part, and came home. "Yes," I said; "I have been out, but found few birds and no sport." "Well," he answered, "now I want you should lay out a trip and go with me." I told him I could hardly stand another trip. "But," said he, "this is my trip. You will go with me, will you not?" You would be almost surprised to know how little urging it required to induce me to say yes. As my friend had recently been presented with a fine Irish setter but had no gun, he insisted I should go with him and select an outfit, which we at once proceeded to do and accomplished satisfactorily.

After making what inquiries I could for several days I nearly satisfied myself that all localities within a few hundred miles had been shot over. As this was toward the last of the month and the law was off on the first, if we decided to hunt within a radius of four or five hundred miles we should be obliged to glean the fields where others had reaped the harvest; so we decided to start for Nebraska, hoping to get beyond the market hunters, especially those who had hunted for this market, for the woods are full of them all over the West, and they are wiping out the game of all kinds as effectually as a fire licks up the prairie grass. We bought tickets to Omaha, with a privilege of a rebate if we decided to stop anywhere this side; but after diligent inquiry at every possible point and opportunity we traveled across the States of Illinois and Iowa from east to west, receiving but the one answer, "The birds have been about all shot off."

Now this looks a little sad, that in two States, where but a very few years ago chickens enough could be found almost anywhere to make excellent sport, one should be told ere the first month of the shooting season is over, that "the birds have been about all shot off." It only reveals the truth that our game of all kinds is being rapidly and surely exterminated. I am aware that in the Great West everything is done on the "broad gauge" plan, and that a majority of sportsmen here think they must have a "pile" of game in order to get any sport out of it; but they will very soon have to moderate their desires and learn to get more sport out of less game.

We arrived at Omaha in the evening, and stopping over night were told that a great many chickens had been shot about 100 miles west on the U. P. R. R. We told our informant that we were not after chickens that had been shot, in fact we were not in the second-hand business at all, but had started for some locality where we could "sit down at the first table." The next morning we took cars and after riding about eighty miles in a northwest direction were landed at the little town of Bancroft on the edge of the Omaha Indian reservation. A few moments' conversation with the landlord, a Parker gun behind the desk and two Russian setter dogs under the table, satisfied me that we had made no mistake in our location. I being the commissary of the party, was ordered to make arrangements for our supplies during our stay, which I did by saying we should want a team at our disposal which would stand fire, enough to eat and a good bed to sleep on at night. "How long do you propose to stay?" asked the landlord. Our answer was: "Until we get satisfied." The price was named and that settled it.

About this time we were called in to dinner, where we were seated at a little round table with plates for four, two of which were already occupied by a middle-aged gentleman and a young lady. Do I hear some one ask, What has all this got to do with chicken shooting? Don't be in a hurry, young man; go slow and I will tell you all about it. After dinner my friend in looking at the hotel register, read the names immediately above ours: Mr. S— and daughter. As the aforesaid daughter was standing near him while Mr. S— had gone to order up his team preparatory to starting, my friend with all due apologies inquired of the young lady if Mr. S— was a native of the town of M—, State of Connecticut, and being answered affirmatively, my friend said: "Will you please tell him an old schoolmate would like to speak with him before he leaves?" Such is life; here were two men, past the meridian of life, who had never met or even heard of each other since the old brown door of an obscure Connecticut schoolhouse had closed behind them. One had served his country as a soldier through the civil war and bore the scars of battle; and both in mercantile pursuits had wandered west to meet here by the merest chance for the first time since they were boys together. It is sufficient for this narrative to say that Mr. S— ordered his team returned to the stable, and he and his fair daughter did not leave us until we had finished our week's sport, adding very much to our enjoyment.

Prairie chicken shooting is *par excellence* the sport of the lazy man; it is the easiest of all land shooting—first, because the field is always open, and if one is too lazy to walk he can shoot from a horse or wagon; second, because early in the season, before the birds are quite matured, or have been too often disturbed, they will lie in the tall grass as close and long as one wishes; and thirdly, because they make a good big mark, flying true and not too rapidly, and there is so much of them that one need not fear of blowing them all to pieces, leaving nothing but feathers in the air. If they happen to get up too near for a shot, you can measure your distance, knowing there is no bush or tree for them to dodge behind. Thus in all respects they make fine game for one not disposed to be in a hurry; and for these same reasons the gentle things are easy plunder for the unscrupulous market-hunter. Later in the season (or at the time we were out), during the last of September, the birds are fully matured, have become stronger flyers, and have been made a little more shy from an occasional shot among them, even in this far off locality, and will not always allow a dog to approach so near them; and if a bird gets up twenty-five or thirty yards away one has to wink his eye pretty quick in

order to stop him, for being strong they will carry off quite a weight of shot unless winged or hit in a vital part.

We shot mostly on the Omaha Indian reservation, which here is quite rolling, but excellent land covered with a heavy growth of prairie grass, and there being no fences we could drive at will in almost any direction. The Indians had here a few fields of corn and other grains, but there were thousands of acres over which we could ride and shoot at pleasure. Our wagon was a comfortable two-seated spring wagon with a park top which would carry four or six persons and our dogs, and we had a couple of ponies somewhat larger than jack rabbits for a team which would walk or run all day, but manifested a most decided disinclination to trot. We had taken two dogs with us, an Irish and English setter and our landlord had two Russian setters which were at our service, so we were pretty well fixed for an enjoyable time.

Our mode of proceeding was about this: We would get an early breakfast, load up dogs, guns, ammunition, lunch, a big jug of water for ourselves and the dogs; thus equipped our party of four, as reorganized, would point the ponies (which my friend named Splinters and Shanks) for the Indian reservation, when a ride of a little more than a mile would bring us on to good shooting grounds. We always drove to the leeward of the field over which we designed to shoot. Then we would get out, leaving Miss S. to manage the team, following slowly in our wake and occasionally marking birds for us, which services she rendered in an admirable manner, and with a new and delightful pleasure to herself. With the four dogs, the three of us keeping about two hundred yards apart and moving in line as nearly as practicable, each would generally find birds enough for his individual shooting without disturbing the others or placing them in danger; and when one's pockets became too heavy for comfort or convenience, he would fall back to the wagon and deposit his load. Occasionally we would all meet at the wagon, when we would water the dogs, sample our lunch, a cigar, look over our birds, and when we had finished our chat and were thoroughly rested, start out for another tramp. Thus we would put in the time till about 11 o'clock, when it was time to bundle ourselves and dogs into the wagon and drive back to the hotel for dinner, after which came cigars and usually a game of cards till about 3 o'clock, when we would find ourselves again seated in the wagon and on our way for the evening shoot, which usually lasted far into the "twilight soft and gray." To me there is a rare and indescribable delight in shooting on a still, quiet evening, watching the last rays of the setting sun, and the last faint glimmer of light as it quickly passes away under the gauzy curtain of night. (May the last days of all good sportsmen be as quiet and pleasant.) We always found supper awaiting us on our arrival home, when after caring for the dogs and shedding our hunting traps, and taking a good square tin pan bath, we, "us four and no more," would gather about the little round table aforesaid, doing ample justice to broiled chickens, flanked by vegetables, warm biscuit, pastry, etc. After supper we would look to the comfort of the dogs, and then seat ourselves for a cheerful chat and game of cards till bed time.

Should you ask me now how many birds we bagged, I could not tell; I kept tally till we got past 100 and then quit. We did not forget our friends or neglect ourselves, for we sent away a box each day, and kept a string hanging under the little porch of the hotel from which our table was supplied at each meal. Thus we passed the week, changing our route occasionally, always getting birds enough to make it enjoyable sport, never turning it into downright slaughter, and leaving birds "enough and to spare." And with it all we had a good time.

CHICAGO, ILL.

KENTUCKY GAME NOTES.

THE past season has been remarkably barren of sports. After a favorable summer and an apparent plentifulness of nesting birds, the most inviting covers were drawn blank. In few instances were more than two rounds necessary to insure an oiling up and "filing away" of guns. The heaviest mast the old-timers ever saw brought not a pigeon nor a squirrel. Streams that a few years ago furnished excellent sport will not now furnish bait.

A few sportsmen met in Louisville during the fall and evolved a new game and fish law, which Chairman Barbour has submitted to the Solons now in session at the capital; but precedents forebode trouble if not defeat. Without legislation radically different from past enactments, sports in the blue-grass belt will soon be an item of pioneer history.

Very few legislators appear to realize that rapid rotation is the prevailing practice; and no sooner than assured of their election, all foolishly set about a canvass for re-election which rarely materializes. Asinine pledges are given during canvasses, and coupled with an equally asinine ambition to go back, handicap representatives so heavily that intelligent and imperative legislation in the interest of game and fish is nearly an impossibility. Two or three instances of observance of our fish law of ten years ago demonstrated its wisdom so clearly that not a complaint was heard; but universal evasions of the penalties and the notorious participation in infractions of the law by officers sworn to encompass the observance of that law, soon resulted in a lapse to the old state of vandalism from which we were but temporarily lifted.

May the fates prosper the efforts of the gentlemen striving to benefit the ignorant and perverse, and their labors result in a law whose penalties will command its religious observance through a mortal fear of the consequences of violation.

During a late horseback trip to the mountains I was in the saddle the greater portion of seven days' traversing a finely timbered section, and though informed by every one that squirrels were plentiful I didn't see one except on the tables at two houses. One large bunch of mallards flying up Cumberland River and two beavs of quail was all the game that I saw, and every day that I was out was a good day for gunning. I was invited to occupy a deer stand within four miles of a country town, where two of five deer had been bagged a few days before, but business forbade. Within twenty miles of home I was shown the leg of a two year old doe, one of thirteen deer started in one drive.

A night at Uncle Joe's was next thing to one spent in camp. His reminiscences of large and small game captured within ear shot of the fireside beside which we sat were delightful. He told me that there are several bunches of deer in the country, and that on the Tennessee border beavs have increased so rapidly as to become seriously destructive of mountain sheep.

A little conservatism and concert would soon render the mountains of Kentucky as rich in sports as when Uncle Joe was a middle-aged man and I a boy, thirty-five years ago.

CENTRAL KENTUCKY.

KENTUCKIAN.

THE ADIRONDACK DEER.

Editor Forest and Stream:

A long letter originally printed in the New York Times has been copied into several of our journals. Its statements are so inaccurate and its reasoning so fallacious that I propose to go through it and show its worthlessness as an argument for deer hounding. The writer says:

Every year a larger number of people than went the previous year visit that region in search of health or amusement, or both, but they leave early in the fall, because the game laws are so framed that there is little to amuse them after Sept. 1.

This may be true of some parts of the Adirondacks, but it is not true with respect to the north side. Parties go into the woods as long as the weather is warm. Only the pot-hunter would stay later.

In so large and sparsely settled a region as that under consideration no law can be effective which does not appeal to the common sense of the majority of the resident population, for they and they only, can prevent the violation of the law by irresponsible people, and unless they will co-operate with the authorities the State cannot secure gamekeepers enough to prevent the hunters from breaking the law.

That is about so. If gentlemen (?) like "J. T. D." will violate the law, by all means repeal the law. Don't punish the offender because "the State cannot secure gamekeepers enough to do it." Poor little Empire State, how I pity you in your helplessness.

It had always been the custom until this year to use dogs in starting the deer, so as to drive them past the point where the hunter can get a shot.

It had always been the custom to run the deer to water and kill it with a club.

The deer can easily distance the dog, and by running to some brook or pond can throw the dog off the scent and escape, unless he happens to come to the spot where the hunter is waiting for a chance to shoot.

Yes, the deer can outrun the dog for a short distance. That only. The pure hound is too slow for this business. Guides use a mongrel—just hound enough to follow the scent. A dog that runs fast and gives little tongue is the best for deer. Why don't "J. T. D." describe the "spot" where the hunter waits for a shot? I will supply the omission. It is at a pond or lake on some bushy point. His guide is with him; his boat is hidden from sight, but where it can be pushed into the water in a moment. There is not a panther in the Adirondacks but will tree to a good dog in from five to thirty minutes; yet he could easily kill a dozen dogs had not nature given him a mortal fear of that determined animal. So with the deer. In his terror he flies to the nearest pond to "throw off the scent." He plunges into the water. Perhaps he has had a hard run for miles; perhaps the water is icy cold. There is no pity in the breasts of sportsman (?) and guide who, hidden on that bushy point, are waiting for it. As soon as the deer is out far enough so they can cut him off from the shore, they put out in the boat. What follows is cold-blooded, deliberate butchery. Swiftly, silently the boat approaches the victim. At a distance of ten or fifteen rods it is discovered by the deer, that now makes frantic efforts to escape. The powerful arms of the guide soon send the boat to within a few feet of the doomed animal. Then the Winchester is a favorite weapon. If the deer is not killed by the time the magazine is emptied, the guide holds it by the tail while the sportsman (?) beats its brains out with a club (carefully provided by the guide for just such an emergency).

Consequently not more than one deer in ten which are started is likely to come within shooting distance, unless the hunting party is a very large one. Even when the deer goes within shooting distance the hunter frequently misses fire and the animal makes his escape.

The sportsman (?) always employs a guide; the party generally consists of several persons. One guide puts out the dogs, and from his knowledge of the country and previous hunts of like nature can tell about where the deer will water, and the rest of the party post themselves accordingly. Probably not one in ten escape.

This kind of hunting gives employment to the greatest number of men and does as little harm to the deer as any method that is employed.

Yes, it gives employment to men, but is that employment an advantage to them after all? The guide keeps a pack of hounds (but no hogs) all the year; neglects all other work for perhaps a month's employment "hounding." As for the deer, it is simply death for it, and after being run by a dog for hours and then plunged into an icy lake, probably death by a club is a relief.

In fact, it is well known that every deer killed by hounding costs the sportsman at least \$150 in expenses for camping utensils, guides, provisions, etc., but the health and enjoyment derived from a life in the woods amply repay him for the expenses.

That is all moonshine. I have known parties to sell venison enough to pay expenses. I have known men who used to make up a hounding party every fall to hunt with hounds for profit.

The use of dogs, however, makes the deer wild, so that the pot-hunter who is shooting for the market cannot easily make his expense, and therefore last winter, by appealing to the sympathies of many members of the Legislature who were not familiar with the subject, some of the pot-hunters' friends procured the passage of a law prohibiting the use of dogs, and what was the result?

So FOREST AND STREAM is the pot-hunter's friend, is it? And the thousands who signed its petitions for a non-hounding law are all pot-hunters or their friends? So far as I know the result was to lessen the number of deer killed; it gave an outer who wanted a deer for camp a chance to kill it without a dog, and gave some people and papers a chance to howl.

The guides lost their usual employment in September and October because people did not dare to break the law, but they had to make their living and provide for their families; therefore, they were forced to hunt deer and sell the hides to the peddlers, as well as the meat, when they could do so. The hide of a good deer brings \$1.50, and the meat must be carried out of the woods on the hunter's back on the chance of finding some one to buy it. Of course, at these rates, it takes a great deal of hunting to realize \$2.50 a day that the hunter would have were he acting as guide for a sportsman, feeling sure of his money whether the sportsman had good or poor luck. The result of all this legal red tape has been plainly shown in the small section of Franklin county with which I am familiar, where up to the latest accounts 66 deer had been killed this fall, as against an average of 25 to 30 each year when hounding was allowed. Under the old law the deer were steadily increasing in the section I visit, and I never saw tracks of both large and small deer so plentiful as they were in the fall of 1884.

Perhaps the guide did lose his usual employment in September and October, but then he had a chance to harvest his crops. Does "J. T. D." mean to tell us as an honest fact that but twenty-five or thirty deer were killed each year by hounding in Franklin county? Why I know of a single party killing as many as that in a single hunt on the southern border of St. Lawrence. "J. T. D." never saw tracks so plentiful as in the fall of '84. Well; when the woods are full of hounds deer will make tracks, and plenty of them, there's no doubt about that.

Many persons suppose that the deer are caught and torn by the dogs, but this is a mistake, as a dog cannot catch a deer unless there

[Cut this out, put it on a blank, obtain signatures and send to your Member at Albany.]

A PETITION

For the Continued Protection of Adirondack Deer.

To the Honorable, the Legislature of the State of New York:

We, the undersigned, residents of _____ County, respectfully petition that the law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time.

(Signed)

acticle very modestly says "we do not profess to be thoroughly posted on this question but have noted down some of the arguments as given by the advocates of deer bounding." He is therefore excusable for the errors it contains. The cry of slaughter comes not so much from those that would preserve the deer as from those that want to kill them, but cannot because they cannot employ a dog to drive them into the water where they can kill them with a club as well as with a gun.

I wager that not one man in ten who is trying to make out that still hunting is so very easy and successful a mode of hunting can kill one deer during the whole month of November by that mode of hunting.

The assertion that more deer were killed last fall than there was in the fall of 1884, is erroneous. For so far as I can learn more deer were killed by still-hunters in the fall of 1884 than there was the present year. Add to what the still-hunters kill, more than four times as many more killed by bounding, and one must be well versed in mathematics to make the number less. Why still-hunters killed more in the fall of 1884 was because the weather was more favorable. I know what conditions must exist in order to approach a deer in the woods and must hold good throughout the whole woods. If more deer were killed last fall than there was the previous fall they must have been killed by the aid of hounds. It cannot be denied but what bounding was practiced to more or less extent in most parts of the wilderness. In the Beaver river country not less than 260 deer were killed in the season of 1884. Two hundred were killed by driving into the water with hounds and about sixty by still-hunting. Last fall less than sixty were killed on the same territory. Why was this? Simply because the law against bounding was strictly enforced. Other sections where the law has not been enforced many deer have been killed and credited to still-hunting. A year ago last fall a party from Jefferson county camped on Beaver river and killed about thirty deer, last fall they went on the same ground and killed four. Another party who the previous fall killed twenty-three, last fall did not kill any.

The writer says "that deer herd together on their feeding grounds in the open woods, where they are easily approached by the hunter, and sometimes the whole herd are killed." This is a great mistake. I was born and raised in the Adirondack wilderness and have hunted deer ever since I was allowed to handle a gun, which was not as the privileged lad of the present day, at the age of ten years, but at sixteen. This long experience has made me thoroughly conversant with the habits of the deer in our North Woods. They do not herd together at all, seldom more than two or three are found together and more often one alone. It is seldom that they come out into open woods during the day. In years when there are beech nuts they come out to feed on the nuts in open beech timber during the night, and almost invariably repair to the swamp and thicket before daylight. If when following a deer it chances to cross open timbered land where it can be seen at a distance, he is sure not to stop there, but seeks some thicket where he can see the hunter on his track and not be seen himself, and when he lies down almost invariably lies in a position to watch his back track. The author says "that where there are no dogs to run deer they become tame and are easily approached by the hunter." This is a most preposterous assertion; go into a country where they have never heard a dog or seen a man, they are the same. It is instinctive for them to be wild and wary. If the writer does not believe this I would like to have him come and try to get a shot at one. If he does not change his mind in less than a week's time he will differ from every one else that has tried it.

I deprecate the slaughter of deer by whatever mode it is done. But every thinking man must see that the chances for slaughter are an hundredfold more than by still-hunting, as it requires no skill or experience. The deer once in the water can be killed as easily as if tangled in the snow crust, and it is a known fact that deer always take to the water when pressed by hounds.

Still-hunting requires much experience, a great deal of traveling and an acquaintance with the habits of deer. Not more than one in a hundred that goes into the woods to hunt can kill more than two or three deer in one season and more that do not kill any at all. There are the Humes, of Diana, that doubtless kill more than is consistent with the preservation of deer. And now one Williams, from Pennsylvania, turns up that kills thirty-two deer, while his two companions who hunted as faithfully the same length of time and killed two deer each. It is alleged that he used a pointer dog. The author says that dogs drive the deer into the windfalls, swamps and thickets. This would be well if they would leave them there, but the hound will follow them through thick and thin until compelled to take to the water where the hunter is awaiting him. The writer says "that in European countries all the hunting is with dogs." This may be true, but do they drive them into the water and kill them there? No, it would be an unpardonable disgrace for them to kill a deer in that way. This is the very reason why hounds should not be used in our Adirondack wilderness—it abounds in lakes and ponds into which the deer are driven and easily killed. Were the hunters obliged to shoot them in the woods while on the full run as it is the only rule to do in the old country, then bounding would not be so destructive. The State of Massachusetts in her game laws does not prohibit the use of dogs but very wisely makes it a penal offense to kill a deer within a certain distance of water when driven by dogs. The writer says the venison will not be injured by the chase in cool weather. He is mistaken,

The worst hounded venison I ever saw was killed in November, with snow on the ground. It was unfit to eat when killed and in twenty-four hours was putrid and had to be thrown away. It is because they cannot endure the race so well that they take to the water so much quicker in cold weather. In view of this fact, if a season for bounding must be tolerated at all, it should not be in October, but the first ten or fifteen days of September. This would accommodate the greatest number of sportsmen, very few of which remain in the woods after that date. If it is later than this it will be entirely to the interest of pot-hunters. Besides, during September deer do not take so readily to water and thus the opportunity for slaughter by this mode of hunting would be entirely avoided.

It is self-interest that causes the hotel keepers in Franklin and Hamilton counties to curse the new bounding law. They all keep large packs of hounds and they bring revenue to their tills.

If the State of New York wishes to adopt measures to increase the revenue of a few landlords at the expense of the destruction of this most noble game in her great prospective park, she has only to repeal the non-hounding law and it will be speedily accomplished. Advocates of bounding claim it is a sportsmanlike way of hunting deer, I do not see it. It is not the part of a sportsman to kill his game by bellying its instincts, or depriving it of the means with which the creator has endowed it for its protection and safety. Let us see how bounding does this. The hunter puts the swift persistent hound on the track of the timid deer, his first instinct is flight, by this means he can escape his human enemy. After a long and frightful race failing in this, he turns toward the water where instinct tells him he can snrly baffle the enemy on his track. Half dead with fright and with protruding tongue and panting sides he arrives on the shore of the lake. The water, although cold and uninviting, is now his only place of refuge. He plunges in, and when well out in the lake should be safe, when a boat pushes out from the shore and cuts off its retreat. Witness his frantic plunges, this way and that, in his endeavor to avoid his now more deadly enemy, but it is of no use, escape is impossible, his pitiful bleatings for mercy are of no avail, he is ruthlessly murdered by the pot-hunter or so-called sportsman. His instinct has belied him, his fleetness has been taken away from him and like the deer in the snow crust or in the trap, can be killed with a club as well as with a gun. This is a method of killing deer beside which even the steel trap is a mitigation, for in his wanderings he accidentally steps in the steel trap and is caught. But in this great water trap you take advantage of his instinct and compel him to come in and be caught. I think that bounding deer should be prohibited on the ground of its cruelty and inhumanity, if it did not lead to speedy extermination, which it surely does.

Keep the non-hounding law where it is, add to it a more effective detective force, and if it be evident that by any other method of hunting too many deer can be killed, legislate some measure to curtail their numbers and plenty of deer are insured, sufficient for all reasonable demands of the sportsman and the tourist in our great Adirondack wilderness so long as it remains a wilderness. C. FENTON.

SHOOTING IN CUBA.

ABOUT twelve miles due south from Habana and two west from the railroad station at Rincon lies one of the tracts (1,300 acres) rented by the Habana Field Sport Club, and policed by its own special constable. These grounds inclose three large lagoons, favorite resorts in winter of coots, teal and other ducks, and their borders are frequented by snipe and other marsh birds. Thus they had been heretofore much visited by local hunters from many miles around, some of whom sought invitations from the club by offering to its members the attention to conduct them in excursions outside of this tract, where good sport could sometimes be had. Some of these attentions had been accepted from two of these parties, who professed to have two wonderfully fine retrievers for these reedy and difficult lagoons, and they were consequently invited to have a day with the club in these waters. The morning was cloudy and dark, threatening drizzling rain, which threatening continued to hover over us without, however, coming to a downright rain storm.

The visitors were supposed and indeed supposed themselves to be so much better posted in successful methods of the chase in this particular region that they were asked to indicate the most efficacious plan, and were shown the four boats belonging to the club, fitted with racks for blinding, etc. Flattered by such bowing to their superior skill, they were inclined to be a trifle boastful, especially of the superior qualities of their retrievers, which they said would be sure to follow the wounded birds into the most impenetrable reeds; and they chose for themselves to go in the boats, while most of the members present distributed themselves to favorable positions on shore to intercept the birds in their flight. But in the general eagerness to get into position, and the confidence that the visitors were so well versed in lagoon shooting, we neglected to mention to them that under the administration of the Field Trial Club there might be some slight changes that had taken place since its advent to these waters, for instance, that there were some birds there with peculiarities such as the visitors had never before seen, though they looked for all the world just like those they had so often found here. These were in groups in the furthest part of the larger lagoon, which the boats had to traverse slowly and with the greatest caution, following the rippling edge of its

is a heavy snow or unless the deer is disabled. Even then, if he should tear the deer's hide he would receive such a thrashing as would prevent a repetition of the offense, as a torn skin does not find favor with the peddler. The numerous extracts you have from time to time published (taken principally from the *Booneville Herald*) shows conclusively that it is the pot-hunter shooting for market who is doing the damage in the Adirondacks, and not the summer visitor, who is supremely happy if he obtains only one deer with branching horns, and is contented if he gets any at all. Compare this result with the story of the pot-hunter, published in the *Booneville Herald*, who shot sixty deer this season for market, or with one of the guides I know personally, who shot twenty-nine deer for market in one small section of woods where, as I said before, all the summer visitors could have only been able to kill from twenty-five to thirty in a season. One would hardly imagine that the matter of hounds or no hounds would have any influence outside of the woods, but the actual fact is that in Franklin county alone it was estimated by one of the papers published in Malone that the falling off in the number of visitors caused by the new law resulted in a loss to Franklin county alone of \$50,000. The matter entered into politics to such an extent that the senators and members were called upon for their views on the dog question as soon as they were nominated, and I understand that the Legislature to restore the former law. It is evident that the hunter for market does the most damage, and that men will not hunt for the market if they can obtain other and more remunerative employment as guides in September and October. After Nov. 1 most of these men settle down to winter work in the lumber region and do not hunt during the remainder of the year.

These being the facts, it follows that to preserve game as much as possible, and in order to interest the inhabitants in enforcing the law, a bill should be passed allowing deer to be hunted either with or without hounds during the months of August, September and October. It should be illegal to allow any venison to be sent out of the Adirondacks during the next five years. Such a law would not deprive the lovers of venison in our large cities of their favorite dish, because there is always an abundant supply from the West.

Now, Mr. Editor, what is the object of game laws? Is it to give employment to guides? Is it to fill summer resorts with visitors? Is it to give Franklin county \$50,000, or is it to give the game such protection as will enable it to hold its own against the raids of all hunters combined?

Up to the present season (1885) we had three methods of hunting deer, each popular with some, each more or less destructive.

First was floating. Destructive, if practiced out of season; otherwise not very. In order to float at all you must have a pond or stream, shallow, in portions at least, and containing food. Not one pond in ten is a "good deer pond." Then you must have a boat and experienced paddler. You hunt at night. Nearly half the nights are moonlight. Very few deer are killed then. Many other nights are cold, rainy or windy. The good nights for deer after Aug. 1 are but few, and I have lain in a boat all night, one of the hottest, darkest, stillest nights I ever saw, on a small pond whose shores were all cut up with fresh tracks, and not heard a sound of a deer. Again, after about two nights' hunting, and the firing of half a dozen shots, at such a pond deer get "educated," and will run and "blow" at the first glimpse of light or the least sound. I have "floated" many more nights without seeing a deer than those when I have, and I do not suppose I have killed over one deer to half a dozen nights. Wounded some, you ask? Well, yes; though no more than are wounded and lost in other methods. So floating is not so awful after all. Besides, there are various ways to stop floating, or at least make it unsuccessful. A single "protector" could keep a hundred ponds "doctored" so no deer would be killed. How? Just burn brimstone here and there around it, about once in two weeks. Or, if the guide is so disposed, a mistroke of the paddle, or a little lurch of the boat at the right moment fixes things, and the sportsman is none the wiser. The objection to "floating" is, that it is the favorite method of the guide and fisherman out of season. It is most destructive in the early part of the season, but the enforcement of the law, as it is, would stop that.

Still-hunting is practiced almost entirely in fall and early winter, and its advocates are mostly the guide and hunter who, after working for pay in the woods all summer, want a few days' sport himself. It seldom pays. Many times the game does not sell for enough to any more than pay expenses. Now and then an expert hunter can make money at it. There is but a short time for it, and the good days, like the good nights for floating, are few, and I suspect, if the truth were known, many deer that find their way to market as killed by still-hunting are, in fact, captured by hounds.

Now for bounding—the real nut we are after. Bounding can be practiced any day in the year. You may have thirty good nights for floating; you may have thirty good days for still-hunting; but you have three hundred and sixty-five for bounding.

Great ado has been made about the number of deer killed by still-hunting this fall. The case is simply this. Had bounding been allowed, these same deer, and many more, would have been killed in the summer.

What nonsense it is to say more deer have been killed because of the non-hounding law. An army is composed of artillery, cavalry and infantry. Disband the infantry, and do you make it more effective? We had three methods of slaughtering deer. We take away the most effective; the one, and the only one certain of success every time, be it wet or dry, hot or cold—and we are told that we must restore it as the only possible way to prevent the extermination of deer.

It is twenty-five years since I killed my first deer. I have averaged about one a year since. I have killed them floating, by daylight from a boat, by watching a pond or field, by still-hunting. I once helped kill one by bounding. So I know a little of all the methods employed. My advice would be, exterminate the mongrel curs that drive deer. Fine or imprison the so-called guides and sportsmen (?) who violate the law, stop the marketing of venison, and educate the public. Then stop tinkering the law, and enforce it.

CANTON, St. Lawrence Co., N. Y.

Editor Forest and Stream:

It is very exciting to hear the dogs driving deer, but the way the law is now the hunters in the country have a chance to hunt only by still-hunting, while the hunters back in the wilderness do hunt with dogs as much as ever. It seems to satisfy the hunters if they can have a few days' sport hunting deer with dogs in the fall, but the guides and hunters are all mad and they are bound to kill every deer that there is in the woods. They swear that if we people can't have any chance to govern our own game there shall be no game to protect. I think every county should govern its own game.

GEO. W. STOWELL.

SCHROON LAKE, Essex county.

The following reply to some of the false and silly statements printed in the press comes from one whose experience and character give weight to his words.

I notice in your issue of the 24th inst. an article headed "The great slaughter of deer last fall." The author of that

reedy shores, a favorite method of these parties being to creep stealthily upon the game, and a shot at a tempting group like that in view would amply repay them for an hour's tugging at the muffled oar. The boat of the club was to them also a novel method of approach, and novelty always has attractions of its own.

The creeping movements of the boats was keeping some birds in motion from one lagoon to another, and from one part to another of this lagoon, giving the members stationed about an occasional shot, but the parties in the boats were inclined to burn no powder upon the birds passing over them so intent were they upon the large bag to result from a single broadside into the tempting flock nestling in the edge of the reeds ahead of them. They had tugged at those oars until their arms were breaking, they had crouched down in the boat until the muscles of their lower limbs were cramped into hard knots, but they had arrived almost within shooting distance and were full of anxiety lest the game should flush at the last moment before they were at the desired distance. Five yards nearer and their labors would be rewarded by that triumph of skillful approach, which they were burning with desire to demonstrate to the city sportsmen as the *sine qua non* for these lagoons. In vain small groups of birds would pass over, and temptingly near to them. In vain *Rallus elegans* would flush from the reeds beside them; in vain *Fulica americana* would flee in couples and quadruples before them in near proximity, when an effective broadside was so soon to fill their bags to overflowing with *Querquedula discors*. In vain also *Purpuras gymnostoma* railed at them its angry protest against their presence in its favorite haunts, thus proclaiming it to the coveted game had they been of more timid stuff. Several pairs of wicked eyes were now turned upon the hunters from various stations on shore in keen expectation of the sport about to begin and almost simultaneously four streams of fire and smoke issued from that triumphant boat, introducing great confusion among the victims of the fusillade, but, strange to say, none of that large flock took to wing, but hovered in those reeds as if in overweening confidence in their hiding place from the terrible enemy before them. But only a brief respite was given them, for a second and a third volley was poured in upon them in rapid succession from the two breechloaders in the boat and Rose and Fetchum were launched out to gather in the dead birds. What a proud moment for these two rustic sportsmen to show off their superior tactics to their city brethren. Never before in all their shooting experiences had they got away with a whole flock, not one escaping to tell the horrid tale. But alas! In spite of their pride of great experience in the ways of the anatide that day, they had been destined to receive a new revelation in natural history. To their deep chagrin Rose and Fetchum belied the fame they had given them. They returned empty-mouthed to the boat. They would not retrieve those ducks. It then dawned upon them that there was something strange in this affair, and moving forward with the boat they were initiated for the first time into the mystery of decoys, they themselves having been decoyed to this advanced knowledge of "tricks that are (not) vain." These ducks had not been bred in northern solitudes. They were village ducks, bred in Westport, N. Y. Oh, ye shades of Nimrod! judge of the confusion of mind that overwhelmed these two at this humiliating discovery. Instead of the exhibition of superior intelligence, it suddenly flashed upon them that they had effectually exposed their ignorance of modern methods which had demonstrated their efficacy upon themselves in a striking manner.

Though no members of the club had sat behind the stools on that day, still they had made a fair bag, which was duly divided among all, their visitors included. Of course they were profuse in regrets that they had forgotten to mention to the visitors the little circumstance of the presence of decoys in the lagoon, as they supposed they knew all about such little incidents of duck shooting, and the visitors were as fluent in their protestations of sorrow at their blundering destruction of the property of their entertainers, which had at least been deteriorated by the numerous discharges of large shot. They were freely forgiven in consideration of the lively entertainment the incident had afforded, and which will long hereafter be remembered as a charming reminiscence of the association, furnishing, as it did, long and agreeable exercise to the diaphragm and abdominal muscles of its members.

NEMO.

HABANA, Cuba, Dec. 26.

PASSAIC COUNTY ASSOCIATION.

Editor Forest and Stream:

I have read with very little satisfaction the proceedings of some of the game protectors against violators of the law in New York State. I should think that these paid officials ought to have made a better record, considering the facts that they have a large area of country to look after and that the reports were for a whole year. Compare their reports with the following, the record of the Passaic County Fish and Game Protective Association for the last month, December:

Abraham Terhune and Thomas Finnegan, fishing with net, \$20 each and costs. Edward Ryerson, shooting black bass, \$20 and costs. Jacob Ryerson, maintaining eel weir, thirty days in jail. James Ryerson, fishing with set lines, prosecution abandoned on account of sympathy for family. Frank Kastell, same offense, thirty days in jail. Thomas W. Garrison, same offense, prosecution abandoned on account of insufficiency of testimony. Barney Palm and Mike Helson, maintaining eel weir, \$20 each and costs. John Milligan, same offense, prosecution abandoned on account of sympathy for family. Whitfield Little, John S. Schuster and Thomas Van Orden, unlawfully killing rabbits, \$20 each and costs. William Snedeker, trapping quail, \$20 and costs. In the cases of the eel weirs mentioned the weirs were all destroyed. The fines were not collected in every case, but none got off without paying at least the larger portion of the costs.

In addition to this the Association has almost perfected arrangements for stocking Greenwood Lake and other Passaic county waters with alewives, and has discussed plans for the improvement of the shooting and fishing in the county. This is one month's record, and December was by no means an exceptionally good month. The Association consists of fifty-five members who pay fifteen cents a month as dues, and nearly all the business of the Association is transacted by the secretary. One association of this kind with a few live members and a handful who pay dues is worth a half a hundred hired game protectors. Still, sportsmen do not seem to see the benefit—I may say necessity—of organizing. A little energy and a little money go a great way when properly applied.

INITIATION.

Editor Forest and Stream:

Time has dealt kindly with me, and I am almost astonished that it has me hovering around in the vicinity of fifty. It seems a long, long time since I shot and killed my first deer, when I was about fourteen. It was in the mountains of Huntingdon county, Pa., and not more than two and a half miles from where I was born, and I have been shooting ever since. How vividly we remember important boyhood exploits. It seems like an occurrence of but a few weeks ago. I remember it all—How I coaxed my father and uncle Sam to go along and how I rubbed up the old smoothbore rifle that no one else would think of taking to the woods to shoot deer with; the sleepless night before the start; the early start; the hunt begun along the south side of Tussey's Mountain; how I watched the man above me and the one below me more than I watched for deer, afraid of getting lost; how while looking for the hunter below me I saw a magnificent buck loping along not thirty yards down the mountain; how I bleated and he stopped broadside; how my gun was discharged and when the smoke cleared away I had a palpitation of the heart and found that the buck was wounded; how I yelled like a Comanche, and how the man below me, Sam Stryker, came up, tried to shoot him in the head to save the skin and venison, and instead shot him in the nostrils, and how the buck made off down the mountain; how I wanted to follow him, with my gun empty, of course; how he would not let me, saying that the deer would stop in a short time; how we waited until my father and uncle Sam came to us, when we all went in search of his buckskin, there being no snow, no dog—and no buck until his skeleton was found nearly a mile from the scene of the tragedy the following summer. Oh, how well I remember how I mourned the loss of that deer. It is hardly necessary for me to say that I thought more of the old smoothbore after that day's hunt than I ever did before.

Since those days I have hunted in Michigan, Minnesota, Dakota, Iowa and Pennsylvania with varied success, but none of my many outings ever gave me as much pleasure and sorrow combined as the first deer hunt on Tussey.

SHONGO.

THE DUCKS OF THE PACIFIC.

TODAY my thoughts have gone back to the day last February I spent with Walter N. Shoemaker, of Chicago, among the ducks, quail and jack snipe in El Cajon Valley. We left the city on Wednesday morning for a twenty-mile drive to that favorite hunting ground, famous for its raisins and oranges, its immense ranches, and last, but not least, its great coveys of quail.

Nine miles from town our dog flushed a covey, and leaving the team with Shoemaker, Jr., we proceeded to bag a couple of dozen, which afforded us about an hour's sport. Driving on ten miles further, we arrived at Ben Hill's ranch, on which was a laguna covering ten acres of ground. Looking down on the water from the hill, we could see thousands of ducks feeding. We halted right there. Going down to the edge of the water we found hundreds of tumble weeds, which make the finest blinds in the world. Quickly constructing a blind I stationed Mr. S. within it, and, telling him not to fire until I was in position, I went down the other side so as to approach the ducks from the trees on that side, as they had floated down to the further end of the laguna on seeing us. Crawling up to within gunshot of the water, I cautiously rose up and—whiff, whiff, went dozens of wings, as mallard, sprig and teal jumped frantically into the air, with quack, quack, as I poured right and left barrel into them and succeeded in bringing down several, among them a royal old greenhead. Bang, bang, went Shoemaker's gun, telling me that the birds were circling over him, and I had hardly time to slip two more shells in my gun when s-h-c-w came a dozen or more sprigs right over my head down into the laguna; and two more came tumbling down. Still I could hear Shoemaker firing up at the other end. We stayed there until I had bagged twenty-seven ducks, as nice and fat as one could wish for. Then, as the ducks had about all left the laguna for the smaller ponds down the valley, we thought it best to hunt them up. My friend had secured about as many as I had, and we felt highly elated with our success so far, for it was only about noon and we had a fine bag already.

Driving down the valley I spied through the trees a dozen big ducks sitting on a sandbar about the middle of the river. We again left the team, and after making a detour crawled down to the edge of the river and found ourselves right opposite the ducks, which proved to be mallards. We sat there admiring them until Shoemaker got uneasy, and rousing up we discharged a couple of barrels into them and two more as they rose in the air, and we had the pleasure of retrieving half a dozen as fine greenheads as I ever saw. Then we went back to the wagon and drove up to Mr. Winchester's ranch house, about a mile further, to get feed for our team and eat lunch. Asking the only man in view if he could accommodate us with hay, we received a negative reply, and were also informed that Mr. Winchester had left orders that no hunting was to be allowed on the ranch. I looked at Shoemaker and he at me, and as I knew of a splendid duck pond on the ranch which I had hunted before with good success, the news was a damper.

"Well, it can't be helped," remarked Mr. S., "but it's rough on the horses, as we brought no feed." And I felt considerably irritated, for Californians, as a rule, keep "open house." We talked the man into giving our horses some feed, however, and he explained that some weeks before that a couple of sportsmen (?) had visited him, and on going to the ponds had shot into his hogs which were feeding in the marsh, had scattered shot among his stock, and on being remonstrated with, had consigned him to perdition, whereupon he made up his mind to stop all hunting. We told him that, of course, we would respect his right to keep us from hunting, and at the same time expressed our opinion rather strongly concerning men who would act as the hunters aforesaid, as such men always did more damage than they did good. On leaving the ranch we had gotten as far as the gate when he called to us and said, "If you will drive down the fence half a mile you'll find some good duck and snipe grounds. Don't shoot any of the stock, and you can kill all the birds you wish. Good bye," and into the house he went.

"Well," said S., delightedly, as I whipped up, "that fellow's a jewel after all," in which opinion I heartily coincided. Down the fence we drove and ere long came to as pretty ground as one would wish to see. Filling pockets with shells, we had not tramped twenty yards from the carriage when *scaupe* went a longbill and bang went Shoemaker's Pieper; *scaupe scaupe*, and up jumped two more, and the fun

waxed fast and furious. Shoemaker held his own royally, and I did the best shooting I ever did in my life, scoring thirteen straight without a miss. We left that snipe ground thoroughly satisfied, and all our hunting was done inside of three acres of ground. It was the best snipe ground I ever saw, and I think my friend S. will say the same if he reads this letter. As the afternoon was waning we took the road toward home, and after getting into two or three more coveys of quail and filling our coats we reached San Diego about 8 o'clock in the evening, thoroughly satisfied with ourselves and the day's sport.

We brought in somewhere near 150 pieces of game, numbering duck, jacksnipe, quail, dove, rabbit and jack rabbit.

Our game this season is fine. Ducks and quail are here by thousands, and we anticipate many a day of fine sport among the geese, which do not arrive here until after the New Year. Three market-hunters, located twelve miles from town, are shipping on an average seventeen dozen quail daily, and still they seem to be as plenty as ever. Black brant are not so plentiful on the bay as last year, and the duck crop I think is hardly as large, but we are having glorious sport nevertheless.

AD. B. PEARSON.

SAN DIEGO, Cal., Dec. 18, 1885.

MICHIGAN DEER.—Escanaba, Mich., Jan. 16.—My informant was mistaken about Lud Leopold shooting a man at work. He raised his gun to do so when his hunting partner stopped him; Leopold thought it was a bear. Not long after that Leopold shot his hunting pard and killed him. When arrested he waived examination and was tried in Circuit Court and found guilty, and was given one year or two hundred dollars fine. I hear he paid the fine. Cheap. Two years ago next month I saw 1,400 deer skins at Escanaba, some red coat, some blue, some heavy gray, some of the latter quite green, a large share of them killed out of season. One week later 1,400 more of the same kind were brought in and shipped away. All of them came from Manistique. This fall I tried to get two deer heads for a friend in Buffalo but could not get them as the hunters only bring out the saddles as a general thing.—BLANK.

FOOLED BY A GREBE.—One day I was rowing leisurely, when I saw a red-necked grebe. The grebe appeared to be pretty far off, but I thought I would risk a shot, so I blazed away, and the shot took effect. I paddled up and secured the bird and laid him on the bottom of the boat. He was a fine specimen, and I was glad to get him. Then I turned the boat toward home. I had got about half way there, and had turned half round in my seat to see my way among the rocks, when I heard a splash. I looked round just in time to see that grebe's tail disappearing in the briny deep. I never got him again. He conducted his operations very well indeed, and I supposed he deserved to get away.—J. WENDELL, JR.

VIRGINIA.—Lynchburg, Va., Jan. 20.—The weather with us was open and beautiful until the 8th inst.; indeed we thought we would have no winter at all. But on the 8th a snow storm and the cold wave struck us at the same time, and for a week the mercury was at and below zero. It was the coldest weather experienced here for a long, long time. From the most authentic sources I learn that the game, and specially our partridge (quail), escaped and are now doing well; but it is reported that in other portions of our State near Staunton the game birds fared badly. Bob White is a sturdy little fellow, and if given half a chance will come out all right.—W. A. S.

CORINTH, Miss.—I left New York on the evening of the 10th inst., and did not reach home until Wednesday at 7 o'clock A. M., nearly twenty-four hours behind time. Was stuck in three drifts before I reached home. It was fearfully cold, and we had a very disagreeable trip. The weather was 6° colder here than it ever has been within the memory of the traditional "oldest inhabitant," or any other man. Ice six inches thick. The cold wave reached this place Thursday morning and New York Friday night about 11 o'clock, as I can testify. Has been cloudy with a cold rain almost every day since last Thursday, and fearfully muddy.—GUYON.

KANSAS RABBITS.—Paola, Kansas, Jan. 15.—One of the late hunting and trapping books says that in hunting rabbits the runways should be manned, the bound turned loose and silent watch kept for the rabbit. This may do very well in some States, but in Kansas all that is required is a small dog, a good hickory club and two or three inches of snow and a person can return at the end of an hour with fifteen or twenty rabbits.—R. H. C.

NEW YORK ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—The officers for 1886 are: President, Robert B. Roosevelt; Vice-President, Benjamin L. Ludington; Secretary and Treasurer, Thomas N. Cuthbert; Counsel, Charles E. Whitehead; Executive Committee, Stephen A. Main, Alfred Wagstaff, Henry N. Munn.

STONEHAM SPORTSMEN'S CLUB.—Stoneham, Mass., Jan. 21.—At our regular meeting, Jan. 7, the following officers were elected: President, P. H. Horne; First Vice-President, Elbridge Gerry; Second Vice-President, A. O. Emerson; Secretary and Treasurer, H. P. Brett; Trustees—Geo. Coburn, W. P. Howe and H. H. Dane.

THE FOREST AND STREAM'S GRIZZLIES.—Santa Barbara, Cal., Jan. 11.—Put 'em (the grizzlies I mean) in Central Park garden with FOREST AND STREAM tag on them, and like designation prominently on their house (or den). You cannot make a better contribution to curiosity and popular information.—W. N. B.

PROGRESS, N. O., Jan. 22.—We have been having some very bad cold weather here, but it is fine now. I have carefully examined the grounds in this vicinity, and am pleased to find the birds all right. I have a couple of basset hounds, and they are having lots of fun with the cotton tails.—T. M. ALDRICH.

BLOOMING GROVE ASSOCIATION.—Officers for 1886: H. W. Nason, President, 74 Broadway; Spencer M. Nash, Vice-President, 23 West Thirty-third street; A. J. Post, Treasurer, 102 Broadway; N. S. Smith, Secretary, 95 Nassau street.

TRAJECTORY TEST.—The shop number of the Bland rifle tested at our rifle trajectory tests was 10,263.

Sea and River Fishing.

ST. LAWRENCE RIVER WORK.

W. M. STEELE, State Game and Fish Protector at Clayton, makes the following interesting annual report of the work on the St. Lawrence River and elsewhere in Jefferson county:

Clayton, Jan. 2, 1886. Gen. R. U. Sherman, Secretary Commission of Fisheries, New Hartford. Dear Sir: I beg to submit my report for the year 1885, as requested by you. My entire time has been given to the protection of fish and game, and I have had no other business, except that for a period of two weeks, by official permission from you, I gave my attention to personal matters out of my district. My memoranda shows that I was actually engaged two hundred and one days. The details are attached to this report. As you are aware my time is almost entirely devoted to the river St. Lawrence. It is long and wide and filled with islands, and affords the very best chances for violators of the fish and game laws to work undiscovered. I think it a low estimate to say that I have traveled more than four thousand miles on the river during the year. My skiff has been in almost constant use in searching for illegal nets, but at times I have used a sailing yacht loaned me for the purpose. During the year I have been in constant consultation with officers and members of the Anglers' Association of the St. Lawrence River. I have investigated every complaint and watched many nights, lying in my skiff, for the purpose of discovering violators of the law and illegal nets, which it was impossible to get at in the day time.

The illegal fishing has been very great in the St. Lawrence River in former years. From Tibbett's Light at the source of the river at Lake Ontario to Chippewa Bay, some fifty miles below, there have been for many years men who have mainly made their living by fishing with nets. It has been estimated that until the Anglers' Association commenced their work, and prior to my service under the instructions of your Commission, there were over one hundred tons of game fish taken from the river annually. But that is a thing of the past. Nets and netters are rapidly disappearing. It is a fact that until three years ago the laws were not known to a half dozen people living by or interested in the river. I have exerted myself to the utmost to make the laws known, by the distribution in pamphlet form of a copy of the game laws of the State and by posters specifying their application to the river, and I believe that they are now understood by all who are interested in the river or who live by its side, whether tourist, resident, boatman or guide. During the year I have destroyed 62 nets, found in illegal use at various points in my district, but mainly taken from the St. Lawrence. These nets I have pulled from the water, getting such help as I could from time to time. I estimated the value of the nets at not less than \$1,500. In each case they have been burned in accordance with the law. During the last three months of the year I was assisted by Daniel Staring, of Alexandria Bay, who was employed by the Anglers' Association at their own expense. He performed valuable services, and worked earnestly to rid the river of the murderous nets.

I have had no opportunity for persecuting offenders. The nets are set under cover of darkness and are emptied in the darkness. The owners will watch them when they are being taken, but will not claim them. It is almost impossible to prove an ownership. They simply look on and see their property taken away, and calculate the chances of profit by replacing them.

I believe that the law passed during the last session of the Legislature which forbids the "having in possession" of black bass and other game fish will be of very great benefit the coming spring, and until the time that the close season ends. The law formerly had merely conditioned that certain fish caught in the waters of the State should not be had in possession. Canada fish were sometimes secured, to be sure, and shipped by the fish mongers to this region, but in spite of the most incessant watching, many tons were taken from our waters during the close season, called "Canada fish" and sent to the market under this misnomer. It will be very easy under the law as it now reads to prevent this.

The Canadian authorities have taken up the matter of protecting the game fish of the river from capture in nets and have greatly improved their laws and increased their protective service. There have been large numbers of nets destroyed on the Canadian side of the river by their officers and by their sportsmen. I think we can feel sure that entire co-operation from their side of the river will be extended to us. With the work that is now being done it can hardly be otherwise than that the fishing in the river will become even better than it has ever been before. I shall in the future, as I have in the past, permit no opportunity to punish offenders to escape me, by working and watching at all times.

I have no suggestions to offer as to the laws or any needed reform in them from the standpoint of this part of the State or the region to which I have been assigned to duty. I believe that we have enough laws, and in fact too many. They need, if anything, simplification and condensation; and if those on the statute books were but thoroughly lived up to by the people, and enforced by the magistrate when complaint was made, they would be all sufficient to properly and thoroughly protect the fish and game of the State.

In ridding the river of illegal nets too much praise cannot be accorded to H. R. Clarke, a summer visitor from Jersey City, N. J. His steam yacht goes daily to many parts of the river, and himself and his employees omit no opportunity to pull nets. He has permission from the Canadian authorities to remove nets from their waters when they are illegal, and he has during the past year made many raids on their side of the river as well as our own. A large number of nets were thus destroyed in addition to those named in the report.

The nets captured were located as follows: March 6, Clayton Bay; 30th, Flynn's Bay; April 25, French's Creek, 1 fyke net at each; May 9, Salmon River, 9 fykes, 10 gills, one trap and two sieves, in five days; 16, Clayton Bay 1 fyke; 19-20, Pulaski and Salmon River, 4 fykes in three days; June 10-20, Chippewa Bay, 3 gill nets; 24, Chimney Island, 1 gill; 29, Blanket's Island, 1 trap; August 21, Carlton Island, 1 fyke; 25-27, Blind Bay, 1 fyke; September 13, Eel Bay, 2 gills; 24-25, Carlton Bay 10 gills; October 9, Cape Vincent, 200 rods gill nets; 15, Cape Vincent, 200 rods gill nets; 16, Miller's Bay, 200 rods gill nets; 19, Chippewa Bay 3 trap nets; 20, Chippewa Bay, 100 rods gill nets; 27, Miller's Bay, 100 rods gill nets; November 4, north side Grindstone Island, 45 rods gill nets; 11, Goose Bay, 100 rods gill nets; 14-18, Cape Vincent, 200 rods gill nets; 26-28, Eel Bay, 40 rods gill nets; December 1, Eel Bay, 1 gill net; 2, Hickory Island, 25 rods gill nets.

In my work during the year, I have invariably and at once investigated any complaints, rumors or information as to nets. You can readily understand that much work was performed in this way of an entirely useless nature. Some one would say that there was a net in such a place. It might be honest information, or an honest belief, but it has not always been so. When there have been no complaints to investigate I have created work by visiting suspected places. All of which is respectfully submitted. W. M. STEELE.

The *Utica Observer* say that Commissioner Sherman is exceedingly well pleased with the above report in form and substance. It shows what he particularly wishes to demonstrate—what thorough work may be done when sportsmen boldly and actively take hold of the work and thus strengthen the hands of the law and its officers. Special Protector Staring will continue to labor with State Protector Steel this season, under the employ of the Anglers' Association. Dr. Sargent, of Watertown, President of the Jefferson County Fish and Game Association, Captain Tyler, of Henderson Harbor, and others interested in fish protection in the harbors of the lake, are hard at work and will complete the chain of fish protection on the St. Lawrence and Lake Ontario in this State, this year. Fish thieves will have but little comfort in 1886, or later, with all these active men watching them.

FISHING AT KEY WEST.

It is a cold day in Key West; and when I say cold I mean it, although were I to give the exact height of the mercury, I doubt very much if you good people in New York and further north, who are toasting your toes around the cheerful holes in the walls and floors, through which the hot air pours, would agree with me. It is just 50° Fah., with a thirty-mile-an-hour zephyr coming straight from the Arctic circle, a cloudless sky and a bright sun, in which, screened from wind, the thermometer I have just had put out to try it, soars upward to 70°. It all depends upon the route by which you reach a temperature, whether it shall be considered hot or cold from above or below. I have in my time found it a little coolish at 80° and warm at 32°; the former in lots of places all over the world, in Woosung and Whampou, China; in Batavia and Singapore, India; in Bahia and Rio, South America; in the Red Sea and in Aden, Arabia, where for days at a stretch—and nights too, for that matter—a thermometer whose marks stopped at 100° would be useless; I have found the latter in our own temperate zone, in a sweet village, in a valley, which honored me by allowing me to be born there, a New York Central village, which possesses, according to the statement of the oldest inhabitants, "the finest climate in the world, sir." So at Key West where as a general thing the winter weather is just right for outdoor life, in autumn clothing, for one extreme, white pants and straw hats for the other. When the day, one winter years ago, the thermometer marking 44°, established for it a perpetual record as the cold day, when not a dozen times in a score of years has it marked below 55°; 50° is indeed cold.

But this cold day has furnished an incident very much out of the common, and one that I think worthy of being recorded.

Although it is cold, and the water is rough, and it is Sunday, fishing is going on at a very lively and successful rate, and by a method differing from all accounts of "Al Fresco," Henshall, "Nessmuk," and other Florida anglers, whose contributions have enriched your columns. From the various wharves a great variety of fish are being captured with scoop nets. One bucket full that I examined contained not only the ordinary fish which we catch daily with hook and line, namely, "grunts" (hog-fish), yellow tails, snappers, groupers and porgies, but others seldom so taken, and some not at all; of the former pompano, and of the latter paintfish, I recognize. And one, a new and strange fish to me, of which I send outline sketch, shaped somewhat like a pompano, but of dark purple color, and armed on both sides at the intersection of tail and body with a fang-like weapon. The paintfish is an unwholesome, bilious-looking fellow, of green pink, pale yellow and blue tints, with a remarkable mouth, made evidently to detach and crush shellfish. The lower and upper jaws project and form each a continuous sharp, crescent-shaped tooth. These fish are swimming around listlessly on the surface, evidently chilled nearly to death, the temperature of the sea being 52°, at least 10° lower than usual. And in addition to its low temperature it has, I should judge, an extremely unusual amount of lime stone rock and sand mixed with it, its color being that of thick whey, and my bath tub this morning, an hour after being half filled, had a bottom deposit of fully an eighth of an inch of sand.

The cause of this unusual state of affairs is a strong norther, which, beginning on Christmas morning at about 2 o'clock, gradually freshened into a strong gale, which just now is moderating after over sixty hours of stirring up things. Although called a norther, the gale has been actually from northwest, gradually hauling to north, where it now is, and dying out; and, except for the force of the wind, roughness of the sea and fall in temperature, which before was well up in the seventies, more beautiful weather could not be conceived of. There is one peculiarity about these northers; no two are alike, and no description of the approach of one would give any valuable data by which to recognize in time that of another. The oldest pilots and fishermen admit that the times are out of joint. Previous to this year they could foretell with considerable certainty the weather. This year all signs fail. During the first fortnight of our stay we were hardly free from one of these storms, our heaviest being the storm of Nov. 2 and 3, which wrought such havoc at Aspinwall, when with us the wind got up to fifty miles an hour. That began, as this one did, at the northwest, hauled just the same, but instead of the bright, beautiful, dry weather of this one, it was accompanied by the usual weather of a storm—clouds and drizzling rain. Another came on us in a calm, the air hot, sultry and laden with moisture, from a black bank to the north northwest there sprang one single, intense flash of lightning, accompanied, not followed, by a tremendous thunder blast, and in ten minutes a gale was blowing, the thermometer dropped ten degrees and a perfect deluge of rain fell for several hours, with no more electric display. This was the last one of any weight for over a week, and it seemed as though that shower had wrung every drop of water out of the air, and since it we have had fine weather.

These northers seriously break up fishing for amusement. One does not care to go far from home in an open boat, with no fair prospect of getting back—without having suffered considerable hardship and exposure, not unattended with danger. So before a norther we don't care to go. During one we couldn't if we would, and after one there is but little chance of success, for the water has grown cold and the fish don't bite well. Until to-day I believe the assertion of the fishermen, that the fish during a norther run off the reefs

and into the gulf stream to keep warm; but to-day's experience teaches that certainly a great many remain and become more or less torpid; and even were they here in plenty and vigorous, the water is so discolored that a trolling bait is probably invisible to them as it is to us dipped an inch under. We have not been entirely deprived of the amusement. There have been some good days, and we have made the most of them. Anchored anywhere on the reefs with rock bottom and no grass below us, fishing is made easy, too easy in fact, for there is but little of the element of chance and none of that of skill in it. Baiting with "sardines," crawfish, conch or corned kingfish, named in the order of their value, little time is lost, and a bucketful of delicious pau fish is soon obtained. In order of value for the table there are pompano, grunts (called hogfish in the Chesapeake), snappers, groupers, porgies, yellow tails, and now and then a hideous yellow and black spotted eel, with an enormous mouth garnished with many sharp teeth. Now and then a young shark interrupts the proceedings. I don't know what the fish called here sardine is. They are in myriads in all the shoal quiet spots near shore, and are the young of some one species. With a mosquito bar net we catch all we want easily, and cooked as whitebait, they are not bad. They would elsewhere be termed minnows, of from one to three inches in length.

What I describe may be called home fishing. Anywhere within three hundred yards of the ship is far enough to go, and seldom brings to hand any fish of size; nearly all range from one-half pound to two pounds. By going five or six miles to the outer edges of the reefs and fishing in from ten to twenty fathoms, larger groupers, snappers, with occasional channel bass, are found. We find them easier in the market. Alongside of the wharves some sheephead are caught, but as the only bait they will touch is a fiddler crab, which is scarce, not many are taken. I am told tarpon can be caught from the wharves as soon as the mullet get to running, which desirable event is promised soon. As yet there are very few mullet and no tarpon.

At times, after an easterly wind, trolling for Spanish mackerel furnishes good sport, but they are very uncertain. I have made three efforts, all unsuccessful, and I think that one reason is that just the weather that suits the mackerel to run in, suits me to stay in. One day, however, I was out when other boats were successful, and I got none. I had various kinds of spoons, spinners and minnows (artificial); they all looked very fine to me, but the fish seemed to prefer the slice of white pork skin, fastened on to the single long-shanked hooks of the natives. It was the same on a longer trip made by a party to the "American Shoals," eighteen miles away, after kingfish. They carried with them a fine assortment of fancy gear, but they caught their fish (and a fine lot they were, too, from thirty pounds down to ten, and a half dozen handsome Spanish mackerel) with the fisherman's gear—a single large cod hook with tapered end, a wire snood hitched and soldered to the inside of the shank, leaving about half an inch as a spur on which to hitch the small end of the long triangle of pork skin used for bait. So it was, I remember, the first time I went bluefishing off Nantucket. My costly lot of lines were soon put out of commission, and I caught my fish on an eel-skin dail, for which I paid a quarter. One lives and learns.

I started once to go to the shoals for kingfish. Our programme was to leave here at 5 A. M., reach the shoals by 8, troll till satisfied, land in Loggerhead Bay, shoot a lot of plover on the ebb tide and be back by 9 P. M. We started at 5 with light airs; at 9 we anchored in twelve fathoms. Close to, on one side, a nasty reef, the Sambro, and our stern trailing off the green water of soundings into the blue waters of the gulf stream, into which we had ventured; and becalmed we drifted rapidly to the eastward, just catching air enough to get back the four or five hundred yards to soundings, after two hours' drifting. As we had no bait for bottom fishing, but corned kingfish, we tried it; but the sharks liked it too well, and we soon used up all of our gear without a fish. It was tedious work and the planks of that schooner, the Foam of the Sea, were hard, and the seventeen hours that the trip cost us were dull ones. To be sure we were, or ought to have been comfortable enough. Captain, cook, pilot and fisherman were full of valuable information about everything nautical and piscatorial connected with the Cays; and Gabe, the cook, kept us well filled with most excellent fish, coffee, etc., but somehow nothing compensated for the enforced idleness.

We had but one adventure, a big loggerhead turtle came past, and as he was engaged in feeding on Portuguese men-of-war, he could be approached, for when so feeding they close their eyes to avoid the stings. A. Coster started for him, struck him and lost. I couldn't see how he could expect any other result, for the spear used consisted simply of—well it might have been half of an iron spike, sharpened, about two inches long, then narrowed abruptly. I couldn't see why it shouldn't pull out as easy as it went in, but it is the correct thing, the wound in the turtle's back, they say, immediately swells close and this spike having become detached from the staff, becomes firmly imbedded and has attached to it about twenty or thirty fathoms of line, by which the creature is eventually secured.

Most of the turtles brought to this market by the spongers are caught in nets set across the channels of the various cays they go to for sponges. These nets are very much on the principle of gill nets, the turtles striking them never turn, but using every endeavor to force their way through, get heads and flippers hopelessly entangled. Under many of the wharves are turtle pens, in which at all times are kept quantities of green and loggerhead captives. The hawk bills are generally killed at once for their shells, which furnish the finest "tortoise shell," worth \$4 per pound. Many of the shells are kept intact, calipash and calipee connected, the former handsomely polished, the latter cleaned, and of these are made very handsome "wall bags," the lining and bags being of satin or silk. These range in value from \$2 to \$12. One at the latter price being about 18 inches long, very richly colored and not trimmed, that is satin lined, etc.

The spongers have had poor luck this year, although upon my first visit to the various depots, I was astonished at the great number in various stages of preparation. I was told that the crop was a very small one, owing to the continued bad weather. It is a pretty sight to see the fleet come in. It reminds me of the Gloucester fleet, but individually there is no beauty in the vessels as there is in the down Easters; these are broad, flat and unshapely, but good sea boats. The owners combine with sponging the business of wrecking. Last week the incoming steamer from Galveston brought news of a German bark ashore at the Tortugas, and in less than half an hour the entire sponge fleet was off for cotton, Key West, Fla., Dec. 27. PISCO.

BROWN TROUT.

Editor Forest and Stream:

I am glad to see that some of your correspondents have begun to sing the praises of the brown trout, *Salmo fario*; just keep on doing so, as they are worthy of our best efforts. I am conservative and don't always put much stock in fish new to our waters until fully convinced that they are worth attention and are an addition. A few years ago the California trout were introduced into our eastern waters; they grew fast, etc., etc., but they can't be called much of an addition, as they don't stay if they can get away.

Three years ago this winter a few thousand eggs of the brown trout were received from Germany by Mr. Fred Mather, who divided them into small lots, sending them to two or three of the hatcheries in the country. Some were received here at Caledonia and were hatched out; some of the young fish escaped into the wild stream, and during this past summer quite a number have been caught in the stream weighing from 5 or 6 ounces to 1½ pounds each, and they were only 2½ years old! I did not have the pleasure of catching but one, but I saw and dressed several that were caught by friends, and I must say they are a grand fish. They are beauties, I was going to say the most beautiful fish of the trout kind I ever saw, but I am afraid some people would call this treason and I will take it back, on comparison with our native brook trout with which we have always been familiar, and say that if a brown trout, fresh from the water, had a little more red on the belly it would be hard to decide which was most beautiful. On their backs they are a rich brown, which on the sides runs into a gold color with great big red spots, but not so many of the spots as on our native brook trout, but the spots are larger and very bright. I will not attempt to describe the beauties of their fins, but will call on your modest and bashful fish editor who can do it up in good shape.

Every fish that I have seen has been very fat, fatter than any of the other kinds in the same stream. The other kinds are our native brook trout, the California trout or rainbow trout and a hybrid, the last, I believe, coming from the salmon or lake trout on one side and the brook trout on the other. I made an examination of the contents of the stomach of the brown trout, dressed by myself, and found plenty of many kinds of insect life, any amount of flies and the larva of flies. On account of their being such good feeders, I think they will be a favorite with the fly-fishermen; they certainly will, after the fisherman lands the first one of them, as they are great fighters.

It may be of interest to fishculturists to know something about how they stand confinement, and if they are easily raised. I found them quite shy, but good feeders, they would pick up much of the food after it had sunk to the bottom, to a much greater extent than any of the other trout family. If they don't see you, or see the motion of your arm in throwing the food to them, they feed like other trout. I found it a good plan to have a number of hiding places in the little rearing pond, in which I kept them, and by standing at the foot of the pond and throwing the food up the pond, they did not see me as well, and fed better, but if disturbed, they would pick up the little particles of food from the bottom as soon as I went away or was quiet.

If, after two or three years, the offsprings continue to grow as fast as the parents have, and do as well then, I say they are the best trout for the present conditions of streams, etc., in the United States. I think they will stand water a little warmer than our brook trout from what I have heard of some of the English trout streams. If your readers can get any information from this I hope it may prepare them to see the coming fish for American waters. J. ANNIN, JR.

CALEDONIA, N. Y.

Editor Forest and Stream:

My experience with the brown trout is rather limited, but is, thus far, very satisfactory. They are hardy and rapid growers, those I have from eggs received from Mr. Mather being considerably larger than either our brook or the rainbow trout of the same age. I prefer them to the rainbow trout and think they are second only to our native brook trout.

U. S. FISH COMMISSION, Northville, Mich.

TWO HOOKS FOR BASS.

Editor Forest and Stream:

Your correspondent "F. W. O.," of Kansas City, asks for information from some of your learned fishermen in regard to using two hooks in still-fishing for black bass. While I do not claim to belong to the class of fishermen he speaks of, yet, I think I can justly lay claim to the title of enthusiastic fisherman, and will give him the benefit of my observations during the past five seasons. Of those who fish for the small-mouth black bass in this section I think I may safely say that ninety-nine out of every hundred use live bait exclusively. I fished the Schuylkill four years, at Black Rock, Perkiomen and Catfish dams, without seeing any one use an artificial fly. Last season I used the fly with some success on several occasions, and know of two others who used it almost exclusively.

The custom in this locality is to use two or three hooks, generally two, on each line. A gut leader about four feet long is attached to the line. At the extreme end of the leader is attached a lead sinker from half an ounce to an ounce in weight, according to the swiftness of the current. About a foot above the sinker a snooded hook is looped to the leader just above a knot in the latter, which prevents it from slipping down. A second snood is attached about eighteen inches further up. If a third hook is used the leader should be five feet long. The gut leader is almost indispensable, as it prevents the tackle from getting into a snarl. The best material for a leader is extra heavy salmon gut, which should be used single. A twisted leader is very strong, so is a clothes line, and either may be used with the same success. The advantage of using two or three hooks is considerable, as several different kinds of bait may be tried at the same time, and much valuable time saved in finding out what kind of food the bass are looking for on any particular day. I have used one, two and three hooks on different occasions; and also on different rods at the same time, and my experience is that the rod that is rigged with two or three hooks will take about twice as many fish as the rod with but one. I believe this to be the common opinion here as it agrees with the general practice of the most successful fishermen. When fishing with a friend in a small boat each fisherman should not use more than two rods. Some habitually use three, but I don't want to fish from the same boat. I had rather take my chances along shore.

While on the subject of bass fishing I would like to ask for information in regard to a suitable reel for casting a min-

now "à la Henshall." I am aware that a high grade multiplying reel, costing about fifteen dollars, will give satisfactory results. I would like to know if there are any lower grade reels that will do the work fairly well, and answer its purpose as well as a one dollar reel does in fly-fishing. Could not a plain reel be manufactured, without click or multiplying mechanism, that would answer the purpose? If not, in what important particular would it be lacking?

E. A. LEOPOLD.

NORRISTOWN, Pa.

THE STRIPED BASS LAW.

IN our last issue we stated that in the Senate of New York Mr. Pierce had introduced a bill to exempt striped bass from the provisions of the law which was intended only to apply to the little fresh-water fish which bears the same name locally. Our readers will remember that at the time of the passage of this law we strongly objected to it and our objection brought out the fact that the framers of the law did not intend to include the *Roccus lineatus*, the "striped bass" *par excellence*, but meant an insignificant lake fish, the *R. chrysops*. We commended on the mischief resulting from people meddling with what they did not understand and suggested that all laws relating to fishes should be submitted to the Commissioners of Fisheries for their approval, before going to the Governor.

The law of New York referring to striped bass, passed May 9, 1885, reads as follows: "No person shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or striped bass weighing less than one-half pound, or less than eight inches in length from end of snout to end of caudal fin, at any time. No person shall expose for sale or have in his or her possession after the same has been killed, any black bass, Oswego bass, striped bass or muscalonge, save only from the twentieth day of May to the first day of January. * * * Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of ten dollars for each fish."

The objection to the law was the dates during which striped bass must not be sold, and by this name we always understand the salt-water fish, and this time is the season during which the fish from Southern waters come into our markets and are consumed in great quantities during the Lenten season. Fish is an article of food to a greater extent than game, and the great supplies should not be cut off in their proper season by any considerations of sport. The sale of brook trout, if stopped entirely, would not seriously affect either the market or the tables of the poor, for the number of pounds is small; but the consumption of striped bass is great, as is shown by the following petition, which was signed by most of the wholesale fish dealers of New York city:

"To the Legislature of the State of New York: The petition of the undersigned wholesale fish dealers, respectfully represents: That they are wholesale fish dealers in the city of New York, and receive for distribution among consumers the bulk of the salt-water striped bass, their consignments from North Carolina alone, between Feb. 1 and April 1, varying from two to five tons per day. Few (if any) of such bass are native or received from New York State waters. With these striped bass come shad, herring, catfish, perch and eels—many tons daily. The salt-water bass is scientifically known as *Roccus lineatus*. It spawns late in the spring and early in the summer. The greatest demand for this fish is during the Lenten season, which will commence on March 10 this year. By Chapter 242, Laws 1885, amending Chapter 534, Laws 1879, known as the game laws, the sale or possession of striped bass is prohibited between Jan. 1 and May 20. We are informed by the draftsman of the act of 1885 that it was prepared at the request of the St. Lawrence Anglers' Association, to apply solely to the fresh-water species of striped bass, scientifically termed *Roccus chrysops*. The ambiguity of the words 'striped bass' is a matter of public concern, because, as law-abiding citizens, we cannot receive or handle the species from the sea, and shippers refuse to consign the other fish unless we accept the bass. As a result, the supply from the South is decreasing and will soon be much below the demand, whereby prices will necessarily be largely enhanced without profit to either dealer or consumer. To fairly prepare for Lent, our cold storage houses should be filled immediately during the present cold season, when the supply is readily obtained."

In addition to this petition of the dealers the Commissioners of Fisheries have written expressing their approval of the new bill. Hon. Robt. B. Roosevelt says: "In reply to your letter asking my opinion of the intention of the Legislature in the use of the words 'striped bass' in the amendment to the Act for the Protection of Game, passed in 1885, I would say that I have no doubt that the intention was only to apply the expression to the fresh-water bass and not to that of the salt, although they are both commonly called by the same popular name. As to the advisability of protecting the salt-water striped bass, *labrax* or *Roccus lineatus*, to the extent of preventing its sale in the spring months, my judgment is that the time has not come for such extreme legislation, and that the people would suffer from the deprivation of a general article of food without corresponding benefits. I would advise a modification of the statute so as to confine it to the fresh-water striped bass."

Commissioner R. U. Sherman writes: "I have your letter of the 9th, inclosing draft of a bill to exempt the anadromous striped bass from the operation of Chapter 242 of the Laws of 1885, which would seem to exclude that fish from market during the closed season for fresh-water bass. It is admitted by the framers of that law that it was not intended to apply to the striped bass from the sea which form so important a part of the market supply. The bill you propose, intended to correct the error, is proper and right, and should become a law at the earliest practical period."

Com. Wm. H. Bowman adds his approval: "Your note of January 7 received. We have no hesitation in recommending the passage of the act proposed by you amending Chap. 534 of Laws of 1879, as amended by Chap. 242 of Laws of 1885, so that it shall be applied solely to fresh-water striped bass."

Com. Eugene G. Blackford writes: "My opinion as a Fish Commissioner of the State of New York being asked whether the words 'striped bass' occurring in the game law, should be limited to the fresh-water striped bass known as *Roccus chrysops*, in reply I would say, it is not probable that the Legislature fully weighed the subject when the words 'striped bass' were used in the game law. The intention doubtless was to confine legislation to the fresh-water species, and not to include those from the sea. The salt-water striped bass largely contributes to Lent, and its exclusion from the markets from the first of January to the

twentieth of May, would be to deprive the people of a large quantity of valuable and important fish food, especially during the Lenten season, when nearly all kinds of fish are scarce. This would result in largely advancing the price of all other fish at the time when the demand for it is the greatest. In my opinion, the bill prepared by your committee, which excludes the salt-water striped bass known as *Roccus lineatus* should be immediately passed by the Legislature, in the interest of the entire people of this State."

With these arguments in its favor we hope the new bill will pass and correct the blunder perpetrated by those who may have meant well but who only knew of one striped bass.

TWO WEEKS WITH A FLY-ROD.

THIS is not written for those who had "just as soon catch flies as fish," still less for those who think "fishing is done with a rod with a fly at one end and a fool at the other," but for those who find their reward, not so much in the value of their catch as in the exercise of their skill, and in the health and enjoyment that come from a life in the open air.

There never was a sportsman worthy of the name who did not find in nature a constant delight, and who did not feel in her companionship a sense of enjoyment which alone was a goodly measure of recompense for all his labors. A patch of bright color in the woods, a roaring brook tumbling over a cascade into a pool below, the various notes of birds, all bring with them a thrill of pleasure the "fry catch-r" will never know.

The number of people of sedentary habits who are learning that country air taken in liberal measure, with rod in hand, is better than medicine, and far more pleasant, increases each year, until good sport has become scarce, and can no longer be found near this section, as a rule.

There are grades of expertness in the art of fishing (for it is an art, and a fine art, too), as in other things, but fly-fishing must be acknowledged to stand at the head. The man who can cast a fly straight as an arrow for eighty or ninety feet with a five-ounce rod, may well feel above him who can "sit like a bump on a log" and fish off a dock.

With two congenial spirits I started about the middle of September for a little vacation in Maine, where all sportsmen hope some time or other to go. I seemed as though we covered a great deal of country, but when I look upon the map and see how insignificant a space it occupies there, I realize that Maine is a great State. We staid a night in Boston, reached Farmington, Me., late the next day, where we changed cars for the Sandy River Railroad. I had never heard of this road before, and I shall never hear of it again without a smile. The gauge of the track is only twenty-four inches, and cars and engine are on a similar scale, so that the whole thing looks like an ordinary train viewed through the wrong end of an opera glass. A man standing in the aisle, and extending his arms, can touch both sides of the car at once. Each passenger has a whole seat to himself. The little engine starts the train of one or two cars, as travel may demand, at full speed, and makes its run of eleven miles to the other terminus, uphill and down, for the track is laid with almost no attention to "grades," "cuts" and "fills," and the engine whirls the train along regardless of such trifles, and makes very decent time too. At Strong another road of the same gauge runs fifteen miles to Kingfield. The State Railroad Commissioners require them to consume an hour and a half in making their run. The night we went up the conductor obligingly ran his train back several miles to Salem because he had forgotten to leave off the mail, which consisted of two or three postals.

Another night at Kingfield, and we started out in the morning in a four-horse stage for a thirty-mile drive to Smith's Farm. There were more hills than houses on the road, and the way old Horace Wells sent his long lash in among those horses at the top of every hill, and half way down, was a caution. We held on the best way we could, or we would all have landed in the front seat. When we reached level ground he would turn his head around and ask, "Are ye all there?"

From Smith's Farm we set out for a seven-mile walk through the woods, "up hill and down dale," over rocks, roots and stumps, and through mud which filled all the low places. They called it a road, but save the mark.

It was a half hour past dark when we reached "Tim Pond," our Mecca. Though bearing an abominable name, given to it in memory of a mighty hunter who was the "leatherstocking" of this region, it is in reality a beautiful lake, washing the base of Mt. Kennebec, and entirely surrounded by mountains, whose sides were already painted in beautiful colors by the frosts of early autumn. Prof. Vibberts calls it "that magnificent sprior," and so it is. A spring a mile and a half long, and 2,000 feet above the sea, clear as crystal, and as full of "speckled beauties" as an egg is of meat.

Here Kennedy Smith, one of the best guides in Maine, and the best of hosts also, has a camp of a dozen cabins in a little opening on the edge of the lake. Each cabin is called a "camp."

It was late in the season for the best of fishing, but we had the best of air, appetite and solid enjoyment. We had the pick of all the weather this fall, and caught fish enough to satisfy a reasonable person.

After supper we unpacked our traps, put leaders to soak, made up a good fire, and went to bed in a bunk filled with boughs and good, clean blankets, and slept the sleep of the just. The next morning we were out early to see what "Tim" looked like. We found it smooth as glass, which is the exception rather than the rule at this season, and the trout were breaking water in every direction. At the landing were plenty of good clinker-built boats. A good boat to row, and for rough water, but rolling too quickly for a novice to use. We selected a likely looking spot, beside a growth of lily pads, and anchored, while Fred tied the water. No rise. Moving off a little he whipped the water faithfully for five minutes in every direction, but without success. It looked rather blue, when a quick ripple in the water, a man off his guard, a tardy strike, and fish departed. But this awoke us to action, and we carried thirty-three beauties into camp next day.

Forty rods from the camp is the outlet called "Tim Brook," which is nine miles long, and empties into the Dead River. It is a very romantic and swift stream. I fished down for perhaps a mile and a half, and should say I fell 200 feet in that distance. There were three beautiful cascades, two of them fifty feet in height. Fresh deer tracks were seen in abundance every morning within sixty rods of camp, and moose and caribou are numerous. Two years ago this month twenty-six caribou were seen on Tim Pond

at once. The fishing there is superior—as far as numbers go—in July and August, but half a pound weight is a fair average. Later, the catch is not as large. The largest I caught weighed three-quarters of a pound, but Dr. Goldthwaite, of Brocton, landed one or two that weighed a pound each. But if glorious air, beautiful scenery and a well-kept camp count, then Tim Pond is a splendid fishing ground in September. We enjoyed every minute. Two or three hours were devoted to fishing morning and evening. The sweet sleep one enjoys in the woods is no small item. We put in our two weeks' vacation all too soon, and packing up our rods and other impedimenta, we tore ourselves away, hoping the time would quickly pass until we could return.

A. G. McKEE.

MIDDLETOWN, CONN., December, 1885.

LEN. JEWELL.—The famous guide and woodsman of Northern Michigan, "Len." Jewell, died at Bay City on the 20th inst. As the fishing companion as well as guide to Mr. D. H. Fitzhugh, Jr., the one who introduced the grayling to the anglers of America, he piloted Norris, Hallock, Milner, Mather, and others who visited the grayling grounds in their early day a dozen years ago. A giant in strength, modest, sober, and with a knowledge of the woods that is rare, he was the perfection of a guide. For over forty years he had followed the business of looking up lands for lumbermen and settlers, and the Bay City *Express* says of him: There were very few men in the Saginaw valley better known than "Len." Jewell, he having been a citizen here for about 42 years. Mr. Jewell was a modest, unassuming man, of retiring disposition and held the respect of every person with whom he came in contact in business or other transactions. For over 40 years he has traversed the pineries of Michigan as a land looker and his judgment as well as his estimates were considered perfectly reliable, never being known to give a false estimate in order to advance his own pecuniary gains, as it is too often the case with men in the same business. The fact is, the deceased if he had been trickily inclined, has had scores of opportunities to practice deception, and in the parlance of men of his class, "make a stake," but he preferred to remain in poor pecuniary circumstances rather than to gain wealth fraudulently. He was of a genial, social disposition, when in company with his intimate friends, and was especially a firm and true friend to those with whom his peculiar fancies gave him the inclination for association. He will be missed and mourned by many who had learned to esteem him for his true worth and manly traits. Leonard Jewell was born in Rome, Oneida county, N. Y., February 25, 1815, and was therefore in his 71st year. He came to Bay City in the fall of 1844 and has since resided here. He enlisted in the Fourteenth Michigan infantry, company A, at the breaking out of the war, and was mustered out of service in North Carolina. He returned to Bay City and engaged in the business of looking up pine lands, which he has followed ever since. He was authority on pine property, showing good judgment and a remarkable faculty of estimating. He was very fond of hunting and was acknowledged to be one of the best sportsmen in the city. He was a member of U. S. Grant Post, G. A. R., under whose auspices his funeral was held.

TIP-UP FOR PICKEREL.—*Editor Forest and Stream:* Say to your correspondent "Pickerel" that of all the forms of tip-up that I have ever used to signal a bite when fishing through the ice, there is nothing like the jumping jack of the toy stores. I buy fifty at a time and stick them up over the holes by suspending them with a stout twine leading from the lead to a slanting tick wedged into a hole in the ice. The line then leads to the string which works the legs and arms, and from these to the stick, so that in case of breakage the fish is not lost. The chances of breakage are very great, and it might be well to have them specially made for the purpose. The fun of seeing the mannikin spread himself in a most frantic manner is simply "immense."—LIMBER JIM.

LAKE ONTARIO.—A bill has been introduced at Albany by Mr. Kilby to prevent the taking of fish, except by angling, in the waters of Lake Ontario adjacent to Jefferson county.

Fishculture.

THE MASSACHUSETTS COMMISSION.

WE have the twentieth annual report of the Commissioners of Inland Fisheries of Massachusetts for the year ending Dec. 31, 1885. The fishways are in good working condition except the one at Holyoke which will require some repairs in the spring. All applications for the construction of new fishways have been considered, and such as have been approved of have been built, except that at Hamblin's mill at Acushnet. By delay of the law, no decision has yet been reached in this case. At the fishways at Lawrence, a record of the fish ascending has been kept. The following species were observed: Alewives, May 6 to June 18; suckers, May 6 to Nov. 3; lampreys, May 7 to June 18; red-fish shiners, May 21 to May 23. Two black bass went up in June, five in August and one in September. One salmon went up in May, ten in June, three in July, one in August and five in October. Five shad were found in the fishway in June, 14th to 19th.

The distribution of trout has been increased and next spring there will be about 250,000 ready for delivery. Land-locked salmon have appeared in ponds which were not thought to be suitable for them when planted, but which were stocked at the solicitation of their owners. There has been an increased run of salmon in the Merrimack the past year. A few have been killed at the dams during low water, but the most serious depredations were committed near Haverhill where dead salmon were found with spear marks on them. Eggs of the salmon were taken from Merrimack fish by Mr. E. B. Hodge, of Plymouth, N. H., and hatched and returned to the river, in addition to those furnished by the U. S. Fish Commission.

Shad hatching was continued on the Merrimack, and to avoid gilling the salmon, a net with 2½ inch meshes was used. This developed the fact that the river was full of young male shad from one to two years old. These young males return with the mature females, while the young females do not return until they are three or four years old, or until sufficiently mature to spawn. An article on the result of shad propagation on the Atlantic coast, by Col. McDonald, is quoted, in which the statistics prove that the commercial value of the increase, due to artificial hatching, has been ten times greater than the sums spent yearly by the Fish Commissioners upon the work of propagation.

The appendices contain a list of ponds leased; "Carp and Carp Ponds" by C. W. Smiley, from the Bulletin of the U. S. F. C.; "Directions for Constructing Carp Ponds" from Report Maryland Commission, 1880; "Taking the Fish from the Ponds" by Dr. Rudolph Hessel, from Report U. S. F. C.; with the laws and resolves for 1885 and tables showing the returns of weirs, seines and gill nets.

FIXTURES.

FIELD TRIALS.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

Feb. 8, 9 and 10.—Fourth annual exhibition of the New York Fanciers' Club, at Madison Square Garden, New York. Chas. Harker, Secretary, 82 Cortlandt street.

March 16, 17, 18 and 19.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club, S. R. Hemmingsway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club, Edward A. Moseley, Secretary, Boston, Mass.

April 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box, 2832, New York. Number of entries already printed 3185.

THE A. K. C. CHAMPION RULE.

Editor Forest and Stream:

Mr. Smith is in error, I did not "impugn his motives," I said that unless explained, there could be no other conclusion but that the proposed amendments were inspired by personal motives; the time at which they were made, and the fact that Sensation won at these two shows, pointed in the strongest manner in this direction. By reading between the lines of Mr. Smith's letter, I think it is clear enough, that the reason guiding him in these proposed amendments, was the previous practice of the W. K. C. and other show clubs, and not the wish to affect the standing of Sensation, and this is just the avowal I called on him to make. It is always agreeable to have a suspicion of interested motives removed and I cannot but think that the W. K. C. in general would be wiser in frankly meeting cases apparently against their good intent on such matters.

I really fail to see where my inconsistency was. I wanted a list made of shows characterized by good classes, good management and good judging, and I cannot agree that the Boston and St. Louis shows were anything remarkable in this line. Certainly neither of them approached either the Washington or Breeders' shows in either point, and if I mistake not, the Ottawa and Toronto shows were either of them ahead of those Mr. Smith selected.

I cannot state my case stronger than I did by selecting the cases of the mastiff judging at the Winnipeg and Breeders' shows, and again I would urge on the A. K. C. the vital necessity of getting rid of the narrow exclusiveness that so poisons its whole body politic, and of which Mr. Smith's letter is so striking an instance.

Depend upon it, the breeder or dog owner does not care a snap as to whether a dog won "at a show held under the auspices of a club, a member of this association." What interests him is, who did the dog beat, how good a class was present, and who did the judging, and even the A. K. C. will eventually find out that it is only by studying the feelings of dog owners and exhibitors, that they will prosper. I cannot see why there should be any difficulty in clubs arriving at a satisfactory conclusion as to what shows were proper to be counted for champion honors, when the public have no trouble in determining this point, and even if there may be trouble in doing it, surely that is no excuse for positively refusing a trial at it.

It is with great regret that I find myself obliged to hold away from the fight that I see impending over the A. K. C. in general, but oculists will take no denial, and I make this final effort, partly to do the justice to Mr. Smith that he has not thought fit to do to himself, and partly to add a last word of urgent entreaty to dog show clubs, not to ruin themselves by the hide-bound exclusiveness that has done so much to bring them into public contempt. W. WADE.

HULTON, Pa. Jan. 22, 1886.

IS THE A. K. C. TO LIVE?

Editor Forest and Stream:

Mr. Wade's twice propounded inquiry is one that can only be answered by the club itself, and not by promises but by acts. Its growth or decay depends entirely upon the amount of confidence it can elicit from those interested in shows. If it transacts its business in a prompt and straightforward manner it will succeed in gaining support, but if carelessness toward the interests of those it has undertaken to govern, an inability to grasp the situation it aspires to, or a laxity in punishing the lapses of its own members becomes apparent, then, like poor Joe, it may exist but it cannot live.

Mr. Wade lays much stress upon the so called "Sensation amendments," but as they were most summarily dealt with at the last A. K. C. meeting, credit must be given the club on that score. Mr. Elliot Smith, I am aware, stated to his fellow committeemen that Sensation's qualifying for the champion class was not the object of his amendment to admit the old St. Louis, Boston and Baltimore shows, but it is nevertheless a fact that the four votes cast against the amendment were given by gentlemen who felt they were crushing a piece of special legislation. There is, however, a portion of Sensation's history which was brought to the notice of the American Kennel Club which demands consideration and prompt action.

We all remember the fight of a year ago over "construction," and how Boston at first adopted the strange rendering of the champion rule propounded by Major Taylor, but after FOREST AND STREAM had editorially condemned Boston's action it fell into line with New Haven and New York, and called for three firsts at shows given by members of the A. K. C. So much fuss was made over this at the time that there was no excuse for any person accustomed to show dogs making a mistake. Yet in the face of this the Westminster Kennel Club's pointer Sensation was entered in the champion class when it was not eligible. Neither Mr. Elliot Smith nor Mr. Mortimer can deny that they were aware of this at the time of the show, if not before, and yet the prize for which Sensation had a walk over is still held by its owners. This is singularly inconsistent with the common dictates of honesty and is particularly conspicuous in view of the position the Westminster Club has always considered itself entitled to, and also Mr. Smith's being the president of the A. K. C.

What, may I ask, is the difference between the taking of the prize Sensation had no right to and Dr. H. M. Perry taking the kennel prize at the last Philadelphia show when he had but four dogs present? Yet in the former case we have the Westminster Kennel Club blandly smiling a what-are-you-

going-to-do-about-it smile, and the New England Kennel Club saying, "We have no protest before us and can do nothing." On the other hand, the Philadelphia Kennel Club disqualified the Sans Souci kennel, and at its last monthly meeting expelled Hext. M. Perry from the club, this action of course preventing him from taking further part as an exhibitor at shows held under A. K. C. rules. The A. K. C. cannot afford to allow this Sensation blot to remain any longer, even if the Westminster Kennel Club thinks that an ostrich-like blindness on its part will prevent outsiders from seeing it. So much for what the A. K. C. must do to preserve purity among its own members.

As to carelessness toward the interests of others, there is the application of the New York Fanciers' Club for admission as a sample. This application was presented at the meeting of Dec. 16, and referred to the Committee on Credentials. A month has elapsed and yet no advance has been made. When the application was read I was allowed permission to say with regard to it that an early answer was specially to be desired, as the club proposed giving \$800 in prizes, and it was anxious to announce at as early a date as possible its being a member of the A. K. C. if it was elected. The entries close next week for the Fanciers' show, and with an utter disregard to the convenience or the interests of the applicant, the A. K. C. still dawdles along in its slaphash, careless methods.

Then we have the short-sighted policy of preventing the growth of the A. K. C. by its restrictive champion class qualification rule, which applies only to its own shows. What a difference it would make to the strength and control of the A. K. C. if its rule read a winner of three first prizes at shows held under these rules, and at which not less than 300 entries are made. Can the committee of the A. K. C. not see that such a rule would enable the club to grasp the control of all shows, while at the same time it is not essential that the controlling body should be swamped by an excessively large membership, if that is what the committee objects to?

It is in the facing such as the foregoing and the action thereon that will determine whether the A. K. C. is to be a live organization or a stumbling block to point the finger at.

JAMES WATSON.

Editor Forest and Stream:

The letter of Mr. Elliot Smith, which appeared in your issue of last week, after I had already sent a communication on the subject of the American Kennel Club, calls for a postscript thereto. Mr. Smith overlooked the fact of the last meeting of the American Kennel Club being open to the public, and also some points in his own club's history. The amendment, which for convenience sake we will call the "Sensation amendment," was proposed prior to the meeting to be held at Pittsburgh last September. It did not meet with a very cordial reception on the part of some of the clubs, and Mr. Nickerson, the former secretary of the New England Kennel Club, informed me when in Philadelphia in November last, that he had written Mr. Smith about it. This brought forth a reply from the proposer, in which he acknowledged the motives which had inspired the amendment were open to misconception, and he would withdraw it. At least one other member of the committee told me he understood the amendment would not be proceeded with, hence it was somewhat of a surprise when it came up for official action.

Mr. Smith cannot fail to remember that upon Mr. Peshall asking that other shows be recognised, he was at once met by the motion made by Mr. Smith that the amendment be laid on the table. The Westminster Kennel Club voted "aye," as did two other delegates, while three votes were cast in the negative, the tie being decided by the negative vote of Mr. Morgan, then acting as temporary chairman. It will strike most persons that if the amendment had been of such vital importance, "a step in the right direction" as Mr. Smith calls it, he should not have attempted to withdraw it on what was so far opposition of the mildest form. The A. K. C. have taken so few steps in the right direction, it was a great pity to withdraw what Mr. Smith considered to be one. It must also be borne in mind that the amendment then was to admit only St. Louis and Boston.

The amendment then provoked a lengthy discussion, but mainly between Mr. Smith and Mr. Peshall, and after some time Mr. Smith accepted Baltimore as a part of it, but refused to make any further concession and finally choked off further discussion by calling for the question, just as Mr. Peshall and Mr. Osborn seemed about getting at a proposition to include really good shows. Then would seem to have been the time to get in Mr. Smith's first love, an acknowledgment of all shows previously recognized by the Westminster and other clubs. Mr. Smith asks if Mr. Wade has ever heard of shows at Mineola, Springfield, etc. I have no doubt Mr. Wade has, and also knows that the Westminster Club recognized Springfield until lapses of time made it obsolete. It also recognized Toronto and Ottawa, neither of which came under the fearful ban of "speculations." When the vote was finally taken, it was seen that the majority of the committee was not in favor of (to quote Mr. Smith) legislating for the recognition of any of "these accidental brutes that had jumped into the champion class through the inferiority of the class they had won in, or through the incompetence of a judge."

Mr. Smith is also in error in saying that the aforeaid brutes were favored by the original A. K. C. champion rule of the Westminster and other clubs that took that line. The A. K. C. rule first adopted choked them off, then Major Taylor's "construction" with General Shattuck's "opinion" intervened, only to be put aside by the leading clubs last spring.

The objection urged against Washington and other shows is that they were "speculations." What is the show Mr. Smith manages? Every show is a speculation—everything is a speculation, if it comes to that, in which there is uncertainty as to the future. Mr. Lincoln and I put up the money for the first Washington show; Mr. Lincoln, Mr. Olcott and a Chicago newspaper man were partners in the first Chicago venture; Mr. Smith and some of his friends are partners in the Westminster Kennel Club shows. Wherein lies the difference? This is it: Mr. Mason judged at Washington; Mr. Mason is not liked by the Westminster Kennel Club, and to get over recognizing Washington the plea of speculations was originated. My authority for that was Mr. Lincoln, and it was an open secret at the time it was done.

Mr. Smith's present proposition is to continue to advocate the recognition of all important shows held by a club in good standing before the foundation of the A. K. C., and only of A. K. C. members thereafter. In the first place, what has a club in good standing got to do with it, and which are important shows? Mr. Smith failed in his continuity of advocating very much, I think, when he distinctly and very emphatically declined at the meeting to allow any other club shows to be added to his three selections. The action and the statement make a very balky team.

Taking Mr. Smith's position as being the one likely to govern the A. K. C., and then add to it the action of the committee on credentials in the case of the New York Fanciers' Club, and what do we find? That this "holier than thou" association for motives they think are only known to themselves, but can be read as through a glass, propose keeping from its membership clubs of good standing without assigning any reason therefor. The secretary of the A. K. C. says the committee on credentials declined to approve of the application of the Fanciers' Club. These gentlemen surely mistake their duties, the province of a committee on credentials is to see that the requirements of the constitution are complied with. Wherein did the Fanciers' Club fail? It had previously held dog shows, and so far as the credentials were concerned they filed the bill. It rested with the committee itself to elect or not as they saw fit. Messrs. Child, Webb and Pope have mingled in one harmonious whole the processes of certifying to credentials, which is their sole province, and the

voting upon a club's application which belongs to the committee.

As I told Mr. Child personally, the A. K. C. is chipping away at its platform until it is a little upturned box 2x1½ on which is seen the sorry spectacle of a few clubs trying to find standing room, and holding on to one another as people do on the rear platform of a crowded car. By and by some of them will get tired and drop off, just such a dropping off will be seen when the sixty days' grace for paying the now pending \$10 assessment expires.

No, that is not the kind of club we want, but a strong, liberal organization, limited in its actual membership if you please, but not in its control, which should embrace every show held under its rules with but one proviso, and that the number of entries. The management and the judges have nothing to do with shows of the future. Exhibitors are wide awake now and have nearly all the shows necessary. These and all future ones to succeed and obtain entries must be well managed and have good judges. The entries will testify to the management and judges.

The "Sensation amendment" is of no account compared with the problem of future show recognition which the A. K. C. must face and that promptly.

JAMES WATSON.

THE NEWARK DOG SHOW.

FOLLOWING is the classification and prize list of the Newark dog show, to be held at Newark, N. J., March 23, 24 and 25:

Champion mastiffs, dogs or bitches, \$20. Open dogs, \$15, \$10 and \$5; bitches the same; puppies, \$10 and \$5. Champion rough-coated St. Bernards, dogs and bitches, \$20; smooth-coated, the same; open classes, same as mastiffs. Newfoundland, \$10 and \$5. Great Danes, the same. Champion greyhounds, dogs or bitches, \$10, open dogs, \$10 and \$5; bitches, the same; puppies, the same. Deerhounds, same as greyhounds, except there is no puppy class. Champion pointer dogs, over 55lbs., \$20; bitches, over 50lbs., the same; open dogs, over 55lbs., \$15, \$10 and \$5; bitches, the same; champion dogs, under 55lbs., \$20; bitches, the same; open, same as large class; puppies, dogs, \$10 and \$5; bitches, the same. English setters, same as pointers. Champion black and tan setters, dogs or bitches, \$20; open dogs, \$15, \$10 and \$5; puppies, \$10 and \$5. Irish setters, same as English setters. Chesapeake Bay dogs or bitches, \$10 and \$5. Irish water spaniels, the same. Champion field spaniels, any color, dogs or bitches, \$20; open dogs or bitches, \$15, \$10 and \$5. Champion cocker spaniels, any color, dogs or bitches, \$20; open dogs (liver or black), \$15, \$10 and \$5; bitches, the same; any other color, dogs or bitches, \$15, \$10 and \$7; puppies, field or cocker, \$10 and \$5. Clumber spaniels, dogs or bitches, \$10 and \$5. Champion foxhounds, \$15; open dogs, \$10 and \$5; bitches, the same; puppies, \$10. Champion collies, dogs or bitches, \$20; open dogs, \$15, \$10 and \$5; bitches, the same; puppies, \$10 and \$5. Champion beagles, dogs or bitches, \$15; open dogs, over 12in., \$10 and \$5; bitches, the same; dogs or bitches, under 12in., \$10 and \$5. Basset hounds, dogs or bitches, \$10 and \$5. Dachshunds, the same. Champion fox-terrier dogs, \$15; bitches, the same; open dogs, \$15, \$10 and \$5; bitches, the same. Wire-haired dogs and bitches, \$10 and \$5; puppies, dogs, \$10; bitches, the same. Champion bulls, dogs or bitches, \$15; open dogs, \$10 and \$5; bitches, the same. Bull-terriers, same as bulldogs; puppies, \$10. Black and tan terriers, over 7lbs., dogs or bitches, \$10 and \$5. Irish or rough-haired terriers, the same. Dandie Dimmonds, the same. Bedlington, the same. Skyes, the same. Champion pugs, dogs or bitches, \$10; open dogs, \$10 and \$5; bitches, the same; puppies, \$10. Yorkshire terriers, over 5lbs., dogs or bitches, \$10 and \$5; under 5lbs., the same. Toy terriers, the same. King Charles spaniels, the same. Blenheim spaniels, the same. Italian greyhounds, the same. Poodles (black), the same; other than black, the same. Miscellaneous, three prizes of \$5 each.

ANCIENT AND MODERN SETTERS.

Editor Forest and Stream:

As I write I have before me a photograph from a picture by Francois Desportes, a French artist who was the greatest delineator of sporting dogs of his time. I have not my books of reference at hand to give the exact date of his death, but it was before the middle of the last century.

The picture in question is a portrait of three setters, all pointing. They are in every respect like our best Llewellyns and might pass for a group from any of our best kennels only that the tails are curiously trimmed, the feather being closely cropped save at the tip where a short point brush shaped tuft is left, just as is commonly done with mules' tails. To those who think that setters were spaniels only a short time back, and that our crack field trial winners are triumphs of modern invention in breeding, this picture is, to say the least, instructive.

The uniform lesson of old pictures is that our best types of setters existed as long ago as any record can be traced. Here is one painted when guns had not been perfected so as to entirely supersede the net in field work with setters. Yet the dogs are just as we see them now. One peculiarity in the principal dog of the group is of great interest to me. The fore leg which is lifted in pointing is not bent at the pastern joint, but the foot is pointed straight out at the bird. This seems unnatural, yet the first setter I ever saw in my life would do just that way. I was but a little boy at the time 9 years old. I lived at what was then called Western New York, now Dwight, Illinois, and there were very few people besides our own family living anywhere within twenty miles of there. I remember that there were on a beautiful map of our "city" (exhibited in Chicago by the land agents) avenues, parks, city hall fountains and even zoological gardens, all laid out in most enticing colors. But the city at the time I speak of consisted of a stake with a rag tied to its top, and there wasn't a single house in sight unless the slowly rising frame of our own might be counted as one.

An Englishman connected with the survey of the Chicago and Alton Railroad, brought to our house a setter bitch and left her for some time in our charge. She was a smart little thing, looking very much like Juno A., and capital in the field. I remember seeing her point with her foot held straight out to the front, and I believed she was showing us the birds just as a man would point with his finger. I remember distinctly to have seen her do so twice, and my general impression is that she did so quite often. I have seen nothing of the kind since and should distrust my youthful memory, but the evidence of the work before me, every line of which shows knowledge, care, and exactitude, convinces me that there was no mistake about it. I note also in Desportes' setters that the ears show little disposition to prick and are set on quite low, and well back. Altogether, this picture strengthens my faith in the antiquity of the good qualities of the setter, and my belief that the worst defects are those resulting from outcrossing to other breeds. Surely if every ornamental point, as well as every useful point in the breed, is a heritage from the distant past, we ought to so frame our standard as to guard all of them from change or innovation.

I am about to go South for an outing. For six weeks to come my headquarters will be in Ocean Springs, Miss. If there is any sport going on down there you will be likely to hear from me.

JOHN M. TRACY.

GREENWICH, Jan. 22, 1886.

THE NEW YORK DOG SHOW.—Editor Forest and Stream: The Westminster Kennel Club will hold their tenth annual bench show of dogs at Madison Square Garden, May 4, 5, 6 and 7. Premium lists and entry blanks may be obtained at 48 Broad street, room 14. Post-office box 1812.—JAS. MORTIMER, Supt.

ENGLISH KENNEL NOTES.

XXXIV.

"LILLIBULERO died at Brighton," so say the great unformed. Alas, poor Langdale! I knew him. Ah! "where be your gibes now? your gambols? your songs? your flashes of merriment, that were wont to set the table in a roar?" He was a mau popular with the crowd who love your free and easy fellows that never attempt to set aught straight in a very wry world. "The Captiving," "the gallant Captiving," as he dearly loved to be styled, was everybody's friend and he only excepted himself to prove the rule. No man could more significantly have sighed, "Life would be tolerable were it not for its pleasures." The last time we met was at Edinburgh, and we gravely discussed the identity of Lillibulero. Our unanimity was wonderful, we held it an uncommonly awkward position never to know when we were in his presence. "Hang me, the beggar may be listening now," said the Captiving as the waiter entered with two mere "gos" of Irish. We guessed Lillibulero up and down the dog directory, but least of all we suspected ourselves. The last time I saw him he was off for the races, bent on "busting the bookies," a performance I am afraid that no amount of rehearsal could have made him perfect in. Langdale was a very old member of the kennel world. Years ago, in Sandell's time, he was an exhibitor and a successful one. For a short time he was hidden behind a cloud, but he emerged with a smile on his face and the "past had buried his dead." He was a very fair judge and a most zealous reporter. The last news I had of him was that he had given instructions to proceed against an English kennel organ for libel. He had been charged in its columns with dishonest judging, but the hand of death has robbed the gibemouches of the dog world of a cause célèbre.

Our Collie Club is in danger of being split up by a scandal born of pique and bitterness. Private animosities founded in disappointment are the greatest danger the specialist clubs run. It was always believed that the Collie Club had nothing to fear in that direction, but this confidence has been rudely dispelled by the appearance of a wickedly malicious, and, of course, unsigned libel. It was put into the form of a circular and posted broadcast. I give it in its impudent entirety:

TO COLLIE EXHIBITORS.

Those who are fond of coincidences will find it curious to observe the following: That Messrs. Boddington, Thomson and Pirie, collie judges, and Mr. Krehl, collie exhibitor, are all members of a club called the "Crib-ton."

That the last named three should be proprietors of the *Stock-Keeper*, a weekly paper chiefly devoted to dogs.

That two of the four (Thomson and Pirie) form a majority of the prize committee of the Collie Club, thus increasing their strength.

That when one judges the others generally exhibit, and very successfully.

THE RESULT.—That at Sheffield show, where the prizes are good, there should only have been eighteen entries of collies at the time of closing entries, Sept. 30.

Verbum sap.

This circular contains a criminally ingenious blending of truth and falsehood. Mr. Boddington is a shrewd and clever fancier, he exhibits the best dogs, in consequence he wins with them and sells them right and left all over the country. This must naturally make less successful breeders envious; but with so many jaundiced eyes upon him that nothing has been discovered against his character is proof positive that nothing exists. If he makes money out of his kennel, many hundreds a year, it is said, then he succeeds in doing what everybody else tries to do.

As for the other three—Thomson, Pirie and Krehl—well, all I can say is, they are public characters in the kennel world and their names have never been associated with a dishonorable action. It is only pen and ink curs of gangrened imaginations and besmirched reputations who would try to drag down into the gutters of filth that public opinion has kicked them into, the men who can face the light of day and walk in the middle of the road. I regret to understand that Mr. Thomson intends to resign the club, and I hope his two friends may not be influenced by his example. Their duty is to stand by their club until the honorable majority have had an opportunity of purging from their midst a cowardly few. "The result" mentioned in the circular was a lying forecast, as the Sheffield show opened with fifty-two collies on the bench.

The only public notice taken of this outrage was in a rigmale episode from a boisterous member of the Collie Club committee. It reminded me of a line in "Hudibras," so I turned over the leaves of Mr. Samuel Butler and smiled when I came upon the couplet:

"Quoth Hudibras, 'I smell a rat;
Ralpho, thou dost prevaricate.'"

The Birmingham people were quite elated at the return of Dame Fortune this year. It was vexing to me that I could only get there the last day of the show. Although the total entry proved a complete recovery, I somehow wandered through the benches with the feeling that things were not quite what the old days knew. I had a good look at the white collie bitch and her pups which were honored with the Prince of Wales' attention. He bought one for ten guineas, and I am told he went to the show for that purpose. What the pups will be heaven only knows, but the dam is a lo-eared, sleepy-faced, light-boned, soft-coated, white English setter, and when I saw her she was suffering badly from chorea.

The St. Bernard Club show adds to its renown year by year. The vitality in this club is most remarkable and commendable. Three hundred entries and many refused is something to be proud of. The public bowed down to Plinlimmon, but the success of his kennel mate was received with mutterings.

Writing of St. Bernards brings up a subject I should be glad to be able to leave alone. Under the slow-witted mismanagement of its present kennel editors, the *Live Stock Journal* is fast going from the dogs to the dogs. The *Stock-Keeper* scored a cruel triumph over it in the St. Bernard show week. The two-penny paper presented its readers with a brilliant lifelike portrait of the talk of the hour, Plinlimmon, and a speaking likeness of Mr. Cumming Macdona. The whole paper seemed to be given up to dogs that week, and the report by "An Expert" (Mr. Crawford, I believe) was good technical reading. The poor old *Live Stock* was starved with a few columns and a report as dry as a drought. The numerous proprietors of the *Stock-Keeper* took care that no bushel should obscure their light from the public. They have adopted a style and policy that goes down with the public, and may pay if it lasts.

The great firm of Spratts Patent has been turned into a limited liability company. It is considered the most genuine business offered to investors and speculators since Bryant & Mays underwent the same transformation. It is stated that the capital has been subscribed over and over again. This was to be expected because every grocer who deals in the goods would feel anxious to have even a little finger in this very juicy pie.

When the senior partner, Mr. Wylam, purchased the patent for a few hundreds, neither he nor his friends could have dreamed of the colossal firm that was to grow up out of the profits on dogs' food. The smart business abilities of the purchaser pushed it to the position it now occupies. £188,000 are a large figure to pocket for a property consisting of the sale of biscuits and pheasants' meal.

The turning of this huge private firm into a public property will be a great blow to needy and shifty dog show reporters who look to augmenting their incomes by the sale of "promising puppies" and eleemosynary presents obtained by hanging about the office-door in Bermondsey—kennel perquisites.

Before the allotment of the shares has been made the £5 shares are selling at a premium of £2. This price is not likely to be sustained. However, the business stands upon such a solid basis and their goods are so first-class that the future of the company is assured.

In the *Sporting Life* forwarded to me through my editors I found the following paragraph marked:

"A friend asks me to mention that the gift of 'Lillibulero' to the American-English Beagle Club which consisted of a pretty engraving of two beagles, is so highly valued by the club that it now 'adorns the window of a little store in Market street. Next time I travel Market street I will look for it.'—PORCUPINE."

A correspondence has been raging in the *Stock-Keeper*, arising out of Mr. F. Adcock's challenge to show his bull bitch Acme against Mr. Sellon's Queen Mab, for £100 aside. As Mr. Adcock insisted upon naming the three judges, from whom his opponent was to choose two, the matter rather naturally fell through. The discussion that began in the above manner is finishing up with an attack upon the judges named, a relation of Britomart's merits and a bogus inquiry into the identity of Gaudifer, whom some half-witted groundlings have sagely endeavored to connect with the writers of these notes. The naked, stark naked truth of that business is not difficult to reveal.

Grave charges have been brought before the Kennel Club against Mr. Vero Shaw. I should be loth to publish this fact did I not know that it has been allowed to openly court the notice of the members in the club, they have carried the news on, and it is now everybody's property that Mr. Shaw has been accused of this, that and the other. It is more than weeks, it is months since this first became known, and I trust any noticing it will induce the committee to disclose what has been done in the matter.

There have been rumors that Mr. S. W. Smith's St. Bernard Merchant Prince was being nibbled at by an American buyer. I hear the bargain is struck.

I hear the London dogs are in great distress over the police order, and I am afraid these notes will dash the only drop of consolation from the lips of their owners who have snugly been assuring themselves that among the muzzled was yours to command, with a happy new year all round.

LILLIBULERO.

EASTERN FIELD TRIALS CLUB.

THE annual meeting of the Eastern Field Trials Club was held at the St. James Hotel, New York, on Tuesday evening, Jan. 19. The following named gentlemen were unanimously elected a board of governors for the ensuing year: Messrs. B. F. Wilson, J. O. Donner, Elliot Smith, W. A. Coster, John G. Hecksher, R. C. Cornell, D. C. Bergundthal, Luther Adams, D. S. Gregory, Jr., 2d, F. R. Hitchcock, H. E. Hamilton, A. E. Godefroy, G. DeF. Grant, George T. Leach and Bayard Thayer.

A letter from Messrs. Heath & Anthony was received requesting that a committee be appointed to investigate the withdrawal of Graphic at the last field trials. The letter was referred to the board of governors, who ordered it placed on file. Mr. Alex. Taylor, Jr., who had presented the letter, thereupon used some unparliamentary language, for which he apologized and tendered his resignation as a member of the club, which was unanimously accepted. Notice was given of a proposed amendment to the by-laws to be acted upon at the next quarterly meeting. The amendment abolishes the initiation fee of \$25, leaving the annual dues \$25, as at present. The meeting then adjourned and the board of governors at once convened and elected officers for the ensuing year as follows: President, B. F. Wilson, Pittsburg, Pa.; First Vice-President, J. O. Donner, New York; Second Vice-President, Elliot Smith, New York; Secretary and Treasurer, Washington A. Coster, Flatbush, L. I. It was decided that the public field trials of the Club for this year should be held at High Point, N. C., commencing Nov. 23 with the Derby, to be followed by the All-Aged Pointer Stake, then the All-Aged Setter Stake, closing with the Champion Stake, the Members' Stake to commence Nov. 18. A letter from W. T. Mitchell to the editor of the *Sporting Life* was placed before the board, and after reading it, Mitchell was by unanimous vote debarred from running or handling dogs at future meetings of the Club. Messrs. Donner, Hitchcock and Gregory were appointed a committee to revise the field trial rules.

FIELD AND COCKER SPANIELS.

Editor Forest and Stream:

Hear, hear! "Let us know where we stand," as "Raven" says in your last issue. I am glad to see my letter, written a few months ago to you on this subject, has at last elicited an answer, or rather another interrogation on the part of "Raven," who we all know is a judge of what a spaniel should be. His remarks about Pluto at Philadelphia fall show are well taken, and only strengthen what I said in my last letter, that practically, to all intents and purposes, there is absolutely no difference between a cocker and a field spaniel—except the weight. Now the question is, who is to decide this matter? I had hoped that it would have been decided ere this by the American Spaniel Club acting on my letter to you in some way, or at least to have publicly heard from one or more prominent members of the club their views on the subject. But my "conundrum" did not apparently have any interest to them in any shape or form.

Most of the coming bench shows have their premium lists printed by this time, so it is almost too late to make the alteration I suggested. But (I think I may say) the principal bench show of the country has not had a date fixed, and I would like to see the manages of said show take the initiative in this matter and I feel sure the other kennel clubs would without doubt follow suit at their future shows.

I therefore, as a breeder and exhibitor, respectfully ask the Westminster Kennel Club of New York to expunge the word "cocker" from their future premium lists and make classes for field spaniels as follows:

Champion Field Spaniels under 28lbs. (any color), dogs or bitches.

Field Spaniels under 28lbs. (black), dogs.

Field Spaniels under 28lbs. (black), bitches.

Field Spaniels under 28lbs. (any other color), dogs or bitches.

Champion Field Spaniels over 28lbs. (any color), dogs or bitches.

Field Spaniels over 28lbs. (black), dogs or bitches.

Field Spaniels over 28lbs. (any other color), dogs or bitches.

Field Spaniel Puppies (any color), dogs or bitches.

Another argument in favor of the change, viz.: If cockers and field spaniels are not practically the same breed, why do all the bench show premium lists put cocker and field spaniel puppies in the same class? They might put as well English, Irish and Gordon setter puppies in one class. In fact it would be a great deal more sensible, as the puppies mentioned are all setters, while in the other case some are cockers and some are field spaniels, as some out and out cocker men claim.

Why, one of our most respected spaniel breeders imported a certain spaniel bitch from the other side as a cocker, and when he got her he found she exceeded the limit that a cocker should be, and consequently the bitch alluded to has been shown in the field spaniel class and won prizes.

I repeat my "conundrum" given in my former letter, viz.: If a champion cocker happens to grow fat in spite of the best efforts to keep him below the limit weight, what is he? We will say he gets to be 30lbs. Can he be shown in the field spaniel class, and if so, does he scale the ladder again, or does he take his place in the champion class?

I would really like to hear what the American Spaniel Club have to say on the matter.

CAVE CANEM.

THE "AMERICAN KENNEL REGISTER" ENTRIES new number 3,185. The current number is the first of the fourth volume. The Register is published monthly at \$1.50 per annum.

LARGE CANOES IN THE A. C. A.

Editor Forest and Stream:

Now that there is some prospect of an amiable and comprehensive settlement of the existing differences respecting canoes, it is time to make a suggestion, not that I hope to change the opinions of such as have decided preferences, but simply to stimulate those who are hesitating or still dissatisfied. The advocates of the sneakbox and others seem to think that 48, or even more, inches beam preferable to less. It seems to me, therefore, quite within the province of the A. C. A. to "cover in the happy mean" and make the proposed new class 15ft. keel by 42in. beam, with an admissible depth forward of 2ft. 6in. and a draft of 11in. for each foot of length on deck, or not to exceed 17in. and a freeboard amidships of about 9in. This would have a tendency to introduce some of the famous Clyde features, and could not fail to give us a class of faster, more comfortable and decidedly handsomer boats than most of those now used under canvas.

If the Association sees fit to draw the line in a reasonably liberal spirit by admitting some such improvement of sailing canoes—without impairing or restricting the privileges of the paddle—it cannot fail to enhance the popularity of clubs by strengthening their membership. There need be no conflicting interests, because the man who has a paddle, cannot afford steam, and even hesitates about the expense of a yacht, will be an interested member directly, while those who have so bitterly opposed his recognition will be surprised to find him quite as gentlemanly as themselves and inclined to foster the best and most active members of the Association.

Granted some such concession, the average man—who now rows his boat when the breeze has failed—will find consolation in the society of those who know the sweet uses of adversity, as exemplified in the paddler aforesaid, and whether they go forth

"In their big canoe with pilions,"

or glance along the coast, both will be cheered by observing

"The seas with swelling canvas cover'd o'er."

I call my new boat a canoe for this reason: She is not deep enough to warrant the more assumptive title of yacht, although I hope to add some features which belong to the latter class of vessels. For instance—including her rail—she will possess a minimum freeboard of 19in., supported by a mast 10ft. 8in. high, which will, I believe, be the most convenient on a line with her deck, gratings, 15in. below the load waterline. Except the shoe shown on the bottom of her keel, she will have no outside ballast, another canoe feature which favors portability. Whatever ballast she requires will be of lead stowed as low as possible inside and concentrated upon the midship section.

Her waterlines will be similar to those of the Eagle with decks somewhat flatter, a deeper forefoot and the after keel less rockered.

I have been not a little amused by the several times repeated in these columns, that such vessels cannot be safely and easily beached and a landing effected without wading or getting splattered. Now allow me to say that I have often beached the Aura, a 23x5 pine boat drawing 17in. forward and 8ft. aft, by rounding to quickly, thus bringing her nearly broadside on. Her velocity, increased by 160lbs. of outside iron, never failed to carry her forefoot well out of water without in the least endangering her structural affinity or disturbing her top hamper. But then she was a cutter model and such vessels have since been proven more tractable, less dangerous and longer lived than any other.

Editor Forest and Stream:

My large canoe is now completed and I can give you some information in regard to the weight of the boat. My canoe weighs 110 lbs. by C. & Douglas, Waukegan, Ill., and is a very slightly craft. Length, 15ft.; beam, 42in.; depth amidships, 15in. Her stowage capacity is something immense. Stems and keel of oak, planking and deck of 5-16 white cedar. She weighs, with bottom board, centerboard, seats, rudder and steering gear all complete, except mast and sails, 150 pounds. This weight could be reduced 20 to 25 pounds if desired. The above boat will cost, complete, including sails, oars, paddles, etc., about \$100. Have rigged her for cruising, wide beam, balance lug sail, 13 sq. ft. The main boom and yard stowed under the deck without joints. This rig I have found to be a very handy one as there is but one sheet and one haliard to attend to. Of course this boat is not paddleable, but she will row very easily, either of which are of but little consequence to me as I am decidedly opposed to rowing or paddling any great distance, but there is no question in my mind as to her being able to sail well. As to the Association forming a class that will admit these wide beam canoes, I am at a loss to decide whether they will gain anything by it. As for myself, I would like very much to see a class of this kind and would be at the meets every year in racing trim, but I don't propose to build a canoe that is totally unfit for cruising in these waters in order to be able to race her once a year at the meets. We have admitted 81 and 86in. canoes in the Chicago C. C. races (and, by the way, they carried away the prizes) and I have no doubt that if a sufficient number of owners of large canoes should apply to the A. C. A. for recognition, a class would be formed for them. There will be several boats similar to the one I built here this winter, and after next season we can tell more about it. I believe I am as deeply interested in canoeing as "Class A" or "Class B," but the wind and water that I have to sail in forces me to use a larger canoe.

CHICAGO, Ill. CAPTAIN.

CANOE CLASSIFICATION.

Editor Forest and Stream:

In presenting the article on classification of sailing canoes in FOREST AND STREAM of Dec. 10, I was actuated only by a desire to advance and improve that feature of the meet. The classification was presented not with the expectation of its being adopted, but to show more plainly the inconsistencies of the present rules and to open the way for better ones. The A. C. A. now has, I believe, over 600 members, and is rapidly becoming national. Every member has his preference, and different localities require different sailing canoes. The A. C. A. having declared what shall constitute a canoe could provide sailing rules broad enough to classify all canoes within the limits. I am not advocating a large, or small, wide or narrow canoe. Let each individual canoeist use his own taste in that respect. I advocate a more equitable and general classification so that each member of the A. C. A. may, if he choose, take to the meet the canoe of his choice and have the privilege of entering the sailing races should he wish to do so.

In reply to the reviewer immediately following my article allow me to say that while the writer of the answer promptly says are for "nearly all the members of the A. C. A.," he candidly admits all I have claimed, and acknowledges that the present rules dictate two sizes of canoes, 15x28 for Class A, and 15x30 for Class B, and remarks that in "another year we may expect to see Class A all 15x28." Well, that is building pretty near to fit the rule. What has become of all the 14x28 and 27 canoes? Have their owners tried their canoes, or have they made an effort to get more even terms by getting a larger canoe?

Those sizes, 15x28 and 15x30, may suit the leather weight and answer well for sail sailing with them, but how about the larger and heavier of our members and those whose only sailing privilege is on the open waters of our lakes? It is not every member that can afford or cares to have one canoe for home use and another for the A. C. A. meet.

The further acknowledgment that "the object of the present rules is to afford a race to every possible size of canoe that may present itself" completes the confession. While the present rules may provide for the canoes in attendance at the meet, and, while the leading canoeists may be contented with the rules as they now are, nevertheless they are unfair and unjust because they dictate the canoes that shall have the privilege of sailing in the races of the A. C. A. Is it probable that a member of the A. C. A. will transport to the meet from a distance a proscribed canoe? Is it not probable that some stay away for this very reason? Change the rules so that all canoes within Association limits may enter the sailing races on more even terms and the result may surprise you. Certainly no harm will be done.

The rules proposed by me do not necessitate a lengthening of the programme, as both divisions of either class could be started at one time. In place of giving a first and second prize, give a first prize in each division and by each other than the canoes within Association limits, better meet the requirements of the Association than those which both dictate and prescribe certain sizes of canoes; which allow large and small canoes in one class on even terms; which allow a canoe under 16ft. x 28in. in either class, and while allowing a canoe of 17ft. x 28 1/2 in. in Class B, prescribe some canoes of less than

17ft. in length, of symmetrical proportions, and capable of being efficiently paddled by one man, as I know to a certainty?

Echoing the sentiment of "Hal," "fair play all around and no favor," is all that is desired by
CLEVELAND, O., Jan. 18, 1886.

SNEAKBOXES AND CRUISERS.

Editor Forest and Stream:

I have just finished reading the articles, and comparing the designs of the three sneakboxes given in the issues of Jan. 7, 14 and 21, and am at a loss to know why, in discarding, as in the last design, some of the duck-shooting features of the craft, you still tacitly recommend the retention of such a peculiar characteristic, the bow. As it is not a thing of beauty, why retain it? Has it any advantages over its adaptability for hunting purposes that it should be retained in the cruiser? Would it not be possible to build a boat on the same length, breadth and midship section but with an orthodox bow, that would row as easily, sail better to windward, and be as good a boat for the purpose as the one presented in the design?

R. K. B.

[It has been attempted in the design given to retain the peculiarities of the sneakbox model, and the bottom is practically the same, except for the additions of stern and freeboard above water. The bow of the sneakbox is very convenient for beaching and hauling up in cruising, and better for that purpose than a boat's bow. A boat is now building for the owner of the Bojorn from a design by Mr. W. P. Stephens, in which the bow is carried out as in an ordinary sail boat, in other respects being the same as shown last week. This boat, intended for smooth water sailing, is 15ft. over all, 16ft. on waterline and 6ft. 4in. beam, with one large lug and a balanced rudder. How she will perform with the other boats described remains to be tried this season.]

LIGHT-HANDED.

HOW unmeaning to the novice, but how striking to the veteran sportsmen are these simple words; to the one they convey no ideas, to the other they are fraught with the utmost importance; one need not of his import, while the other caters to their meaning with the utmost ability and care. I have seen a canoeist who knew what I mean; experience in its practical trials has taught them that, and if not, its synonym, "Nessmuk," has done his part. Hail to "Nessmuk"! What a jolly fellow he must be, and withal what common sense he shows. To the Western canoeist and hunter, well "Nessmuk" does this, "is always the finale."

"Nessmuk" wants but little here below" is fully exemplified in the life of a canoeist. A canoe is a pretty craft, and if her captain is a man of taste, a valuable one; but she is not a freight barge. How many times, and veterans, too, can lug along 200 pounds of stuff in a 75-pound canoe and call it canoeing is a mystery to me. I once did this myself, but no more. Instead of the halcyon days being gone, they have come. Let us see what a canoeist really needs. First comes canoe and fittings, sails and paddles are in their place, though some dispense with the former while cruising; canoe tent, cushions and apron nearly complete the list. Next comes the outer man—olskins head the procession, next comes bedding; a sleeping bag is the *de plus ultra*, but heavy blankets answer almost as well; a rubber blanket to throw over all, a heavy suit of underwear, with two or three pairs of socks, a soft hat or helmet, medium heavy coat and flannel shirt, and we have the list complete.

The most important department of all is the cuisine; grub box, magic man, heads the list; coffee pot, inside of which when not in use repose knife, fork and spoon, pepper and salt, can opener and water bottle, are by any means got in. It occupies one corner of the grub box; the square coffee and sugar can occupy the other corners, while the remainder of the aforesaid grub box constitutes the larder. A grantware plate and cup, together with a small frying pan, make utensils enough and to spare.

A troublesome, but necessary adjunct, is the tool box, which should be of tin and not over 3in. high, so that it may be placed under the cushion and used for all. A few copper and half a dozen nails, copper wire, string, a brace and a few screws, a small tin of putty, a lead pencil, a few brass screws and a piece of copper plate about 6x2 to mend paddle, etc., are the main things, while the remainder of the box can be used for storing "small duff," which, as every canoeist knows, accumulates with appalling rapidity.

A strong sheath knife should be carried in the belt; it should have a thin blade and be carried so that the sheath will project into the hip pocket. For all men carry a revolver, for show if not for use. A good knife, a good hatchet, a good saw, a good auger, but on the other hand don't handle it yourself if you can help it.

In some cases more may be carried and some less, but this is enough for a thousand mile cruise, and if I were going on such a trip I would only add such things as I could carry on my person. The disposition of a canoeist's plunder of course depends upon circumstances, but take the word of one who has tried it and you won't repent it.

I am away in taking up this subject, and am wearing out my old trodden ground, so that even my canoeist, start off with four white shirts, and a dress suit in his dry storage. It made even me desire to scribble.

ARCTURUS.

A VERY SMALL STEAMER.—Editor Forest and Stream: As I see that you invite communications on matters connected with canoeing, I send you the following description of what I believe to be the smallest steamer ever built, and I am proud to say that it was built by me. It is a 14ft. long, 20in. beam, clinker built, of pine, with short counter. The boiler is of steel, in shape vertical, 20in. high and 20in. in diameter, 31 one inch tubes, lagged with mahogany, brass dome and funnel. I have had as much as 160lbs. to the inch on it, but have usually worked it at 90 or 80. It is fed by two injectors; one a No. 0, Schaeffer & Budenberg's make, and the other a model made by the same makers for exhibition. The latter is barely 3in. long, yet, strange to say, it works far better than the larger one. I had originally a pump, but this a home made article, was not satisfactory. There is, of course, a water gauge, a steam gauge and a safety valve, the latter a large one. An ejector in the stern speedily throws out any water from the bilge, and an exhaust box on the waste pipe effectually prevents the unpleasant puffing noise. With the blast steam can be raised in a quarter of an hour, and when clean, the boiler will make steam so quickly that the boat will run well by fire door open. The engine is 3 1/2 in. stroke, 2in. bore, cylinder top just appears above the deck. There is no link motion. The reversing is accomplished by a cam, working in a slot on the shaft. Half a turn astern is given by hand to the fly wheel, and when steam is turned on the engine will go astern. With Welsh coal, there is no annoyance whatever from smoke. With about 300 revolutions the canoe will make about seven miles an hour in smooth water. Of course she is only intended to carry one in the well; but on one occasion she carried myself and two friends, one on the bow and one on the counter, for about seven miles. She is extremely stiff, so much so that I can stand up on the counter while she is running and steer with my feet. She is decked in forward of the boiler. A brass coil allows the air to enter, so as to prevent the woodwork getting too hot.—W.

THE FLORIDA C. C.—Editor Forest and Stream: At the meeting of Jan. 17, the Florida C. C. was organized in the city of Jacksonville with ten charter members and the following list of officers: Captain, B. H. Barnett; Mate, R. M. Call; Secretary and Treasurer, E. H. Buckman. This is the pioneer canoe club south of Mason and Dixon's line, and I believe it will be a great success. The organization, as has the right sort of men in the board of officers and all about them they have the facilities for gratifying a fondness for our manly health-giving sport. If convenience to some of the finest canoeing waters in the world will be an incentive to the development of a canoeing interest, they have it here, for flowing by their very doors they have the noble St. Johns River, which has a length of more than 300 miles, every one of which is a paradise for the canoeist. There are also numerous smaller rivers and streams within half a day's ride of the city in the waters of which game fish of many varieties can be taken, while along the banks, deer, bear, wildcat and birds of various kinds may be found for the hunting. When we take into consideration the fact that here the canoeing season is never closed by snow and ice as it is in the North, it is open all the year round, we begin to realize what a canoeist paradise Florida may and probably will become. Captain Barnett appointed a committee of sailing device, a report from which will be had at the next meeting. The captain of the club and probably two or three of the other members will join the brethren of the A. C. A. on the waters of E. I. Bay and around the campfires of Grindstone in August next.—CHAS. A. NEWELL.

SPRINGFIELD C. C.—The annual meeting of the S. C. C. was held on Jan. 10. The officers elected were: Captain, C. W. Bliss; Lieutenant, E. C. Knappe; Secretary, F. L. Sifford; Purser, P. A. Knappe. Messrs. Bliss, Bowles and Knappe constitute the Regatta Committee. A spring meet will be held at Calta Shasta Grove on the Connecticut River. The club dinner will be held on Feb. 10.

PERSONAL.—Mr. and Mrs. C. K. Murroe are now in Key West. Messrs. Phinney, of Boston, and Rev. C. P. Peters, are with Capt. Kendall at Thompson's. Mr. I. P. West, formerly of Orange, N. C., well known as the builder and paddler of canvas canoes, called on us last week. Mr. West is now settled in Omaha, Nebraska. Mr. Lucien Wilson, of the Cincinnati C. C., was in New York this week and spent Sunday at Marmalade Lodge.

OAKLAND, Cal.—Mr. W. W. Blow has sent us some photos of his canoes Zephyr, 14ft. x 28in., and Mystic, 15ft. x 28in. The former is rigged with a Mohican sail and small dandy, while the latter is rigged with jib like the Eagle.

A CRUISING AND RACING CANOE.

THE introduction of the Average Record system in the Association races, and the few changes made in the rules in 1884 have checked the tendency to build larger canoes and also to build canoes specially for sailing or paddling, and have fostered two sizes of boat, one in Class A, and one in Class B, as it would, while with sheets off, is not built to the limit of 16ft., the former, 14 to 15ft. by 28in., is built to the limit of 16ft., as it would, while with sheets off, make her too unwieldy for transportation, slow in tacking, and heavier. The favorite length promises to be 15ft., as giving the best all-around results, both in racing under the rule and for cruising and transport. Of course a 16x28 canoe would have an advantage in a paddling race, especially over a straightaway course, and on many occasions a canoe would have a similar advantage over two legs of the A. C. A. course in E. I. Bay, but neither of these would compensate for the sacrifice of all-around qualities and speed to windward. Similarly in Class B, the limit allowed is 15x31 1/2 or 16x30, but few avail themselves of the extra 1/2 in. of beam or foot of length, as experience has thus far proved that the smaller boats, such as Dot, Snake and their class, can out sail the larger canoes in most waters. The fight between these canoes and the larger ones of the Pearl type has been carried on for a long time, with odds in favor of the smaller boats. It must be said that the 1st class boats have had the advantage of more skillful handling for the most part, and have outnumbered the others, but the racing thus far in America all goes to prove that the ordinary 14 or 15x30 canoe, with a moderate amount of ballast, and in many cases unballasted, can do nearly all the heavy canoes are capable of, and that they are faster in most weathers. That they are easy paddling, convenient in transport, and for these reasons they have become popular. The near future will in all probability see some races between them and the best canoes of the other type, handled by experts, and these may reverse the results of the previous racing here; but in any case the medium all-around canoe must remain the favorite in America.

As in Class A, a more powerful boat could be built by going to the full limit allowed, but all considerations, weight, quickness in stays, easy paddling, convenience in transport, control under paddle, cruising and special work in rapids, etc., dictate 15x30 as the desirable mean.

For a 15ft. canoe a limit of beam of 31 1/2 in. has been established for Class B. A 15ft. x 31 1/2 in. canoe is quite a large boat, comparatively speaking, and for every purpose, except sailing races, such a canoe is less convenient than a smaller and lighter one, and however good the large one may be in the regular sailing races, she cannot hope for a place in the average record, as her weight and beam will in most cases handicap her in paddling.

After the A. C. A. '84 meet there was a marked tendency all along the line to build larger canoes approaching the limits more nearly on the average than any year previously. The Sunbeam was a result of this movement. Though not built up to the limit—on account of the paddling difficulty that would result—this canoe was designed to get the most out of a 15ft. x 30in. canoe. The stem and stern were plumb with a full body amidship and aft, and deeper draft than formerly, got by a decided deadrise to the floor. A season's use has pretty well proved that she is a fast canoe under sail and an excellent s. boat. A light-weight man must needs carry considerable ballast in a Sunbeam, however, to get stability down the wind—one hundred pounds is not too much to get the canoe down to her true lines, and more can be carried to advantage often.

The Lassic was designed as an attempt to get good speed, close windward work, a fairly light and small canoe to carry a moderate amount of ballast—always a heavy load to handle—and to be a good cruising canoe for all but very narrow and rapid waters. She has proved herself fast under sail and paddle, easy to handle on the water and ashore, amply large enough for a man of medium height and weight, and needs but 75 pounds of ballast at the most; with all this she is very steady before the wind. She is a Class A canoe, but allowed in Class B races, and just comes within the limits of Class III. paddling.

The dimensions—15ft. x 28in.—and the points arrived at were given to Mr. Everson, who worked out the problem in his own way, and to whom all credit for the result is due.

Two flat brass plates were used for the boards, placed as shown in the drawing, as being the best for windward results it was thought, not overlooking convenience at the same time. For cruising the after board can be dispensed with, and the slot in the keel plugged. The forward plate can be removed and a wooden board substituted, thus saving about 20 pounds in dead weight. The ballast all goes below the floor, and is held in by the floor boards buttoned down. It is then in the very best place. The canoe is steady before the wind since she draws more water than the Sunbeam—unless the latter is heavily ballasted—being narrower. The motion from side to side is a very easy one, quite unlike the quick roll of a flat keel canoe. The manipulation of the oars takes time to acquire, so that the maximum result can be obtained. They largely decrease the work that has to be done by the rudder in single board canoes.

15	1 5 1/2	0					

The keel batten, 3/4 in. thick, is a separate piece; but it would be better if worked in one with the keel. The centerboard trunks are both below deck, closed on top and opening only on the bottom. The boards, of select brass, are hinged by means of two L-shaped pieces

shown at *v*, one on each side of the board. These pieces are each fastened to the keel by a screw from the outside. To remove the board the canoe is turned over, the two screws taken out, and the board turned back, when the board will drop out. The fore board is of 5-16in. brass, weighing 15lbs. The after board is of 3/16in. brass, weighing 5lbs., and is quadrant-shaped. Each is filed to a sharp edge. They are hoisted by cords, the forward pendant belying on a cleat on after end of the trunk; the after pendant coming through the deck to a cleat on starboard side of deck, abreast the canoeist. The three mast tubes are of uniform size, 2in. inside, so the masts may be interchanged. The rudder is of 3/4in. oak, thinned down at the edges, the yoke being a semi circular piece with a score in it for the rudder lines, of brass chain. The foot gear consists of two oak pedals, *l f*, fitted to the floor boards with brass spring hinges. When two are paddling, the after man uses the braces, *s s*, on the floor, the back-board for the forward man being at *r*. The hatch, *o*, is made with an outside rim, fitting over the coaming and close to the deck. There is no fore bulkhead, as usually fitted, and the sliding bulkhead is also omitted, a piece, *r*, taking its place and supporting the hatch and carrying the back-board. The broken lines in the sectional view show the inner edges of the planking, the widths of same at midships being given in the cross section.

BODY PLAN OF CANOE LASSIE.

CROSS SECTION AT MIDSHIPS.

THE SINGLE BLADE.—Where is "Single Paddle" this winter? Does he find a difficulty in hunting up the victories of the past season? I did not attend the meet, but if the reports can be trusted not a single race open to both kinds of paddles was captured by the single. I again make the assertion that everything else being equal the double is the fastest, and I may add that I think the superiority will be more apparent in the larger sizes of canoes. The 1886 meet is certain to be attended by the best paddlers of the country. Surely the single paddle men can attend and do their best to contradict my assertion. Don't be content with saying, "We have better men at home," but bring the better men along and give the doubles a worthy battle.—BOREAS.

HARTFORD C. C.—The annual meeting of this club was held Jan. 19, when the following officers were elected for the ensuing year: Geo. L. Parmele, President; W. B. Davidson, Treasurer; John D. Parker, Secretary; Louis Q. Jones, Commodore; W. G. Abbot, member Executive Committee. Several new members were elected, and there is every indication of continuing prosperity. The club has found the following prescription of great benefit in keeping up club interest during the winter months: B. Smoke, canoe talk, refreshments as *q s*, Label, a camp fire. Dose—One each month at the homes of the different members. The next meeting will be at the home of Commodore Jones on the evening of Jan. 27.

WIDE AND NARROW CANOES.—Editor *Forest and Stream*: "Hal" says I have placed constructions upon his communication not warranted by the words used. I did not think so, but he must know better than I can what meaning he intended to convey, so I most cheerfully ask his pardon, and also thank him for his answer. I should like to say more, but have taken to heart the remark of "Skipper" about taking up the precious space of the *FOREST AND STREAM*, and will refrain.—KATRINA.

†A. C. A.—Mr. Edward C. Hammott, of Davenport, Ia., is a candidate for membership.

Pachting.

Address all communications to the *Forest and Stream* Publishing Co.

FIXTURES.

- July 17—Beverly Y. C., Marblehead, First Championship.
- July 31—Beverly Y. C., Swampscott, Second Championship.
- Aug. 14—Beverly Y. C., Nahant, Third Championship.
- Aug. 21—Beverly Y. C., Marblehead, Open Matches.
- Sept. 18—Beverly Y. C., Nahant, Fall Matches.

ELECTIONS OF OFFICERS.

Lynn Y. C.—Jan 5.—Commodore, E. C. Neal; Vice-Commodore, Howard Dennis; Fleet Captain, F. S. Newhall; Secretary, W. B. Newhall; Treasurer, J. W. Atwill; Measurer, C. B. Taylor; Regatta Committee, W. B. Newhall, W. M. Rand, W. Hawkes, C. H. Lockhart and H. P. Armistead.

Buffalo Y. C.—Jan. 6.—Commodore, Harry D. Williams; Vice-Commodore, Louis G. Northrup; Secretary, Mort. C. Provoost; Treasurer, Eugene Roberts; Measurer, John H. Swanson; Trustees, Harry D. Williams, Charles B. Hill, J. H. Swanson, Harry N. Vedder, L. G. Northrup; Regatta Committee, John Willoughby, Charles Greiner, Richard Tobnie.

Hull Y. C.—Commodore, Charles V. Whitten; Vice-Commodore, Benjamin L. M. Tower; Rear-Commodore, George R. Howe; Secretary and Clerk, Peleg Aborn; Treasurer, Charles C. Hutchinson; Assistant Secretary, Frank C. Brewer; Measurer, William H. Litchfield; Executive Committee, Charles A. Perkins, J. F. Brown, J. J. Henry, G. Whittemore; Regatta Committee, E. H. Tarbell, W. H. Litchfield, O. A. Ruggles, B. W. Rowell, W. A. Cary, W. K. Millar; Membership Committee, Fred Pope, A. P. Thayer, B. T. Wendell, J. R. Chadwick, W. L. Porter, George Coffin, Charles E. Cunningham J. E. Sayles.

East River Y. C.—Commodore, M. J. Charde; Vice Commodore, Sargeant W. McManus; Secretary, Harvey T. Lewis; Treasurer, J. J. Driscoll; Sergeant-at-Arms, Peter Gillen; Board of Trustees, M. J. Charde, John Whitaker, J. F. Sullivan, William Briggs and C. Dreyer; Regatta Committee, E. E. Brown, J. D. Smallfield and Aloysius Lamb.

Poughkeepsie Ice Y. C.—Commodore, Theodore V. Johnston; Vice Commodore, William R. Innis; Secretary and Treasurer, Thomas H. Ransom; Regatta Committee, Thomas H. Ransom, Theodore Van Kleck and William F. Booth.

CRUISING AND RACING CANOE LASSIE—CLASS A.

THE CRUISE OF THE PILGRIM.-V.

BY DR. W. H. WINSLOW.

PENOBSCOT Bay is, in my opinion, the best and most interesting cruising ground upon the Atlantic coast, but there is not a yacht club from Whitehead to Mt. Desert, except one lately formed at Rock land. A chain of small mountains lies along the western side from Northport to Rockland, a distance of about sixteen miles, and there are numerous high promontories upon the eastern side until the eyes rest upon Green Mountain, the highest portion of that magnificent island, Mt. Desert. It is not asserted as the French thought. There are many \$100,000 villas at Bar Harbor, and deer have been shot in the forests this season.

There are hundreds of pretty wooded islands, worth from one dollar apiece to many thousands, in the lower bay, and many of them are being bought up by city men for summer homes. There are many of the finest little coves, harbors and camping places along the shores, but one can conceive of, the water is deep and the shores are bold for the most part; low tide uncovers flats in which one can dig large, sweet, tender clams by the bushel, and the blue of high tide is covered with great quantities of dry drift wood, the refuse of the many sawmills up the rivers, which will get up a good hot bed of coals for a clam bake in the shortest possible time. Flounders, tommy-cod, cunners, salmon, lobster and the frisky sculpin are there in abundance. Crows, gulls, loons, ducks, snipe, partridge, squirrel and other birds in sufficient quantity to keep the guns from rusting. There are many places of picturesque beauty worth visiting, and a few of historic interest, of which Fort Point and Castine are the most celebrated. Within easy sail of everywhere, one can find cities or villages where he can get letters, newspapers and supplies. Everything is good and cheap, the people are kind and hospitable, there are few tramps and vagabonds to molest them, and all laws except those pertaining to liquor are promptly enforced.

During the cruising glory of the place is the magnificent sheet of sheltered water for comfortable, safe cruising. I climbed to the top of Mt. Percival, one of the aforesaid chain upon the western shore and looked down and away at one of the very finest views I have ever beheld, and that is saying much, for I have eaten bread in seven kingdoms. The shore line could be followed to the right as far as Owl's Head, to the left to Belfast, Seaside, Fort Point, then crossing the noble Penobscot strait to Castine, Cape Rosier and away into Eggemoggin Reach. Islands of every size and shape, cultivated or heavily wooded, blue water, blue sky, blue sea, and the cry could reach seaward. Before us was the long narrow Islesboro, with the light-house and inlet of Gilkey's Harbor. Beyond the eastern shore, blue hills shone blue and high above the surrounding land. Eastward, the misty peaks of Mt. Desert could be perceived, and southeast a dark heavy cloud upon the horizon represented Isle au Haut. It was like looking down upon a map of blue and green and gray—beautiful scenery, bold shores, few ledges, sheltered channels and straightaway courses, all in view from the excellent roads along the water line.

My companion, E. L. Williams, of South Boston, gazed at the magnificent sheets of water upon each side of Islesboro, the western and eastern ship channels, stretching from Belfast twenty-eight miles to the open sea, and exclaimed, "What a splendid sheet of water and what a glorious place for yacht races." But I confess the place is a long way from Boston and New York for the land craft to go, and without them, races would be as stale as soup without salt. Then the region gets up Genesee weather very often after the middle of August, and before that time the fogs are sometimes troublesome, so I suppose the New Yorkers will stick to their sultry, shallow Sound, and do a tremendous lot of yachting at the fashionable hotels all along shore from New York to Nantucket.

We broke camp one day after dinner and got everything and everybody on board safely, though the cutter was pitching her nose pole upon about sea, and without them, races would be as stale as soup without salt. Then the region gets up Genesee weather very often after the middle of August, and before that time the fogs are sometimes troublesome, so I suppose the New Yorkers will stick to their sultry, shallow Sound, and do a tremendous lot of yachting at the fashionable hotels all along shore from New York to Nantucket.

That's what one can do with a deep iron keeled cutter in a blow. If we had cast the wrong way, or sagged much before filling the sails, we should have been on the rocks. The iron keel and deep sharp body made her obstinate; she resisted the insulting flaps of the sea; implied that she was not to be made a plaything of by saucy waves; stood up firmly and obeyed her captain's wishes, and brought us out of the danger.

It was heavy weather and a very lively boat to windward. The cutter lay her rail to the water and hung there. Puffs did not catch her more than an inch or two, and she came up again lively. The seas were heavy but she did not ship any. She rose and fell, and knocked them right and left, but only threw spray in our faces occasionally. Sitting upon the windward seat of the cockpit, with feet braced against the lee side, we watched the movements of the craft, ready to start the jib sheet if necessary.

A large sailor plucked up his courage and gave us a salute with her whistle, while Theo, the passenger, had sea legs enough on to dip the ensign at the peak, where it always was when we were under way in sight of anybody. The steamer's people crowded to the stern and swung hats, handkerchiefs and parasols at us in admiration of our gallant contest with the gale, and before she was out of sight, we had rounded Cape Rosier, shaken out the reefs, paid off sheets, and were flying away from the following seas. It was a rapid run to Northport, and we anchored there at seven o'clock.

The boys were given a run on shore and small parties of gentlemen and ladies were taken out upon excursions of one or two days' duration, and as every one down east understands picnicking and camping out, we had most enjoyable times. There were always members of the party who knew all about vessels, so I had plenty of help in managing the yacht.

Turtle Head is a high wooded bluff at the northern end of Islesboro, owned and occupied during the summer by Dr. Davis of Chelsea, Mass. The doctor has a fine private home in the midst of a lovely forest of immense spruce and pines upon the highest part of the Head. He has beds for a dozen guests, a large supply of provender and wines, genuine Havana cigars, a perfect armory of sporting and warlike weapons, two boats, a boathouse, fishing outfits and signals. One can see across the bay in every direction from the upper windows, where a good telescope and marine glasses enable one to see every sail approaching long enough beforehand to hoist the colors upon the flag pole upon the edge of the bluff, and the little cannon, which thundered a salute to every passing or visiting pleasure craft.

No one is allowed to hunt upon the Head; the squirrels are quite tame and will come at the doctor's call and eat walnuts at his feet, while the uncollected seal lie in peace upon the rocks about the shore. Nothing delights the amiable doctor and his wife and Jimmy, the colored servant, so much, as a visit, and nothing can certainly be pleasanter to the visitors than the hospitality for which Turtle Head is famous. We were there in November, no soft winter. The doctor in the yacht in "real cutter weather" just to show him her qualities and to enjoy more of his society, and we shall go back again, sure of a hearty welcome, as every gentleman yachtsman may be also.

There's only one objection to his paradise and that is the anchorage. The wind and sea always seem heavy all around the Head. One may run the nose pole against the rocks and have lots of water under the keel, but there is no sheltering lee, and no soft bottom. The doctor just picked up her anchor and walked away with it many times. I left Bert in charge one day and went ashore for water, and when I came down to the landing, ten minutes later, the riding rope was straight up and down and the yacht was rapidly drifting up river. Fort Point is just within the mouth of Penobscot River and is one of the most picturesque and precipitous places upon the coast. There is a large summer hotel near the rounded parapet of the old Fort, and many pretty villas face the bay and line the road to Seaside. The river widens just above the point into a lovely sheet of water with excellent anchorage, and here we spent many pleasant hours. One night at sunset the northern sky became suddenly overcast by a dense black cloud that reminded me of some premonitions of the hurricanes that I had experienced in the tropics, and I concluded we were to get a regular sneezer. I got out the light, examined and cleared the extra anchor, tightened up things generally and prepared for the worst. Out it came, still black and threatening and quickly settled upon us like a mantle, so that we could not see thirty feet away. I breathed free; there was no wind; it was a down east fog that drenched the sails and covered the deck as if they had been rained upon. We went below and played comfortable games of euchre till midnight; then we slept till 8 A. M., when a man upon the wharf shouted that breakfast was ready and we took our meals ashore for a change.

It is a pretty run from Belfast to Castine, up the Bagaduce River and out again, across to Sabbath Day Harbor, along the shore of Islesboro, past Hugh's Head, and around the southern end of the Isle, and up then between it and Job's and Seven Hundred Acre Islands to Gilkey's Harbor. All the lower part of Islesboro and the adjacent islands are owned by a Boston millionaire, who goes down in his steam yacht and spends the summer in cruising and fishing. He has a range of sheltered water that is perfectly lovely, and upon this range I would I had a spot for camping, as I consider it one of the best places in the whole bay. But I am not a millionaire, and I probably could not buy it if I were. It struck me this gentleman could add much to his own happiness by being less exclusive.

Gilkey's Harbor, at the upper end of the inland passage, is a frequent stopping place for vessels in the storm, and is a most excellent haven, sheltered upon all sides by the land, and having the stickiest mud bottom I have yet experienced. We reached there one afternoon and the boat was sent ashore for fresh water. It was low tide, flats made off from the shore everywhere, and the boys had a long pull before they found a landing. I was amusing myself studying up the region with the glasses, when my attention was attracted to some birds along the shore, and I made out a score or more of gulls standing motionless in the mud. When the boat returned we put in the gun and went for them, but we could only get within about 300 yards and did not hit any with the rifle. The reports of the guns awoke a flock of gulls behind some tall grass, who took to their wings and sailed away with the cranes, making an evening concert of discordant sounds. We pointed the boat for the yacht and beheld a pretty picture.

The Lincolnville Mountains lay in deep shadow across the bay with the sunset glow showing over their peaks, forming a mellow background; the water was like a mirror stretching from the distant shore into the harbor, and reflected the rose tints of the western sky; the dark evergreen of forest of Spruce Island to the left, and the low green point with the little white cottage and lighthouse to the right, framed the picture, and, midway between, lay the little Pilgrim with her white masts and hull sharply defined upon the delicately shaded water of the bay. All the details were so softly tinted, so peacefully and so lovely, and so exquisitely beautiful, that we stopped rowing and spent some minutes in rapturous admiration.

It was getting late and supper was yet to cook, so we pulled to the west and were soon aboard and hard at work at the engine. Jamie and I landed on the island while the coffee was making and went into the woods in search of the originator of a solemn caw, and came soon upon the shore of an inland lagoon that lay dark and slimy in the gathering gloom. Our eyes soon made out numerous herons standing quietly by pools of water and we tried to get near them, but could not, on account of the treacherous ooze around us. Then we went, red to shoot at long range, but the sounds awoke a score of ghostly things which vanished like the Flying Dutchman, and none remained. Then we sought the boat and practiced paddling with a single oar till we arrived alongside of our floating home, where supper was ready.

We started early the next morning, and in the Western Bay found a lot of loons calling a storm. The boys got out their guns and fired at them for half an hour, and the yachtsmen were soon in the water. The shooters were sure they had killed a number, but we were not able to find one *corpus delicti*. I told them they had frightened the loons so that they had gone down to the bottom and were holding on to the grass with their teeth until we had gone away. A fine breeze came in from seaward about 10 o'clock, and, as we sped up the channel, the persecuted birds showed themselves in the coves and laughed derisively at the amateur loon hunters.

COMPARATIVE POWER OF LARGE AND SMALL VESSELS.

Editor Forest and Stream:

I have read with much interest the discussions and the various schemes that have been devised for equalizing the advantages which the larger vessels have over smaller ones in yacht racing. But it appears that a clear idea of the "What is it," that gives this advantage is not fully comprehended by all the managers of yacht racing, and that the line, which this advantage of volume varies with the average yachtsman.

Volume of displacement, being a function of four factors, viz.: length, breadth, depth, and a coefficient of form—usually called the coefficient of fineness of displacement—if any one of these factors is taxed, volume is sure to come out under the other factors.

The secret of this element—volume of displacement—lies in the fact that it grows, with the increase in the dimensions of the vessel, faster than does the corresponding resistance. An example will illustrate.

Suppose we have two vessels of precisely the same model and loaded to the same per cent. of their depth. As the two vessels are alike, and loaded alike, their coefficient of fineness, or displacement, will be the same, and we may throw this factor out of the calculation. Again, as the two vessels are alike, their lineal dimensions all vary by the same ratio, when we compare them by means of the ratio. That is to say, we will suppose all the linear dimensions of the one, as length, depth, draft, length of spars, and hoist and spread of sail, to be twice as great in one as in the other.

Then because similar surfaces are as the squares of their respective lineal dimensions, all the similar surfaces of the one, as wet surface, and the cross section, upon which the resistance chiefly depends, as also the sail area, are four times as great in the one as in the other. Again, because similar solids vary in their volumes, as the third power, or cube of their similar lineal dimension, the volume of one is eight times as large as that of the other. That is to say, the larger vessel has twice as much tonnage to the yard or foot of canvas, or twice as much power to the pound of resistance as has the smaller vessel.

The same relation is shown by an expression much in use by naval architects, viz.:

$$D \propto V^{\frac{2}{3}}$$

in which D represents the volume of displacement in cubes of some lineal unit—usually a foot.

As this expression may not be readily understood by those not familiar with algebraic notation, I will explain: The denominator of the fractional index signifies that the cube root of the volume D is to be taken, while the numerator 2 signifies that this root is to be squared. Because similar solids shows the surface of one face of a cube, whose volume is equal to the displacement. And though this surface is not the surface of either of the vessels, it is a surface that varies with the volume by precisely the same ratio as does the wet surface or the immersed cross sectional area, and therefore, it is a means of comparing these surfaces in different vessels. Moreover, the denominator signifies that the volume varies as the cube, while the numerator shows that similar surfaces on the vessels vary as the square of the lineal dimensions.

It may be asked, if the power of the vessel to hold sail up to the wind increases faster than does the resistance, why not put on more sail area?

This we can do to a small extent, and only to a small extent. We would soon find ourselves in the region of impracticability. An example will illustrate: Suppose, in the case already considered, we were to put sail area on the larger vessel according to the increased tonnage, i. e., eight times as much sail as is on the smaller vessel, not only by 2, but also by the square root of 2, or 1.414, thus making all our canvas and spars in the large vessel 2.828 times as large in their lineal dimensions as those of the smaller vessel.

This would give us the sail area exactly, but it would get us into serious difficulty. It would raise the center of gravity of the sail and thereby increase the heeling moment of the wind, diminishing the stability of the vessel under way.

Taking the increased height of the center of gravity of sail into consideration we have three factors, and must therefore multiply by the ratio and the cube root of the ratio=1.26, when we shall have provided the larger vessel with sail just according to her ability to carry it. In this case the sides of the sails and the length of the spars would all be 2x1.26=2.52 times as great as in the smaller one. But after we have put on a vessel all the sail we can prudently manage, how can we take care of them when all their lineal dimensions are increased by 25 per cent.

It is to obviate this difficulty that large vessels, not having room for as much canvas by the ton as small ones, cut down their beam and thereby diminish to some extent their need for canvas.

If the above ideas concerning the value of volume in giving power to a vessel were more generally understood, we should hear less about taxing it under any other dimension.

For the purpose of comparing the volume of vessels whose dimensions vary by different ratio, we must multiply together the several dimensions of the larger vessel and divide the product by corresponding dimensions of the smaller vessel, introducing the coefficient of fineness in each; when they are different, the quotient will be the power of the larger vessel in terms of that of the smaller vessel.

GRAND HAVEN, Mich.

H. C. PRANSONS.

CAPE COD PILOTAGE.—Will some one who has made the run from Cape Cod to Buzzard's Bay or the Sound give a sketch of the trip, how to dodge the shoals, and the usual courses run, so that a stranger may mark a chart for a 5 ft. draft boat?—W.

CRUISE OF THE COOT.

IT is not customary to "lock in" boats on Sunday, but as the season was fast drawing to a close, the authorities of the Raritan Canal increased the facilities by keeping the lock and bridge tenders on duty all the time. Bulletins had been posted announcing that the waterway would be closed for the winter Dec. 20, the date usually fixed and lived up to, unless something extraordinary should occur. Gold Sunday before that time were not allowed to interfere, as a thaw might occur later on, enabling boats temporarily frozen in to pass out. The chief reason why the canal is closed at all during winter, is the impossibility of operating the lock gates in a jam of ice broken up by steamers. A suspension for annual repairs is also imperative, the constant traffic demanding a watchful supervision and speedy renovations, on the principle that "a stitch in time saves nine," very applicable to the proper maintenance of an artificial vein of commerce. The water being run off, inspections of the sides and bottom can be had and repairs executed with rapidity and ease.

The Raritan Canal is 43 miles in length, from New Brunswick to Bordentown on the Delaware River. Originally an enterprise of the State of New Jersey, it has fallen into the hands of the Pennsylvania Railroad Company, with the object of avoiding competition by a judicious regulation of the charges. The traffic at this day, though very large, will not compare in volume with former times. The management of the canal has conveyed the idea that their occupation was nearly played out, and that the canal, by long distance, whereby the various canal charges could be averaged, by steamers had also replaced the mule power to a great extent, regular lines of propellers traversing the canal at short intervals. Some of these steamers and their tows are of unheard of proportions, so long and clumsy as to strike terror into the hearts of smaller and lighter craft, and the various canal charges could be averaged, by steamers had also replaced the mule power to a great extent, regular lines of propellers traversing the canal at short intervals. Some of these steamers and their tows are of unheard of proportions, so long and clumsy as to strike terror into the hearts of smaller and lighter craft, and the various canal charges could be averaged, by steamers had also replaced the mule power to a great extent, regular lines of propellers traversing the canal at short intervals. Lyman
Sight.

MASS. ARMS CO., Box 500, Chicopee Falls, Mass.

A Handy Tool for Sportsmen.

HENRY'S PATENT Combination Haft.

It is the only haft or tool holder that carries the tools in the same end of the holder as they are used. No shaking the tools out into the hand to get the one wanted. The same motion that unscrews the instrument in use removes the cap that covers the surplus tools. No wrench to be used. It has a solid handle and can be used with a mallet. The tools are of Jessop's steel and nicely tempered. Sent postpaid to any part of the U. S. on receipt of 75c. postal note. Extra Brad Awls, 15c. per doz. JOSHUA BRITTON & SON, STOUTFORD, MASS.

GRATEFUL-COMFORTING. EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus:

JAMES EPPS & CO., Homoeopathic Chemists, London, England.

HILL ON THE DOG.

THE STANDARD WORK ON THEIR

MANAGEMENT AND DISEASES.

Price \$2.00.

For Sale by the Forest and Stream Pub. Co.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1885 we hope to make it in 1886. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful.

We are sometimes asked to explain the reason of the FOREST AND STREAM's constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see.

Another element of strength is the jealousy with which we have maintained the inherent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table. We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

GOOD THINGS IN STORE FOR 1886.

Among the papers and sketches to appear are the following:

Sam Lovel's Camps.

An account of Sam Lovel's experiences when he took Uncle Lisha's advice and went trapping on little Otter. By THE AUTHOR OF UNCLE LISHA'S SHOP.

To the Walled-in Lakes.

Sketches of exploration and hunting in the Northwest with the Blackfeet and Kootenays. By "YO."

Cruise of the Coot.

An account of a voyage alone in a single-hander from New York along the Atlantic seaboard to Florida. By C. P. KUNHARDT.

Wanted.

LONG ISLAND GUNNING AND GAME
PRESERVE CLUB—A party of gentlemen,
loving sport, are contemplating the formation of a
gunning and fishing club on Long Island where
land is cheap, accessible and game thrives well.
Propose to buy land, stock with quail, pheasants,
deer, etc., stock streams with trout, erect club
house so situated as to be convenient to upland
shooting and shooting and fishing on Great South
Bay (near Fire Island). Game to be fed and covers
made in winters of unusual severity. Man or men
to act as game keepers. Members to combine their
dogs for splendid kennels, etc. Stock to cost from
\$200 to \$1,000 per share. Membership limited.
Interested gentlemen will please address S.I.O.,
Gedney House, Broadway and Fortieth street, New
York City. jan28tf

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2.

NEW YORK, FEBRUARY 4, 1886.

VOL. XXVI.—No. 2.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications,

THE MAINE HOUSE BURNERS.

ONE common protection of the classes who violate the game laws is in their standing threat to poison the live stock and burn the barn of any one who dares to give evidence against them. Scores and hundreds of outrageous acts have gone unpunished because no one in the community had backbone enough to risk the vengeance of these fellows. Just now the Legislature of New York is asked to modify one of the best game laws of the State out of deference to the demand of Adirondack dwellers, who threaten, if the law is not changed, to slaughter the game out of pure revenge.

In most instances this fear of vengeance is without any adequate foundation. The grouse snarer may proclaim that if "peached on" he will burn barns, but as a matter of fact he is a cowardly fellow, brave enough in setting snares, but lacking courage to apply the incendiary's match. The way to treat him is to go ahead with his indictment and punishment. In nine cases out of ten no barn burning will follow. In the tenth case, where the law breakers are actually so depraved as to execute their threats, there is but one course of action, as in the other nine, namely, to prosecute. Then if the barn incendiarism follows, punish that too. At all hazards take away from such dangerous members of society their defense. Break up the reign of terror. This is just the condition of affairs they have had to contend with in Maine.

Last March one J. W. Day, of Wesley, Me., was prosecuted by detective Pettingall for having killed deer contrary to law. Day believed that Game Warden Munson, of Wesley, was responsible for his arrest, and he made the customary threats of revenge. He belonged to a clique known as the "Shacker Boys," Shacker being a local term for deer. The Shackers resolved to "clean out" Warden Munson. Among other devices to accomplish this end, they set a dead-fall for him, but this he escaped. Then Day announced that a match was waiting for Munson's buildings as soon as the hay was in. At last on the night of July 17, Day poisoned Munson's cow, emptied a can of kerosene in the barn and house and set fire to them. Both were totally destroyed. Six weeks after that others of the "Shacker Boys" stole into the barn of Game Warden Samuel Cushing, cut off his horse's

head and burned the barn and all its contents. The incendiary Day was arrested for his crime and lodged in jail. Then letters were sent by the Shacker gang to six other persons who had been prominent in enforcing the game laws, among others to Dr. Sam. B. Hunter, of Machias. These cheerful missives threatened fire, poison and death. Day also sent out from his cell poetical effusions bearing upon his crime and arrest. One of these compositions was produced at his trial as an evidence of the law-defying character of the Shackers. It is an illiterate mess of doggerel beginning:

It was in the town of Wesley
as you shal understand
thair lived a croud of young men
thay was cald the shacker band
and thay was accused of munny
a bad deed let them be guilty or not
but they hunted deer the year around
and for the wardens make it hot
thair was one young man among them
the wardens all knew well
for by this deavils rill
thair had munny a poor deer fel
he hunted on old stream
I would have you all to know
and he sed it was one place
the wardens dast not go

Day was brought into court Jan. 23, and the case went to the jury on Monday of last week. He was convicted of arson and sentenced to State Prison. Next April, it is confidently hoped, at least one more of the Shacker band will join him there. The Maine authorities have adopted the only adequate policy of dealing with these characters; they are pursuing that policy with a decision and a vigor that cannot be too highly commended, and by the time they shall have finished, it will be understood, in that part of the State at least, that prosecutions for game law offenses are not to be avenged by poisoning cows, beheading horses and putting the torch to barns and dwellings.

KANSAS GAME NEEDS.

THE members of the Leavenworth Gun Club have addressed a memorial to their Senator, asking for much needed changes in the law for the protection of game birds. The quail and grouse are shipped to market in such quantities that, though the open season for them is right, the two species are sadly harried and their extinction only a matter of time. Another evil which has been developed in Kansas is the side-hunt. Competitive shooting leads to the killing of unreasonable bags. Game is destroyed not for the inherent sport of shooting, nor because the birds themselves are desired for food, but only to make a score which shall "beat the other fellows." The petitioners ask that exportation of game may be stopped; that Kansas game may not be dumped into the Chicago and St. Louis markets. They also ask that local game killers may be limited by law to twenty-five birds each in one day. These demands are reasonable. Senator Lowe will serve the true interests of his constituents if he will secure the game legislation they ask.

THE ALBANY DEER BILLS.

TWO of the bills relating to the hounding of deer have been reported upon by the Assembly committee, and were put on the files last Monday.

The first is No. 107, introduced by Mr. White. It makes the deer killing season from Aug. 15 to Nov. 1; allows jack-hunting from Aug. 15 to Oct. 15, and dogging from Sept. 15 to Oct. 15; allows possession of venison from Aug. 15 to Nov. 15, and the sale of venison from Aug. 15 to Nov. 1.

The second is No. 108, introduced by Mr. Barnes. It makes the deer killing season from Aug. 15 to Nov. 15; permits hounding from Aug. 15 to Nov. 1; forbids jacking at any time; and forbids the transportation of venison out of any of the counties of the State (save Queens and Suffolk) except that from Aug. 1 to Nov. 15 two carcasses may be transported if accompanied by their owner.

Both of these bills contains some good features, but each one has a vast preponderance of unmitigated evil, and the amendment of the present law as Mr. White proposes it, or as Mr. Barnes proposes it, would be nothing less than a public calamity. Mr. Barnes's clause restricting transportation of venison to two carcasses accompanied by the owner, is a capital provision, or it would be but for the idiotic proposition to legalize the transportation of dead game fifteen days before it is lawful to kill that game.

Mr. White and Mr. Barnes are posing under false pretences as apostles of game protection. The milk in the cocoanut is the deer-hounding clause. These bills have been prepared and are now being pushed solely with a view to restoring

Adirondack deer-hounding. The good non-jacking clause, the good non-transportation clause, the good shortening of the season clause—each is only a sop to make us forget the true nature and intent of the bill. Either bill, if it became a law, would mean the deplorable destruction of Adirondack deer. Mr. Barnes is working only for a small class of, improvident hotel keepers, stage drivers and guides. Their time-serving policy of grasping all they can to-day without regard to certain ruin to-morrow, is directly opposed to the true sentiment and interest of the intelligent residents of the Adirondack counties.

Every citizen of this State should concern himself to work for the defeat of the Barnes bill and the White bill, and all other bills intended to restore hounding.

We repeat the warning already given. If the deer law is to be maintained it must be by immediate, earnest and persistent action by individuals, each one doing his share. Elsewhere we reprint the petition given last week; and we urge every reader of the FOREST AND STREAM in this State to secure signatures to this and forward it to his district representative in Albany. This must be done now. The deer-hounders in the Assembly boast that they will carry the day. If their designs are thwarted it must be by prompt work.

THE REVENGE ARGUMENT.

ONE argument upon which the advocates of shooting exhausted deer in the water lay much stress is the revenge argument.

There are a number of men and their families in the North Woods who depend for a livelihood largely upon the wages paid them by rich city sportsmen who hire the guides and their hounds to drive deer into the water for the sportsmen to butcher. The hounding advocates aver that the guides of this particular class are a miserable, poverty-stricken lot, continually upon the verge of starvation. They drag out a wretched existence through the winter, barely subsisting upon what provender they have secured with their deer-hounding revenue and with what venison they kill in the snow. Were hounding allowed the winter-killing of deer by these half-starved guides would be limited to their actual present needs; they would crust-hunt only enough deer to do them and their dogs through the winter, and would carefully protect the rest as material for the profitable summer and autumn water-killing. But—this is the argument—if hounding be forbidden, and this source of revenue cut off, the guides will be compelled to kill more deer in winter; and, more than this, will crust-hunt by the wholesale and destroy the game out of pure revenge; and their revenge will not be sated save at the sacrifice of all the deer they can butcher.

Briefly put, the contention is that the deer must be hounded to death by sportsmen in order that they may not be crust-hunted by the guides. Paddle up to them in the water and cut their throats in August to save them from having their throats cut in the snowdrifts in February. The hounders who make this plea doubtless think that they have for it some foundation in fact. If there are shiftless, lazy, half-starved Adirondack dwellers who will butcher deer out of revenge, they certainly are not representatives of the decent class of North Woods guides. They are not the sort of citizens whose threats should coerce the Legislature into making a law for their benefit.

To the tender-hearted water-butcher of Adirondack deer it may appear a harsh sentence, but most other people will agree with us that if these men cannot make a living as guides in the North Woods under present laws, they ought to kill their hounds, engage in some legitimate labor and earn their bread and butter as other folks do.

MASSACHUSETTS SUNDAY SHOOTING.—A petition was presented to the Massachusetts General Court, at Boston, last week, praying for the repeal of the "Blue Laws" of that State, among them the statute which forbids shooting game on the Sabbath day. Whatever may be the reasonableness or unreasonableness of the other laws included in the petition, this one is perfectly right and proper. The prohibition of Sunday shooting should be maintained; to repeal its provisions would be most unwise.

CODFISH FOR THE GULF OF MEXICO.—Professor Baird is engaged in an attempt to acclimatize codfish in the Gulf of Mexico. A million eggs from the station at Wood's Holl in Massachusetts, will be put into the waters of the Gulf at Pensacola. The experiment will be watched with a great deal of interest.

TO THE WALLED-IN LAKES.

IX.—NIGHT IN THE LODGE.

THE wind, which rose again as the sun set, was cold, and as soon as dinner was over we took refuge in the lodge. Sticks were thrown on the smouldering coals of the fire, and Yellowfish, seizing the axe, went out and cut a couple of armfuls of wood, which he brought inside and laid by the door. By this time the pipes and cigarettes were all aglow, and the fire gave out a cheerful warmth, which made the howling gale without, a thing to be laughed at. We lay back on our comfortable beds, with our feet stretched out toward the fire, and were just lazy and contented. It was too soon after dinner to talk, and we quietly enjoyed the warmth and listened to the raging of the wind, and the rattling of the lodge poles and the flapping of the smoke shield, and sent up clouds of fragrant tobacco smoke. The lines of fishes drying above our heads swung backward and forward as the gale increased, but we felt nothing of its fury.

"Wind Maker is hard at work to-night, Appekunny," said I.

"Yes," he replied, as he glanced toward the half breed, "he lives up here in the Upper Lake. Does he not, Yellowfish?"

"Ah," replied the Indian, who was staring hard at the fire as he sucked at his pipe.

"It is rather curious," continued Appekunny in an aside to me, "that the Pegunny seem to have placed the cart before the horse in their belief with regard to this god. You know that Wind Maker lives under the water, at the bottom of lakes." Then louder, "The Pegunny say that when he wishes to make the wind blow, he first makes the waves, and that as they roll along they make the wind. Is it not so, Yellowfish?"

"Ah," said the Indian.

"He is strong in these mountains," said I. "All the time the wind blows. We have very bad luck. Our medicine is not strong. Tell me, Appekunny," I continued, "about the Medicine Rock on the Marias. How far has it moved since you have known it?"

"Once," he replied, "it was at the top of the bluff, but that was many years ago. Since I have known it, it has only moved two or three feet. Some years it moves more than others. It all depends on how fast the bluff wears away in the weather. The slope being gradual, the rock moves slowly. The Pegunny think that it is alive, and, as you have seen, make presents to it."

We had passed this rock on our way from the Marias, a huge, reddish boulder of sandstone, two-thirds the way up the face of a sloping hill on the north bank of the Marias River, and strewn on the soil about it were the decaying remnants of presents that had been made to it in the past. Near it I had picked up a pair of brass earrings, a steel finger ring, a little medicine bottle, and an old war eagle feather, the most recent of the offerings.

"Down on Milk River," said Yellowfish, "behind [east of] the Sweet Grass Hills, is another Medicine Rock. It looks like a person sitting down on top of a bluff. The Pegunny worship it. Always when they go by it they give it presents. Sometimes they give it a shirt, and put it on the rock, and then when you look at it it seems more like a person than ever. Over in the mountains to the west there is a pine tree in which is grown a sheep's horn. It is a very pretty horn. Not so very long ago—may be when my father was a young man—the tree was small, so that a man on foot could touch the horn without lifting his hand above his shoulder. But [as the tree grew] it got higher and higher, until it could hardly be reached by a man on horseback. All Indians gave presents to it whenever they went by, but one day a Nez Percé got mad at it and shot it, and pretty soon afterward he died. Some of the Pegunny have seen this horn, and maybe these Kootenays know about it, too."

"Speaking of religious beliefs," said Appekunny, after a little pause, "reminds me of what old Red Paint said to the priest over at Birch. The priest had just come into the country, and one night he asked a lot of the Indians over to the chapel on Birch Creek to have a talk with them. He wanted, he said, to get them to tell him some of their religious beliefs, and then he was going to tell them about Jesus Christ and try to convert them. He could not speak Piegian, and asked me to come over and interpret for him, instead of the regular interpreter, so that there would be no misunderstanding of any kind.

"I went over at the appointed time with a lot of the Indians, and more came after us, so that the chapel was pretty full, for, you see, they all wanted to hear the stories that the priest was going to tell. It was the famine winter, and the people were glad enough of any kind of an excitement to keep them from thinking of their starving wives and children and of their own gnawing hunger. Among those present was old Red Paint. He is a pretty good talker and has always something to say.

"After a little preliminary talk the priest asked them to tell him some of their traditions, for he wanted to find out something of what they believed. 'And afterward,' said he, 'I will tell you of my God, and His power and goodness.'

"Upon that old Red Paint got on his feet and told the story of the bad man who once cached the buffalo and the other game. He said:

"What I tell you now happened long ago.

"In those days the people were hungry. No buffalo and antelope were to be found on the prairies. The deer and elk trails were covered with grass and leaves; not even a rabbit

could be found in the brush. Then prayed the people, saying: 'Oh, Old Man! help us now or we die; gone the buffalo and deer; uselessly we kindle the morning fires; useless are our arrows; our knives stick fast in the sheaths.'

"Then went Old Man to find the game, and he took with him a young man, the son of a chief. For many days they traveled the prairies and ate nothing but berries and roots. One day they climbed a high ridge, and when they had reached the top they saw, far off by a stream, a single lodge.

"What kind of a person can it be," said the young man, "who camps there all alone, far from friends?"

"That," said the Old Man, "is he who has hidden all the buffalo and deer from the people. He has a wife and a little son."

"Then went they close to the lodge, and Old Man changed himself into a little dog, and he said, 'That is me.' Then he, the young man, changed himself into a root digger [a carved and painted stick about three feet long, shaped like a sacking needle, used by women to unearth roots], and he said, 'That is me.'

"Now, the little boy playing about, found the dog, and he carried it to his father, saying, 'Look what a pretty little dog I have found.'

"Throw it away," said his father, "it is not a dog." And the little boy cried, but his father made him carry the dog away. Then the boy found the root digger, and again picking up the dog, he carried them both to the lodge, saying, 'Look mother, see the pretty root digger I have found.'

"Throw them both away," said his father, "that is not a stick, that is not a dog."

"I want that stick," said the woman, "let our son have the little dog."

"All right," said her husband, "but remember, if trouble come, you bring it on yourself and on our son." Then he sent his wife and son out to pick berries, and when they were out of sight he went and killed a buffalo cow and brought the meat into the lodge and covered it up, and the bones, skin and offal he threw into the creek. When his wife returned he gave her some of the meat to roast, and when they were eating the little boy fed the dog three times, and when he gave it more, his father took the meat away, saying, "That is not a dog, you shall not feed it more."

"In the night, when all were asleep, Old Man and the young man arose in their right shapes and ate of the meat. 'You were right,' said the young man, 'this is surely the person who has hidden the buffalo from us.' 'Wait,' said Old Man, and when they had finished eating, they changed themselves back into the stick and the dog.

"In the morning the man sent his wife and son to dig roots and the woman took the stick with her. The dog followed the little boy. Now as they traveled along in search of roots they came near a cave, and at its mouth stood a buffalo cow. Then ran the dog into the cave, and the stick, slipping from the woman's hand, followed, gliding along like a snake. In this cave they found all the buffalo and other game and they began to drive them out, and soon the prairie was covered with buffalo and deer. Never before were so many seen.

"Then came the man and he said to his wife: 'Who now drives out my animals?' and she replied: 'The dog and the stick are now in there.' 'Did I not tell you,' said he, 'that those were not what they looked like? See now the trouble you have brought upon us!' and he put an arrow in his bow and waited for them to come out. But they were cunning, for when the last animal—a big bull—was about to go out, the stick grabbed him by the hair under his neck and coiled up in it and the dog held on by the hair beneath, until they were far out on the prairie, when they changed into their original shape and drove the buffalo toward camp.

"When the people saw the buffalo coming they made a pis-kán and drove a big band of them into it, but just as the leaders were about to jump off, a raven came and flapped its wings in front of them and croaked, and they turned off another way. Every time a band of buffalo was driven near the pis-kán, this raven frightened them away. Then Old Man knew that the raven was the one who had kept the buffalo cached.

"So he went and changed himself into a beaver and lay stretched out on the bank of the river as if dead, and the raven who was very hungry, flew down and began to pick at him. Then Old Man grasped it firmly and ran to camp and all the chiefs came to decide what should be done with it. Some said to kill it, but Old Man said 'No! I will punish it,' and he tied it over the lodge, right over the smoke hole.

"With the days the raven grew poor and weak and his eyes were blurred with the thick smoke, and he cried continually to Old Man to pity him. One day Old Man untied him and told him to resume his original shape, saying: 'Why have you tried to fool Old Man? Look at me! I cannot die. Look at me! Of all people and tribes I am the chief; I cannot die. I made the mountains. They are standing yet. I made the prairies and the rocks. You see them yet. Go home, then, to your wife and child, and when you are hungry hunt like any one else or you shall die.'

"And now," concluded Red Paint, "the white men have cached the buffalo, just like this bad man of whom I have told you, and we have nothing to eat; we are starving. *Oki,* [that's all], and he sat down.

"The priest had listened attentively, and he now rose and said: 'My brethren, your condition is a very hard one, and I am heartily sorry for you; but although you have nothing to eat, and your people are, as you say, starving, you have

still Jesus Christ, and I am here to tell you about him.' I interpreted this, and as I finished old Red Paint sprang to his feet, and, raising his hand to enforce silence, he said, sternly, 'That ain't grub,' and stalked out of the room. It was a good while before I could get my face straight enough to tell the priest what he had said, and when I did so he seemed to feel mighty badly about it."

It was impossible not to see the comical side to this story, and we roared over it until our shouts of laughter drowned even the noise of the wind without. Then I proposed to Yellowfish to tell us another story of the Pegunny, and asked him to relate it slowly, so that Appekunny might translate it literally as it was told, and I could take down the words just as they were spoken.

In his interesting papers on "Life Among the Blackfeet" Mr. Schultz has indicated the position in the mythology of this people occupied by *Napi*, or Old Man. This deity is the most powerful of the Blackfoot gods after the Sun, but is at the same time so malicious, and so short-sighted and foolish that he is continually doing mean things to those with whom he comes in contact, and is forever getting himself into scrapes. A little persuasion induced Yellowfish to comply with my request, and, laying aside his pipe, he sat up and prepared to talk. I give his stories as they fell from his lips. He said:

"That I told you about, far behind. That Old Man. Long ago women told me; long ago they were apart, women one place, men another. Old Man went about. First place, many men they stayed. He went, Old Man. Found two women, go to buffalo piskán. He found those women. Their lying down. He come there, those two women. Lying down, those two persons, women. He come one woman, take her person. One woman, he take her. When run, hit him nose. Much blood. Other woman run coulée. Far off, let fall one woman. Much hurt him nose, Old Man. When let go one woman hunt other, Old Man not find. Say 'Again lie as before those two women.' Big fool Old Man. *Oki.*"

This is a free translation of the story as told: "What I tell you happened long ago. This story is about Old Man. Long ago the women told me that in ancient times men and women were apart. The women lived in one place, the men in another. Old Man was traveling about, and first he came to a place where many men lived and stopped there some time, and then he went on his way. As he was going along he saw two women going to a buffalo corral. When he came near them they [were very much frightened, probably they had never before seen a man and] lay down flat on their backs. Old Man came up to them and found them lying so [and supposed them dead]. One of them he took up in his arms and carried with him. [She was limp with fright and] as he ran along her knees flew up and struck his nose, and Old Man bled a great deal. When he went away the other woman got up and ran off into a coulée. When Old Man had gone a good way, he let fall the woman he was carrying, for his nose hurt him very much, and went back to get the other woman, but he could not find her. Meantime the one he had been carrying had got up and run off. So he lost them both. Old Man said, 'Just you lie there again you two women, and see if I don't get you both.' So Old Man was made a big fool. That's all." Yellowfish seemed to greatly enjoy the discomfiture of Old Man and we laughed in sympathy with him as he chuckled over the god's misfortunes. After a little he continued:

"Going along Old Man came to big lodge, woman's home. Went in. Said women, 'Do you think you have man for marry [us]?' He said, 'Who is chief here?' Woman said [pointing], 'That woman behind, chief.' He said, 'To-morrow come coulée those women. Will be in coulée that Piegian, fine wearing apparel his, like weasel skin trimmed leggings, very handsome his wearing apparel.' Said chief woman, 'Wait. I first chief woman, I first take man.' That woman not niee her person; make dried meat; all bad her wearing apparel. That woman come coulée. Many men. Old Man in middle, fine dressed, weasel skin leggings. That chief woman sees Old Man, she let go, went back women. Said, 'Those persons take; fine dressed man middle, not take, him mine.' Fix nice wearing apparel that woman. Nice her wearing apparel. Went coulée. Went look for man those women. Old Man stay far back. Those women take men, take all men their lodges. One stop yet, Old Man. That chief woman said, 'Old Man, think I fool. Now we make buffalo piskán Old Man, going to [be] pine tree. Now he is fooled Old Man, not woman! When first that way, before find women men, men make buffalo shank moccasins. When women theirs, then make men all good wearing apparel. *Oki.*'"

Turned into the vernacular this story is as follows:

"As Old Man was going along, he came to a big lodge which was the woman's home. He went in. The women said to him, 'Do you think that you have men for husbands for us?' He said, 'Who is chief here?' A woman replied, 'That woman behind is chief.' He said to the chief woman, 'To-morrow let those women come to the coulée. A Piegian will be there, finely dressed, with leggings trimmed with weasel skin; very handsome is his wearing apparel.' The chief woman replied, 'Let the others wait. I am first chief woman, I will be the first to take a husband.' Now Old Man wanted very much to have the chief woman for his wife, although she did not look nicely. She had been mak-

CAMP FLOTSAM.

XXII.—A BIG TALK DAY.

THE expedition of the last two days proved conducive to a second sleep in the morning, and it was ten o'clock before the camp succeeded in getting on its feet and taking a look outside. It was a typical Sunday; there was scarcely a ripple on the water or the stirring of a leaf on the trees; all nature seemed hushed in adoration before the invisible altars of the living God. We lingered long at the breakfast table, which George had spread under the trees and from which we could look upon the lake and along the hills on the opposite shore.

Every camp has a lounging place; last year the favorite spot was under a pine, hard by the tents; but this summer a log, a little off from camp, close to the water's edge and overhung with foliage, was our retreat. Here we would sit and smoke navy plug, and more than once, on a moist morning, we were treated to the sight of a flock of ducks, which, coming over the treetops behind us, settled in the water not ten rods in front. And hither on this Sunday morning, provided with pipe and field glasses, we settled ourselves. Soon a mink made its appearance from under a log a few rods away, came half the distance toward us, stopped, and then, as if scenting danger in the air, skulked in among the rocks. On the opposite shore, where with the naked eye one could not distinguish a man from the surrounding objects, with the aid of the glasses we could see the water lashed into foam by the sport of a loon, broken by the leap of a bass—our prey, yet seeking its own, like one of us—until Sabbatis in his canoe glided along close in shore, when the loon and bass disappeared together. We held the log for an hour and until a boat put off from the island opposite and headed for the camp. Then, knowing that visitors were on hand, we returned to the camp to slick up. The Colonel and Captain were soon at the landing and were duly escorted up the hill to the tents and received with all the honors. By the time we were through with a short experience meeting, which covered the last two days, there was another arrival—an old deer-hunting acquaintance of the Colonel's, on the Brulé and Fortune lakes—and a new school of experience was thereupon opened. The way those two veterans killed deer while sitting on the bunks in our tent was a sin. In less than an hour no less than six bucks were hung up and half as many more lost. In the mean time, with the help of the Captain, we landed several five-pound bass. Our sport was interrupted by another comer—our student friend—who, like the others, had dropped in for a call. Then the hunting and fishing went on again, but now spiced with an occasional dash of Schwieger, Hamilton and Kant. Venison, fish and metaphysics made a strange conglomeration, but the feast was heartily enjoyed; and we were well into the afternoon before the table was cleared and we were alone. It had been a day of much talk, but the end was not yet. Hardly were the boats of our friends out of sight before one of the Indian boys emerged from the bushes behind the tents, his brother a little below, a canoe and a skiff came round the point, and the host of Sabatis was upon us—horse, foot and dragoon, girls, squaw and all. Squatted in a half-circle about the tent door, they jabbered the afternoon through, Dame Sabatis pulling steadily on her clay pipe and explaining to the Madame between puffs the mystery of binding a papoose upon a board and the less difficult accomplishment of papoose raising; while the junior branches of the family discussed the pictures in a London illustrated paper which the Colonel had left us. They held their posts until nightfall and until the first squadron of mosquitoes charged up the hill and began to make things lively. There were no signs of their giving way until the smudge was started, to windward, when there were sundry expressions of disgust and a glaring about with watery eyes. "Ugh! much smoke," came from Dame Sabatis, as in a fit of suffocation she shifted her seat further from the door. The line followed her example, but the smudge was doing its best and the cohorts continued to fall back until they took refuge in the boats and drifted around the point, out of sight. The last visitor had gone and the day of the big talk was over. Coldly and silently the moon raised herself above the hills, illuminating the treetops with a glory that no mortal pencil could transfer, casting the long black shadows of rocks and islets upon the water and the deeper shadow of the forest upon the tents, and with all the splendor of the night about us we sought our blankets and sleep.

When we opened our eyes it was broad daylight, the tattoo was ringing across the water from the opposite camp and we hurried out to sound the response on the cook's frying-pan. There we found George, who had just returned from his morning trip to the outlet after water, bringing with him a pair of well-grown chickens, which he had purchased as "examples" of a lot which had been offered to him. They were liberated and were soon chasing bugs and scratching about for breakfast, and our poultry farm was started.

The day was a quiet one, with scarcely a ripple on the water, and two hours of casting brought us but three small bass. At noon a couple of anglers from Kingston, who had found our fishing place, put in to greet the American camp. To one of them, Mr. J. E. Hutcheson, we became indebted for camp luxuries in the shape of melons, coffee and old Times, which he afterward kindly sent us, and another link was forged in the chain of friendships which binds us to our cousins over the border. The night after their departure was made memorable by a combined attack of rain and mosquitoes, and at 3 A. M. we were turned out and compelled to start the smudge. The "killer" did its work effectually, but the Madame abhorred the grease and preferred the suffocating incense of the punk.

The forenoon brought a fine breeze, and we ran three or four miles up the lake under sail in search of a new bass ground. Some one had told us that on the north shore there was a bay which, years ago, had been a favorite ground for bass, but when any one had lately tried it was unknown; so we set out on a voyage of discovery. When the north shore was reached we lowered sail, and, turning down the lake, followed the rocky shore which rose above us, crowned with a heavy growth of timber and varied with an occasional clearing, in search of something which resembled a bay. We soon found that it would require a somewhat lively imagination to locate anything of that description among the rocks, so we began to feel our way along the shore by casting. Soon a small stream which tumbled over a rock suggested a spring close at hand; a landing was made, and we

set out to find the fountain head. A quarter of a mile back we found it, an oozy, miry spot, the first sight of which put all thoughts of quenching our thirsts at rest. A few yards below the stream gathered itself in a stone basin, but the water was warm, and we returned to the boat, preferring to take our chances on lake water. A thick growth of water-weeds hemmed in the outlet of the little stream, and on the outside edge of these we took a good-sized bass on a Lord Baltimore, while the Madame landed a much larger one on the more plebeian cast of a piece of perch. A little further along the shore we took another on the same fly, and the Madame again rivaled our catch with her strip of perch. With alternate strikes on the fly and bait we cast a mile down the lake, and, failing to find the bay of which we were in search, we took advantage of the breeze to hoist the sail and make our way homeward.

After we had gone a mile the wind failed us and with the oars we pulled to the foot of the island, where we met our neighbors, who were just starting out for their afternoon fishing. It was intensely hot on the water, and having no confidence in the condition of the weather, we turned into camp. On our way across the lake we noticed a peculiar appearance in the water as though the bottom had been stirred about, leaving it full of a whitish sediment which hung suspended near the surface. The symptoms were that the lake was about to undergo the periodical performance, which the Greenwood Lake fishermen style "working." Within the next two days the case was well developed; before a week we found the brook in front of the tents lined every morning with a substance which resembled sulphur in appearance and of a most unpleasant odor. This state of things continued for nearly a month, save when it was interrupted by a storm, in which case for a day or two the water would appear less turbid, only to come back to its old condition. From the commencement the fly-fishing was virtually at an end and consequently our sport. It was seldom, except on a rainy day or the one succeeding, that we could get a rise, and for the rest of our outing our main success was with trolling or with bait. We had built a fish-box a few days before and anchored it in front of the camp, in which we had stored our surplus fish. We had over twenty five bass in good condition, and with this reserve we felt secure during a dearth of fishing. Toward night we went to the marsh at the outlet and secured a lot of fine speckled frogs for the morrow's work. After breakfast we set out on a long troll up the lake, trailing a frog and a gang of flies astern. At the foot of Griffin Island we landed a small bass and midway of the lake we took another. At the head of the island we had a couple of strikes, at the same instant, on the Lord Baltimore and a frog, both of which were taken in. This comprised our entire catch for the morning, and although we trolled along the shores of the islands and the mainland for three or four miles, not another bass did we encounter. Just before sunset we started down to the outlet for the mail. When we entered the creek we rigged a cast of white flies to try the somewhat novel experiment of dropping them in the open patches of water among the lily pads. With the first cast came a strike from a pound and a half big-mouth, then several "goggle-eyes" followed, then another big-mouth, and by the time we were at the landing we had taken six big-mouths of over a pound each and were fully persuaded that we had been having some sport.

The next few days went by with daily trials with the fly, which brought no returns, and we determined to forego all further attempts at fishing until the "blow" should leave the water. This, the Colonel assured us, would take place with the first heavy rain, so we sat down to mope in the camp and to philosophize over the instability of fish affairs while waiting for a change of weather. During the lull we received some very important additions to the camp. One morning George brought the Madame a cat which he had found on the shore, and a day or two afterward some genius at the outlet conceived the bright idea of bringing over a calf to pasture on a strip of grass at the end of the island. When the latter feat had been accomplished we felt that we needed but a porker to give the camp a home-like air. We soon found, however, that the only pleasure from our live stock was that furnished by the "ki-dog," a vagrant mongrel of uncertain age, which had followed us from shore and taken up quarters under our bunk in the tent. For the cat took at once to the woods, while the calf became disgustingly familiar by hanging around the camp, getting tangled in the tent ropes, upsetting tables, knocking down rods and disturbing us by its bawls at unseasonable hours. But a sharp course of discipline, administered with a hoop pole with the aid of the ki-dog, soon made the life of that calf a burden to itself, nevertheless we invariably cursed the hour in which the thought was born that impelled the owner of the brute to turn it out near our camp. About 2 o'clock in the morning of the second day after the arrival of the cat, the camp was hailed with a sad toned meow at the door. Pussy was sitting there in a state of semi starvation, her wildness gone, and she was coaxing for a meal. A piece of bread, half a dozen sardines and a cup of milk from the can of condensed, thinned with water, made her breakfast, after the partaking of which she again struck off into the woods and was not seen for another day. At her next appearance, satisfied that she would never make a camper, we captured her, fed her and put her into the potato bag, in which she was taken ashore where we dumped her at the landing. How we got rid of the calf, which turned out to be too much of a camper, will appear hereafter.

During these days of loungings in camp, while waiting for the water to clear, the woods were well explored. In one place we found a profusion of blackberries near the camp and thenceforward many were the dainty desserts which they afterward furnished for the table. Much prospecting was also done to find a spring nearer than the outlet, but in this land of granite, water, save as found in the lakes, was a rare article, and our search was not successful. There was a tradition of good springs on the island below the camp, less than half a mile away, but vigilant reconnaissances failed to bring it to light, and Lost Spring Island thus received its name. Across the lake we came upon a deep bowl in the hillside, into which the water ran in a tardy sort of way from a fissure in the rocks, which proved a fairly good spring. On the afternoon of the finding we had been cruising along the shore when George's quick eye fell upon the green spot about the spring, and landing, he handed down a cup of the water for our judgment. Then returning, he emptied an after can of the fluid down his throat, while we sat and looked on in amazement. Had it not been for his color one could well have believed that the heroic Kingfisher stood before us plying his summer vacation, and, with a dearth of spring water about us, we thought with a shudder of the possibilities were the great Templar added to the camp.

WAWAYANDA.

ing dried meat, and her hands and arms and clothing were covered with blood and grease. The next day the chief woman came to the coulee, and there she found many men. In the midst of them was Old Man, splendidly dressed, with weasel-skin leggings. As soon as she saw him, the chief woman recognized Old Man, so she let them all go and went back to the women. To them she said, 'You can take any of these men except the finely dressed man who stands in the middle. Do not take him, for he is mine.' Then she put on her best apparel and went to the coulee. The women went to look for husbands. Old Man [who wished to be chosen by the chief woman] stayed far behind [so that he should not be taken by any of the others]. All the women chose husbands and took all the men to their lodges. One man was still left unchosen. It was Old Man. The chief woman said, 'Old Man thought I was a fool. Now we will make a buffalo piskán, and I will change him into a pine log and we will use him for a part of the fence. So Old Man is the fool, and not the woman.' In old times before men had wives they made moccasins out of buffalo shanks, but when they got wives then men had them make good wearing apparel for them. That's all."

"Old Man had pretty bad luck," said I.

"Yes," replied the Indian, "plenty trouble he had. Some time I tell you more about him."

As he spoke, he rose and put some more wood on the fire, and then, taking off his coat and moccasins, prepared to turn in. The others had by this time settled themselves in their blankets, and I prepared to follow their example. I filled and lighted a final pipe, and, with my covering partly drawn over me, smoked and stared at the fire. The wind still roared over the lake, and whistled through the willows, and shook the smoke shield. Gradually the fire burned down. Objects lost their distinctness. From the shadowy piles of blankets about the walls came deep, regular breathings, showing that my companions slept. Under the ashes of the fire lingered a dull glow, and a slender white thread still rose above them. Through the smoke hole a bright star looked down into the lodge. Now and then from some smouldering stick a jet of flame shot up for a moment and illumined the scene. Then the gloom settled down again.

Dreamily my thoughts went back over the years to other nights, spent in other lodges, with other companions, and memories of brave, tried friends of former days crowded thick upon me. I remembered lodges pitched on the plains—camps by the Republican, the Platte, the Loup, the Running Water, the Missouri—where with those friends, red and white, I had hunted and feasted, and fought the Dakotas and their allies; I thought of lodges in the mountains, on the fragrant sage plains, or high up beneath the snows, where, by the hurrying streams which pour into the Green and the Grand, with one companion I had trapped the beaver for a season; of months spent in the lodges of my brothers the Panis, and with the kindly Utes, and of camps scattered far and wide over the West.

Then I see pass before me, as in a vision, the forms and faces of grave, silent, gentle men, whom once I had called my friends.

They have fired their last shot, they have kindled their last camp-fire, they have gone over the Range—crossed the Great Divide. "There were giants in those days," and of that heroic race how few are left alive! Lingered illness, the storms of winter, the pistol ball of the white man, the rifle shot of the savage, have sadly thinned their ranks. And none have risen, nor can arise, to fill the places left vacant. The conditions which made these men what they were no longer exist.

Musing or dreaming, I know not which, I live over again scenes of the past, until, roused by the chill air, I draw my blankets over my head and fall asleep. Yo.

Camp Fire Flickerings.

"That reminds me."

179.

IN my youthful days I spent many a night upon the water with jack and spear. Of course it was contrary to law, but as the elders of the community paid no attention to the law, it could not be expected that the youngsters would do so. I therefore became a pretty skillful handler of both spear and paddle early in youth. While still green at the business I used to court the acquaintance of old Jake, the town drunkard, as, whenever he could be caught sober at night (which was but seldom) he was the best spearman in that region.

One night in June, away back in the fifties, I had collected a prime lot of fat spruce or pitch wood, and hunting up Jake we repaired to the lake for what I then thought to be a night's sport. Jake would always spear better when well ballasted with a cargo of whisky, but on this particular night he proved to be over-weighted, and was liable to founder and go down by the head. The night was a very favorable one, the fish were plentiful and lay steady in the light, but Jake made strike after strike at them without effect. The whisky in his eyes added to the refraction of his lines of vision in the water, and he miscalculated every stroke. Disgusted and angry I at length steered the boat for home. When a few yards from the landing, where the water was about five feet deep, a poor little sucker, some ten inches long, came out from shore, steering for deeper water. Jake saw him, made a desperate lunge with his spear, overbalanced, and went headlong into the water. After regaining his feet and blowing the water from his nose and mouth, he waved his spear in triumph, on which was impaled the worthless sucker—sole trophy of his night's efforts—and exclaimed, "Condemn 'you! I'll larn you that nary a fish in this ere lake can run by me." AREFAR.

Natural History.

Address all communications to the Forest and Stream Publishing Co.

"THE STANDARD NATURAL HISTORY."

THE bringing out of a general work on natural history is an undertaking at which, it might be thought, any publisher would hesitate. The enormous amount of ground to be covered by such a work renders it imperative that it shall be the product of a great number of writers, and the absolute necessity of numerous illustrations makes the expense appalling. Besides this, literary difficulties of no little magnitude must be met and overcome. A standard work is for the use of the general public, but also, in a measure, for that of scientific men; and it must, therefore, on the one hand, steer clear of abstruse technicalities, and on the other, must be concise and accurate.

That the field to be covered is a broad one appears when we consider that of vertebrates alone there are estimated to be about twenty thousand species, that there are over half a million different and distinct forms of insect life, and that the total number of species included in the whole animal kingdom is not far from one million. With this million of species the present work has to do.

It is clear enough that no one man can be the author of such a work. In the present state of science, a single group, or fragment of a group, of animals is often too much for one individual to master, and when the specialist leaves his chosen field and attempts to write of forms to which he has directed no particular attention, he is quite as likely to go wrong as any one else. The publishers have taken the right method to make the work under consideration what it purports to be—a standard natural history. As editor-in-chief they have selected Mr. J. S. Kingsley, and have secured the assistance of a number of the foremost American specialists to furnish the material for the work.

Thus the lower invertebrates from the Protozoa up to the Starfishes and Sea urchins are treated by Prof. W. K. Brooks, Prof. S. F. Clark, Dr. J. W. Fewkes, Mr. A. F. Gray, Prof. C. E. Hamlin, Dr. Alpheus Hyatt, Prof. R. Hitchcock, Prof. D. S. Kellicott, Dr. C. S. Minot and Prof. A. S. Packard. Among those who have contributed material for the volume on the Arthropods are Professors Birge, Comstock, Fernald, Kingsley and Riley, Drs. Dimmock, Horn, Packard, Williston and Uhler, and Messrs. Harry Edwards and J. H. Emerton. The matter for the volume on Fishes, amphibians and reptiles comes from Professors Cope and Van Vleet and from Drs. Gill, Garman, Jordan and Yarrow. The bird volume is the production of Messrs. D. G. Elliott, C. B. Cory and Dr. Stejneger, while the mammals, except man, are handled by Drs. Coues, Gill, Macloskie and Lockwood, Prof. R. Wright and Messrs. Lockington and Scott. The volume on the races of man completes the work, and among the contributors to it are Messrs. F. W. Putnam, W. H. Dall, L. Carr and Dr. C. C. Abbott.

The list of contributors to the volumes includes in some groups the very best scientific talent which America has produced, while in others the names of our foremost specialists do not appear. Still, with such a corps of contributors, we should expect to find the work fully up to date, and fairly representative of the present state of our knowledge. On the other hand, it must be remembered that the earlier fascicles of the work were issued five years ago, and that within the last five years great advances have been made in our acquaintance with certain groups of animals.

The "Standard Natural History," which has just been issued from the press of S. E. Cassino, of Boston, has appeared in sixty parts of forty-eight pages each, and now, as completed, makes six large imperial octavo volumes. The mechanical execution of the work is excellent, and in typography, paper, presswork and general excellence of the illustrations there is little to be desired. The very large number of engravings by which the work is adorned will render it especially attractive to the general reader, to most of whom these illustrations will be new. It is attempted in the present work to give a fairly complete sketch of each group of animals by some naturalist who has made it a special study. A general account is given of the structure and habits, together with an outline of its classification. The principal species are enumerated and the more important facts given about them. A feature of the work which will, no doubt, commend it especially to many of our readers is that American forms are made prominent throughout the work.

The limits of this notice preclude the possibility of critically reviewing the several volumes of this work. The general impression conveyed by the work is that, on the whole, it has been well done, though from the very nature of the case the work is very unequal. The plan of the work has, however, been very well carried out, and the volumes will be in many respects of great convenience. Among the vertebrates, the volume on the birds appears to be the most satisfactory; that on the mammals the least so. Taking, for example, the North American ruminants, our large game, we find that they are treated in a manner which is not satisfactory. It seems a pity that we should be obliged to have served up to us again with regard to certain species well worn quotations from Richardson, as if nothing had been learned with regard to them since his day. The range of the buffalo is given as it was ten years ago, not as it is to-day nor as it was six years since, and no adequate mention is made of its enormously rapid decrease since the year 1872. It is on such points as these, points which are especially interesting to the general reader, that the work fails to satisfy.

As has been said, the volume on the birds appears to be the most satisfactory, and the chapters devoted to the truly game birds are very happily treated. So also the portion of the volume which has to do with the *Passeres*, the work of Dr. L. Stejneger, which is especially good.

In the fishes the text is excellent, far better than the illustrations. The description of the *Salmonidae* is far ahead of that of any popular work which we have seen. The author regards the charr as the highest form of salmonoid, and condemns the somewhat general idea that this term is one of contempt. His remarks about the grayling are not clear. The account of the Elasmobranchs, skates, rays, sharks, etc., is excellently done, and the same may be said of much of the work on the reptiles.

It is unnecessary to say much as to the illustrations. Most of them are very beautiful and faithful, but now and then we see some which are so bad as to be a blot on the work. The so-called portrait of the mule deer, p. 303, is a veritable horror, and it is difficult to comprehend how it could have found a place in the volume. The cut of the pike (*E. lucius*),

p. 169, is only to be identified by the title which appears under it.

It was inevitable that in a work planned and carried out on so large a scale, errors should occur, and perhaps as few as could have been expected are to be found in the present work. The plan of having each author sign his contribution, thus making him personally responsible for the material which he has furnished, is a guarantee of the care and accuracy with which the work has been done.

"The Standard Natural History" will prove a useful work and will do much toward popularizing science in America.

TWO YEARS IN THE JUNGLE.*

WHEN Professor Ward, of Rochester, selected Wm. F. Hornaday as a collector of wild animals in India, for his museum, he made a happy choice. Few men are to be found who so well unite the qualifications of hunter, collector, taxidermist and naturalist, and to collect successfully for a great museum, a man should be all these. Besides these, courage, physical strength and endurance, and patient skill in managing wild men and savages are all required. As a hunter Mr. Hornaday attacked the tiger in the jungle, the wild elephant and bison in their native forests in India, and this on foot, with his life entirely depending on his accuracy of aim, and the certainty of his weapon. Besides these lords of the forests Mr. Hornaday brought to bag the bear, the wild boar, crocodiles, and many species of deer and monkeys in the forests of Bengal.

In Ceylon he collected many of the peculiar fishes of that island, with other curious marine forms of life. The jumping fish, which comes ashore and feeds on the rocks; holothurians, resembling brown sausages six inches long, covering the beach, and much prized in China under the name of *bêche de mer*. Also skates and rays in great numbers and variety, though none were seen as large as the great devil fish (*Manta*) of our southern coast. Specimens, however, of this gigantic ray are not wanting in these seas, for the writer saw one in the Indian Ocean which would have measured at least twenty-five feet from tip to tip of the bat-like wings. Our traveler also procured a specimen of the tiger-shark (*Selachostoma*) six feet long, tawny in color and spotted with black. This species grows to an enormous size in tropical seas. One played about our ship when becalmed in the Indian Ocean, which was longer than our ship's beam (26 feet) and as large round as our long boat, a formidable looking creature, and perhaps the largest of fishes—as most people now know that the whale is not a fish. Another rare fish collected by Mr. Hornaday was a shark-ray (*Ramphobatis*) seven feet long, which has a spin crest like a sturgeon. Flying foxes, a large species of bat, were so abundant that forty-four were killed in five shots, as they hung in clusters like pears from a tree top. In Ceylon the crocodile is abundant, and unlike their relatives, the gavials, are often dangerous. The largest specimen was twelve feet long, though many larger ones were heard of. So in Florida we hear of sixteen-foot alligators, but they seldom measure more than ten feet when killed.

The most interesting part of the book is that treating of Borneo. Many tourists and sportsmen visit British India and Ceylon, but the interior of the great island of Borneo is almost a terra incognita. The principal object of Mr. Hornaday's visit was to procure specimens of the orang-utan (*Simia*), an animal little known, but of which strange tales have been told by romancing travelers. Its home is in Borneo, about which, even in Singapore, a meeting place of all races of men, the grossest ignorance prevails, as we are told by Mr. Hornaday, and as Borneo is 550 miles long, and 625 wide, there is a large field for exploration.

The orang utan is arboreal in habits, and rarely comes to the ground, where it is weak and slow, but it is at home in the lofty tree-tops, where it builds a sort of nest of branches. These forests are swampy and not easily traversed, either on foot or in a boat, yet this indefatigable American hunter collected forty-three specimens of both sexes, and of all ages, seven of which exceeded the maximum size of oranges as given by Wallace, the well known English naturalist. Mr. Hornaday's largest specimen measured four feet six inches from head to feet, and almost eight feet in extent of outstretched arms, and his weight was estimated at 185 pounds. It was the largest that the native hunters had ever seen, and they called him the "Rajah." Mr. Hornaday says he felt as if he had killed some terrible wood demon, or satyr. It was shot from a boat in a submerged forest, and two shots from a Maynard rifle brought the great ape down from his tree. Three baby orangs were captured, two of which refused to live in captivity, but the third was a mild and tractable infant, which became a tame and affectionate pet, and was Mr. Hornaday's constant companion as long as he remained in Borneo. It had many human traits, one of which was that like human infants, it could not swim, but sunk helplessly when put in the water. The full grown orang is enormously muscular and active, and would probably easily overpower any unarmed man. "The Rajah" may be seen in a glass case in the National Museum at Washington.

Another anthropoid ape peculiar to these great islands, the gibbon (*Hyllobates*) was procured by Mr. Hornaday, though with much difficulty, on account of its great activity. It flies through the tree-tops with immense leaps faster than a man can run on the ground. In a collection of animals in Macao, China, many years ago, the writer saw a tame specimen of the gibbon. It was about four feet high, with arms reaching the ground as the ape stood upright on short and rather weak legs. It was covered with long silver-gray hair, and seemed made of India rubber, bounding five or six feet from the floor of the room, more like a bird than a quadruped, and its feats among the ropes stretched along the ceiling would have astonished the most skillful gymnast or acrobat. Another rare monkey peculiar to Borneo, of which Mr. Hornaday gives a portrait, is the proboscis monkey (*Nasalis*), which with its immense nose, side whiskers and grave expression of face, much resembles certain old merchants to be seen any day on Wall street.

Perhaps to many readers the account of the Sea Dyaks, a race inhabiting the north coast of Borneo, will be the most interesting part of the work. They are represented as being a brave, vigorous race of savages. Perfectly honest, they neither lie nor steal, and always pay their debts. They are hospitable and kind, have neither priests, creeds nor religious observances, but believe in a supreme being. The position of their women is equal to that of the men, and their advice is asked in important affairs. They are very fond of their children, and are moral and chaste in their lives. These virtues are shown by the fact that in a Dyak village all live together in an immense apartment house, with separate rooms

*TWO YEARS IN THE JUNGLE. By William T. Hornaday. New York: Charles Scribner's Sons, 1885. Price, \$4.

for fifty families, all of whom meet together in a common hall on amicable terms—conditions often difficult to be carried out in the most civilized society.

Says Mr. Hornaday: "In hospitality, human sympathy and charity the Dyaks are not out-ranked by any people living, so far as I know; and their morals are as much superior to ours as our intelligence is beyond theirs. If happiness is the goal of human existence, they are much nearer it than we."

Less than fifty years ago these amiable people were a ferocious race of pirates, who infested all these seas, slave hunters and head hunters; but by the firm, judicious and benevolent government of two Englishmen, Sir James Brooke and his son and successor, Charles Brooke, nothing now remains of this piracy, rapine and bloodshed, except a few heads of slain enemies hanging up in the houses of some of the chiefs. All this Mr. Hornaday acknowledges, which goes to show that civilization does not always bring misfortune in its train.

The book is furnished with suggestive and graphic if not highly finished illustrations, and is, in our opinion, an original and valuable addition to the library of the naturalist and sportsman. S. C. C.

NOTES FROM MAINE.—Smyrna, Me.—In your issue of Dec. 31, "H. R." gives an account of a supposed otter chasing a hare. My experience in trapping and of observations of the habits of the otter are that it lives entirely on fish. I think that "H. R.'s" otter must have been a fisher, as his description of its quick, clean jumps would indicate, and at the distance from him to one not familiar might easily make a mistake. Having caught many of the latter I have had a chance to study their habits. Your correspondent, "J. G. R.," in Jan. 14, explains it very well. I think the hare is not the fisher's favorite repast, but the Canada porcupine is its best dish. I have found the quills repeatedly in its skin and body; and the porcupine makes the best bait for the fisher of anything I ever tried. There are many crews of lumbermen in the woods here, and when a crust comes, woe to the deer and moose. The loggers are mostly Canucks, who do not care for the game laws, but kill everything they can to supply the camps with meat. But if some poor native kills anything out of season to keep his starving family in meat, then the valiant game wardens will pounce on him if they can get any information. It is right that the law should be enforced, but let the Canuck lumberman suffer as he deserves. Last spring one team carried out two moose hides on top of the load, through the county seat, across the line to their home in the Province, and not a word said. The same has happened in a great many places on the border.—SPRING POLE.

REPORT OF THE NEW YORK FORESTRY COMMISSION.—The first annual report of the Forestry Commission details the action taken as to organizing the Commission, the amount of salaries paid, etc., and show that the amount expended on Jan. 1, 1886, was \$536.89, leaving unexpended an available balance of \$14,413.11. It has not been possible for the Commission to do more than familiarize themselves with their duties, and to acquire knowledge as to the wants and dangers of the forests through the intelligent exertions of special agents under their direction. The Commission asks time to prepare and present a further report, and in connection therewith recommend certain amendments to existing laws, such as the prevention of forest fires, trespassing on forest lands of the State, and the removal of timber, the injury of forests through the operation of railroads, and a provision for the conveyance of certain lands now forming part—but it is believed by the Commission erroneously—of the forest preserve. The Commission consists of Townsend Cox, President; Sherman W. Knevals and Theodore B. Basselin.

ELK IN THE ADIRONDACKS.—Chauncey Hathorn, in a letter to Mr. E. R. Wallace, dated at his forest home in the solitudes of the North Woods (Raquette Lake), give the following items of information: "I am enjoying myself greatly in my 'winter palace'; although mercury has sometimes fallen forty degrees below zero. Deer are very plentiful here now—much more so than they were five years ago. And what is very surprising, the elk has again made its appearance in this section. A large one was recently killed at Long Lake. It is a mystery to us all, where this mammoth creature—so long a stranger in this region—hails from." Mr. Hathorn doubtless refers to the American stag (*Elaphus canadensis*), an animal which, says Mr. Wallace, I believe has not been seen in the Adirondacks since 1836, when Mr. Beach—an intelligent hunter then located on Raquette Lake—shot at one near Rainbow Lake.—*Syracuse Journal*. [The presence of an elk in the Adirondacks would be a "mystery," but it is important that the identity of the animal should be established on something better than hearsay.]

HAND-BOOK OF THE NATIONAL MUSEUM.—We have received a Hand-book of the National Museum, which gives a brief history of the origin and progress of this offshoot of the Smithsonian Institution from its inception to the present time, and a somewhat sketchy account of the vast mass of material gathered here for exhibition. The little pamphlet of 110 pp. contains a good deal that is interesting and useful, and the cuts with which it is illustrated add to its utility. The pamphlet is not a guide to the Museum, as its title might imply, but is rather a book to be read previous to a visit to the collections. As such it is not without a certain value. We understand that it is for sale at the National Museum and at Brentano's, in this city. The pamphlet is by Mr. E. Ingersoll and the cuts chiefly by F. H. Taylor.

CARDINAL BIRD IN NEW YORK IN WINTER.—Is it not unusual to see a cardinal bird in this part of the country at this season? I saw a fine specimen on three occasions in the Central Park last winter, and last week on a very cold morning I heard and saw my old friend again near the lower lake. It makes a pretty sight to watch this active and beautiful bird in a country white with snow.—C. P. (New York, Jan. 15). [Occasionally we see cardinal birds here in winter, and there are a number of recorded instances of their appearance on Manhattan Island at this season of the year.]

SPORTING EXHIBITION.—An international sporting exhibition will open at Rouen on Feb. 18. The exhibits will include horse and dog specimens from England, Spain, and Switzerland. There will also be a good show of hunting equipments, and a musical competition of hunting horns. The organizers also promise a "rato-puige," or rat-destroying department. The miscellaneous part of the exhibition will be made up of velocipedes, rowing boats, fishing implements, balloons, etc. The exhibition will last until the end of February.

Game Bag and Gun.

A CAMP HUNT IN MISSOURI.—I.

Editor Forest and Stream:

With your approval I propose to fulfill a promise made to some camping companions during a most delightful camp hunt enjoyed by us this fall in the wilds of Southeastern Missouri. The promise was to give to the lovers of field sports and camp life, in a series of letters, a glimpse of the real enjoyment and invigorating recreation enjoyed by a few business men during a sojourn of ten days or two weeks in the wilderness.

Our party, eleven in number, with two servants, one a good cook, equipped with every convenience and comfort for a camp hunt in the woods, left Nashville as soon as the October frosts had tinged with brown the autumn leaves. Our destination was James's Bayou, in the wilds of Southeastern Missouri. The party was chaperoned by Mr. Isaac T. Rhea, of the great grain house of B. S. Rhea & Son, and his untiring energy and intelligent forethought had left nothing to be desired. He was ably seconded in his efforts to make the occasion a success by the cooperation of Mr. Dan Bailey, the veteran sportsman, of the wholesale grocery house of Bailey, Davis & Co., and by Mr. W. K. Phillips, the handsome junior member of the wholesale grocery house of Phillips, Jackson & Co. Fully armed and equipped for a deadly raid upon the wild ducks, wild geese and wild turkeys, and a possible deer or black bear, we took our leave of the loved ones at home and boarded a train of the St. Louis Division of the Nashville, Chattanooga and St. Louis Railroad, with hearts beating high in anticipation of the sport that awaited us. We had heard favorable reports of the abundance of game in our chosen hunting grounds, and every man was eager to test for himself the verity of the reports.

You must allow me here to express our appreciation of the courtesy and kindness of the N. C. & St. L. R. R., who not only furnished free transportation over their line for the whole party, but aided in every way to make our trip a pleasant one. And our whole company will always feel under obligations to Colonel Deal, of Charleston, Mo., who gave us a permit and an invitation to hunt on his land, some 12,000 acres. He visited us in our camp and his genial presence made us feel at home on his vast domain in the wilderness. The laws of Missouri forbid non-residents from camp hunting in that State and the presence and protection of Colonel Deal were greatly appreciated by us. Owing to delays occasioned by a change in the grade of the railroad we did not reach the great Mississippi River until near noon of the next day after leaving Nashville, but thanks to the foresight of Mr. Rhea, wagons and horses were in readiness, and crossing the great father of waters on a ferry, we struck out toward the setting sun, and at dark pitched our tents on the banks of the bayou whose name and dark waters were suggestive of robber bands and bloody deeds.

It was Saturday night, and doubt and despondency for a time clouded our bright expectations for a successful hunt. No one of the party had ever visited the locality before, and the selection of a camp site convenient to water and to the expected game, was a matter of the utmost importance. The rapid approach of darkness compelled us to make a hasty choice, governed rather by the proximity of water than by any appearance of the happy hunting grounds we had come so far to find. There was absolutely nothing to indicate the presence of game, and more than one of the party expressed disappointment at the prospects before us, and I think, if the vote had been taken, a majority would have expressed a preference for the warm beds and comfortable fire sides they had left at home. To add to the general feeling of doubt and despondency, members of the party had scouted the woods, ponds and streams along the route in quest of game, and had bagged but one squirrel and two summer ducks. The writer, anxious to test the qualities of a new Colt's hammerless gun, had gone on in advance of the main party, and in a walk of five miles was rewarded with only one shot. But that one shot satisfied me that I had no mean weapon. A summer duck, scared from a pond by another of the party, flew overhead, and coming from the direction of the sun, was not seen until immediately overhead. I turned, and as the duck was rapidly disappearing over the trees, I sent a charge of No. 7 bird shot after him that stopped his wild career as suddenly and effectually as if a rifle ball had struck him. But to the tent. After a hasty supper we prepared our sleeping quarters and lay down to rest with a feeling that we had come a long way to sleep in the woods.

Imagine the transition from despondency to feelings of thrilling expectation as the Sabbath dawned upon us bright and beautiful, and our ears caught the sound of a music that sends the warm blood leaping in the veins of a sportsman. The morning air was vocal with the *honk, honk* of the wild geese and the *quack, quack, quack* of the flocks of wild ducks disporting themselves upon the waters of the neighboring ponds. We had, as if guided by an invisible hand, pitched our tents midway between lakes or ponds that formed the favorite haunts of the wildfowl, and at a point that formed, as experience afterward proved, the best possible location for our camp. Some of the younger and more ardent members of the company, Sunday as it was, could not resist the temptation, and, under pretext of prospecting, slipped their guns out of camp, and directly the noisy picnic of the ducks and geese was disturbed by unwonted sounds, and in dismay and dire confusion the frightened fowls filled the air with their discordant notes and with the noise of flapping wings as they circled around and over the camp in their efforts to escape their unexpected enemies. We had game for supper. That night how different the feelings with which we went to sleep from those of the night before. Every man closed his eyes feeling as if he wanted the night express to make no stops at way stations and to bring us through to the morning at the rate of a mile a minute.

On Monday morning we were up before the dawn, and after a hasty breakfast were off to the haunts of the game. Most of the party, attracted by the known presence of the ducks and geese, donned their rubber boots and hid them away to the ponds. As daylight dawned the sport commenced, and for a couple of hours the frequent shots sounded like a skirmish line at active work in battle.

Mr. Jas. Coger, of Waverly, a famous wild turkey hunter, and myself, concluded we would try our luck in the pursuit of our favorite game, the wild turkey. The wild turkey ranks, in this country, all other game fowls with the sportsman, and such is its character for wariness, and the difficulty

of its capture, that one wild turkey is counted equal to ten wild ducks or three wild geese. Any sportsman who knows how to shoot can easily approach a flock of feeding ducks in a pond or stream by taking advantage of the banks and other obstructions, or he may stand in some favored spot where ducks and geese are passing on their way to and from their feeding grounds and shoot them as they pass; but the man who makes a success of hunting wild turkeys has to study their habits and use all the skill at his command.

At the opening of the hunt some of the party seemed to think that your correspondent was laboring under a slight disadvantage because he had lost his right arm near the shoulder. The work of the first day, however, convinced them that this was a mistake. Mr. Coger and myself, after a hard half day's hunt, returned to camp for dinner with two turkeys. Both had fallen before my hammerless. The duck hunters came in with a load of ducks and geese. We were now assured that our hunt would be a success. We had game already enough to last us several days.

After dinner we set out for explorations in new and different directions. Some three or four of us started out to investigate a forest back of our tents and away from the bayou and ponds. We had scarcely entered the woods before one of the party exclaimed, "Look at those deer!" as two fine deer bounded away from us and in a moment had disappeared in the thick underbrush. Had we been aware of their presence, or even expecting to see them, they might readily have been shot.

We saw them no more. We then separated and breasted through the woods, hoping in this way to discover any game that might be concealed in the thick and tangled brush.

Ahead of us ran my magnificent setter dog Io. I heard a squirrel barking off to the left, and removing the cartridge of turkey shot from one barrel and substituting a charge of No. 7, I was preparing to shoot the squirrel, when just ahead of the advancing line I heard the notes of consternation uttered by a flock of wild turkeys as my dog dashed into the midst of them, without warning, and scattered them in every direction. In an instant I was on the alert. A moment later and a splendid young gobbler, fat, black and glossy, came flying past. Shooting too hastily, I missed him with the first barrel, but dropped him beautifully with the second, nearly fifty yards away, with the No. 7 shot.

In the meantime I could hear the other sportsmen talking as they advanced, and could see the turkeys that had taken to the trees, flying from tree to tree ahead of them. One hen turkey, scared by them, flew to the top of a monster tree almost in front of me. By great care I succeeded in creeping near to the tree and by a well directed shot brought the turkey to the ground. By this time the other hunters were out of hearing. I quietly selected a position and after waiting long enough for the suspicion of danger to pass, gave a yelp or two on my call. Very soon I was rewarded with an answer, and in a few minutes a fine young gobbler came, and jumping upon a log about fifty yards distant, straightened his tall black body and neck for a survey of the situation. A puff of smoke from the muzzle of my gun hid him temporarily from my view, and when the smoke was gone so also was the turkey.

Without moving from my place I gave a few more calls and had the satisfaction of shooting down another at long range. Going then to the log upon which the young gobbler stood when I shot I found him lying dead behind the log. I now found myself alone, in strange woods, a mile from camp, with four turkeys, and night approaching. I concluded I did not want any more turkeys just then. Hanging one up in a bush I shouldered three and my gun and started for the camp. Great was the astonishment when I staggered into camp under the weight of my game. None were more astonished than those who had started with me. They had seen no turkeys, "saw some big birds flying out of the trees ahead of them, but thought they were big owls."

So passed the days of the hunt, every day adding largely to our supply of game, and around the camp-fires at night were recounted the incidents of the day. One day Mr. Coger and myself brought in eight turkeys, all killed at one place, and as we supposed out of one flock. Hunting cautiously through the woods where we saw fresh evidence of the presence of turkeys, we stopped for a few moments and making a few calls we presently got an answer, and looking ahead of us saw a sight that rarely ever falls to the good luck of a hunter in these days. A flock of about twenty black, sick, blue-headed fellows were feeding directly toward us. We allowed them to come up in close range and each of us got two. We afterward called up and killed four more, Mr. Coger getting five and I three. On another day Mr. Bailey, Mr. Coger and myself killed and brought in six. Of this number I was fortunate in killing five, having called and killed three at one shot, Mr. Bailey killing the other. In the mean time the duck hunters were having all the sport they wanted, as the immense strings of ducks and geese brought in testified. Rich jokes were told on each other around the camp-fires at night and a right jolly set were we.

NASHVILLE, Tenn.

(TO BE CONTINUED.)

THE DEAD DIAMOND COUNTRY.

WE left Colebrook one cold morning for Dead Diamond, our destination being Amasa Ward's camp at Hell's Gate, on the Dead Diamond River. Our route took us through Devil Notch, one of the great waterheds of New Hampshire, to Errol Dam, and then up the Magalloway River to Uncle Peter Bennett's, at the forks of the Diamond. After a night's rest here we started for Ward's camp by the old toll road to Lamb Valley, which is five and a half miles, where we arrived about 10 in the forenoon. After making a raft of some logs we crossed the stream, which is very deep and sluggish, and struck up Lamb Valley. (There is good boating up this stream in the summer for twenty-three miles, but as it was now late in the fall we went by land. Ward furnishes at short notice, for large and small parties, boats of his own make.) We took an old logging road and followed to the pond, which is two miles from the river, then took the carry for Amasa's camp, where we arrived about 1 o'clock in the afternoon. Amasa Ward is one of the best guides and hunters in New Hampshire, and at his camp one is sure of a hearty welcome and a good place to rest. His camp is situated in the center of the game region, eighteen miles by water and ten miles by land from any settlement. Here the deer and moose roam at their will. One cannot go in any direction without seeing signs of them.

After a good night's rest we were ready for a hunt, but having very little snow it was poor business, and we gave up until Amasa came home from his traps. He came the next day with a load of fur. He had otter, sable and mink skins

in every quarter of his camp, and on the side was a beaver skin, and a very large one it was, Amasa told us. Amasa's welcome was, "Well, boys, this is about as good a thing as I have seen lately. I will allow that I was thinking about going out of this; but after I run my talking machine a little while I guess can stand it till the 1st of December."

It began to rain and snow a little, and the next day we found about three inches of snow, which froze up hard the next night and put an end to still-hunting, and we only got one shot, and even then scored a clean miss. The Diamond is one of the best streams for trout in Northern New Hampshire, with plenty of game, and it promises to be one of the centers of sporting. One wishing to make a trip can find guides at Colebrook or at Magalloway.

ALBERT C. WALLACE.

COLEBROOK, N. H.

"FOREST AND STREAM'S" GRIZZLIES.

I HAVE just received a communication from Mr. J. P. Squibob, who writes me while in camp at Polikoscchnitz-kewrskaia, and after a long conference with General Gourko, Mr. Squibob and the General are firm in the opinion that the future destination and mission of the FOREST AND STREAM's grizzly bears should be of a national character, and have requested me to lay before the President and Cabinet their views upon the subject. As these officials all take, or should take, the FOREST AND STREAM, your publication of the scheme will save me a journey to Washington. I will only remark that if any portion of the plan proposed seems inapplicable to the methods of our Republic, it is because a lengthened sojourn in the dominions of the Czar has produced its natural effect upon the mind of Mr. Squibob.

(1) A park or corral, containing several—or more—acres and fenced in with a stone wall fifty-six feet high, provided with peep-holes and one gate of entrance only, shall be established near the White House. Over the gate a legend shall read, "Office-Seekers' Repose."

(2) The bears shall be placed therein and provided with rocks, brushwood and other lurking places.

(3) All office-seekers shall be compelled by law to pass through the gate of this park when on their way to the powers they seek, or shall receive not less than 500 strokes of the knout.

(4) All laws conflicting in any manner with the above scheme shall be at once repealed.

Observe the beauties of this plan for a truly economical and labor saving institution. The expense of constructing two park gates is lessened one-half—a second would be useless. The Government will not have to feed the bears. No surgeon would be required, and the President and Cabinet would have time to attend to the affairs of the nation.

Five dollars a peep could be charged at the peep-holes, and judging from the way people throng at a public execution, or to see a jockey's neck broken at the short turns on a race-course, the wall would be paid for in less than six months.

The Smithsonian would be in raptures.

I may add that the receipt of Mr. Squibob's letter relieved my mind of much anxiety concerning his fate, and upon this head I may write you again. G. WHILLIKENS.

P. S.—If any one should suppose that no one could be found willing to dare the dangers of the park, I can only say that he doesn't know the qualities of the average American office seeker. G. W.

Scarcely a week goes by without the addition of a new attraction to Superintendent Conklin's collection of rare animals. That is why thousands of hard-working men use up most of their Saturday half holidays and Sundays at Central Park with their wives and children. Some of the people who live in the big brown stone houses near by say that the menagerie is a nuisance and that strong odors from the arsenal are wafted to their sensitive noses. Neither the boss artist, the military looking man nor the mild young man could find any trace of the odors yesterday, and when they asked Superintendent Conklin about it he laughed and said it was all moonshine.

But during all this time the two grizzlies have been grinning away in their brand-new iron cage, waiting to hear what the gentle reader thinks of them. They came by express from the wild west a few weeks ago, as a little token of esteem to a big newspaper man in Park Row. After they had eaten three of his editorials one afternoon and then laughed at him, the big man sent them up to Mr. Conklin at the Park, and there they have gladdened the hearts of several thousand children and their white-capped nurses. The small boy who is slowly wading through this narrative

"TWO LITTLE GRIZZLY BEARS ARE WE."

has no doubt discovered that the bear on the right is singing, while the black-looking fellow beside him is indulging in a heart-broken sob. The sobber's name is B and the singer's name is A. This is what he was singing:

See how the fates their gifts allot.
B eats chestnuts; I do not.

Now you see the reason for B's glumness. But it never lasts more than fifteen seconds at a time. As a rule the grizzlies eat more queer capers in a minute than a man could remember in a day. They spend much valuable time turning somersaults over each other and wrestling and training for all sorts of athletic feats. When they are not dusting the rocky floor of their cage with each other's gray-brown coats they sit up and make eyes at the pretty French girls who stand outside in charge of little boys and girls. This is a trick the gray-coated park polie-mea taught the grizzlies, and although a sharp-featured old lady lectured them about it for an hour yesterday they haven't reformed a bit.—*New York World.*

THE TRAJECTORY TESTS.

Editor Forest and Stream:

Notwithstanding the very considerable amount of commendation of which you were made the recipient upon the publication of the results of your rifle trials, I desire to express, as one of the many who have followed the reports with pleasure and profit, a sense of obligation to those through whose enterprise the tests were brought about. In view of the excellent methods employed and the manifest thoroughness which characterized the entire undertaking, it is safe to predict that these tables will be recognized and consulted as authority for a long time to come, forming as they do, a tangible and reliable set of data for the purpose of rifle makers as well rifle users.

To the student of modern rifle lore the recorded figures present occasional seeming anomalies, which perhaps the knowing ones of the craft may be able to clear away. For example: We are taught, theoretically, that one step toward securing a low curve is accomplished by making the rifling with a moderately slow twist, as such a form produces favorable conditions, in connection with proper loading, for a high starting speed, and still allows the use of sufficient weight of bullet to be well sustained in its flight at least up to the limits of the ordinary hunting distances.

That this doctrine can not be unqualifiedly accepted is aptly illustrated by a comparison of the work of the .40-60-210 Winchester with that of the 40-cal. Bullard in the late trials. The former is but a slight modification of the express proper in the matter of degree of twist (one turn in forty inches), and with its finely proportioned cartridge might, it would seem, be reasonably expected to show an extremely low curve, yet its bullet rises more than 11.5 inches in reaching the target at two hundred yards, while the latter with one turn in twenty inches gives a trajectory of barely 10.5 inches, loaded in practically the same proportion.

I long ago imbibed the idea that a rifle to most completely meet the purposes of the hunter, in all the ever varying conditions and circumstances of his usual experience, would be a weapon so made up as to blend the most valuable attributes of both the express and long-range systems.

I was therefore somewhat disappointed to find that my pet plan would not be likely to reduce or eliminate the difficulties involved in the estimation of distance and the corresponding adjustment of sights. Thus we "live and learn."

On the whole, however, the riflemen of to-day are to be congratulated upon the fine array of weapons from which to select, and a gratifying fact is that in making the choice they may safely be controlled by individual preference for any particular form of mechanism, breech action or such other matter of detail as strike the fancy, and take the shooting qualities for granted.

All of the standard makes are good and they must be to hold their ground in the field of competition. I have recently seen a number of diagrams—the careful work of Mr. E. A. Leopold—illustrating the performance of the several rifles engaged in the recent tests, and will say that any one must indeed be hard to please who would not be satisfied after seeing how the average weapon will send bullet after bullet cutting so near the same plane that it speaks volumes for the wonderful uniformity with which the modern rifle responds to proper treatment and handling on the part of the marksman.

NORRISTOWN, Pa., Jan. 23.

W. D. ZIMMERMAN.

JANUARY REFLECTIONS.

Editor Forest and Stream:

It seems perfectly natural, even in the absence of a written law, that the sportsman should have his decided and instinctive feelings as to when the season for hunting should close. He has his unwritten laws, equally as sacred as his duty to observe those of his legislature. How naturally this seems to be the beginning of a new year. The man of business, who simply makes sport a recreation, feels that the time for his recreation is ended, and that it is better luck to resume his serious labor with the beginning of a new year. To have a good conscience, it is advisable that one should consider that his sport is not contravening his legitimate business; for without a good conscience, a peaceful mind and a light heart, sport is not a pleasure, but becomes a sneaking, time-killing occupation. We look upon the man who loves field sports as being a whole-souled, brave and honorable gentleman, for it seems that it is these qualities that plunge him into a sport that creates the feeling of boundless freedom and innocent unrestraint which the fields and forests themselves present. It is difficult, therefore, to see how such a character can do violence to his own humane ideas as to the fitness of seasons.

But stop! I must be driven to these philosophizing ideas from that tinge of regret with which I quietly lay away the trusty little gun in its cushioned case. So true has been its work and so glib its mechanism, as to be treated with the companionship of something animate. Then there are our dog friends. We had fallen newly in love with them, and they with us. At the sight of the cartridge belt, or the hunting leggings, or the brier-torn coat, do you remember how provokingly familiar they became? Do you remember how, when on Sundays we stayed at home from the office during autumn weather, they hung around our chair and jealously jostled each other from the rug at our feet? Now they will grow more dignified and formal; salute you kindly in the morning, but, like men whose connections sever, almost become strangers. They become epicures, display a full feather, grow fat and independent. These are the relative positions of a well-regulated sportsman and his dog.

Then I have parted with a Southwest Virginia autumn, with its semi-southern beauty. The kind golden haze of its sun has changed for the struggling winter glare; the second growth of the green meadow swards have been made bare by the grazing herds; the leafy picture that hung in the landscape is returning humbly its tints of nature; the partridge, that dreaded only the cracking shot, is battling in the frosted coverts with the fox and the hawk. Many a pleasant day have I spent in the field this fall. My first shooting was one afternoon, about the first of September, when I bagged eight woodcock along a branch, in a patch of corn, within the corporate limits of our little hamlet. Then the sora soon began to settle along the swamp and branches in the open meadows. Bags of from ten to fifteen could be made in the afternoon. After a while the partridge came in. They were later of growth than usual, but soon the awkward, downy, and from the tangled weeds, changed into the metallic whir and lightning dart.

At the close of this season there is one thing that troubles me, a trouble that has found the tender spot of many more than myself. My old setter is failing. He is passing over on the shady side, and with human tact, tries to hide it in the field. As I have told you before, he claims to be no

tancy dog, but is every inch a business dog. With every point he makes his position is a surprise, one never looks like the other. As the tainted air, at long range, from the bevy meets him, his high point, lithe stride and stealthy step is the warning. When plunging along, you would think wild, and his keen nose detects the single sulking bird, he will fall, spread like a feather. Poor old fellow! When he grows old and crazy and useless, perhaps I'll wish I had seen him fall headlong from the steep cliff, as he roared the wild pheasant through the low ivy on the mountainside, or had gone under, not to rise again, as he heedlessly plunged into the mad flood to bring me the duck. Then I could have remembered him as the brawny and brave young hero, instead of the lame and suffering old creature that he may be. Don't you remember how we always wish we could have another just like our old one?

SOUTHWEST VIRGINIA.

GRAEME.

THE ADIRONDACK DEER.

Editor Forest and Stream:

In the published proceedings of the Board of Supervisors of the county of Essex, assembled at Elizabethtown, I find the following items: "Mr. Powers presented and moved the adoption of the following resolution: Resolved, that our Senator and member of Assembly are hereby instructed to use all legal means to secure the repeal of Chapter 557 of the Laws of 1885, entitled 'An act for the better preservation of wild deer,' etc. A vote being had, it was carried unanimously."

I cannot see how the honorable Board of Supervisors could conscientiously place themselves on record in this light, for they must know the consequences of encouraging the breeding and using of hounds in a deer park or range like the Adirondack wilderness, a region nearly depleted of deer already. The law these gentlemen wish repealed was passed expressly to preserve the Adirondack deer from extermination. No doubt the supervisors have been influenced by a certain set of men who call themselves sportsmen; men who go out to have a good time and take things easy; men who send their guides and dogs out to do the hunting while they sit on some runaway waiting, in the meantime solacing themselves with the contents of their pipe and bottle. Along comes the frightened deer, fleeing from his worst enemy, the hound, and in passing gets riddled by a handful of shot from an old "scatter-gun," provided the shooter has not indulged too often.

There is another set of men who call themselves sportsmen—men whose strongest "holt" is the "tail-holt"—who go out in a boat, and when the deer takes to the water to escape the hounds, grip it by the tail and whack it over the head with a club until it gives up its life. Or, perchance, the oarsman will hold him steady by a grip on the tail while the shooter kills him by aiming at his head only a few feet away. These men then go out among civilized people and brag of their prowess in deer hunting. They call themselves sportsmen. God save the mark!

There is one point in regard to hounds and deer that is not sufficiently known, and that is the terrible destruction of deer by hounds when running at large. Having lived in the Adirondacks nearly all my life I think I am qualified to speak in this matter, and I will give you some facts that have come to my knowledge. Mr. Elijah Simonds, an old trapper and hunter, well known in these parts, and whose word cannot be impeached, tells me that about forty years ago he heard reports of moose signs near Dix's Peak, and taking another man and a hound with him went in there to investigate. On the way the hound slipped away from them a number of times, and he told me he counted seventeen deer that he knew his hound killed in the two days they were in the woods. There was a deep snow on the ground, crusted enough to bear the dogs but not the deer. Speaking of dogs running at large, he says, one winter two dogs, belonging to a Saranac hotel keeper, went into the woods and staid two months, hunting on their own hook. In going up Cold Brook one-half mile he counted nine deer killed by three dogs. One had got into a hole where the dogs could not get at its head or throat and they had eaten off its hind parts. It had just life enough to crawl up on the bank as he came along. He afterward caught one of these dogs in a bear trap, which took him around the head, and he was glad of it. Simonds said that he had not the least doubt that those dogs destroyed at least two hundred deer that winter, and he believes that one hound allowed to run at large in the winter will destroy more deer than all the hunters of that town kill in the year by legitimate hunting. I have long been of that opinion myself. Mr. Simonds said that some of the hotel-keepers were mean about letting their dogs run in winter. He named two on Keene Flats, and others at Saranac Lake who made a practice of letting their dogs run and scout the woods in winter as much as they pleased. He says it is almost impossible for owners of dogs to keep them where they belong, for they get uneasy toward spring and they have to let them out for exercise. When let out they stay around a few minutes and then start off for the woods to look for deer, and they know where to look as well as we do, because they have been taken there before. He says in hunting with dogs they often kill deer in the woods that the hunters know nothing about.

This reminds me of a neighbor of mine who had a big hound he used to let run loose, and when the dog came home at night with bloody chops and a full belly he would knock off work, take his hired man and go and look for the remnant of the deer, sometimes finding it but oftener not. A lumberman, an acquaintance of mine, tells me that, being tired of eating salt pork, he thought he would take his dog up into the woods and catch a deer, the snow being deep. Although it was against the law, he thought it no harm to kill one deer for his own eating, especially if it did not become known. He said he came to a yard of deer and set his dog on, expecting to catch one deer, but in spite of all he could do to stop him the little — killed five before he could get him off.

There is a class of irresponsible men in the Adirondacks that are half lumbermen, half guides and more than half poachers—I mean game law breakers; who often keep from one to three hounds, and, as a rule, let them run loose. One such man living near me had two young hounds nearly a year old. In March, when the snow was deep and crusted, these dogs, in company with an older hound, used to go off in the morning and be off all day. This man, on being remonstrated with and told that the dogs were destroying all the deer, said: "D—'em, let 'em run; it will learn 'em to hunt."

A man who was drawing logs in that section told me that while looking out a lumber road he found eleven dead deer killed by dogs on less than two acres of ground. The deer, being unable to resist or run, being hopelessly mired in the stiff snow, the dogs could butcher them at their leisure.

Samuel Dunning, an old Adirondack guide, tells me it is nothing uncommon for a hound to go into the woods and be gone a month, hunting on his own hook. I once went on a fishing excursion to Moose Lake; went into the woods at Arayville, North Elba, and in traveling through the beautiful woods, six miles or more, I was surprised at seeing no deer signs, and but very few about the lake. On coming out I made some inquiries at the house of Mr. Morbous, a backwoods farmer. I asked if there had been much hunting in that section the last year, and was told, not more than usual. I also asked if there had been any stray hounds around late in the winter, and he said a hound came there in March; used to sleep in his hog-pen nights and went off hunting in the woods daytimes. The snow was three or four feet deep, with a crust that would bear a dog, and he stayed about there two or three weeks.

He said, "It was a blanked good-looking hound." Just so, it was a "blanked" good-looking hound, but God only knows how many deer this dog slaughtered while ranging the woods, far and near. He probably stopped when there was no more deer to be slain, and then departed to "fresh fields and pastures new" to carry on his butchery.

In fishing up some mountain brook in May, it is not very pleasant to come across the body of a deer in the water, driven in and killed by dogs in March or April. I have seen a doe, heavy with fawn, running before a hound in May, but then, "it was a blanked good-looking hound," as the man in North Elba said.

One thing is certain. Every effort to have the deer bounding law repealed, and every vote cast for that purpose is a direct effort and vote for the extermination of the deer in the Adirondacks. This will take place sooner than they think if the law is repealed. Look at Vermont: not a wild deer known to exist, and the Green Mountain region should be a well-stocked deer range, and would be at this day if the domestic wolves, the hounds, had not been allowed to chase, worry and slaughter deer, right and left, until the last one is gone.

I saw a statement in a late number of the FOREST AND STREAM of the finding of a number of skeletons of deer supposed to have been killed by wolves. Query—Were they not killed by domestic wolves, who knows?

Now, it is my belief, that the only way to preserve the Adirondack wilderness as a well-stocked hunting ground for the people of the State of New York, is for the Legislature to define and locate the boundaries of the deer range of this region, and then pass stringent laws, giving a bounty of fifty dollars for the head of every hound caught or found at any time within these limits, the same to be assessed on the owner of the hound.

NEW RUSSIA, N. Y., Jan. 26.

BAINBRIDGE BISHOP.

Editor Forest and Stream:

As I have been in the habit of hunting deer in the Adirondacks more or less every year for the last forty years, I feel that I have a right to have my say with the rest. A proposal to amend the present game law comes from Boonville and was published in the *Utica Morning Herald*, Jan. 21, in the form of a memorial to our Legislature recommending opening the season Aug. 1 and closing Oct. 15, and to repeal all restrictions as to the mode of hunting during that time. The list of signers is headed by State Game Agent Brinkerhoff, with twenty-three others, all Fulton Chain hotelkeepers, guides or stage proprietors interested in conveying people to and from the woods. The memorial states that the present season has been very destructive to breeders, and that four-fifths of the deer killed were does and unfit for food, and asks that the half of October and the whole of November be cut off in order to stop the slaughter. Let us see where these breeders were killed. Game Agent Brinkerhoff, who, I am told, is also a guide, in his report published in the *Utica Morning Herald* Dec. 14, says that he has kept a record of the deer killed by floating from Aug. 1 to Sept. 15, which was 63. Of this number 38 were suckling does, 12 were yearling does, and only 8 bucks in all. I give his own figures. This record corresponds with that kept by him for the past seven years, and gives a proportion of one buck to ten does, and most of them mothers of fawns.

Game Agent Phelps in his report says that Wm. Light and Barbour, two well known Bisby guides, told him they had counted this season some twenty-five or thirty carcasses of deer that lay rotting near the banks of the Canishega still-water, on the south branch of Moose River. These deer, it is fair to infer, were wounded in front of a jack during the floating season, but had strength enough to get a short distance from the stream and were never found. Deer killed by dogs or by still-hunting are seldom lost. If this is approximately true of two miles of one still-water, what is the grand total of the deer left to rot in the whole Adirondacks? Besides, a large portion of venison is wasted, as the weather will not permit of its being kept but a short time; and deer during the floating season are always in poor condition. In October and November, and in those months only, they are at their very best. Venison can then be kept quite a number of days, and my experience and I believe of most hunters is, that more bucks are killed than does, at least the number would be equal.

Still, with all these facts and figures, according to their own showing, these memorialists ask to cut off the half of October and all of November and retain the whole of August, that they may shoot the breeders and dog them *ad libitum*; that they may put money in their purses.

I am pleased to see so few names of the many guides of the North Woods appended to it. Any man or sportsman who has hunted deer in October or November, who has been fortunate to kill one or two deer (and he can, if he tries), will never want to sit doubled up behind a light any more in August and riddle a sucking doe with buckshot at short range. No more will he want to kill the poor, frightened animal as he plunges, panting and red hot, into the lake or stream to escape the hounds. He will be satisfied to kill his deer by fair play and in a sportsmanlike manner, and will never be haunted by the ghosts of the starved fawns, whose mother he may have slaughtered in front of a light in August. It is always wise to learn from the experience of others. In Maine the law prohibits killing in August, also hounding, and limits the number of deer to be killed by one person to three, which has done away with market-hunting, as no market-hunter will go into the woods if he can't kill but three deer. This law has been in force in that State for several years and has given general satisfaction. Why not go and do likewise?

A VETERAN.

HOLLAND PATENT, N. Y.

The communication signed C. Fenton, published in our last issue, should have been credited to the Lowville (N. Y.) *Republican*.

KANSAS GAME BIRDS.

Editor Forest and Stream:

I give you a synopsis of a recent communication by the Leavenworth Gun Club, addressed to Senator P. G. Lowe of this place in relation to the destruction of our quail and prairie chickens which are really our only game birds of note.

Our Kansas law is sufficiently strong and stringent so far as shooting seasons are concerned, and protects the birds from unreasonable attacks; but no law as yet has been able to prevent the wholesale slaughter of birds in the lawful shooting season, hence our birds are becoming scarce. In the prairie chicken and quail seasons, birds by the hundreds and thousands are daily offered for sale, and there are many men who make money by slaughtering our birds and sending them to our river markets where previous arrangements have been made with dealers to receive them. We submit the following points for legislation:

First—Make it a criminal offense for any person to kill more than 25 quail or prairie chickens, or part of both, in any one day from sunrise to sundown. This section puts an end to matches as to which party or person shall kill most game in any one day. No sportsman would care to kill and carry more than 25 birds in one day.

Second—Make it a criminal offense for any person to offer for sale, barter or trade in Kansas, any prairie chicken or quail killed in Kansas, and join with the seller any person who shall offer to buy, trade or barter for any quail killed in Kansas at any season of the year; and the possession of such birds for marketable purposes shall be *prima facie* evidence of any evasion of the law, and the burden of proof must rest with the possessor. This section closes up the avenues of sale and prevents pot-hunters from making the potting of birds profitable.

Third—Make it a criminal offense for any express company, railway company, or any common carrier, to receive for shipment and transportation at any point in Kansas, any quail or prairie chicken. The above section does not prevent any common carrier from shipping into Kansas any game birds, and the second section would not prevent persons from buying birds from outside of Kansas, only they must have the bills, bills of sale, etc., properly authenticated that such birds were not killed in Kansas.

These look like extreme measures, but it requires extremes to reach a proper medium, and a little extreme legislation would break up the pot-hunting business, just as President Cleveland's extreme measures are breaking up the cattle ring business. Do you know, Mr. Editor, that during the prairie chicken season, hundreds of men from Missouri and other neighboring States, go on to the prairies of Kansas, and ship in thousands of chickens to the dealers on the Missouri River, and even to Chicago? The stopping of transportation breaks up that kind of business. Will you please give publication to this as I expect it will bring criticism, and thus help to open the way to such state legislation as shall be uniform, or as nearly so as possible, in protecting our birds from pot-hunters who kill for the money the birds will bring.

THOS. MOONLIGHT, President.

LEAVENWORTH, KANSAS, Jan. 27, 1886.

The third annual election of the Leavenworth Gun Club, Jan. 4, was as follows: Thomas Moonlight, President; A. C. Girard, Vice-President; Henry Laintz, Secretary; Geo. W. Goff, Treasurer. Board of Managers, W. C. Hinman, Frank C. Patton, Wesley C. Gordon.

MIDWINTER PERILS.

THE following account, taken from the *Sun* of last Friday, has additional interest because Mr. Allison was one of the two campers whose cosy winter camp was described in these columns week before last, under the heading "Notes from a Winter Camp":

Bangor, Jan. 26.—Chas. A. Allison, the New York sportsman who had such a terrible experience at Moosehead Lake on Saturday last, was in Bangor to-day on his way home. The *Sun's* representative found him in a comfortable room at the Penobscot Exchange, seated before a blazing hearth, and listened to some of the details of his perilous journey. Mr. Allison is a young law student of New York city, where he has also been connected with the press. Since last summer he has been camping out by himself at Brassva Lake, near Moosehead, having a royal good time shooting and fishing. He had sent his traps in advance to the Kineo House, a great hotel on the shores of Moosehead, with the intent of returning home, and on Saturday he started on snowshoes to walk to the hotel, a distance of ten miles, there to take the stage for the railroad at West Cove, at the foot of the lake. He trudged along toward Moose River for a while all right, but the drifts became of such a nature that he cast the snowshoes aside and started on moccasins. When he reached the mouth of the river, where he intended to cross, he found, to his dismay, that there was a stretch of open water before him. He started to follow up the river for a crossing, but had not gone far when the ice broke, and he went into the water to his shoulders, barely saving himself by stretching out his arms. He then kept along the shore for a distance, but the snow was four feet deep, and he was again obliged to take to the ice.

Soon again he broke through, and this time went so deep that he got a drink of water, which his parched mouth sadly needed. By great exertions he managed to crawl out, and then sat down on a spot of sound ice to rest and try to tie on one of his moccasins, which had fallen off. So slow was he tying the knot with his benumbed fingers that when the operation was finished he found that the shoe had frozen to the ice, and he was obliged to cut it off and proceed barefooted. He half walked, half crawled along the ice, breaking through every few rods, and getting out—how, he knew not. His wet clothing had by this time frozen stiff, and he only kept from freezing to death by rolling in the deep snow on the banks. This gave him the appearance of a veritable ghost of winter, the snow having clung like a feathery mantle about his dripping, icy form. Once he was almost buried by falling over the crest of a wing dam into a huge drift.

There is one habitation only on Moose River, the cabin of Tom Willer, and this Allison knew, but he did not know how near he was to it. At length, wearied out, he was about to lie down in a snowy grave, when, almost without hope, he shouted for help. There was no answer. It seemed like shouting to the winds. He called again, and there was a faint echo. He was near Tom Willer's. Willer came out on the bank, but the ice between him and the freezing sportsman was thin, and had not two Bangor woodsmen bravely exposed their lives by going out through the thin ice to their necks in water, pushing an old flatboat before them, young

A PETITION

For the Continued Protection of Adirondack Deer.

To the Honorable, the Legislature of the State of New York:

We, the undersigned, residents of _____ County, respectfully petition that the law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time.

(Signed)

Mr. Allison would never have seen New York again. He was kindly cared for at the cabin, and was soon in Bangor, healthy and well, having, thanks to his snow baths, suffered no serious injury from freezing.

"Do you see that hat?" he asked, pointing to an old derby on the table. "Well, I wore that hat in camp, and thought it would hardly do to go home to New York in, but I took a notion to bring it along as an old friend. Well, I probably fell into the water fifty times, but every time I clung to the old hat, and once in my despair found myself talking to it, as a madman, and asking it not to desert me."

The Godbout hunter, Napoleon Comeau, whose name is familiar to our readers, had a hard experience last week. A dispatch from Montreal, Jan. 30, reports: In the tempest which prevailed some ten days ago all over the Gulf of St. Lawrence, four hunters of Godbout had a miraculous escape from death, having drifted for some ninety miles during forty hours on a piece of floating ice. Napoleon Comeau, his brother and two of his brothers-in-law, went out from Godbout River in two canoes to hunt seals and ducks. Two of the men were engaged in killing a seal upon a field of ice, when the animal fiercely turned upon them. Napoleon Comeau, who is a telegraph operator at Godbout and one of the best shots and most noted hunters in the country, went to their assistance with his brother. After killing the seal they were drifted so far out into the gulf that they were unable to return. A merciless storm raged around them and soon they were thirty miles from either shore. Three of the men became badly frozen and would have perished but for Napoleon Comeau. They had nothing to eat but two frozen ducks and had frequently to take to their canoes as the ice broke away beneath them. After drifting for ninety miles during forty hours, they managed to land upon the south shore of the gulf, near St. Annes des Monts. Then they were driven to Metis, a distance of fifty-six miles, it being impossible for them at this season of the year to cross the gulf. From Metis they reached Quebec by rail.

A FLORIDA YARN.

Editor Forest and Stream:

I send you a copy of a letter received by a little boy at the North from a Florida dorky with whom he struck up an acquaintance last winter. The letter is dated at Mandarin, Jan. 15, and reads as follows:

Harry, you will remember I told you I would write you. Well, I will fulfill my promise. I am down here among the alligators—that is, in their home. When I first came down last November I took a hunting excursion down in the swamps. I was out two days and one night. I took a fellow along who is a native, and two old army muskets, and ammunition, and a bag of grub, which consisted of cheese, crackers, cold tongue and peanuts. We traveled about ten miles. Night came on; then came the tug of war. Nowhere to sleep, no blankets, ten miles out in the woods. We were close by a muddy stream or river. We stacked our guns and hung our grub on the guns. So I climbed up a big live oak tree and got in the crotch for the night. It was pretty warm and I felt comfortable, all things considered, according to the situation. Just before daybreak I heard a scrambling below. Looking down, there was a big wild hog after our grub; he had knocked down the guns and was cleaning us out. While so doing up comes an old alligator out of the swamp and tackled the hog, and such squealing that I thought the whole place alive. Two old wild cats smelled blood and came on the spot. I tell you, Harry, I felt shaky. I called to the fellow. He had gone to the top of the tree. The wildcats, alligator, wild hog fighting like Old Nick below and both of us up the tree, the guns on the ground; what to do I could not tell. I can tell one thing, my eyes were as large as moons—at least I thought so.

The old alligator was boss of the fight. He ate up the hog. The smell of blood kept the infernal old wildcats around till sun up. Finally they left. I came down. The guns and ammunition scattered over the ground, the grub all gone. I got the fellow down and prepared to leave, but to my surprise, about fifty feet, looking up a tree, was a wildcat licking his chops. I filled the old gun a quarter full of buckshot, not so much powder, and brought him down. In the meantime I sent the fellow down to the stream to get a bottle of water. He did not see the cat. I was afraid to tell him for fear he would run off and leave me alone in the swamp. So while he was gone, as before stated, I brought the old fellow down, cut off his head, threw it away in the bushes. When the fellow returned I told him I had shot a raccoon; I had him almost skinned. The fellow looked at it with suspicion, as he knew more about a coon than I did. He almost caught me in my little game. He said to me, "Where is the tail? You see, all coons has long tails and wildcats has short tails." "Confound it," I said, "I shot it off." We struck up a fire and broiled that old tomcat for breakfast. I tell you, Harry, he tasted equal to venison. After breakfast we started to look for the old alligator; found him on the bank of the stream asleep or sunning himself. Put two full charges under his flank. He keeled over. We cut him open. We found the hog, one of the wildcats, the bag that contained our grub, all inside of him, a bullhead and three ducks. I concluded to return home. On our way back, succeeded in bagging two rabbits, four squirrels, one opossum and some small birds. Very well satisfied, but no more all night in the woods for me,

ROBERT HAZELTON,

DAKOTA GAME.

BUSINESS keeps many of the readers of FOREST AND STREAM, no doubt, from taking those long vacations and outings that some of your correspondents enjoy; but it is the next thing to being there ourselves to read the accounts they write of trips by land and water, of game bagged and fish caught, and all the incidents thereof. However, as far as I am concerned, I manage to get one little vacation of ten days every year. There is one week in October of each year when my address is Dakota. Heretofore I have never been able to get the use of a suitable hunting boat; so this year, before I went, I sent out my little Powell & Douglas boat in ample time, as was supposed, to arrive before she was wanted; but when we arrived—for I took with me my neighbor, the Doctor—the boat had not put in an appearance. We spent our week very pleasantly and bagged as much game as we needed for our own use and that of the neighborhood, besides bringing back all we needed; but we came back convinced of the truth of the statement made recently in these columns, that "the Dakota of to-day was fast becoming the Iowa of five years ago," for we encountered a number of parties both going out and coming in, and no day that we spent on the prairie or on the lake were we out of hearing of the boom of guns. Four years ago, on my first trip, we encountered very few shooters; but the country has been pretty well advertised, and perhaps I have done some of it myself. Probably there are nearly as many geese and ducks as there were on my other trips, but the land is pretty well broken up and there is more feeding ground for them, so they are scattered more; but prairie chickens are increasing very fast, and the single pair of quail I noticed last year have raised two broods, and if the winter is a mild one there will be good quail shooting on my friend's farm next fall. We had a good time and arrived home safely, but they got a pretty good joke on the old man. The little mother at home wrote, "Do take care of yourself; that boat makes me nervous," and got for reply that "no cause for nervousness existed," for "first, there was no water deep enough to drown any one," and "second, there was no boat," and "third, I guessed I was old enough," etc., etc. Well, I don't know how it came about, but the boat hadn't been in the water ten minutes before out I went, gun and all, and as I had to pole ashore to empty my boots, wring out my clothes (jimmey, wasn't it cold!) and scoop the mud out of my ears, of course the boys found out all about it; but how on earth they found it out at Highland Park is more than I know, but all the same I'm hunting for the Doctor with a club.

HIGHLAND PARK, Ill.

HARRY HUNTER.

ERRATIC BULLET FLIGHTS.

Editor Forest and Stream:

Reading in your issue of Jan. 21 of the "Dido of a Spent Bullet," it brought to mind several episodes which have occurred in my own practice. One occurred about forty years ago. From boyhood I was always tinkering with rifles whenever opportunity offered. I made very numerous experiments with hunting sights. That which gave best results for all work is well illustrated in the Whitney-Kennedy rifle shown in the advertising columns of FOREST AND STREAM. My front or muzzle sight, which shows white in the engraving referred to, was made of ivory. A gentleman in our neighborhood employed me to mount such a set of sights upon his hunting rifle. I had finished them and loaded the rifle to see if they were properly centered. Our folks had just moved the old house from over the cellar, preparatory to building a new one on the site. Picking up a half-brick of bright red color, I blackened with powder a spot in its center about the size of a twenty-five cent piece and placed it in an indentation of the lumber pile, about thirty yards distant. Stepping down into the old cellar, then half filled, I rested the rifle upon the embankment and fired. In an instant there was a sharp whizz by my left ear and a slight disturbance of my hair just over the ear, and at the same time a sharp thud in the old chimney stack a few steps to the rear. In one second my eyes were in that direction, where I saw a little puff of brick and mortar dust rising from a crevice. Stepping to the spot, I found the larger portion of the bullet I had just fired. It was a narrow escape. Had it gone an inch above it would have damaged my old hat.

The hard-wood lumber was simply sawed "through and through" but not "edged," the one-inch boards being left full width for roof purposes, to lay shingles upon. The boards were piled in same order as sawed, in what sawyers call "stocks." It was what was termed a three-stock pile. In "sticking up," long, narrow strips bound the piles together. Upon one of these strips, at an indentation of the pile, I placed the brick. I fired at this, striking the upper part of it, cleaving off about one-third of the brickbat and deflecting the bullet directly upward, it striking the wane edge of the board above and giving the bullet a return motion. It next struck the projecting stick above, giving it the direction back again, as I have related.

MILTON P. PEIRCE.

PHILADELPHIA, Pa., Jan. 26.

THE MUTUAL LIFE INSURANCE STATEMENT.—The statement of Mutual Life Insurance Company, published in another column, shows a remarkably prosperous condition of affairs. The amount received for policies in force or terminated amounts to \$103,846,252, and the surplus to \$5,012,633.78. The assets include \$49,228,930.16, and mortgages on real estate, \$39,306,104 U. S. and other bonds, \$10,720.45 of real estate, \$2,619,643.21 in cash in bank, and \$8,156,800 loans on collateral, the total assets footing up to the tremendous sum of \$108,908,967.51. The Mutual Life is one of our oldest and best companies, and its continually increasing prosperity and ever-widening influence tells a story of wise and conservative management.

AN ADIRONDACK DEER HUNT.

BY CHARLES DUDLEY WARNER.

From "In the Wilderness." By kind permission of Messrs. Houghton, Mifflin & Co., Boston, Mass., publishers of Mr. Warner's works.

EARLY on the morning of the 23d of August, 1877, a doe was feeding on Basin Mountain. The night had been warm and showery, and the morning opened in an undecided way. The wind was southerly; it is what the deer call a dog-wind, having come to know quite well the meaning of "a southerly wind and a cloudy sky." The sole companion of the doe was her only child, a charming little fawn, whose brown coat was mottled with the beautiful spots which make this young creature as lovely as the gazelle. The buck, its father, had been that night on a long tramp across the mountain to Clear Pond, and had not yet returned. * * *

The doe was feeding, daintily cropping the tender leaves of the young shoots, and turning from time to time to regard her offspring. The fawn had taken his morning meal, and now lay curled up on a bed of moss, watching contentedly, with his large, soft brown eyes, every movement of his mother. The great eyes followed her with an alert entreaty; and, if the mother stepped a pace or two farther away in feeding, the fawn made a half movement, as if to rise and follow her. You see, she was his sole dependence in all the world. But he was quickly reassured when she turned her gaze on him; and if, in alarm, he uttered a plaintive cry, she bounded to him at once, and, with every demonstration of affection, licked his mottled skin till it shone again.

It was a pretty picture—maternal love on the one part, and happy trust on the other. The doe was a beauty, and would have been so considered anywhere, as graceful and winning a creature as the sun that day shone on—slender limbs, not too heavy flanks, round body, and aristocratic head, with small ears and luminous, intelligent, affectionate eyes. How alert, supple, free, she was! What untutored grace in every movement! What a charming pose when she lifted her head, and turned it to regard her child! You would have had a companion picture, if you had seen, as I saw that morning, a baby kicking about among the dry pine needles on a ledge above the Ausable, in the valley below, while its young mother sat near, with an easel before her, touching in the color of a reluctant landscape, giving a quick look at the sky and the outline of the Twin Mountains, and bestowing every third glance upon the laughing boy,—art in its infancy.

The doe lifted her head a little with a quick motion, and turned her ear to the south. Had she heard something? Probably it was only the south wind in the balsams. There was silence all about in the forest. If the doe had heard anything, it was one of the distant noises of the world. There are in the woods occasional moanings, premonitions of change, which are inaudible to the dull ears of men, but which, I have no doubt, the forest-folk hear and understand. If the doe's suspicions were excited for an instant, they were gone as soon. With an affectionate glance at her fawn, she continued picking up her breakfast.

But suddenly she started, head erect, eyes dilated, a tremor in her limbs. She took a step; she turned her head to the south; she listened intently. There was a sound—a distant, prolonged note, bell-toned, pervading the woods, shaking the air in smooth vibrations. It was repeated. The doe had no doubt now. She shook like the sensitive mimosa when a footstep approaches. It was the baying of a hound! It was far off—at the foot of the mountain. Time enough to fly; time enough to put miles between her and the hound, before he should come upon her fresh trail; time enough to escape away through the dense forest, and hide in the recesses of Panther Gorge; yes, time enough. But there was the fawn. The cry of the hound was repeated, more distinct this time. The mother instinctively bounded away a few paces. The fawn started up with an anxious bleat. The doe turned; she came back; she couldn't leave it. She bent over it, and licked it, and seemed to say, "Come, my child; we are pursued; we must go." She walked away toward the west, and the little thing skipped after her. It was slow going for the slender legs, over the fallen logs, and through the rasping bushes. The doe bounded in advance, and waited; the fawn scrambled after her, slipping and tumbling along, very groggy yet on its legs, and whining a good deal because its mother kept always moving away from it. The fawn evidently did not hear the hound; the little innocent would even have looked sweetly at the dog, and tried to make friends with it, if the brute had been rushing upon him. By all the means at her command the doe urged her young one on; but it was slow work. She might have been a mile away while they were making a few rods. Whenever the fawn caught up, he was quite content to frisk about. He wanted more breakfast, for one thing; and his mother wouldn't stand still. She moved on continually; and his weak legs were tangled in the roots of the narrow deer path.

Shortly came a sound that threw the doe into a panic of terror,—a short, sharp yelp, followed by a prolonged howl, caught up and re-echoed by other bayings along the mountain side. The doe knew what that meant. One hound had caught her trail, and the whole pack responded to the "view halloo." The danger was certain now; it was near. She could not crawl on in this way; the dogs would soon be upon them. She turned again for flight; the fawn, scrambling after her, tumbled over, and bleated piteously. The baying, emphasized now by the yelp of certainty, came nearer. Flight with the fawn was impossible. The doe returned and stood by it, head erect, and nostrils discented. She stood perfectly still, but trembling. Perhaps she was thinking. The fawn took advantage of the situation, and began to draw his luncheon ration. The doe seemed to have made up her mind. She let him finish. The fawn, having taken all he wanted, lay down contentedly, and the doe licked him for a moment. Then, with the swiftness of a bird, she dashed away, and in a moment was lost in the forest. She went in the direction of the hounds.

According to all human calculations, she was going into the jaws of death. So she was; all human calculations are selfish. She kept straight on, hearing the baying every moment more distinctly. She descended the slope of the mountain until she reached the more open forest of hard wood. It was freer going here, and the cry of the pack echoed more resoundingly in the great spaces. She was going due east, when (judging by the sound, the hounds were not far off, though they were still hidden by a ridge) she turned short away to the north, and kept on at a good pace. In five minutes more she heard the sharp, exultant yelp of discovery, and then the deep-mouthed howl of pursuit. The hounds had struck her trail where she turned, and the fawn was safe.

The doe was in good running condition, the ground was

not bad, and she felt the exhilaration of the chase. For the moment fear left her, and she bounded on with the exaltation of triumph. For a quarter of an hour she went on at a slapping pace, clearing the mossy bushes with bound after bound, flying over the fallen logs, pausing neither for brook nor ravine. The baying of the hounds grew fainter behind her. But she struck a bad piece of going, a deadwood slash. It was marvelous to see her skin over it, leaping among its intricacies, and not breaking her slender legs. No other living animal could do it. But it was killing work. She began to pant feebly; she lost ground. The baying of the hounds was nearer. She climbed the hard-wood hill at a slower gait; but, once on more level, free ground, her breath came back to her, and she stretched away with new courage, and may be a sort of contempt of her heavy pursuers.

After running at high speed perhaps half a mile further, it occurred to her that it would be safe now to turn to the west, and, by a wide circuit, seek her fawn. But, at the moment, she heard a sound that chilled her heart. It was the cry of a hound to the west of her. The crafty brute had made the circuit of the slash, and cut off her retreat. There was nothing to do but to keep on; and on she went, still to the north, with the noise of the pack behind her. In five minutes more she had passed into a hill-side clearing. Cows and young steers were grazing there. She heard a tinkle of bells. Below her, down the mountain slope, were other clearings, broken by patches of woods. Fences intervened; and a mile or two down lay the valley, the shining Ausable, and the peaceful farm-houses. That way also her hereditary enemies were. Not a merciful heart in all that lovely valley. She hesitated; it was only for an instant. She must cross the Slide Brook Valley if possible, and gain the mountain opposite. She bounded on; she stopped. What was that? From the valley ahead came the cry of a screeching hound. All the devils were loose this morning. Every way was closed but one, and that led straight down the mountain to the cluster of houses. Conspicuous among them was a slender white wooden spire. The doe did not know that it was the spire of a Christian chapel. But perhaps she thought that human pity dwelt there, and would be more merciful than the teeth of the hounds.

"The hounds are baying on my track;
O white man! will you send me back?"

In a panic, frightened animals will always flee to human-kind from the danger of more savage foes. They always make a mistake in doing so. Perhaps the trait is the survival of an era of peace on earth; perhaps it is a prophecy of the golden age of the future. The business of this age is murder:—the slaughter of animals, the slaughter of fellow-men, by the wholesale. Hilarious poets who have never fired a gun write hunting songs,—*Ti-ra-la!* and good bishops write war songs:—*Ave the Czar!*

The hunted doe went down the "open," clearing the fences splendidly, flying along the stony path. It was a beautiful sight. But consider what a shot it was! If the deer, now, could only have been caught! No doubt there were tender-hearted people in the valley who would have spared her life, shut her up in a stable, and petted her. Was there one who would have let her go back to her waiting fawn? It is the business of civilization to tame or kill.

The doe went on. She left the saw-mill on John's Brook to her right; she turned into a wood path. As she approached Slide Brook, she saw a boy standing by a tree with a raised rifle. The dogs were not in sight; but she could hear them coming down the hill. There was no time for hesitation. With a tremendous burst of speed she cleared the stream, and, as she touched the bank, heard the "ping" of a rifle-bullet in the air above her. The cruel sound gave wings to the poor thing. In a moment more she was in the opening; she leaped into the travelled road. Which way? Below her in the wood was a load of hay; a man and a boy, with pitchforks in their hands, were running towards her. She turned south, and flew along the street. The town was up. Women and children ran to the doors and windows; men snatched their rifles; shots were fired; at the big boarding-houses the summer boarders, who never had anything to do, came out and cheered; a camp-stool was thrown from a veranda. Some young fellows shooting at a mark in the meadow saw the flying deer, and popped away at her; but they were accustomed to a mark that stood still. It was all so sudden. There were twenty people who were just going to shoot her, when the doe leaped the road fence and went away across a marsh toward the foot-hills. It was a fearful gantlet to run. But no one except the deer considered it in that light. Everybody told what he was just going to do; everybody who had seen the performance was a kind of hero:—everybody except the deer. For days and days it was the subject of conversation, and the summer boarders kept their guns at hand, expecting another deer would come to be shot at.

The doe went away to the foot-hills, going now slower, and evidently fatigued, if not frightened half to death. Nothing is so appalling to a recluse as half a mile of summer boarders. As the deer entered the thin woods, she saw a rabble of people start across the meadow in pursuit. By this time the dogs, panting, and lolling out their tongues, came swinging along, keeping the trail, like stupid, and consequently losing ground when the deer doubled. But, when the doe had got into the timber, she heard the savage brutes howling across the meadows. (It is well enough, perhaps, to say that nobody offered to shoot the dogs.)

The courage of the panting fugitive was not gone; she was game to the tip of her high-bred ears. But the fearful pace at which she had been just going told on her. Her legs trembled, and her heart beat like a trip-hammer. She slowed her speed perforce, but still fled industriously up the right bank of the stream. When she had gone a couple of miles, and the dogs were evidently gaining again, she crossed the broad, deep brook, climbed the steep left bank, and fled on in the direction of the Mount-Marcy trail. The fording of the river threw the hounds off for a time. She knew, by their uncertain yelping up and down the opposite bank, that she had a little respite; she used it, however, to push on until the baying was faint in her ears; and then she dropped, exhausted, upon the ground.

This rest, brief as it was, saved her life. Roused again by the baying pack, she leaped forward with better speed, though without that keen feeling of exhilarating flight that she had in the morning. It was still a race for life; but the odds were in her favor, she thought. She did not appreciate the dogged persistence of the hounds, nor had any inspiration told her that the race is not to the swift. She was a little confused in her mind where to go; but an instinct kept her course to the left, and consequently further away from her fawn. Going now slower, and now faster, as the pursuit seemed more distant or nearer, she kept to the south-

west, crossed the stream again, left Panther Gorge on her right, and ran on by Haystack and Skylight in the direction of the Upper Ausable Pond. I do not know her exact course through this maze of mountains, swamps, ravines, and frightful wildernesses. I only know that the poor thing worked her way along painfully, with sinking heart and unsteady limbs, lying down "dead beat" at intervals, and then spurred on by the cry of the remorseless dogs, until, late in the afternoon, she staggered down the shoulder of Bartlett, and stood upon the shore of the lake. If she could put that piece of water between her and her pursuers, she would be safe. Had she strength to swim it?

At her first step into the water she saw a sight that sent her back with a bound. There was a boat mid-lake; two men were in it. One was rowing, the other had a gun in his hand. They were looking towards her; they had seen her. (She did not know that they had heard the baying of hounds on the mountains, and had been lying in wait for her an hour.) What should she do? The hounds were drawing near. No escape that way, even if she could still run. With only a moment's hesitation she plunged into the lake, and struck obliquely across. Her tired legs could not propel the tired body rapidly. She saw the boat headed for her. She turned toward the center of the lake. The boat turned. She could hear the rattle of the oar-locks. It was gaining on her. Then there was a silence. Then there was a splash of the water just ahead of her, followed by a roar round the lake, the words "Confound it all!" and a rattle of the oars again. The doe saw the boat nearing her. She turned irresolutely to the shore whence she came; the dogs were lapping the water, and howling there. She turned again to the center of the lake.

The brave, pretty creature was quite exhausted now. In a moment more, with a rush of water, the boat was on her, and the man at the oars had leaned over and caught her by the tail.

"Knock her on the head with that paddle!" he shouted to the gentleman in the stern.

The gentleman was a gentleman, with a kind, smooth-shaven face, and might have been a minister of some sort of everlasting gospel. He took the paddle in his hand. Just then the doe turned her head, and looked at him with her great, appealing eyes.

"I can't do it! my soul, I can't do it!" and he dropped the paddle. "Oh, let her go!"

"Let H. go!" was the only response of the guide as he slung the deer round, whipped out his hunting-knife and made a pass that severed her jugular.

And the gentleman ate that night of the venison.

The buck returned about the middle of the afternoon. The fawn was bleating piteously, hungry and lonesome. The buck was surprised. He looked about in the forest. He took a circuit, and came back. His doe was nowhere to be seen. He looked down at the fawn in a helpless sort of way. The fawn appealed for his supper. The buck had nothing whatever to give his child,—nothing but his sympathy. If he said anything, this is what he said: "I'm the head of this family; but, really, this is a novel case. I've nothing whatever for you. I don't know what to do. I've the feelings of a father; but you can't live on them. Let us travel."

The buck walked away; the little one toddled after him. They disappeared in the forest.

POINT OF BEACH.—New Year Day was so pleasant and warm, that a few of us thought that if Saturday was as pleasant we would make one more trip to the mill. Friday night found us cleaning guns and loading shells preparatory to an early start Saturday. Early Saturday morning the horses were hitched up and T., Joe Miller and the writer were aboard the surrey, bound for the mill. We were driving up Nostrand avenue (Brooklyn). Miller's dog, a superb pointer, tried to get into the surrey when it was in motion, only succeeding in getting his hind toe run over by the rear wheel. Duke, we thought, was not hurt much and so we wouldn't take him in the wagon. He, however, thought otherwise, and jumped on to a car that was going our way, stepped inside and seated himself on the cushion, looking out of the window toward us. When we reached the earstables he changed ears and got into the little one-horse concern that turns toward the park and showed such a desire to ride that Miller had to get out and bawl him out of the car. We carried him the rest of the way. My little cocker spaniel ran all the seven miles and seemed to enjoy it. When we reached the mill we got the little 14 by 4 skiff and dropped down the creek for the end of Barren Island, called Point of Beach. Some time since one of your correspondents wrote quite a long article about the bad smells of this place. Now I have been down at all times of the year and never experienced such ill effects as he mentions; and at the same time I have shot lots of bay birds, and in the fall a good many black sea-ducks and English spce. Arrived at the beach, we walk up near the water, around the island nearly, Miller getting a couple of butterball ducks. We saw no snipe of any kind, though the season had been so very mild. There were quantities of gulls, crows and heldivers, and some old sportsmen whom we met said that some geese and brant had been shot near the beach. Right across from Point of Beach is the tail end of Rockaway Point. This is a splendid place in August, September and October for bay birds and ducks and a good many are shot. After dinner F. saw some ducks out in the channel and offered to row any one who would go out and shoot them. Of course Miller went and he got four out of this flock, all butter balls. They were very fat and had quantities of feathers. Toward sundown it began to grow chilly and we sorrowfully packed up our duds and started with slow oars home.—COCKER.

THE HOUNDERS' CONFESSION.—The deer hounder rings the changes on the destructiveness of jacking, except when he forgets himself and inadvertently shows what he really thinks. Thus the editor of the Boonville *Herald*, who is a rabid advocate of the hound and club, commenting on Mr. White's bill to allow jacking in August, and hounding not until after Aug. 15, "gives himself away" by saying: "This bill is not what is wanted by the true sportsmen. It does not allow the use of dogs in August, at which time the greater number of tourists are in the woods, and in order to get a deer they will have to float night after night for it or go without. The deer of the woods are for the sportsmen who go to the forests for rest and recreation, and dogs should be allowed to run as much in August as September." "Float night after night for it." That is to say, jacking is harder work and a less certain method than hounding. Is that not a fair inference from the words?

SAGADAHOC ASSOCIATION.—Bath, Me.—This association elected the following officers for the ensuing year: President, Dr. Charles A. Packard, Bath; Vice-Presidents, A. Q. Goud, Topsham, James H. Millay, Bowdoinham. Executive Committee, S. W. Carr, Bowdoinham; A. Q. Goud, Topsham; G. H. Nichols, A. Hatch, Bath; A. S. Alexander, Richmond. Secretary and Treasurer, Geo. E. Newman, Bath. A committee of three were appointed to consider the best method of prosecuting violators of the game laws, and an offer of a reward of \$10 was voted for proof sufficient to convict any person of such offense. This association is now in a flourishing condition, and much good has been done here during the few years of its existence. Sewall's Pond, in Arrowsic, Campbell's Pond, West Bath, and Nequasset Pond, in Woolwich, have been stocked with black bass to a limited extent, and the latter being thought particularly well suited for the purpose, it is proposed to deposit there early the coming season one hundred of these superior food fishes. The gentlemen composing this club have shown much public spirit in their experiment with the Messina quail, and in stocking the waters in the vicinity with trout and black bass, paying all the expenses connected therewith freely out of their own pockets. The good results of this organization are seen also in a better state of public sentiment in regard to the game of our forests, and the song and insectivorous birds of our fields and gardens, and it is seriously hoped that the time is not far distant when these laws will be respected by all, and when it shall be considered not only inhuman but the height of meanness to take the life of our beautiful song birds for mere sport, or kill our partridges and other game birds out of season.

MICHIGAN NOTES.—If the deer in northern Michigan don't become extinct in a very few years, it will be something wonderful to relate. During the year 1885, 1,130 carcasses were shipped from Alpena alone.—William McKeeson and Lewis Ingersoll were hunting deer (out of season) in Pioneer township, Missaukee county, near Lake City, when Ingersoll shot and killed McKeeson, mistaking him for a deer.—H. H. Warner, of Rochester, N. Y., who owns Mai-on Island in Saginaw Bay, intends to have Congress pass a bill, if possible, giving him the marshy portion between the island and the main shore, on the ground that it is part of the island and a recent accretion. While this property would seem to be of no great importance to any one, even to Mr. Warner, it is in reality a valuable territory. It comprises the Wild Fowl Bay hunting ground, and therefore is valuable to the sportsmen of this section of Michigan. At the last Congress a similar bill was offered, and by the strenuous opposition of the Lansing Gun Club, was defeated. It now behooves sportsmen to use their utmost exertions to oppose the bill if they desire to hold possession of the property. If it passes into the hands of Mr. Warner he can arbitrarily prevent any one from shooting on this ground, thus reserving it for his own use. As Wild Fowl is the principle ducking ground on Saginaw Bay, the sportsmen who annually visit it will readily understand the importance of bringing their influence to bear in opposition to the Warner bill.

GAME BILLS INTRODUCED AT ALBANY are as follows: (1) Mr. Huntington's, to protect deer, European hares, gray partridges and English pheasants on Long Island for five years. (2) Mr. Parker's, to prohibit jacking deer. (3) Mr. Barnes's, to make open season for deer Aug. 1 to Nov. 15; allows hunting Aug. 15 to Nov. 1; forbids jacking at any time; limits transportation of venison to two carcasses accompanied by owner, and legalizes shooting dogs when in violation of the law. (4) Mr. Pierce's, repealing the deer hunting law. (5) Mr. Wemple's, permitting deer hunting in Fulton and Hamilton counties during September and October. (6) Mr. White's, permitting floating from Aug. 15 to Oct. 15; hunting from Sept. 15 to Oct. 15; sale of venison Aug. 15 to Nov. 15. (7) Mr. Peart's, to forbid woodcock shooting between Jan. 1 and Sept. 1.

FOXES ARE UNUSUALLY NUMEROUS in the neighborhood of Morrisson, Sullivan county, N. Y.—or at least they are bolder than ever in depredations on the poultry. The local hunters and trappers have had great sport hunting foxes, and there is scarcely a barn in the region that has not at least one fox pelt nailed to its door. The extraordinary number of foxes in the county and their unusually bold manner of operating can be explained in no other way than by the theory that the wild animals and birds on which they depend for food—rabbits, partridges and other small game—are for some reason not to be found in their usual haunts, thus forcing the fox to resort to heroic tactics to obtain necessary provender.

FORT BOWIE, ARIZONA, Jan. 21.—Quail are very plentiful, so are cotton tail and jack rabbits. Deer are getting scarcer every year, although I have killed two in the mountains just back of the ranch within the past three weeks, going out and getting back the same day. There are plenty of antelope in the valleys. Now and then a bear is killed in the mountains. Blacktail deer are scarcer than the whitetail; occasionally a small band comes in here in the winter time. In some localities within a few miles of here good deer hunting can be had. There are some turkeys on the summits of the mountains. Antelope hunting is the most exciting sport I know of.—J. C. H.

HIGHLAND PARK, Ill.—What little cover we have left is pretty well beaten over by hunters who come up from Chicago and elsewhere. When I first came up here to live, in 1889, there was fair shooting just on the outskirts of the village; but the growing timber has been cut down, hard winters have killed the quail, and too much shooting has done the rest.—HARRY HUNTER.

TEXAS—El Paso, Jan. 23.—I admire your position toward non-hounding deer laws, the rigid enforcement of game protective laws, etc. There is no protective law in El Paso county, and the evil is being felt already. Our Legislature does not meet until next January, so there is no relief until then, when our gun club hope to bring this county in.—R.

MAINE MOOSE—Two of the Kineo guides at Moosehead Lake recently shot a pair of moose within three miles of the lake. Leaving the carcasses in the woods and returning the following day to bring the meat home, they encountered on the way and shot another of the monarchs of the forest. All were of very large size.

A CURRITUCK DUCKING SCORE.—Following are the scores of four days' shooting at Currituck:

Jan.	O.B.	R.H.	Wid.	C.D.	Geese	Mis.
11—Two guns, Little Sheep Isl. (1h.)	4	3	8	1	2	
12—Two guns, Sheep Island	4	6	1	8	1	2
12—Two guns, Narrow's Isl. (2hrs)	3	5				
13—Two guns, Sheep Island	92	8	9	30	2	4
13—One gun, Devil's Elbow	27	10	1	10		
13—Two guns, N.E. p't Home Marsh (24 day)	7	5		1		3
13—Two guns, Grandy Island, opposite club house	17	44		15		
14—Two guns, Sheep Island	47	9	8	4	2	
14—Two guns, N.E. p't Home Marsh	5	33		2		13
14—Two guns, Devil's Elbow	10	28	4	5	2	
14—Two guns, Grandy Island, opp. club house	9	33		8	1	
Total	267	176	39	81	9	22
Total for days: 11th, 18; 12th, 70; 13th, 275; 14th, 218.	Grand total, 581.					

LYMAN'S PATENT IVORY BEAD FRONT SIGHT.—This sight gives the sportsman a clear white bead, which can be seen distinctly against any object, in the woods or in bright sunlight. The contrasting black neck of the sight makes the bead all the more prominent. The construction is strong and the sight durable. It has been tested and is highly endorsed by the best known rifle shots. Mr. Otto Walkers, of Kent, Ohio, well known as a splendid wing shot, who uses the Lyman rear sight for all his shooting, says of this front sight: "I am of the opinion that this front sight is about as perfect as it is possible to make it. I do not claim to be much of a stationary shot, but at 50 to 100 yds., with this front sight and your rear sight, I can bunch the bullets in a way that would surprise some of our older and more experienced rifle shots. In my wing shooting it shows up so plain and distinct, that it is quite an easy matter for me to hit glass balls thrown up at from 25 to 50 yds., which is, as you know, a much more difficult feat than at 15 ft., which is the distance some of our champion wing shots shoot."—Adv.

WATERPROOF CARTRIDGES.—Windsor, Conn., Jan. 23.—U. S. Cartidge Co., Lowell, Mass.—Gentlemen—Thinking it might be of much interest to you, we take pleasure in informing you of the success which your first quality waterproof shells have achieved. During the past two weeks the U. S. Government have been testing in every manner possible, one of our shotguns, which has resulted in the gun accomplishing all it was asked to do, with no failure in anything. During the test your shells, among others, were used, and the Board of Officers, who had charge of the trial, soaked in water for forty-eight hours some of your first quality waterproof shells (paper) and at the expiration of that time, these shells were put into the magazine of our gun and were manipulated through the gun and fired without a catch or failure.—Truly yours, SPENCER ARMS CO.—Adv.

Sea and River Fishing.

FLY-FISHING FOR SUCKERS.

A PARTY of us were in camp on our favorite ground at M. Pond, in the latter part of August, 1885, for a week's fly fishing for trout. The fish had been rising quite freely night and morning for the first three days, and I had taken from twenty to thirty in perhaps three hours' fishing each day. But now, for some reason known only to themselves, they had stopped rising, and after a morning's fishing with only two trout to show for it, we began to talk of trying another pond.

During an excursion to this region in 1883, in passing along the shores of a pond about one and a half miles to the eastward, I had seen fish rising; in fact, the pond seemed fairly alive with them, and they appeared to be of large size. I had fished it several times with indifferent success, but as it was quite a distance from where I was camping I had never cast a fly on its waters after sunset. So now we concluded to try it under different conditions, for I was certain that it contained an abundance of trout. Taking supplies for two meals, our rods and landing net, we started at about 4 o'clock for the pond. Following an old tote road, partly overgrown with bushes, in about an hour we came to Long Pond. This contains twenty-five or thirty acres, is oval in shape and twelve or fifteen feet deep, and is situated on a divide between two mountains, being fed entirely by springs.

It was a clear day, and the surface of the pond, unbroken by a ripple, mirrored the mountains, with all their rugged outlines, on either side. A pair of hawks wheeling in circles overhead, a pileated woodpecker calling to its mate on the opposite mountain side, and once in a while a flycatcher, leaving its perch on some limb overhanging the water, would scoop up a fly from the surface before it had time to dry its wings and fly away, were all the signs of life to be seen. An old raft was anchored at the shore near by, but from its appearance little fishing had been done here this season.

"If trout were very plenty here," said Jim, "I should not suppose the flycatchers would be allowed to have all the fun."

"Wait till sunset and perhaps there will be a change in the programme," said I. "But meanwhile I will try what virtue there is in an anglerworm." So putting together our rods we pushed the raft out a few rods from shore and began still-fishing with worms. Once in a while a fly would come to the surface of the water, cast its skin like a mosquito, and float on the surface until its wings were dry enough to use, when it would rise in the air only to be gobbled up by the nearest flycatcher, as though it had been hatched for his especial eating.

Do all fishermen know that the flies that trout like the best come from the water like mosquitoes? In the best natural trout ponds you will find their cast-off coats floating in great numbers, and in some of the larger varieties of flies nearly an inch and a half in length. I was watching a fly fluttering along the surface of the water trying to rise into the air before its wings were fairly dry, when it was suddenly taken by a trout that I judged would weigh at least a pound, and making a splash that fairly made us jump, and might have been heard twenty rods.

Carefully moving the raft within casting distance I cast the bait across the wake, and letting it sink below the surface it is quickly taken, and with a few minutes' play I have him in the net. "A pound and a half?" "No, pound and a quarter," said I.

Just then another rise at the opposite side of the pond, and as the sun sank behind the mountain tops, leaving the pond in the shade, it became fairly alive with fish, all apparently of large size. After catching two more with bait I take off the bait hook and put on a couple of flies, and making a short cast across a big swirl within fifteen feet of the raft, a big one took the tail fly nearly as soon as it touched the water. Turning him as he started, bringing the dropper perhaps three inches from the surface, it was taken by another fish; then the fun began. As I was using large flies I did not let the fish get very far away, but they made my rod

bend almost double when they would both start in the same direction.

"I've got a buster," shouted Jim, and looking up I saw his rod bent in a half circle and his eyes as large as saucers. He had evidently got a big one, but I could only give him a hasty glance, for I had all I could do to keep mine from going under the raft and getting tangled up. Bringing them sharply round I slipped the landing-net under the nearest one and brought him on the raft, when instead of having a trout as I expected I had a sucker. To say that I was dumfounded would not half express my feelings at that time. Jim did not notice what it was, so I quietly put it in the basket and proceeded to reel in the other one, of which I had caught a glimpse, and I saw that one was a trout and a large one, too. Meanwhile Jim had got his fish pretty well tired out, and calling for the net he took him in. "A sucker, as I am a sinner," said Jim. "If that's what you are catching, land this fish for me," said I, and bringing my fish around so that he could reach him, he took in a trout that would weigh a pound and a half at least. "That is what I am catching to-day," said I, and as he turned to unhook his sucker, the expression of disgust that came over his countenance was amusing to see. I laughed, but not a smile from him. "Are suckers in the habit of rising to a fly?" said Jim, as soon as he could make himself heard. "Not to mine," I replied. But now came an experience, that if it had not happened under my own observation, I am afraid I should have called a "fish story." For the next half hour suckers were continually rising for flies, and I judged I caught as many as fifteen and Jim nearly as many more, all taken with the flies on the surface of the water. They would rise as greedily as trout when they are on the feed, and the hook catching in their tough lips, we had to take each one in and unhook him with our hands.

The surface of the water was fairly alive with fish from one to three pounds weight, and I should think more than three-fourths of them were suckers. We could hear their lips come together, when they took in a fly, for quite a distance, and that was all the way we could tell a sucker from a trout, till he was in the net. The noise made by them in taking flies is something that was entirely new to me as was their taking our flies so freely. I have frequently seen them feeding in schools with their back fins out of water, when they would go down in an instant if a bait or fly was cast among them, but here they were, not at all shy, and frequently rising within a few feet of the raft. We caught only four more trout that evening but they were large ones.

We camped that night by the side of a fine spring of water, and tried them again in the morning and caught four more trout, but not a sucker put in an appearance. They had evidently gotten their fill the night before. After the sun came up they stopped rising, and the surface of the pond was as quiet and untroubled by a fin as when we first saw it on the day before. Going ashore we ate our breakfast and went back to our old camp with a basket of trout of which any one might well be proud. Any one passing our camp that evening might have supposed a big jollification was going on, from the shouts of laughter that frequently issued therefrom as I thought of the look of intense surprise and disgust that came over Jim's countenance as he landed his first sucker. When he reads this it will be the first time he knows that I caught the first one.

As we talk over that excursion we promise ourselves that when the next fishing season comes for us, and we feel the angling fever coming on, we will look for part of the anti-dote at Long Pond.

THE STRIPED BASS LAW.

Editor Forest and Stream:

In your issue of Jan. 28 you advocate, under the caption "The Striped Bass Law," the revision and modification of the present law in regard to the close season on striped bass (Jan. 1 to May 19). It seems very strange to us that you (who, of course, know, that the close season now named in the law, barely covers the period during which the striped bass are running up the Hudson, spawning and returning to salt water) should seriously lend your influence in the direction of the extermination of our great game and food salt-water fish. Any of our old Hudson River anglers can remember when splendid takes of bass were made up the river, especially at and near Sing Sing. And every one knows that the fishing through the ice and netting in the early spring has about destroyed any hope of ever getting any more bass up the river, and made the fishing for them miserable in our bays. There is just a chance left for the preservation of striped bass, and that chance lies in the maintaining of the present law.

The fish mongers may say that the bass sold in our markets come mainly from the South. So the game butchers say the quail sold here come chiefly from the West. But this is no reason why—for the sake of their making a few dollars just now—our game fish and birds should be exterminated.

ABBET & IMBRIE.

NEW YORK, Feb. 1.

[The fact is that the season named does not cover the whole season of the striped bass in the Hudson, for small ones are found spawning occasionally until the middle of June. No one knows where the large bass spawn within the limits of the State of New York; if any one does know the locality then that person has kept the secret well, for our fish culturists and fish commissioners have sought this information in vain. On two or three occasions a small striped bass has been found with ripe eggs, in the month of June, or late in May, as high up as Catskill or Castleton, by the men employed in the shad hatching for the State, and a few eggs have been hatched. The large bass of thirty pounds and upward often go up the Hudson and winter under the ice in the vicinity of Tarrytown and here they are caught by nets set or hauled under the ice. They do not go far up the river and leave it early in spring. They are found in salt water about Montauk Point, the eastern end of Long Island, in April and May, full of eggs, but seldom with ripe ones. It may be fairly questioned whether they spawn here or not as a rule. The only spawning grounds of striped bass that have been found are in North Carolina. We have advocated the repeal of the bill because outside of the fish taken under the ice in the Hudson and an occasional one along the coast of Long and Staten Islands, there are no bass taken in the State, the most of them coming from the South, and it has not been shown that their capture in Southern waters has threatened the supply of this valuable food fish. It has seemed best to repeal the law before passing another one on the same subject, and if this were done in the present case we could then join Messrs. Abbet & Imbrie in advocating the passage of one which prohibits the netting of striped bass under the ice in the Hudson.]

COOKING A TROUT IN CAMP.

FOR the last half mile the trail led us through a piece of low, marshy ground rank with the luxuriant vegetation of July. The level ground was a relief to feet that had supported not only the bodies rightfully belonging to them, but packs of fifty pounds, more or less, and had climbed hills and stepped over fallen logs for nearly four miles. In this piece of "bottom" there was no sign of the presence of a lake, but the wooded hills on every side plainly said that if there was water in the neighborhood it must be near. The two guides were leading the column, each with the boat resting on the neck yoke on his shoulders, while the Colonel and the Doctor, each with a pack of provisions, Jack, the Colonel's son of sixteen, with camp kettles and axe, and I, with the tent, brought up the rear. Tired and hungry, no one beside the Doctor noticed the profusion of the curious flowers of the pitcher plant which thrust its single stalk crowned with a large purple blossom above the grass, while the modest pitchers were invisible. The Doctor gathered several of the flowers, no doubt with the evil intent of inflicting a botanical lecture upon us at the first opportunity, remarking at the time that we must be near the lake. He had scarcely spoken when Lake Merganser opened into view as we passed a clump of bushes. We left the marsh and turned up the lake a short distance to get on more solid ground, and beside a big rock the boats were launched and we rowed along the shore looking out for the little spring that came down the hill, in order to camp by it.

The sun was not over two hours high when we reached the camping place, and it was necessary to utilize every moment in order to prepare for night and get supper for five hungry men and a ravenous boy. Tired as we were the Doctor insisted on having fresh lake trout for supper, and getting out his tackle, stepped into a boat and soon had his heavily-leaded trolling spoon in the depths of the lake where the large lakers love to lie in the cooler waters. The guides went to cut and split some dry wood for the night, the Colonel gathered twigs and branches for a temporary fire, I had pitched the tent, and Jack was bringing balsam boughs which I carefully stripped of large stems and laid in lapping rows until a soft, springy bed, redolent of the most delightful odor that ever beguiled tired woodsman to slumber, was completed. The declining sun lit the treetops on the hills, and the clouds hung lazily over the water as if to see themselves in that mountain-framed mirror; or, possibly, they knew the lake was the result of their weeping, and now with cheerful faces they loved to hover over it. The Doctor, in his eagerness to get out his fishing tackle, had stepped upon and ruined his pitcher-plants, and we were thereby saved a lecture on the family *Sarracenia*, for which Jack audibly expressed the thanks which the rest of the party felt.

A noisy kingfisher flew up and wound up his reel on a limb, disappointed at the result of its last dive, and a shout from the Doctor proclaimed that he had a strike. After a long, quiet reeling-in, the fish made a fair struggle for freedom which bent the short, stout rod and caused the Doctor some anxiety lest the line should pass under the boat and get fouled or be sawed off. Nothing of the kind happened, and in a few minutes more a splendid five-pounder was laid before us. The kingfisher also saw it, and chirped his disapprobation of the invasion of his domain and the capture of a fish greater than he could master. "Now," said the Doctor, exultingly, "we'll have the fish for supper and save the ham and canned goods for some other time, perhaps when we can't do better." He looked around defiantly, as if challenging opposition, his face still suffused with a flush of victory, but finding none he subsided, and his smile lit up the cedars and the rocky shores of the island and was reflected by the white birch at the landing, and then audibly picked up in a weird manner by a solitary loon whose "ha-ha" as he dove startled the kingfisher into again winding up his reel as though he had struck a yearling trout. A few minutes later the Colonel and the Doctor sat on a log by the open front of the tent and argued how a trout should be cooked. "I tell you," said the Colonel "a trout to be cooked to perfection should never be dressed at all. Just roll it up in wet clay, about an inch thick all around, and lay it in a bed of hot ashes and cover it up with live coals, and let it bake. A trout the size of this one wants from a half to three quarters of an hour, and when the clay comes off the skin comes off with it and the inside arrangements are shrivelled up to nothing. The fish is cooked in its own juices, and is not dried up." And he smacked his lips at the thought. But I had some doubt about the Colonel's experience in this matter, and suspected that all he knew of it he had read somewhere among the camp stories of theoretical campers, for he was not as much of a woodsman as he flattered himself to be, and in this he bore a most striking likeness to most of us who do a little camping.

About cooking a trout, however, the Doctor had his own ideas, and while the Colonel was delivering his lecture on camp-cookery, had split the fish down the back. Then, laying his pipe on the log, looked up and said: "Colonel, this is my trout, and I am going to cook it in my way, and when you eat it you will say it is the best fish you ever put a tooth in. It will wrap round your heart like a yard of new flannel." He then ran a twig through the gills, put a splint across the halves to keep it spread open, laid a strip of bacon over the head, and set the twig in two crotches before the fire, so that the fish hung with the flesh side to the coals and the dripping bacon would keep it moist.

"Don't you salt it before it is cooked?" asked the Colonel. "No; it is best to salt it afterward." "I like to have salt cooked into a fish." "Yes," chimed in Jack, "both salt and pepper should be cooked into the fish and not sprinkled over, afterward. If you want to serve that trout to the Queen's taste just salt and pepper it while it is broiling."

"Well," replied the Doctor, "when you go out and catch a trout and bring it to the camp, you may cook it as you please, and if it is good I will say so, but I am the old trout cook myself, and you will all say so after you eat this one. I tell you the bacon salts it some and salt on a raw fish binds it from cooking through properly. Now among the old Romans—"

"Hang the old Romans," said Jack, "how do you know whether they ever slept out over night or not, and a man who never did knows nothing of camp-cookery. What did a Roman cook know of Lake Merganser and a trout cooked over birch twigs? Not more than a French chef."

They appealed to me, and I intimated that if there was plenty of it and it was ready that moment I could eat it with salt, ashes, or sand, either on the outside or on the back-bone. I spread a blanket on the boughs and stretched full length on it. The sun was nearly down, and a wood-thrush poured forth its short, sweet notes in the thicket, the crickets

chirped below the bed of balsams, and the bacon sizzled. The Doctor and Jack went for some light-wood to make a cheerful fire, and the Colonel fussed around muttering something about salt, and then went to the spring for water. Jack came in, threw down his wood, and asked if there was any pepper in camp. I told him there was, and he went hunting for it. Presently the other two came in, and after a glance at the fish the Doctor pronounced it done, took it from the fire; opened the salt-box and sprinkled the fish lightly, saying: "You'll say that this beats the world."

"What have you been doing with the salt-box?" asked the Colonel.

"Salting the fish, to be sure," was the reply. "I salted it while you went for wood," said the Colonel, "and put on plenty, too."

"So did I," said Jack; "I salted it and peppered it well. Guess we've got it salt enough."

"Well," sighed the Doctor, "you've got it to eat, or no supper. There is one good thing—the spring is handy; but the next time I cook a trout I want you to let it alone." An early-rising owl asked "Who, who?" and the Doctor looked up but answered not. The last rays of the fast-declining sun illumined the clouds until their tints rivalled the Doctor's face. His good-nature got the better of his disappointment, and he said: "Maybe it won't be so bad, after all."

We sat around the fire with huge chips in hand for plates and anxiously watched, as only hungry campers could, the slow process of dividing the fish. I tasted, and rested. The Colonel tasted, and looked at me. We in turn looked at Jack, who had a large piece on his fork which his open mouth would soon engulf. He bit it, jumped, and ran to the spring.

By this time the Doctor was ready to sample his. One taste, and he knocked the bread into the fire as he rose, saying: "I expected any quantity of salt, but—" Here a coughing-fit seized him and he stopped.

"Jack," called the Colonel, "what did you put on his fish?"

"Nothing but salt and pepper," answered he. "Where did you get the pepper?"

"Out of the brown paper by your tackle-box."

"Good grief! The Scotch snuff I brought up to give Uncle Ben to kill fleas on his dog!"

The pink rays of the dying sun set the kingfisher out in bold relief as he chattered furiously, and a loon on the opposite shore laughed a scornful, jeering laugh. An audible silence hung like a pall over the camp for half a minute. "If there was a gun in camp I'd kill that loon in the morning," remarked the Doctor, and each sat awhile wrapt in thought, contemplating the beauties of nature.

FRED MATHER.

HARPOON FOR BIG FISH.

THE diagrams shown below are drawn from a pattern from which a number of steel heads have been manufactured for use in Florida. This harpoon with movable ears was invented, we believe, by a Massachusetts gentleman, Mr. W. R. Tompkins, who spends a considerable part of each winter in Southern waters. His account of the capture of a devil fish with one of these weapons appeared a short time ago in *FOREST AND STREAM*. With the same weapon he has taken numbers of tarpon, as well as some very large sharks.

The harpoon head requires little explanation, for the drawing tells the whole story. Into the socket the staff fits, but it is not attached to it. The line is looped about the slender part of the shaft of the head and the swell of the socket keeps it from slipping off. The ears are, as can be seen, movable. When the harpoon is thrown they lie close to the shaft. After it has entered the fish, and as the pull comes on it, the ears are thrown out and it is impossible for the head to draw out. The cutting edge is very keen and should be kept so, and the weapon kept free from rust. One of those shown us by Mr. Tompkins was nickel-plated.

OFF FOR FLORIDA.—On Saturday last a very jolly fishing party from Syracuse, N. Y., left by steamer Saratoga for Havana and from there to Key West and Florida. They are all sportsmen and trout fishers who find that the Adirondack winter is too long and does not promise them any sport before the middle of May. The party consisted of the Hon. James Geddes, R. W. Jones, Dr. O. C. Potter, F. B. Klock, Burnet Forbes, Jacob Krouss, John Moore and John Blanchard. We personally know most of them and truly believe that no jollier party of anglers ever cut bait. They are mostly fly-fishers, and will try their lures on the salt water inhabitants before they tempt the alligator with a brown hackle. We hope to hear from them.

TO CARRY A LANDING NET.

Editor Forest and Stream:

Having lost two or three nets when wading, the necessity of a fastening which is secure and at the same time from which the net may be easily disengaged, resulted in the method described as follows:

To the pin of a large "shield pin," such as is used for horse blankets, solder a pin of about half the length of, and bent so that it will be about $\frac{1}{2}$ in. from and parallel with, the first. Put this near the collar in the back of any coat worn when fishing, and it will stand out from it, being so held by the second pin.

To the handle of the net fasten, either by screws, rivets or lashing with fine fishing line, a strip of German silver or spring brass $\frac{1}{4}$ inch wide and of a suitable thickness, allowing about $\frac{1}{4}$ inches to project beyond the end of the net handle; bend this piece of metal into a hook, beginning about $\frac{1}{2}$ of an inch from the end of the handle; bend it over on the side of the handle opposite from that where it is fastened. Take hold of the net anywhere and its hook may be caught on the loop made by the pin in the back of the coat. By hooking it with an upward motion and by then giving the net a toss back it will there remain until it be lifted up and unhooked by pushing it down. This may appear a very complicated operation at first, but if once tried it will prove the contrary, and there will be no nets lost in the future. Another advantage of the arrangement is that by the hook the net may be hung on the reel strap, in the opening of a pocket, or a buttonhole of the coat, without being obliged to hold the net in any particular place to so fasten it, which is sometimes quite a convenience when unhooking a fish, after which it may be hung again on its loop behind. C. G. LEVISON.

BROOKLYN, Feb. 1.

[The model of this has been left at our office by Mr. Levison, where it can be seen for the next month.]

A CURIOUS SALMON CAPTURE.—Albany, N. Y.—*Editor Forest and Stream:* Last summer, while on a trip on the Upsalquitch River, which is a branch of the Restigouche, I had with me only a trout rod and some trout flies, and becoming very tired of salt pork and beans, I determined to try for one of the many salmon which sported themselves every evening in the large pool (Fork's Pool) in front of my camp, even at the risk of my last tip. I entered the canoe at just about sundown, and paddled to a place where the water was rough, and cast my fly just over the spot where I had seen about an eight-pound salmon rise. The very minute the fly touched the water the salmon rose and took it, and such jumps as he made could only be equaled by a circus acrobat, but when he got through jumping I commenced to reel in, and the fish came in just like a log of wood, which is not the way that salmon usually come. When I had him in close to land, I saw that he was coming in tail foremost and acted as if he were almost dead. I then laid the rod down on the shore and took the line in my fingers and pulled it in very slowly. Now, as I had no gaff, I was in a rather bad position, and I determined to try and catch him by the tail and yank him on shore. I tried this once, and just as I got my fingers on his tail he gave a sloop with it and covered me with water, and ran out about ten feet and then stopped. I repeated this operation four times, and with the same result each time, till at last the fish "belled up," and then I knew he was mine; so the next time I took the line in my teeth, my right hand took him by the tail, and with my left on his side I succeeded in scooping him ashore, where I immediately jumped on him with both knees, and killed him with a stone. As soon as he was entirely dead I got off and examined him, and found that in his first jumps he had tied two half hitches around and made one around the small part of the tail, and the reason he gave in so quick was that his gills and mouth were completely tied up by the leader. To conclude, I got drenched, but we had fresh salmon that night for supper. This may seem rather crooked to those who have caught salmon, but there is a man named Jim Harris, who lives a mile from the junction of the Restigouche and Upsalquitch rivers, who will prove it.—PETE.

TIP-UP FOR PICKEREL.—*Editor Forest and Stream:* In your last issue "Lumber Jim" tells of using the jumping jacks of the toy shops to signal when a fish takes hold while fishing through the ice. All the toys of this kind that I have seen appear too frail for this use, and a fish of three pounds would, in my opinion, smash one every time. No doubt these "jacks" could be made strong enough for this purpose if one made them himself, but it would be something of a task to make a lot of them, for one man often cuts as many as fifty holes, if the ice is not too thick, and puts a line in each hole. Years ago I did some of this kind of fishing, and then thought it sport, and this is the way we boys used to improvise "tip ups." We laid a round stick across the hole, flat on the ice, and then cut a stick with a crotch in it, one limb of the crotch about six or eight inches long and the other a foot in length. To this longer one the line was attached and the crotch was put over the round stick, the long butt laying out on the ice with a dark rag tied to it. When a pickerel took hold the flag went up, the crotched twig standing upright. Several kinds of tip-ups may now be bought in the tackle stores, more or less ingenious and effective. I should like to see "Lumber Jim's" face when a big fish smashed his toy jumping-jack, and hear him whisper softly to the west wind his blessings on the man who put a frail tow-string inside it, or hung the legs on a frail sliver of pine.—POKE-O-MOONSHINE. [We have several communications on this subject which are unavoidably crowded out this week.]

MENHADEN FISHERIES BILL.—Washington, Jan. 25.—The Senate Committee on Fisheries this morning agreed to report favorably Senator Sewell's bill for the protection of fisheries on the Atlantic coast. The bill in its present form prohibits fishing for menhaden and other oil and fertilizer and producing fish within three miles of the coast, under penalty of forfeiture of the fishing outfits. It does not apply to the use of nets having meshes of nine inches or more.

STRIPED BASS.—A large striped bass (*Morone lineatus*) was caught off Fire Island last Monday. It weighed fifty-five pounds and was displayed at Mr. Blackford's in Fulton Market. This is the largest fish of this kind we have knowledge of this season.

PROVIDENCE, R. I.—With two friends I went to Kingston one day last October and found perch, pickerel, bass and trout fishing there. We stopped at the Knowles House.—BASIL.

DESTRUCTION OF FISH IN LAKE ERIE.—Erie, Pa., Jan. 26. —*Editor Forest and Stream:* The fishermen here ran their steam fishing tugs up to Dec. 20, with large catches. The bay is frozen to a depth of about ten inches, and fishing through the ice for perch is in order, and good catches of large fish are made daily. The State hatching house is finished here and I believe is in operation; what for I cannot tell, surely not to stock these waters. All laws as far as the lake is concerned were repealed last summer and pound-nets are all along the shore wherever a stake can be driven, scooping in any and everything. Men who have boats to hire catch bait with seines from forty to one hundred feet in length and scoop up all the young whitefish fry; fyke nets have captured or frightened nearly all the bass from these waters. Instead of taking sixteen or twenty black bass on an afternoon's fishing, as my fishing chum and I used to, we tried eight or nine afternoons during the past season and only got one between us, and that not over three pounds. It is a shame that a few hogs, for the sake of dollars, should ruin the sport of thousands. We cannot even buy them at a reasonable price, for they freeze and ship them, or hold for higher prices. The amount of fish taken at this port the past season was immense, each boat bringing in from one to three tons daily. The men who own the boats will not give correct figures and the truth will not be known; but from ten to thirteen steamers and about thirty sailing craft are employed every season with constantly diminishing size of mesh in their nets are telling the tale. It is only a matter of time, short time too, when hawks and eagles will have to emigrate or starve.—HEADLIGHT.

WILLIMANTIC, Conn., Jan. 28.—P. W. Turner, of Turnerville, owns the lands surrounding North Pond, and has always claimed that he had a right to do as he liked with the pond, under a law which makes private any pond that is surrounded by land that is owned by one person. But in 1875 the people of Hebron had a law passed exempting Mr. Turner's pond from this private pond statute and placing it under State control. Mr. Turner has long wanted to test the constitutionality of the law, and a few days ago invited Frank Fowler, Will Alpaugh, Edgar Burnham, John Lincoln and Henry Edgerton, of Willimantic, to visit him and fish. They caught a fine string of pickerel, perch and trout and felt under great obligations to Mr. Turner for the day's sport. While they were enjoying it many people from Hebron watched them. The five young men were exhibiting their catch in Willimantic yesterday when Sheriff Filmore, of Hebron, arrived with warrants for their arrest for violating the fish laws, North Pond being forbidden ground from Nov. 15 to April 15. The Sheriff awaited the prisoners at the depot, but they thought it was a joke and did not appear. He then went to their places of business, took them in custody, procured a wagon and the party drove in a drizzling rain twelve miles to Hebron. Lincoln and Burnham were fined \$2 and costs and the others were discharged because the Hebron people had not seen them make any catches.

BASS FLIES.—*Editor Forest and Stream:* I have been studying up the question of bass flies this winter and devising new forms. I send you specimens. I want to go for the big ones. You know that most of the black bass taken with the fly are what are called "shore bass," i. e., those which run from a pound to a pound and a half, with an occasional larger one. My idea is this: Take flies like the sample inclosed, any color you like, place lead enough on the line to keep them well under water, let out twenty or more feet of line and troll for the bass instead of casting for them. There will be just as much sport if you use the same rod and tackle that you would in casting the fly. I was out fishing one day last season and let the fly sink in about eight to ten feet of water on the end of a reef and then put out a live bait on another rod. The first thing I knew a three and a half pound bass had taken the fly that was hanging still in the water and near the bottom. I then made up my mind that the way to use the fly for bass was to let it go way down below the surface. I did not have time to test my theory that season, but will do it next year, and now write it out in order to let others try it. If they have any success with this method I will be pleased to hear from them.—N. W. A. [The flies were brown and ginger hackles tied on a No. 4 Sproat hook with a short hook at its back placed half way up the shank.]

THE ADIRONDACK HATCHERY.

Editor Forest and Stream:

The sheet of water in the Adirondacks on which is located the new State fish hatchery, heretofore known as Little Clear Pond, has been rechristened by the Fish Commission and will henceforth be called Lake Brandon. It is a beautiful body of water, covering some 250 acres, and its elevation to the dignity of a lake is but justice. The lake is named Brandon after the township in which it is located. State Fish Commissioner Sherman says that 80,000 infant salmon trout, all in good condition, have been taken from the hatchery and placed in the lake. Many of the small fish at the hatchery were killed at the time of the recent break in the dam; some by the stoppage of the flow of water for 24 hours and others by the sand which afterward washed in. A number of landlocked salmon from Cold Spring Harbor will be deposited in Lake Brandon this spring. The work of repairing the break in the dam will be commenced as soon as the weather will permit. It has been suggested that it would be wise to locate the dam 200 feet further up stream, as it could then be made two feet lower, thus lessening the danger of another washout. It is proposed during the coming summer to construct twelve stock ponds near the hatchery. The men employed at the hatchery are now engaged in getting out the timbers to be used in building these ponds, and work on them will begin as soon as the frost is out of the ground.

The law-abiding citizens of Franklin county realizing the benefits they are likely to receive from the new hatchery, and deploring the losses it has sustained through the maliciousness of certain poachers, have taken up the cudgel in its behalf. Over 100 of the most prominent residents of Saranac and Bloomingdale villages have signed a paper pledging themselves to do all in their power to prevent future depredations and outrages by the poachers, to use every effort to bring offenders to justice, and encourage in every way the work of the hatchery.

The hotels in the Saranac region, like all others in the Adirondacks, are dependent on sportsmen for the greater part of their patronage, and there are several quite large houses there. The receipts at Paul Smith's amount to \$75,000 annually, and at the Prospect house to \$50,000. The Lower

Lake House has two hundred guests the year round, and the hotels at Chateaugay Lake also do a heavy business. In years gone by the game laws have not been well observed in that part of the wilderness, but last season a marked change for the better was noticed. The hotel proprietors are beginning to realize that the chief attraction for sportsmen is the fish and game to be found in that region, and unless proper protective measures are taken there will ere long be little inducement for the tourist to patronize them. Other business men are awakening to the fact that it is time to make a move for game preservation, and School Commissioner Wardner, of Rainbow Lake, a man who is well-known and popular in Franklin county, is taking the preliminary steps for the organization of a fish and game protective association. He is meeting with encouragement everywhere, and the indications are that a strong society will be formed within a few weeks.

UTICA, N. Y., Jan. 27.

FISHCULTURE AND THE FISHERIES.—A large octavo of 680 pages with the modest title of "Handbuch der Fischzucht und Fischerei" has been issued from the press of Paul Parey, Berlin. For those who read German, it is a most valuable work. Ichthyology, embryology and anatomy of fishes are well described by Dr. B. Benecke in 200 pages; fishculture in its various branches, apparatus, enemies of fish, and protection, is ably treated by the celebrated fishcultivist, Herr M. von dem Borne. The sea fisheries, boats, implements, etc., are described by Herr G. Dallmer. The work is profusely illustrated with well drawn figures in all the departments, and is a highly creditable volume. The illustrations alone are instructive.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 22.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

Feb. 8, 9 and 10.—Fourth annual exhibition of the New York Fanciers' Club at Madison Square Garden, New York. Chas. Harker, Secretary, 62 Cortlandt street.

March 16, 17, 18 and 19.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club, S. K. Hemingway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club, Edward A. Moseley, Secretary, Boston, Mass.

April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3185.

NOTES FROM ENGLAND.

I PROMISED in my last to say something about special clubs; that is, clubs each of them devoted to the interests of one particular breed. This country swarms with them. The two oldest are the Bulldog and the Dandie Dinmont Terrier clubs, and of the latter I do not know whether there are now two or three in existence. The Fox-Terrier Club and the St. Bernard Club are much the strongest, and there are probably twenty distinct fox-terrier clubs, independent of each other and of the original club, but accepting the same standard for the dog and conducted much on the same lines.

The Collie Club has drawn up the most extraordinary description of that dog that was ever published, and it yields conclusive proof that it was the work of amateurs, who know nothing practically of the sheep dog and his work.

The Mastiff Club is largely worked by men of no knowledge of the breed except what they catch up in the reverberations of dog-show chatter. Of course the club is not entirely composed of such; there is enough of the salt of intelligence to keep it from rotting, but it has exhibited putrefaction disagreeable to honest nostrils ere now, and it sadly wants vitalizing.

The Great Dane Club came with a boom, the new name took, and despised German boarhounds are worshipped under the new title, to which, however, their claim cannot be proved. But it is not a bad thing for those in the swim when quotations rise from £10 to £100.

Of other terriers than those mentioned, the Bedlington, the Airedale, the black and tan, the Irish, has each a club to look after its interests, and if the so-called Welsh terrier has not an infant club to take care of it, then after all the Welsh gutters in its praise and English protests that the dog is not Welsh, it has been "wrecked in Babycombe Bay," while, so far, at least, its congeners "ride safe at Port Natal." I cannot say they ever venture to leave their anchorage or do much actual work. Most of our clubs are more like boys' "playing at ships" on a pond for their own amusement than undertaking anything useful. The two other foreign breeds, each having a club, are the dachshund and the French basset hound, the latter of which is limited, as these quaint-looking cripples do not take with English sportsmen, who seem to have lost their old love for slow, musical hounds, preferring the dash and endurance of our modern foxhound, who with increased speed has lost much in tongue but nothing in nose. We have also a Pug Club and a Toy Spaniel Club, principally under the guidance of ladies, assisted by, as I have heard them irreverently called, "old women of the other sex."

Lastly, we have the Irish Wolfhound Club, or what I call the Resurrectionists, the men who propose to "make from sand a solid rope, French bread of rubble." The Scotch deerhound and the German boarhound—or Great Dane, so-called—are being crossed to resuscitate the Irish wolfhound. I at one time inclined to the belief that there was sufficient blood of the old Irish wolfhound left to reconstitute the race, but a closer investigation of the evidence I have had to make lately has rudely shaken, if it has not yet entirely destroyed, a faith I nursed not wisely but too well.

It would be impossible in the limits of a letter to do anything like justice to the value of special clubs, as judged by their results.

The very great increase in the numbers of the varieties of the dogs so cared for, and the decidedly higher quality of the animals exhibited, taken as a whole, is claimed as due to the influence of the clubs, by the partisans of these societies. No doubt there is much truth in this, as regards some breeds at all events, but other influences apart from, and even antagonistic to, such clubs have also been at work, and not without good effect. Then there are those who point out that in almost every breed there has been degeneration in practical

or working qualities due to clubs fostering unimportant fancy points and exalting them above essential qualities.

Another very grave charge brought against these clubs is that they, however honestly founded under the impulse of admiration for the breed and desire for its improvement, many of them degenerate into cliques and are worked for the benefit of the members and not to the advantage of the breed of dogs.

This last evil is effected by the influence of the prizes the clubs are enabled to offer to show committees, and these prizes are, in the large majority of cases, given with the understanding that the donors shall name or select the judges. As this almost invariably means the appointment of one of themselves, the unfairness to outsiders is evident, and this leads me to refer to the much lauded and greatly over-estimated special judge.

It is evident that these clubs have a strong interest in getting men holding the same views as the club supports to judge their dogs, and such men are certainly most likely to abound in their own circle than out of it. But they go too far, and especially through the *Stock-Keeper*, which aspires to be the mouthpiece of the special clubs, claim that only men who have confined themselves to one or two breeds are fit to judge these breeds. This is a monstrous claim, the absurdity of which defeats itself. In our gardens one sees numberless species and varieties of flowers, and some men are famed for their roses, for their chrysanthemums; but should we call them florists worthy of the name if they knew so little of other flowers as not to be able to separate the good, bad and indifferent? The man who has a good map of the carnivora in his mind will the more readily class the varieties of the domestic dog, and if he is a breeder of these animals and well-informed as to the uses, whether of sport or work, for which they are bred, he will the more readily distinguish between the relative fitness of the individuals forming each class. But the special judges of the day are for the most part not the best informed, or men of practical experience in the working of dogs, but those who by the accident of their wealth or from having been fortunate as exhibitors, and having learned their lesson in the narrow school of the clubs, are promoted through the influence of their fellow club men to the position. Here is a sample of how a specialist judge and public writer deals with fox-terriers; he says, "Seven or eight years ago such terms as 'terrier character,' 'expression' and 'liberty' were unknown." And I think when I have quoted this specialist's definitions of these terms, all true lovers of the terrier will agree with me that it is a pity we were not left in the darkness and ignorance of seven or eight years ago. Says this oracle: "When one looks into some of the faces of the fox-terriers on a show bench, they see the same look as they do in a collie, and the eyes, instead of looking keen and fiery, are mild and placid. The size of the eye has much to do with this; a large eye is as bad as a small one, the former being collie-like and the latter bull-terrier-like in expression. This is the definition of the term 'expression.' Well, there are definitions more difficult to understand than the most formidable propositions, and I take that to be one of them.

Our specialist judge then goes on to say: "But character it is almost impossible to define; a dog's stern has much to do with it, and one of the changes we hail with the utmost satisfaction is the perpendicular carriage of the stern, that is now acknowledged to be the correct thing." Could any one but a specialist judge write such balderdash? Our cows carry their tails perpendicularly, but it was left to the modern product of special clubs to discover the close analogy in the caudal appendages of the cow and the fox-terrier.

Now come we to the quality of "liberty," and your readers must be prepared for enlightenment, for our sage tells us it "is an easier thing to explain;" and this is how he does it: "Liberty in its true sense is only found in a few specimens. * * * Long-backed dogs have liberty of a sort, but the liberty that conduces to speed at the expense of stamina is wrong. * * * Liberty simply means an aptitude to gallop; but it must not be thought that this means that a dog must be long in the back and loins to possess it; far from it. * * * A narrow-chested and long-legged dog cannot possess liberty, from the very fact that his conformation makes it impossible for him to take a long, raking stride with his forelegs, simply because their fulcrum, the shoulder blades, are blocked and restricted in their action by the shape of the chest." But enough. I am of the benighted ignoramus of the dark ages of more than seven or eight years ago, before these terms were "known and understood," at least in a specialist judge's sense of them, obstinately hold that a greyhound can gallop and stay better than a bulldog, and that the former shows much greater liberty of action than the latter; and in the old benighted times the greyhound was the long-legged and narrow-chested dog, and the bulldog the comparatively short-legged and wide-chested one; but of course we must all bow to the modern specialist, whether he understands the terms he uses or not.

In my opinion the evil inherent in the specialist judge is the narrow views that a faucier of one variety insensibly cultivates, and that almost certainty of exaggerating some one or more points desirable enough where normally developed, and not at the expense of the general character. In mere fancy articles like toy terriers this is of less consequence than when applied to dogs for use; but even in toys it is dangerous, and among other evils leads to the development of those hideous skulls which Professor J. Woodroffe Hill properly ridicules as hydrocephalous.

There is also the danger that members of a special club elected to judge will be, almost unconsciously, perhaps, influenced by *esprit de corps*, and thus do injustice to those who are not of the privileged judge electors, which common fairness seems to indicate all exhibitors should have an equal voice in.

I told you last month how serious the hydrophobia scare is with us. We are muzzled up to the eyes—that is, our London dogs are—but had the muzzles been applied to some editors of the daily press and a multitude of foolish letter writers therein, the stamping out of rabies could have been carried out more effectually.

I thought we had succeeded in putting into type the most utter nonsense on this subject that sane men could compile, but a friend has sent me a big bundle of cuttings from the New York Herald, and after reading them I think our London press may throw up the sponge. How such a busy people as you appear to be can find time to read such trash is a marvel to me; but I suppose it is read. I looked in vain through the waste of words for a little of evidence that the Newark dog was rabid, but could find none. It is otherwise with us; we have no less than twenty-six deaths from hydrophobia following the bites of mad dogs in London alone recorded during 1885.

I was amused to read the account of the mad stone and the wonderful cures it has effected. I had the story many years ago from an English friend who lived in, I think, Indiana twenty-five years ago, and who thoroughly believed in its virtue, and yet I assure you he is in other respects sane, although that seems hard to believe. I have great hopes the scientists will come to our aid and that we will soon be able to inoculate dogs with as great certainty of preventing rabies as we now prevent smallpox, by vaccination.

In this country we are in the hands of a parcel of mawkish sentimentalists, who are able, through the folly of our legislators, to put a veto on the physical research which would help us.

These people are hard to reach and impossible to touch, for they are ignorant of their own ignorance, and certainly mistake emotional disturbance for intellectual conviction.

At the Dogs Home, London, there has within the last few months been about 10,000 dogs destroyed—all are destroyed after three days that are not claimed or suitable permanent

homes found for. In one district of London 500 summonses were issued against people for not having licenses for their dogs that had been "run in" by the police. Most of these people were, I am informed, of the well-to-do classes; people who apparently thought they were too respectable to be suspected and might therefore cheat the Revenue with impunity, and they certainly would but for the action of the police in seizing all dogs unmuzzled or unled since the hydrophobia scare set in.

Mr. Frank Adcock made an offer to show his bull bitch Acme against Mr. Pybus-Sellon's Queen Mab for £100. This has begotten a discussion not quite free from acerbity. It is not worth troubling you with details unless the match eventually comes off, of which there seems at present little probability, but there is a curious and instructive little episode dropped into the subject in the most natural manner, and an indiscreet editor in his zeal for special clubs and specialist judges, has cut the encysted tumor, and like that slice of St. Medard's knife in the Devil's fardel on the Red Sea shore, he has let out more than he will catch "one while." Mr. Pybus-Sellon is the honorary secretary of the Bulldog Club, and acted as judge of the bulldogs at the Crystal Palace show, July, 1885. In the open bitch class there were nine competitors, and Mr. Pybus-Sellon said of that class in a report he wrote for the *Kennel Gazette*—the organ of the Kennel Club—"This (the bitch) class was the best of any. I gave Acme first honors as she has wonderful ribs, short back, is well out at shoulders, eyes wide apart, and in ear, muzzle, layback, under jaw and tail excellent." Mr. Pybus-Sellon awarded in that class of nine three prizes, two very highly commended and two commended cards, and wrote of the class as I have quoted; but in December last he describes the class in which Mr. Percival placed the same bitch Acme as "a moderate one." This is certainly not ingenuous, and to make it worse the *Stock-keeper* founds an argument, or the semblance of one, upon it, to the effect that judges should not write reports over their own names, or give reasons for their decisions, because, like Mr. Pybus-Sellon, they may be afterward confronted with their opinions much to their confusion. Either Mr. Pybus-Sellon was right in lauding Acme so very highly when he judged her and wrong when he disparaged her, or vice versa, but as he has the right to choose which horn of the dilemma he will sit on, he has also had the opportunity of explaining the apparent inconsistency, but he has not done so, and I think must be held an incompetent judge until he does explain the contradiction in a satisfactory manner.

I have always thought that the reports of the judges over their own names was one of the best things the Kennel Club has yet done, and this bulldog incident confirms me in my previous opinion. Doggy things are dull as ditch water; we are all laying up force for the coming Crystal Palace show.

CORSINCON.

THE PITTSBURGH DOG SHOW.

WE have received the premium list of the twelfth annual dog show of the Western Pennsylvania Poultry Society, to be held at Pittsburgh, Pa., March 16, 17, 18 and 19. Major J. M. Taylor, of Lexington, Ky., and Mr. B. F. Wilson, of Pittsburgh, Pa., will judge English, Irish and black and tan setters; Major Taylor will judge pointers, fox-terriers, foxhounds, greyhounds, deerhounds, spaniels and beagles; Mr. James Mortimer, of Babylon, L. I., will judge all other classes. Following is the classification and premium list: Mastiffs, champion dogs, gold medal; bitches the same; open dogs, \$10, \$5 and medal, bitches the same; puppies, \$5 and medal. St. Bernards, champion, rough-coated dogs, gold medal, bitches the same; open dogs, \$10, \$5 and medal, bitches the same, smooth-coated the same, puppies \$10 and medal. Newfoundland dogs, \$10 and medal, bitches the same, puppies \$5. Greyhounds, champion, \$10; open dogs, \$10 and medal, bitches the same. Deerhounds, dogs or bitches, \$10 and medal. Pointers, champion dogs, large size, gold medal, bitches the same; open dogs, \$20, \$10 and medal, bitches the same; small size the same; puppies under 18 months, dogs, \$10 and medal, bitches the same. English setters the same. Black and tan setters the same. Irish setters the same. Irish water spaniels, \$10 and medal. Cocker spaniels, other than black, under 25lbs., \$15, \$10 and \$5, over 25lbs. the same; black over 25lbs., the same, under 25lbs. the same; puppies, under 18mos., \$5 and medal. Foxhounds, champion, gold medal; open, \$10 and \$5. Beagles, champion dogs, gold medal; bitches the same; open dogs, \$10, \$5 and medal; bitches the same; puppies, dogs \$5 and medal; bitches the same. Dachshunde, champion, gold medal; open dogs, \$10, bitches the same, puppies \$5 and medal. Fox-terriers, champion dogs, gold medal; bitches the same; open dogs, \$10, \$5 and medal, bitches the same; puppies, under 18mos., dogs, medal, bitches the same. Collies, champion dogs, gold medal, bitches the same; open dogs, \$10, \$5 and medal, bitches the same; puppies under 18mos., dogs, medal, bitches the same. Bulldogs, champion, gold medal; open, \$10, \$5 and medal. Bull-terriers, champion over 25lbs., gold medal; open, \$10, \$5 and medal, under 25lbs. the same; puppies under 18mos., medal. Rough-haired terriers, \$10 and medal. Black and tan terriers, dogs, the same, bitches the same. Dandie Dinmont terriers the same. Irish terriers the same. Skye terriers, champion, silver medal; open dogs, \$10, \$5 and medal, bitches the same. Pugs, champion dogs, gold medal, bitches the same; open dogs, \$10, \$5 and medal, bitches the same, puppies medal. Yorkshire terriers, blue and tan, over 5lbs., champion, gold medal; open, \$10, \$5 and medal, under 5lbs. the same. Toy terriers, \$10 and medal. King Charles spaniels, \$10 and medal. Blenheim spaniels the same. Italian greyhounds the same. Miscellaneous, \$15, \$10 and \$5. Entries close March 2. A large number of special prizes will also be given. Mr. C. H. Whitman, of Chicago, will superintend the show. The Secretary's address is Mr. C. B. Elben, Box 303, Pittsburgh, Pa.

THE NEW HAVEN DOG SHOW.

FOLLOWING is the premium list of the third annual dog show of the New Haven Kennel Club, to be held at New Haven, Conn., March 30 and 31 and April 1 and 2: Mastiffs, champion dogs, \$10, bitches the same; open dogs, \$10 and \$5, bitches the same, puppies \$8 and \$4. St. Bernards, rough-coated, the same, smooth-coated the same. Newfoundlands \$10 and \$5. Greyhounds, champion, \$10; open, \$10 and \$5. Deerhounds the same. Pointers, champion dogs, \$10, bitches the same; open, large dogs, \$10 and \$5, bitches the same, small the same, puppies \$8 and \$4. English setters, champion dogs, \$10, bitches the same; open same as pointers. Black and tan setters the same. Irish setters the same. Irish water spaniels \$10 and \$5. Clumber spaniels, dogs the same, bitches the same. Field spaniels, champion, \$10; open, \$10 and \$5. Cocker spaniels, champion, any color, \$10; open dogs, liver or black, \$10 and \$5, bitches the same, any other color the same, puppies \$8 and \$4. Foxhounds \$10 and \$5. Beagles, champion, \$10; open dogs over 12in., \$10 and \$5, bitches the same, under 12in. the same, puppies \$8 and \$4. Dachshunde \$8 and \$4. Basset hounds \$10 and \$5. Fox-terriers, champion, dogs \$10, bitches the same; open dogs, \$10 and \$5, bitches the same, puppies \$8 and \$4. Collies, champion, dogs \$10, bitches the same, open dogs, \$10 and \$5, bitches the same, puppies \$8 and \$4. Bulldogs, champion, dogs \$10, bitches the same; open dogs, \$10 and \$5, bitches the same. Bull-terriers same as bulldogs. Black and tan terriers \$8 and \$4. Rough-haired terriers the same. Dandie Dinmont terriers the same. Irish terriers the same. Bedlington terriers the same. Skye terriers the same. Pugs, champion dogs \$10, bitches the same; open dogs, \$10 and \$5, bitches the same, puppies \$8 and \$4. Yorkshire terriers over 5lbs. \$8 and \$4, under 5lbs. the same. Toy terriers the same. King Charles spaniels the same. Blenheim

spaniels the same. Italian greyhounds the same. Mexican hairless the same. Poodles the same. Miscellaneous, over 25lbs \$10 and \$5, under 25lbs. the same. Kennel prizes will be offered for mastiffs, St. Bernards, greyhounds, pointers, English setters, Irish setters, spaniels, beagles, fox-terriers, collies and pugs.

The list of judges as published in *FOREST AND STREAM* of Jan. 21 is correct, except that pugs and Mexican hairless are added to the classes assigned to Mr. Mason. Mr. G. Edward Osborn is superintendent. The secretary's address is Mr. S. R. Hemingway, Box 1235, New Haven, Conn. Entries close March 13.

THAT IRISH SETTER SPECIAL.—Progress, N. C., Jan. 21, 1886.—*Editor Forest and Stream*: In your issue of the 14th, under the head of "Irish Setter Special" over the signature of L. W. White, I find what he terms an answer to my question in yours of 7th inst., but what seems to me to be anything but an answer. It seems to me rather a queer combination to be called an answer to a few simple questions. If it is impartial on my part to ask him why the prize was not awarded as per agreement when the dogs started, and not changed as it surely was after one dog had won a heat, I must confess I fail to see it, as I claim I have the right to look after the interests of any dog I have in my charge when its owner is not present. It is true I have never been entrusted with a special, and cannot say that I wish to be, as I never saw anything made at it, but if I should be so very unfortunate as to have one put in my hands I should get it into the hands of the club that was to make the award as soon as possible, and then if they failed to give it to the dog it belonged to it would be their fault, not mine. I cannot see why Mr. White should make so much ado about my not contributing to an Irish special, as I never bred an Irish dog, and this is the first one I ever handled, as they had been called such hard names that I supposed it about impossible to break one on account of their wildness, but to the contrary this one has a little too much caution, which was all the fault any one could find with him in his heats, besides I did not know as it was expected of a common dog breaker, to give very liberally to specials of any kind. Now as to the prize, Mr. White told me there was nothing extra to compete for it and that it was for dogs in the open class only, and to be decided by the judges as to which red dog had done the best work. This I objected to, but he said it was the only way it could be done, so I had to abide by it, and started my dog under those conditions. Blarney was the first red dog run and won his heat. Elcho, Jr., and Rose of Killarney did not start until next day, and were both beaten. This gave me good grounds to believe that I had the special already won, according to the way Mr. White said it was to be decided, the Derby not to compete for it. But to my surprise that evening at the hotel I found Messrs. John and Luke White, Mr. Walker, owner of Glencaire, and Mr. Tallman, handler of Elcho, Jr., and Glencaire, and they had concluded to run the red dogs together for the special. I don't know whether Mr. White had asked advice on it then or not, but think he had not. I told them it was a little too thin, as I considered it Blarney's already, and should not run for what already belonged to him. This was where and when I refused to run separate heats, but did offer to give any red dog there a race any time in the month of February, in this State, but no one saw fit to make it. The next day I ran Blarney in his second heat and was beaten, and took my dogs down to where I am located for the winter and did not hear any more of the special until I went up to run my pointer. I then asked two of the judges what they had done about it and they said, not anything, as Mr. White had not put it in their hands and they would not act on it, but said if he would do so they would tell very quick which dog it belonged to. My pointer was declared beaten and I came back and heard no more of the prize until I wrote Mr. White about it, and he informed me in a letter dated Dec. 1, 1885, that he had laid the matter before the judges, and at first they told him to divide it between the Rose of Killarney and Glencaire. He said he drew their attention to Blarney and they said he was no good and to throw him out. Most glorious judgment. How it would have sounded to any one that was there and saw Blarney's heat and that of Rose of Killarney. The better way for Mr. White would have been to have taken every man interested in the red dog before the judges and asked them to assist him in giving the prize so long as he did not see fit to put it in their hands, and not have waited as he did until the trials were all over and everybody but a few members had gone home. As Mr. White very well knows not one of the three judges he names would take a red dog as a gift and did not care what became of it as long as they were not responsible. Mr. Donner might give him advice as a friend but not as judge, as he was not judge of setters and had not watched their work, neither had any of the judges any right to decide it after the trials were all over, as they had refused to do so in the proper time. If I have put Mr. White in an awkward position I can't help it. Will all those dogs dividing second and third this last year be eligible in specials at bench shows given to dogs that have been placed in trials?—T. M. ALDRICH.

HYDROPHOBIA.—*Editor Forest and Stream*: Your editorial entitled "Hydrophobia versus Delirium Tremens" reminded me of a circumstance which occurred a few days before. For some weeks I had been the victim of a serious abscess which had deprived me of the use of one of my hands, and somehow—without the slightest foundation in fact—it was rumored about that the trouble was caused by an injury received from one of my dogs. On the occasion referred to I was in conversation with a physician of my acquaintance, when a person noted for his proclivity for something stronger than water came into the store where we were sitting, and evidently at the time a little under the influence of his inhibitions, addressed me somewhat rudely as follows: "I understand you have a bad hand. What is the matter—hydrophobia?" After my reply the physician said to him: "No, it is not hydrophobia, but there are a number of cases of that in this town. Hydrophobia is defined as a disease in which there is an aversion to water, and there are quite a number of persons in this place who are so afflicted." My questioner had sense enough left to feel the thrust, and I scarcely felt sorry for him, as I thought him rather impertinent in his manner. Perhaps, after all, there are some cases of hydrophobia at Newark.—D. G. J.

THE BOSTON DOG SHOW.—Boston, Feb. 1.—*Editor Forest and Stream*: All indications are very favorable to a great success at our coming show of April 6 to 9 next. We have secured the immense hall of the Mechanics' Charitable Association, which will enable us to have our benches, judging rings, etc.—everything, in fact—on a single well-lighted floor. We have contracted with Spratts Patent American Limited to feed the dogs, providing everything, while Mr. John Read, who was our superintendent last year, will act in the same capacity this year. Our premium list, which will be very full, will be ready for distribution about the 15th inst.—Edw. A. MOSELEY, Secretary.

RED IRISH SETTERS IN THE FIELD TRIALS.—Philadelphia, Pa., Jan. 28.—*Editor Forest and Stream*: I should like to make a suggestion to those interested in red Irish setters. At present it seems like wasting money to run them in competition with English setters at field trials. Would it not be well to have a stake open to reds only in connection with, say, the Eastern Field Trials Club? To do this it would be necessary to raise sufficient funds to defray the expense and provide necessary prizes. If this is done, I trust in a few years the reds will be able to hold their own in any company.—W. H. C.

THE HARTFORD DOG SHOW.—*Editor Forest and Stream*: Referring to your editorial headed "The Hartford Plan" we thank you kindly for the following: "In all matters connected with dog shows, the interests of exhibitors are of the first importance." * * * "It is eminently proper that they or some of them should be consulted on the appointment of the judges." The above is just what we have done and we are glad that you support us. We shall announce our list of judges before we issue our premium list, so that exhibitors can act understandingly. The beagles will be judged by the American English Beagle Club's standard, and by one of their members. We also claim April 13, 14, 15 and 16 for our show instead of April 14, 15 and 16. Following is the list of judges appointed for the Hartford dog show: English setters, Mr. J. O. Donner, New York; Irish setters, Mr. W. H. Pierce, Peekskill, N. Y.; Gordon setters, Mr. H. Clay Glover, New York; pointers, Mr. J. M. Tracy, Greenwich, Conn.; field and cocker spaniels, Mr. A. C. Wilmerding, New York; beagles, Mr. N. Elmore, Granby, Conn.; all other classes, Mr. James Mortimer, Babylon, L. I.—HARTFORD KENNEL CLUB (A. C. Collins, Secretary).

THE NEWARK DOG SHOW.—We are informed by the Secretary that entries for the Newark dog show are coming in finely, and that many requests for blanks are received daily. The show will be held under the rules of the A. K. C. as revised at the last meeting of the club. A letter has been received from Mr. Whitehouse, expressing regret that he will not be able to act as judge. There will be a meeting of the club tonight to appoint judges for the unassigned classes, a list of whom we hope to be able to give next week.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 50 cents) for the convenience of those who have occasion to use a large number of blanks. In ordering be careful to state what particular series of blanks is desired, i. e., whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be retained for future reference.

THE AMERICAN ENGLISH BEAGLE CLUB.—*Editor Forest and Stream*: The following officers have been duly elected for this year: President, Dr. E. C. Nichols; Secretary and Treasurer, W. H. Ashburner; Executive Committee, W. F. Streeter, A. Winsor, Herman F. Schellhass. The amendment to the by-laws having been adopted, the annual dues are now \$1.—W. H. ASHBURNER, Secretary.

INDIANAPOLIS DOG SHOW.—Indianapolis, Ind.—*Editor Forest and Stream*: As I am the owner of the English setter dog Change, winner of first at our late bench show, will you please rectify the mistake of your reporter in giving the name of Socroie as the owner of Change.—S. H. SOWELL.

PREMIUM LISTS.—We have frequent calls for premium lists and entry blanks of the different dog shows. They are often wanted at the last moment before the closing of the entries. Dog show managers should bear this in mind and send us a supply.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Dude. By Louis E. Haag, Indianapolis, Ind., for black, tan and white collie dog, whelped Dec. 7, 1885, by Frank H. (A. K. R. 2934) out of Nellie Price (A. K. R. 2819).

Cash. By Louis E. Haag, Indianapolis, Ind., for black, tan and white collie dog, whelped Dec. 7, 1885, by Frank H. (A. K. R. 2934) out of Nellie Price (A. K. R. 2819).

Leona. By Louis E. Haag, Indianapolis, Ind., for black, tan and white collie bitch, whelped Dec. 7, 1885, by Frank H. (A. K. R. 2934) out of Nellie Price (A. K. R. 2819).

Maud Nelson. By H. L. Hollis, Wellsville, N. Y., for fawn mastiff bitch, whelped Nov. 28, 1885, by McManon (DeBueh—Dinah II) out of Lady Nelson (champion Nelson—Gregg's Brenda).

Madona. By H. B. Soule, Taunton, Mass., for blue belton English setter bitch, whelped July 8, 1885, by Count Paris (Royal Blue—Modjeska) out of Lyn (A. K. R. 2430).

Duke. By Spencer Helms, Hudson, N. Y., for orange and white cocker spaniel dog, whelped Dec. 5, 1885, by Prince Albert (Chance—Fly) out of Golden Floss (Col Stubbs—Pet).

Murdock B. By C. A. T. Riepe, Providence, R. I., for black, white and tan English setter dog, whelped March 24, 1885, by Foreman out of Pet Berwyn.

Lady Vic. By Chas. W. Roedenburg, Hoboken, N. J., for red Irish setter bitch whelped May 10, 1885, by champion Elcho, Jr. (champion Elcho—champion Nor-eu) out of Ruby (champion Berkeley—Syren).

Nanon. By Chas. W. Roedenburg, Hoboken, N. J., for red Irish setter bitch whelped May 10, 1885, by champion Elcho, Jr. (champion Elcho—champion Noreen) out of Ruby (champion Berkeley—Syren).

Lulu. By J. G. Tod, Harrisburg, Tex., for red Irish setter bitch, whelped 5-pt. 10, 1885, by Glencoe (Elcho—Noreen) out of Flame (Vn—E).

Editor Forest and Stream: In your issue of Jan. 28, 1886, 143 West Fifty-fifth street, New York city, claims the name of St. George Kennel. Now, as I have used that name for my kennels for several years, having claimed it long since in your and other papers, and shown dogs and won prizes at the principal shows as belonging to it, I would suggest that the gentleman adopt some other name for his kennels.—E. W. JESTER, proprietor St. George Kennel, St. George's Del.

NAMES CHANGED.

Olive K. to Marion. Black, white and tan English setter bitch, whelped Aug. 6, 1881 (Rake—Bessie Lee), owned by California Kennels, Sacramento, Cal.

Blackie to Lady Abbot. Black spaniel bitch, whelped July 11, 1885 (champion Black Prince—Newton Abbot Lady), owned by A. C. Wilmerding, New York.

Chancellor to Newton Abbot. Chestnut spaniel dog, whelped July 11, 1885 (champion Black Prince—Newton Abbot Lady), owned by A. C. Wilmerding, New York.

BRED

Notes must be sent on the Prepared Blanks.

Marion—Harold. California Kennels' (Sacramento, Cal.) English setter bitch Marion (Rake—Bessie Lee) to their Harold (Gath—Gem).

Dido—Harold. California Kennels' (Sacramento, Cal.) Irish setter bitch Dido (champion Ben—Dido) to their English setter dog Harold (Gath—Gem).

Flora to Comedy. Eugene Taylor's (Richmond, Va.) English setter bitch Flora F. (Rebel Wind'em—Flecta) to W. H. Colquitt's Comedy (A. K. R. 2559), Jan. 17.

Lotie—Paul Gladstone. A. Netherland's (Memphis, Tenn.) English setter bitch Lotie (Count Rapier—Junio) to W. B. Gages's Paul Gladstone (Gladstone—Lavalette), Jan. 7.

Flora L.—Barry. R. L. Stevens's (Hoboken, N. J.) St. Bernard bitch Flora L. (A. K. K. 3145) to Jos. Echeiter's Barry (Barry—Juha), Jan. 15.

Flash R.—Mainspring. D. S. Gregory, Jr., 2d's (New York) pointer bitch Flash R. (A. K. R. 80) to J. T. Perkins's Mainspring (Mike—homp), Jan. 10.

Belle—Bang Bang. D. S. Gregory, Jr., 2d's (New York) pointer bitch Belle (A. K. K. 203) to Westminster Kennel Club's Bang Bang (A. K. R. 294), Jan. 10.

Leah—Huck. Dr. W. A. Strother's (Lynchburg, Va.) English setter bitch Leah (Gladstone—Frost) to E. S. Terry's Huck (Rebel Wind'em—Blossom), Jan. 4.

Frost—Huck. Dr. W. A. Strother's (Lynchburg, Va.) English setter bitch Frost (Leicester—Vivress) to R. S. Terry's Huck (Rebel Wind'em—Blossom), Jan. 1.

ENGLAND'S CHAMPION SHOT.—Graham the English shot sailed for home on Saturday last, having failed to make any definite arrangements for a meeting with the crack shots here. Just before his departure, speaking of his plans Mr. Graham said: "I have been champion wing shot of England" for the last four years. I will shoot three matches with Captain Bogardus or any one else, as follows:—Match No. 1.—To shoot at 100 pigeons each at 30 yards rise. Match No. 2.—To shoot at 100 pigeons each; 1 to stand at 24 yards and my opponent at 30 yards, 1 to use one gun against his two. Match No. 3.—As a special inducement to Captain Bogardus I will shoot him a match at 100 pigeons from the 25 yard mark. I to use one hand only against his two, if he in this match stakes \$500 to my \$250. The first two matches for \$500 a side. The Hurlingham rules, under which I offer to shoot all these, I find are the ones adopted by the leading American gun clubs, with whom it has been my privilege to shoot during my short stay here. I have had a pleasant time here, and am coming back in a month or two. I don't want the shooting public to think I am running away. I am only going home to shoot a big money match and will return in the next steamer."

MIDDLESEX GUN CLUB.—A meeting of the Middlesex Gun Club was held at the law offices of Suydam & Stillman, this city, on Saturday evening last, and final arrangements perfected whereby the organization became complete. Changes have been made in the Board of Directors, which now consists of the following named gentlemen: Messrs. E. H. Robinson; A. Worden, of Dunellen; F. R. Stevens, Chas. R. Thiers, Geo. P. Suydam, S. G. Smith, Jan Terry, of Plainfield; John H. Corbush, Bound Brook; John Day, Jersey City; M. W. Mulford, Elizabeth; J. Blenhermann, New York. The officers are: President, E. H. Robinson, Secretary, M. W. Mulford, Treasurer, George P. Suydam. The building will be erected at Dunellen and fitted up appropriately for the use of shooters. The regular weekly shoots of the club are on Saturdays. Live and clay pigeons and glass balls are furnished in abundance. The initiation fee is fixed at five dollars with fifty cents monthly dues. Life members are constituted by the payment of \$25 a year. A large number of prominent sportsmen have already become members. This club, while laboring under difficulties in its formation, starts out under most favorable circumstances, and promises to eventually be a prominent organization of the State.—*Plainfield (N. J.) Constitutional*.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHEBRIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARR, April 18, 1885.—*Adv.*

THE STATUS OF GALATEA.

SINCE it has been decided that Galatea will come out next year to sail for the America Cup, her challenge having been duly accepted, the question has been raised in some quarters as to her claims to be a representative British yacht. In the *Field* of Jan. 9 the following letter appeared:

"Sir—I see it reported in Tuesday's *Times* that the owner of Galatea intends racing for this Cup, and has already issued a challenge. This course all yachting men must deprecate, for, though we know that any one has the right to challenge for this Cup, it must be borne in mind that as the race is more or less regarded as an international one, the yacht sent over should at least have some pretensions to being a prize winner in home waters.

I think something should be done this year to retrieve our lost laurels, and with the view of avoiding the blunder made last year in sending out an untried yacht (it seemed madness to send Genesta out after such important alterations, without a trial), I would suggest that the various yacht clubs contribute to a prize to be sailed for under the same conditions that are applied to the America's Cup, it being of course understood that the winner goes to New York as our representative yacht. If this course were adopted, I think £1,000 would be easily raised.

A week or three more letters appeared, which we give with the editorial comments below, two of them being in answer to former letters.

"Sir—I sincerely trust you will use your influence and write strongly against the absurd match proposed to take place with the Americans. It is nothing but courting defeat. A yacht should be built specially for the purpose.

CHARLES ISLANDS.

"Sir—As to the sailing capabilities of Galatea, I think 'John' is at least a little premature. In the season can hardly have fairly tried her, and sailed in no few matches, and like Irex in her second season, may yet be a prize winner. I think it is a pity that cold waters should be thrown on the sporting endeavor to regain the America's Cup. No doubt, if any yacht owner (doubting Galatea's powers) may still desire to enter for the Cup, the N. Y. Y. C. will, as last year, accept two entries. We have yet to see the two distinct types in a sea-way; so may a breeze like that at Dartmouth last August be on the match days, and I venture to say that it will not be 'by fluke or otherwise' if the white red St. George's cross is flown under the burgee.

JACK (YARD).

[To save trouble to our readers, we may mention that Irex started in twenty-nine races the first year she came out, and won eight first and two second prizes, amounting to £680. The Galatea started in fifteen races, and won two second prizes, value £50.—Ed.]

"Sir—Your correspondent 'John' has made the statement that Genesta, when she sailed for America, was 'tried' yacht. Will you allow me to inform this gentleman that his statement is incorrect, inasmuch as she was tried both before and after her 'important' alterations. Possibly, judged by his incorrectness on this one point, 'John' may be incorrect also in his knowledge of these alterations, terms of the 'deed of gift' of America's Cup, etc., as he certainly does not appear to understand the terms of the six months' notice. JOHN B. COOK, owner of Galatea, has made the statement that the property of sending the Galatea to New York to compete for the America Cup—and no doubt some very strong opinions are likely to be expressed about it—there can be no doubt that the Genesta had unexceptionable credentials, and was quite a fit representative of British yachts. As this matter—the question of the capabilities of the Genesta—was so thoroughly thrashed out in our columns, we cannot now re-open the subject, and so far as Genesta is concerned, the correspondence is closed.—Ed.]

The assumption that Galatea is not such a vessel as will make a good fight for the Cup, and that her qualities are not such as to justify the expense and trouble to which the holders will be put, is based on the summary of her season's work as concisely stated above, two seconds to fifteen starts and a total of only £50 prize money. This in truth is her record, and if it were all there might be

some reason for the complaints made against her posing as a champion; but to those who have followed the season closely and who are familiar with all the ins and outs of Galatea's work this year, there is really no ground yet for condemning her, or for asserting that she will not be found in a better place next season. An analysis of her races will show that while always beaten she was in reality but very little in time behind a very fast boat improved by a season's trial and the alterations it suggested. Undoubtedly Galatea, from the time of her launch has been a most unfortunate loss in several respects, but the source of the principal trouble is known and steps are now being taken to remedy it, and thus far at least it is too soon to pronounce her a failure or a fraud, and to deny her the same rating accorded here to Genesta. She was built with the object in view of racing for the Cup; her owner, an old sailor, is ready—not to take a pleasure trip which will cost him little and throw all the expense on the defenders, but to spend a large amount of money on a venture which can bring him a return in kind in the event of victory, and which can only be modifying in case of defeat. Her designer, too, whom we may suppose is not only pretty well acquainted with his own work, but is now thoroughly posted on the requirements of a boat for our racing, and whose prestige is largely involved in the result of the coming race, has sufficient confidence in the boat to decide to bring her out after Genesta's failure. Each of these reasons, when taken in conjunction with much more to lose than to gain by a defeat, and who have had better opportunities of knowing the boat than any one else could have, are willing to risk the trial; and having challenged in good faith, are entitled to the same consideration they would receive if they came with a string of twenty winning flags flying.

THE ATLANTIC.

THE members of the Atlantic Y. C., Messrs. L. A. Fish, J. R. Maxwell and N. A. Lawton, have been appointed a committee to manage the building of the new sloop for the club. The drawings have been made from Mr. Ellsworth's block motion and plans and specifications are now ready for the builders, several of whom will send in estimates. The dimensions as given are:

Length over all	95ft. 1in.
Length on load line	83ft.
Beam extreme	23ft. 2in.
Beam at load line	22ft. 8in.
Depth from rabbet to plankline	11ft.
Freeboard	3ft. 6in.
Draft aft, from stem	4ft. 6in.
Draft amidship	5ft. 10in.
Draft at stern	5ft. 7in.
Draft with centerboard	30ft. 6in.
Area of midship section	92sq. ft.
Area of lateral plane	550sq. ft.
Displacement	105 tons.
Ballast on keel	38 tons, lead.
Ballast inside	9 tons.

The sail plan shows a mast 30ft. from fore side of stem and 66ft. to bowsprit, with a 40ft. topmast, 70ft. boom and 44ft. gaff. The bowsprit will be 35ft. outboard, spinnaker boom 72ft. and hoist 54ft. The new boat will be built at once and will be ready by Decoration Day. Captain Joe Ellsworth and his crew will sail her.

NEWSPAPERS AND CLUB SCANDALS.

IN the active hunt for news among a number of daily papers private affairs which concern no one but the parties directly interested are often dragged before the public, regardless of the harm that may result when once the matter is made the subject of general gossip. A recent example of this sort of journalistic enterprise is given in the case of the Scavanhaka Y. C., in which a family party that in no way concerned or interested any one outside of the club has been made public by the papers in a manner which has only widened the breach. What the New York *Herald* thinks of such proceedings is well told in the first of the following extracts, taken from its editorial columns of Jan. 30. What it does in a similar case is shown in the second extract from its news columns of Jan. 13. The latter paragraph, immediately on its appearance in the *Herald*, was denied by the leading men of the American Y. C., and was further disproved by the harmonious meeting and the treasurer's report which followed a few days later.

On the other hand, in spite of the *Herald's* direct assertion to the contrary, there is a decided difference of opinion among the members of the New York Y. C. and more excitement over the coming election than has been felt for many years; but as yet the matter is simply a private one, with which the members only are concerned.

N. Y. *Herald*, Jan. 30.

N. Y. *Herald*, Jan. 13.

YAKS ABOUT THE NEW YORK Y. C.

NOT STRONG ENOUGH TO KEEP GOING.

IT is rather remarkable that an organization of such high standing as the New York Y. C. cannot conduct its election of officers without being subjected to a series of malicious yarns. Absurd rumors of dissensions, which were said to threaten the very existence of the club, have gone the rounds, and some people have been simple enough to give them credence. On inquiry we find that the sensational stories have not the least foundation in fact; that the club was never in a more satisfactory condition; that harmony prevails instead of discord, and that, in a word, the scandal mongers have simply drawn upon their imaginations for what they have pleased to call the facts. It is time that such slanders should cease.

A PRIMITIVE LATEEN RIG.

ICE boats in the neighborhood of Fall River are merely makeshifts, not the finished yachts of the Hudson. This is naturally the case, as our bay is seldom frozen over to make good lee for the sport. However, when such is the case, our yachtsmen generally manage to utilize sails and jibs and build platforms with runners, which answer quite well for sport, and in strong breezes frequently attain good speed.

Ten years ago this very winter we had a long cold spell, and the ice admitting of it, several such boats were built and launched (if the latter term will apply to the process of putting them on their proper element), both sloops and cats. Not to be outdone, your correspondent had some run over the water. Of course, with the usual sail on an ice boat. Her dimensions were as follows: Length between runners and rudder, 16ft.; distance between runners, 12ft. For a sail was used the job of the Una, a 25ft. yacht which belonged to the aforesaid. This was 20ft. long on foot, with a leach of about 24ft., containing about 240sq. ft. On first rigging this boat the main boom (a spare mast) of the Una was bent to the luff of this jib, and the masts were set plumb over the runners. Of course, with the usual sail was made a first-rate yard for my lateen, and the masts, being hauled together at the top, made a nice pair of shears to hold the yard. The lower end of the yard was, of course, made fast to the end of the bowsprit. Having carried away two or three sets of masts, 4in. spruce, I at last determined to have something strong, and taking an axe went into the woods and cut a couple of hickory sapplings for the purpose. These never broke, but have probably long since furnished firewood for some one's stove, as the boat was used only one season. She indeed short-lived, but I think that it is safe to assert that none ever furnished more sport than did that one. Being always ready and always at the disposal of my friends, she was in motion nearly all the time when the weather was fit, and as her deck was large her accommodations were equally so, and with strong breezes her crew and passengers frequently numbered a dozen. As to speed, in light breezes she was nothing, being easily beaten by several of the cats. Not to be outdone, your correspondent, being a little heavier, could not have fallen short of 600 pounds. However, when the wind was strong the result was reversed. The other boats were simply nowhere, as the lateen could outpoint them fully a point, and foot three feet to their two. The cats were nowhere, let them put on never so much steam.

Now for the lesson. The shape of the lateen sail is probably better for pointing close to the wind than any other, as the whole luff and head is held close to the wind, and it will therefore not shake so much as one where the head swings off. I think, too, that it furnishes more proportionate driving power per square foot of area, as the whole of it can be used for that purpose, even when lying very close to the wind. There are objections to it, however, as used by me, the chief of which is its awkwardness. The yard is a very clumsy spar to handle, being so long, and, for that reason, so heavy, as great strength is required. Furthermore, in the lateen the perpendicular line, it made so much of a lifting sail that it required a great deal of weight aft to hold her rudder down hard enough to get a good grip on the ice.

The fastest time that I ever made with her was in one of our heavy northwesterly. With six men aft and eight hundred pounds of rock piled on forward, I succeeded in sailing three-quarters of a mile in 35 seconds from the time of straightening the rudder. FALL RIVER, MASS.

J. BORDEN, JR.

INTERIOR OF THE CUTTER MELUSINA.

GIVEN a certain amount of space, measured by the number of cubic feet contained within the ceiling and below the deck of a yacht, the problem is how to dispose of it so as to secure the greatest amount of room for a man. It matters little how wide it may be if it has not height, or how long if it is too narrow for comfortable movement. On shore the architect starts out with at least 6 or 7 ft. in every direction, but the naval architect is hampered and bound down by the absolute necessity of limiting himself to a hull whose dimensions are dictated by many other considerations besides the personal comfort of the dwellers therein, and who has not the resource of his brother ashore of putting on a bay window here or a mansard roof in another place. He is confined to a very contracted space, and the results of his planning depend partly on his individual skill, but still more on the form of hull to which it is exercised. His work must be laid off by one unit of measurement, the height of a man, which will be about 6 ft., and the space to be distributed is valuable or otherwise as it contains this factor. If the height is less than this a man cannot stand erect, but must always retain a constrained and uncomfortable position; if the length is less a man cannot lie down to sleep; and while less breadth may give passable accommodations if coupled with length and depth, 6 ft. in height will give a berth or transom on each side, and a passage way between.

Measured by this standard the shortcomings of the ordinary shoal centerboard boat are easily seen by a glance at a transverse section. In a boat of 14 or 15 ft. beam for instance, drawing under 5 ft., and with the ordinary low freeboard, and centerboard trunk amidships, when the required width on each side of the trunk is laid off the floor line has been raised so high that to obtain any head room a high cabin house is necessary, with its attendant loss of weight, construction of a limited deck room, and unsightly appearance. Referring to the accompanying cut it will be seen that a large part of the space is

divided into small portions of awkward size, one under the floors and a small triangular space in each wing, none of them of much use. The fore and aft disposition is still worse. No room in the fore peak, a height of 3 ft. only in the galley, the center of the boat taken up with the centerboard trunk, the main cabin forced aft, cutting out any after stateroom, and a damp and ill shaped hole under the cockpit, difficult of access and when reached of limited capacity. Besides these are the wings already mentioned, and small spaces under deck alongside the cockpit, sometimes utilized for stowage. The main cabin must be depended on for the principal dormitory; the stateroom, if there is any, is hardly more than a closet, and is placed under the deck, dignified by name of berth. Aided even by the extra space stolen from above by the cabin trunk, the accommodations of the ordinary centerboard sloop are nearly always of a makeshift and unsatisfactory character.

With the boat of moderate or even narrow beam and a fair depth the case is entirely different. The space, no greater in cubic feet than in the former case, is now in the form of a solid, approximately rectangular in section, at least as high as a man can stand comfortably high, and keeping these dimensions for a length of three or four times the measuring unit—say 25 ft., with large space beyond at each end. It is obvious at once that a man can walk from end to end of this space, erect and with arms extended, and the division of it that would naturally suggest itself would be: One length, say 7 ft., stateroom; one length, 8 ft., cabin, and the remaining length added to the portion at the bow for galley and forecabin. An excellent example of this type of boat and its capabilities is shown in the plan of the companion on the Melusina, prepared from sketches furnished by her designer, Mr. George K. Boutelle, to whom the credit of the general plan is due, the details being designed and carried out by Mr. Edward Burgess.

Inspection of the lines of the Melusina, published in the *FOREST AND STREAM* of Dec. 17, will show that her actual beam of 10 ft., on deck, decreased only by narrow skylight and companion in plan, gives an ample deck room, in fact greater than in shoal boats of much larger beam and length, whose decks are cut down by a clumsy cabin trunk to a narrow gangway, often blocked by the boats and spare spars. In the Melusina, as in all her of type, the space for working ship is ample, a deck 42 ft. long by 10 ft. wide and with space along the middle line. Her relative beam also, 27 per cent. of her loadline, when coupled with depth and hullast, is sufficient to insure a fair amount of initial stability demanded by many in a cruising boat. In compliance with American ideas, a cockpit is provided for the steersman and large enough to accommodate three or four persons. Aft this cockpit and made as part of it is a hatch opening into a sail locker. Forward of the cockpit is a skylight over the after or ladies' cabin, then a space of deck between the latter and the main companion. This is in one with the main skylight, which lies just ahead of it. The companion is placed a little to the starboard side, and below for a door from the main to the after cabin, this door of course being on the port side of the companion stairway. Just above this door is a small skylight as long as the companion proper, and forward of both is the main skylight.

Entering the cabin from the deck by the main companion, the visitor is landed in a small but cosy room, not vastly different from a snugger ashore, except in the absence of windows. This room is 6 ft. square and about 6 ft. high, finished in hard wood, with a bed on each side is a comfortable locker with cushioned seat and back, making a bed at night or a lounge by day. Opposite to the stairway is a handsome tile stove, and above it is a bookcase. Aft of these is a door, as shown, leading to the galley, while on each side at the head of the transom is a cellaret locker, the top making a table with a closet above, the top making another shelf. The after bulkhead contains a door to port, abreast the gangway, leading to the cabin or stateroom, and at the foot of each transom is a closet for coats, dresses, etc., allowing them to hang at full length. Below the transoms is additional storage room, and under the floors are the water tanks and spaces for coal, potatoes, etc. The cabin is well lighted by the skylights, and with its polished furniture, bright cushions and hangings and cheerful stove, it is always homelike and inviting. Leaving the cabin by the after door the visitor enters the after cabin, a room 6 ft. long, with a single head room. On the starboard side is a permanent berth made up with drawers and lockers under it, as shown, giving ample and accessible storage for clothes. A dressing case and mirror will occupy the forward bulkhead, next to the door, while between the berths at the other end is a water closet. The washbasin is arranged in one of the drawers at the foot of the port berth, and may be drawn out for use at any time, the waste pipe being flexible. Aft this cabin is a large sail locker, and space for spare lines, cables, brooms, mops, etc., the only opening being on deck.

Now going forward through the main cabin, the galley is reached, clean, lofty, roomy, with lockers for two men forward, a stove, pump, etc. On the port side is an icebox and refrigerator, with water tank below, and next to this a dresser and cupboard, offering every convenience for cooking. No low, confined, smoky hole such as is too often found in the ordinary sloop, but a light, airy and comfortable room, easily kept clean, in length it extends quite up to the bows, giving a good head room for the entire distance.

This general plan is found in all boats of the cutter type, from Genesta, whose plans were published in the *FOREST AND STREAM* last fall, to the small fives of 5 ft. beam or less; and in all cases it gives an amount of practical accommodation which cannot be had in the common centerboard type for the same length or cubic capacity.

A large cabin or room enough for a hotel range are not the prime objects in designing a boat, but in deciding on the controlling features and dimensions of its design each owner should consider the opportunity for a proper distribution of room. Careful study and a little skill combined with appropriate dimensions will give a roomy and commodious boat at no greater cost than an ill-arranged and uncomfortable box; size alone will not always insure proper accommodations, and it is often money well spent to call in aid of the experienced designer, who by his skill will make the boat worth the money she costs.

OEN. PAINE'S YACHT.—Work is progressing steadily on Gen. Paine's new boat. The keel stem and stern have been got out, and the hull will soon be ready. The joiner work is going forward at the same time, so that her hatches, companions, etc., will be ready before the deck is laid.

SAIL PLAN OF MELUSINA.

SECTION AT FORE END OF CABIN.

LATEEN RIGS FOR ICE BOATS.

IN answer to inquiries concerning the lateen rig we republish a cut of the rig as applied to a canoe, which first appeared in the *FOREST AND STREAM* of Aug. 7, 1884. The shape of the sail and details of rigging can be applied to an iceyacht as well as to a canoe. This rig, fitted by Captain George Price, of Boston, has two shear legs, a, a, hinged at the top, a yard, b, and boom, c, united by a joint at their fore ends. The halliard d is made fast to the hook k, and leads through a block on the yard, up over the sheave l and down the other side of the block.

The boom is held down by a universal joint or link below the point of suspension of the yard, so the sail swings freely.

The topping lift, or lazy jacks, e, are made fast to the two eyebolts. The sail is reefed by the lines g, g, led through grooves. In a large rig the two shear legs would fit in an iron cap, forged with two sockets, the sheave l and hook k being retained in their present position but all being of iron. Two halliards would also be used on a long yard.

THE CRUISE OF THE BONITA.

SUNDAY, Jan. 3. Bonita left Chincoteague, Va., and went into Wataquepiqua Inlet at 1:30 P. M. From there we worked our way down inside to Cape Charles in very fine weather. Stopped at the cape and got some oysters and quahogs, lay over until Jan. 7. Sailed from back of the cape at 6:45 A. M. and arrived in Norfolk at 11 P. M. Had very light wind from the NW and when we got out to Hampton Roads it came on calm with the ebb tide; we could not make much head way.

Jan. 8. At the dock in Norfolk white frost and some ice. Jan. 9. Fortunately we lay in a good berth in Norfolk; the weather very severe, making ice very fast, the wind N.W. blowing a gale.

Jan. 10. Left Norfolk at 7 A. M.; sailed up the Elizabeth River and through the canal into the North Landing River; got through all right and had but slight trouble from ice until we got to Blackwater Flats at the head of Currituck Sound at 5 P. M. and here we are in for it (frozen in solid).

Jan. 16. Still in the lee; weather warmer and ice breaking up some; go ashore to exercise the dog and have some sport with her; when sailing she sits on the stern and watches the birds that go by and seems to snuff in disgust that we let good shots escape.

Jan. 17. Broke the ice to the channel. Monday, Jan. 18. Bid good-bye to Blackwater Flats. The steamer Orinda, of N. J., got up steam and back-d down and took Bonita in tow. She steamed along down Currituck Sound and had us into the short canal that connects Currituck Sound and North River.

Jan. 19. 1 o'clock A. M. The wind S.E., fresh and rainy, we laid at the bridge until 8 A. M., then went down North River. Orinda towed us through Albemarle and Croatan Sounds, and we arrived at Cape Hatteras at 4 P. M. We went into Pamlico Sound and arrived at two miles northwest of the N. W. Point Royal shoal at 11 P. M. We then cast off from Orinda. No wind, we rowed to the light and anchored at 1:20 P. M.

Jan. 20. 6:40 A. M. had a good breeze from N.N.W.; got under way and arrived at Harbor Island at 9:30 at the head of Cove Sound, N. C., and arrived at Beaufort 4 P. M. Wind fresh N.E.

Jan. 21. We are having bad weather today, the wind S.E. and raining. It looks as though we should have lay by two or three days. They had a wreck here on the 9th, a three-masted schooner went ashore very near the Cape Lookout light; five or six men drowned, one was saved to tell the sad story. They say he hung to the end of flying jibboom 48 hours before they got to him and fifty men on the beach in sight of him picking up wreckage.

CRUISE OF THE COOT.

IT was past noon before some matters of business had been attended to, whereupon the lines of the Coot were cast off from the bulkhead and the peak roused up for a drift up to the lock. The boat could not be kept up to the light wind, but sagged broadside down upon the bulkhead in spite of her board. For the last hundred yards she was shoved along by digging the bat hook into the timber cribbing. The lock-tender, opened the gates without a word, took my line and made some coo-whistles about a post, and then walked off to his dinner. In due course of time the yacht got through and sculled up the artificial harbor to a berth near a small shipyard. A visit was made to the office of the canal, where a pleasant young gentleman was in charge. Through the pig-hole he took the name, tonnage and destination of the Coot, and handed out a receipt for \$2.28, the fee for passing through the canal. This did not seem exorbitant, considering the large number of locks and bridges and the attendance of a sambo.

Two officials volunteered with noticeable alacrity to point out the "team office," where animals for a tow were to be secured. I felt like a fly in a spider's web. There seemed to be a mutual understanding between the two offices and I was to be the victim. A little wooden box with a very modest sign over the door held the monarch of the mule path, to whom I applied for the needed assistance. It required but one animal, I urged, the Coot was so small, but he could not break up his team, he said. Then I told him of a gang of mules and I was told that the expense would be \$7. The autocar replied with a vacant gaze and, the same terms as provided for a "chunker boat," and he was pleased to offer me the benefit of the lowest rate. This was very kind; but as loaded Erie boats came through with only one pair of horses digging their hoofs into the path, it seemed ludicrous to hitch four prancing mules to a little thing I could almost haul through myself. "Ah, but what time he allowed?" he queried. "He never leaves the dock whether it would or not," he coolly demurred, assured me there was no escape from his clutches. Before giving up I sought out several canal boats for a tow astern, but none of them volunteered for less than \$5, as they understood the situation quite well. To sail through was against the regulations. So I pushed the money through the inclosure with which his majesty was lodged about to resist the onslaught of fierce canalliers, and in return receive a formal receipt with the assurance that the boat would be on hand as soon as fed. Of course, it was not. The day was raw and damp, and it was anything but agreeable waiting till late in the afternoon for the appearance of four disconsolate but very knowing representatives of the race limited to one generation. They stalked gravely across a bridge and up the tow-path a few rods, when they halted and cast inquisitive glances across the water. The driver followed in an old army coat. Like the mules, he had nothing to say. He was halted twice, then he made a tired motion and the Coot was on a race for favorable remonstrances. He had no received his customary half dollar and this was his way of making his wishes known. For a half mile the canal is virtually a narrow harbor to the town of New Brunswick. On one side the buildings stretch along, their yards coming down to the bank. Wharves, basins and landings are numerous. Many schooners, barges and carriers of all descriptions load with the products of the city's varied manufactures. On the opposite side rises the embankment which preserves the level of the canal considerably above that of the river, rising turbulently beneath. Above the city is the flat or deep lock of the canal proper. Beyond this the water-way contracts and assumes its artificial aspect. Before reaching this lock the county and railroad bridges have to be passed under. The Coot's mast obliged the attendants to open the draw, and the first structure was quickly left astern. But at the railroad bridge travel was so incessant that we had to wait fifteen minutes before a chance offered to swing the draw. Train followed train in such rapid succession that it seemed marvellous how few accidents should happen with the roar of the engine and the clatter of the wheels. It is not another darting across your vision. Red flags were posted at the ends of the bridge, and the heavy iron span opened. The mules were whipped up and the Coot slipped through just as a passenger train came to a dead stop, warned by the red bit of bunting.

There is more prose than poetry to be told of a canal, and little remains to be said beyond the information already given. The dusk of the evening was soon upon us. The mules kept stepping along at a regular pace, and the Coot was perched upon the tow-path, every foot of which they knew so well. The driver leaped upon the rear animal, pulled the cow over his head, and I broke out my oilskins, a nasty, cold drizzle making the prospects for the night very unpleasant. The distance to the next lock was ten miles, and as there was a "station" for man and beast at the lock, which we would not reach before 7, I determined to tie up for the night. No green lantern being on board, a white light was displayed after the manner of a signal. The boat was pulled up to the lock, and the approaches being guides which are easily discerned. But the weather was so raw (and I had missed the noonday meal) that a stop was imperative. Teams are changed at these "stations" and a fresh driver taken on. A voluble son of Erin announced himself as my next companion. He found the stove of the company's building so much pleasanter than the idea of setting forth through such a night, that he was reluctant to find me prepared to await the next day. The Coot was pulled up to a cribbing, the end of which afforded a turnout to avoid colliding with passing

LATEEN RIGS FOR ICE BOATS.

boats. She was tied to the bank, and after supper I turned in for a good night's rest, which was appreciated after the unusual work and exposure of the day. Several times the horns of canalliers and drill whistles of steam propellers broke upon my senses, and a vague fear seized me that the Coot might be run down or crushed by some careless fellow. As a precaution I had one lantern burning on deck and kept the cabin lamp bright all night. Nothing more serious took place than a slight chafing of paint against the bank in answer to the calls of the steamers. Mooring lines must be made well fast in a canal, as the suction of passing boats will drag the moored craft off shore with considerable force.

C. P. K.

THE CRUISE OF THE PILGRIM.-VI.

BY DR. W. H. WINSLOW.

THERE is only one other of our numerous excursions that I will mention. One morning, C. A. Pillsbury, editor of the *Republican* of Belfast, Me., R. G. Dyer, local editor, and G. H. Quimby, humorist, better known as "Our George," came aboard the yacht with sundry fish lines, pipes and mysterious packages and domiciled, as it they were commencing camp meeting. Such an array of luggage and talent I did not honor the craft before, and I put on a regular quarter-deck smile and immediately made out a man-of-war watch, quartermaster and station bill to prevent them from being too promiscuous. The wind was blowing a moderate gale from the N.W., and the day was clear and pleasant. The anchor was soon away and catted, the sail up and trimmed, and we flew down the bay at the rate of eight miles an hour. Our George looked after the jib sheets, the Local steered, the Editor in Chief smoked, and I took a position for once as a passenger and greatly enjoyed it. Editor Pillsbury, a former writer for the *FOREST AND STREAM*, said in his journal:

"It was a delightful sail down the bay Thursday. As we went on, the breeze freshened, driving down over the Northport and Lincolnville hills in fine gusts that sent the Pilgrim along with the Local at the helm, at the best rate of speed she had ever shown. Two hours after leaving Belfast, we were fairly abreast of Camden, and this was certainly good work for a small craft."

"It was my first cruise in a cutter, and I very much doubt if a boat of the same tonnage of any other other type would have behaved as well as did the Pilgrim. In a ten mile boat to windward, against a sea into which she now and then ran her bowsprit. It was wonderful the way she worked to windward, and, though her lee rail was under water a good part of the time, she did not leak the water to any extent, or throw spray enough to wet those on board, whether they were in the bow or cockpit."

Mr. Dyer said: "At the rate of eight miles per hour, the Pilgrim sped down the bay with the lee rail awash, the white sails filling out with the wind, the water clear cut, thrown off in rainbow tints by her graceful bow, and the trembling tiller sending an exhilarating thrill along the arm of the helmsman. Below Mark Island the wind died out to a flat calm, leaving the yacht rolling and tossing one mile north of the Drunkard Ledge. Before night a southwest wind sprang up which again put life into the gallant little vessel. We passed the Fiddler Ledge, off Crabtree Point, on our port hand, and ran for the Sugar Loaves—three rocks that rise abruptly out of the water nearly opposite Brown's Head light. Passing Young's Point, we open up the Thoroughfare (Fox Island), one of the finest harbors on the coast."

"Anchor was cast off Martin Hopkins cove, supper eaten, and then three of the party rowed across to North Haven."

"The village of North Haven is at the northern side of the harbor and is the second largest fishing port in Maine. Some Boston people have bought land here and built a club house on the shore for summer use. Friday morning a stiff southerly wind was blowing, and it was decided to make Carver's Harbor, by the way of the eastern end of the island. The Pilgrim swiftly passed through the eastern entrance by the quarantine station upon Widow's Island, when building, by the way, resembles a barn more than a hospital, and then on to Stoddard's Point, the easternmost part of the island. The wind came out of Pleasant River in sharp squalls and the yacht buried her lee rail in a manner that would have terrified the uninitiated. We now had to anchor in Carver's Harbor. On our lee is Isle au Haut while to windward and seaward are Brimsone and other islands."

"Our stop at Carver's Harbor was brief. * * * Weighing anchor, we shaped our course for the open sea through Larry's Island passage. The sail was delightful. Right here we wish to speak of the excellent survey and buoy system of the Government for the protection of navigation. Every ledge and shoal is carefully buoyed and numbered so that with a chart the stranger can sail about with safety."

"Camden was reached at night-fall. Here we remained until Saturday morning, when sail was again made and the Pilgrim headed for home. We reached Belfast at 1 P. M. All were delighted with the trip and unanimous in praise of the Pilgrim, which is one of the ablest and best sailing boats in these waters."

"Our George" has his say: "For a few weeks before the Puritan-Genesta race, there was sufficient interest evinced over it to have paid the national debt, but the cap to keep it in, the interest has fallen off one or two per cent. Still yachting will always be popular and people will go, some to enjoy it and others to be maderetched by it. "A yacht is a high-toned pleasure boat with usually more 'git' to her than to her plebeian sister, and like a piece of pie can be either large or small. There are two requisites necessary for yachting. The first is to have a friend who owns a yacht, and the next is an invitation to go with him. When Dr. Winslow came along and invited me to go with him in the Pilgrim for a few days' cruise, I told him that I had been standing by in hand for twenty-five years his lining for an invitation, and had about come to the conclusion that I was dead, for he was the first I had heard in all that time. He said he was to have the Editor and Local aboard, and, although he did not say it in so many words, I gathered that he wanted me to give a tone to the thing—a sort of eclat as it were, and likewise on stated occasion to pull a rope, with a can-opener, and how-like an angel of peace over the cockpit. In fact, to put myself where I could do the most good and be the least in the way. That's the kind of invitation I like, to make myself sort of promiscuous and not engage as a specialist. When I'm invited out to sit still and look pretty, I get tired very quick. I never was intended for a piece of bric-a-brac."

"The Pilgrim is about five tons. I don't know whether that means that she weighs five tons or will carry five tons. I have been so busy somebody else to 'cast off the downhaul and hoist the jib,' and for me to 'hold her till she filled.' I suggested that as I couldn't swim, if he was going to let her fill, I'd better go ashore. * * *

"When we went on board, we found the hook attached to a piece of rope. Capt. Winslow said to me 'haul the anchor short,' and for somebody else to 'cast off the downhaul and hoist the jib,' and for me to 'hold her till she filled.' I suggested that as I couldn't swim, if he was going to let her fill, I'd better go ashore. * * *

"The Pilgrim is a sloop and likewise a cutter. I can't tell you exactly what a cutter is. A razor and a meat axe are cutters, but the Pilgrim is neither a razor nor a meat axe. I think a cutter is rather long legged in the water, has a deep cellar so to speak, and a straight bow like a steam boat. * * *

"I broke out the anchor and there never was a case of measles that broke out as hard as that anchor did. I also weighed the anchor, but I have forgotten how much it weighed; I should say a thousand tons, more or less, and then I 'eared it,' and then I 'on'ly' embraced the mast, and drew a cambic banknote from my star-board pocket and gathered up the perspiration, which had oozed out from my mainport, and was standing like spectators on my face to see us get under way. There was one of those turn-around-the inside-out breezes, and as the Pilgrim makes up her mind very quickly, those on board are forced to do likewise. Her deck is flush and about a foot and a half above water, when she is trying to dip her flag in the brine. I have seen a 'flus' deck' that was a good thing to hold on to, but it wasn't a yacht's, and as she would lurch, I would instinctively feel my toes grabbing for the inner sole of my boots, and I would hug the mast as if it were my best friend."

"After all the fuss and coolery of bidding the shore good-bye was over, I went aft and sat down and proceeded to enjoy myself. I was just getting used to it when the Pilgrim concluded to jib, and, before I had given my consent, the motion had been put and the vote taken and the thing stood a tie, when the main boom went over to the other side and carried it, and a fine-looking gentleman of about my size came wending ending his yachting minus a head. Later on I learned that the main boom always has the right of way on board a yacht. * * *

"When I was stationed as overseer to clear the jib sheets, I learned what the word busy meant. I never before knew that a piece of rope was endowed with intelligence. I always looked at it as an inanimate object, but when I would go forward that particular bit of rope would be lying there as peaceful as a plaster of 'Paris' Sammy at prayer, when, all of a sudden, it would make a spring and one or two turns around my port lee and bury her lee rail under so that a speed that my years do not usually allow me to attain, and I would find myself about to go over the side, when it would let go my leg and lay out on the deck as still as if it had not moved since I came on board."

"The Pilgrim is as staunch as any of its old namesakes, and she can sail anywhere you point her. If there is a breeze, she will snell close up to the wind and a little the other side of it if it inclines, and, when there was a spanking breeze she would put her lee rail under so that everything would be under water but her keel, and you could walk around on the side of the cabin and hang your hat on the floor. Anybody who does not enjoy the water does not want to strike up a friendship with a yacht, for it is strictly a water bird, but, if one does enjoy being on the water, and has a stomach that is not fit to be maimed and get the owner into trouble, there are few sports more enjoyable."

"It is a sort of sport where there does not seem to be any work, and, yet, after sailing all day with a good breeze, you feel at night as if you had wheeled Jumbo up. Mr. Washington, but you are all ready the next day for another dose."

"I think that does up the excursion very well and will only say, that the event was one of the most enjoyable of the whole summer, and the cruising waters, wild and picturesque shore lines, and snug, safe harbors at convenient distances ample to make this portion of the busy a most delightful place for weeks of pleasure yachting."

Another memorable trip of 1 day was made with three old sea captains of advanced age and rich experience. Two of them had been captains of ships for years in the China trade, and one had just returned with his frigate from Sanyra. I got them to test the laying powers of the yacht, and we decided that she lay within three points of the wind, and she headed exactly six points apart upon different tacks. The Pilgrim was from only two points, reclining on the onshous and smoking, as he was not well, but he was always ready when his turn came to tell a story. Here is one of them: "Two ships were racing home from Hong Kong and kept along side by side for a week, and no amount of trimming and watching gave either the advantage, both being on the port tack, close hauled. At last the Boston captain had his yards braced in about two points; he immediately began to go ahead of his rival, and arrived home several days in advance. You can make more of the wind by not bracing too sharp up," said the captain."

Capt. McDonald told how not having a barometer aboard saved his vessel, and how with a barometer one was lost. "The two vessels were in company, bound in to Boston. It began to blow and he kept on all sail, not suspecting any severe weather was coming, and drove his craft, and when the gale did come off shore, he was able to reach Provincetown and to get to anchor before dark. The other vessel had a barometer and as it was falling rapidly, the cautious captain ran up under Cape Cod, took in his light sails and reefed down close. Then he kept on at an easy jog, but he had lost valuable time and day light. The gale caught him, drove him off shore, and the vessel foundered with all on board. It is just as well sometimes not to pay too much attention to the barometer," said the captain."

This reminded me of the Signal Service journals and the fishermen's sun-dog the day I left Booth Bay. Our journalists called this trip "The Cruise of the Royal Tars."

THE CRUISE OF THE ZIMMERMAN.

"HURRY up, boys!" This was the skipper's first order, which was promptly obeyed. Water, wood, coal, small boats, sea stores, oil-kins, gun boots, shore torgery, etc. had been properly stored, and we were waiting for Morris Clark and his usual home mate loaf, and then worthy put in an appearance just as the yacht sailed down stream, and with a fresh southerly breeze we made our first start. The night was dark and rainy, wind freshening and hauling in the eastward. Off Oldman's Point a "heavy one" struck the yacht, the cook struck his foot out of the companion way, reporting that the ship was upst to down. As that important functionary was standing on his head, argument was not admissible. Directly another "hard one" jumped in; the mate, who was lifting the jib at the time, was literally floated into a horizontal position. The leeward water barrel went overboard, crushing down on a staving on that side, and every thing to starboard left us. By request of the cook, we stopped for the night. As an honest recorder of fact, I must say this little episode was the result of Clark's practical joke. He's a sad one, always on the alert for a little exciting fun. Our yacht is a center-board sloop, 31 ft. over all, 27 ft. loadline, 11 ft. beam and 2 ft. 6 in. draft. Two water barrels are on a flush deck aft of the cabin, and when the yacht canted to an excessive angle of heel, the weight of water so high could not be kept in position, though carefully lashed in the chocks."

Next day was foggy. Beat down to deep water point, where we fell in with the steam yacht Comet at anchor; Dr. Valett and friends just returned from a trip South, and bound to New York and Long Island Sound. Went on board and had a good time. When abreast of Fort Delaware wind suddenly shifted to northwest, blowing hard, came to, ship rolling badly, and anchor light dancing a jig. Morning

BRAIDED FISHING LINES.

The great superiority of a properly braided line over a twisted or laid line, has increased the demand for braided lines enormously. This demand has induced a number of manufacturers, entirely unacquainted with the requirements of anglers, to put on the market a quantity of perfectly worthless goods. Many of these lines are undersized and short of marked length; nearly all of them are made of poor material and on old-fashioned machines. Anglers will please take notice that all of our best braided lines—cotton, linen, raw silk, dressed silk, oiled silk, enamel, and polished waterproof tapers—are labeled with our full firm name and trade mark, except the enamel fly lines on cards, which bear only our trade mark and the name of the Empire City Braid Co., whose agents we are.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page illustrated catalogue.

"MUSIC WITHOUT A TEACHER."
Any person can play a tune on the Piano or
Organ in 15 minutes by using Soper's Instantaneous
Guide. The Guide, with 20 pieces of popular music,
mailed to any address on receipt of \$1.00. No pre-
vious knowledge of music required. Send for testi-
monials. **HEARNE & Co., Pub's, 1164 Broadway, N. Y.**

HILL ON THE DOG.

THE STANDARD WORK ON THEIR
MANAGEMENT AND DISEASES.
Price \$2.00.

For Sale by the Forest and Stream Pub. Co.

GOLD MEDAL, PARIS, 1878. BAKER'S Breakfast Cocoa.

Warranted absolutely pure
Cocoa, from which the excess of
Oil has been removed. It has three
times the strength of Cocoa mixed
with Starch, Arrowroot or Sugar,
and is therefore far more economi-
cal, costing less than one cent a
cup. It is delicious, nourishing,
strengthening, easily digested, and
admirably adapted for invalids as
well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

Hunting Boots or Shoes, Wholesale
or Retail. **JOHN D. RETHEL, Man'r of
Sportsmen's Goods, 124 Chambers St., N. Y.**
Send for Prices. No Postal Cards.

Membership Certificates for Gun Clubs.

Send 10 cents for a sample of a handsome Cer-
tificate of Membership for Gun or Rifle Clubs,
printed in five colors. Something which every or-
ganized club should have, and when framed and
hung up will be an ornament to any sportsman's
home or place of business. Price \$3.00 for twenty-five.
If ordered printed elsewhere (in the same
style) would cost from \$10 to \$12. Address **W. C.
HINMAN, Box 1,041, Leavenworth, Kansas.**

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws
which govern the operations of digestion and nutri-
tion, and by a careful application of the fine prop-
erties of well-selected Cocoa, Mr. Epps has provided
our breakfast tables with a delicately flavored
beverage which may save us many heavy doctors'
bills. It is by the judicious use of such articles of
diet that a constitution may be gradually built up
until strong enough to resist every tendency to
disease. Hundreds of subtle maladies are floating
around us ready to attack wherever there is a weak
point. We may escape many a fatal shaft by keep-
ing ourselves well fortified with pure blood and a
properly nourished frame."—*Civil Service Gazette*.
Made simply with boiling water or milk. Sold
only in half pound tins by Grocers, labelled thus:
JAMES EPPS & CO., Homeopathic Chem-
ists, London, England.

"REPELLENE."

An Infallible Preventive of the Attacks of
Mosquitoes, Black Flies, Gnats,
And All Other Insects.

The Maynard Rifles & Shotguns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1882.

PRICES REDUCED.

With Pistol Grip Stock, Tip Stock and Swiss Butt Plate.

For Hunting and Target Practice at all ranges the "MAYNARD" more completely supplies the wants of

Hunters and Sportsmen generally than any other Rifle in the world, as many barrels can be used on one stock, and for accuracy, convenience, durability and safety, is not excelled.

Send for Illustrated Catalogue describing the new attachment for using rim and center fire ammunition.

NEW RIFLE SIGHTS.

The Kind They Have Been Looking For.

Front and Rear Sight are patented to F. W. Freund.

A production of years of patient and thorough study in the field and shop. This sight has met with great success East and West. It shows what perfection has been attained in open sights for hunting, sporting and target rifles. They give excellent satisfaction when used under unfavorable conditions of light or defective sight, and are, on account of their fine workmanship, an ornament to any rifle. Send stamp for illustrated circular; write your name plainly. Address

F. W. FREUND, Greenville, New Jersey,
912 Bergen Avenue (Jersey City P. O.)

Eaton's Rust Preventor.

For GUNS, CUTLERY and SURGICAL INSTRUMENTS. Specially adapted for salt water shooting. For sale at all principal gun stores. Western trade supplied by E. E. EATON, 53 State street, Chicago, Ill. Cannot be sent by mail.

Manufactured solely by

GEO. B. EATON, 570 PAVANIA AVENUE,

Jersey City, N. J.

What the Champions of the World Say:

ELKHART, Ill., Feb. 13, 1884.

J. C. Petmecky:

DEAR SIR—I have used your cleaner and find it one of the best I ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

Mr. J. C. Petmecky:

DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced.

Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky:

DEAR SIR—At my recent shoot in your city I afforded me the pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,

Champion Shot of the World.

FLORIDA. Indian River

NEW MAPS FOR SALE.

New maps of BREVARD COUNTY, FLA., just published by J. Francis LeBaron, C. E. Deputy U. S. Surveyor for the District of Florida. They include the entire INDIAN RIVER country and the Kissimmee Valley, showing the drainage operations of the Okeechobee Drainage Co. and the Disston Company. These maps are complete and accurate, and are made from actual surveys by the author, supplemented by the official surveys of the U. S. Deputy Surveyors, the U. S. Coast and Geodetic Survey, and the U. S. Engineers, U. S. Army. They show all the new towns, post offices and settlements, projected and constructed canals, railroads, wagon roads, etc. They show the depth of water in the ocean, river and lagoons, and are invaluable to the land hunter, settler, sportsman or tourist. They are mounted in three styles as follows:

ANSWERS TO CORRESPONDENTS.

NEW ENGLAND FOX HUNTING.

THE morning breaks dull and lowering. Moisture is in the air and an inch of new snow covers the old and crusted mantle which lies upon the ground. Fetters of frost bind the earth, and the feathered game is protected by law and by the conscience of each right-minded man.

Is there then no use for the gun and the dog at this inclement season? The old fox hunters of New England will laugh at you if you ask this question. It is now that they take their pleasure. No matter how ardent they may be in their pursuit of birds during the season, it is to the fox hunting that they look forward all the autumn, and upon its delights that they reflect after the snows have melted and the waters have burst their icy bonds.

On a snowy winter's day, when the white flakes are softly falling, the old fox hunter is uneasy. He takes down his gun more than once during the day, counts his cartridges over and over, and looks over old Drive and Dame and the pup to see if their feet are right. If there should be an abrasion between the toes, or if the hard crust of a previous run has cut a pastern, he bathes the spot well in old beef brine. Probably he finds the dogs all right, for the foxhounds of New England as a rule are a tough and hardy race, and take good care of themselves. Game they are, too, to the backbone, and we once knew one to run for half an hour with a steel trap fast to his hindleg. But he never left the track, nor complained, and when released followed on as cheerily as ever.

The morning breaks, the old pung is at the door before light, and the hunters with guns and dogs are soon off for the well known grounds where reynard during the night has been hunting. Before the old horse is fairly tided and blanketed, the mellow notes of Drive, and the shriller notes of his consort, mingle with the excited yelps of the pup, and we know that a track has been found.

Why speak of the remainder of the day; of the exhilarating music which salutes the ear, now loud, now faint, sometimes passing entirely out of hearing, again drawing near, until while we listen entranced, the fox leaps the wall within twenty feet of us and vanishes from our startled sight before we can raise the gun. The dreamer will not make a successful fox hunter. Why speak of all the winter sights and sounds of the fields and woods, sights and sounds that are seen only by him who goes a-foxing. He can tell you

how the chickadees and the kinglets swing in the branches of the cedar, how the black snowbirds and the tree sparrows tear at the heads of the weeds and squabble over the seeds that fall on the snow from the spreading panicles of the tall-stalked weeds; how the nuthatch corkscrews his way up the trunk of the tall forest trees, and what queer rolls the woodpeckers drum out on the dry branches. He knows too where the cunning old gray squirrel has buried his store of nuts, and understands the curious chuckling conversation which the bluejays carry on when they think they are quite alone. It is no use for us to tell of all these things, because all the old fox hunters know about them, and those who are not fox hunters won't understand them.

THE AUDUBON SOCIETY.

VERY slowly the public are awakening to see that the fashion of wearing the feathers and skins of birds is abominable. There is, we think, no doubt that when the facts about this fashion are known, it will be frowned down and will cease to exist. Legislation of itself can do little against this barbarous practice, but if public sentiment can be aroused against it, it will die a speedy death.

THE FOREST AND STREAM has been hammering away at this subject for some years, and the result of its blows is seen in the gradual change which has taken place in public sentiment since it began its work. The time has passed for showing that the fashion is an outrageous one, and that it results very disastrously to the largest and most important class of our population—the farmers. These are injured in two ways; by the destruction of the birds, whose food consists chiefly of insects injurious to the growing crops, and of that scarcely less important group the Rapaces, which prey upon the small rodents which devour the crop after it has matured.

The reform in America, as elsewhere, must be inaugurated by women, and if the subject is properly called to their notice, their tender hearts will be quick to respond. In England this matter has been taken up and a widespread interest in it developed. If the women of America will take hold in the same earnest way, they can accomplish an incalculable amount of good.

While individual effort may accomplish much, it will work but slowly, and the spread of the movement will be but gradual. Something more than this is needed. Men, women and children all over our land should take the matter in hand, and urge its importance upon those with whom they are brought in contact. A general effort of this kind will not fail to awaken public interest, and information given to a right-thinking public will set the ball of reform in motion. Our beautiful birds give to many people a great deal of pleasure and add much to the delights of the country. These birds are slaughtered in vast numbers for gain. If the demand for their skins can be caused to fall off, it will no longer repay the bird butchers to ply their trade and the birds will be saved.

Statistics are as yet wanting to show the proportions to which this traffic has grown in North America, but we know that it reaches well into the hundreds of thousands. Some figures published in FOREST AND STREAM of Aug. 4, 1884, showed that in a three months' trip a single taxidermist collected bird skins to the number of 11,018, which, including specimens too badly mutilated for preservation, and skins spoiled in the making, would perhaps represent a destruction of 15,000 birds. This same person states that he handles annually about 30,000 bird skins, almost all of which are used for millinery purposes. A single middleman who collected the spoils of the shooters in one small district, brought to the taxidermist's in four months about 70,000 birds.

The birds of the fields, the birds of the woods, the birds of the marshes, and those of the sea, all suffer alike. It is needless to repeat the oft-told story of destruction. How can we best go to work to combat this great and growing evil, what means can we best employ to awaken at once popular feeling against it?

We desire to enlist in this work every one who is interested in our birds, and we urge all such to take hold and assist us.

In the first half of this century there lived a man who did more to teach Americans about birds of their own land than any other who ever lived. His beautiful and spirited paintings and his charming and tender accounts of the habits of his favorites have made him immortal, and have inspired his countrymen with an ardent love for the birds. The land which produced the painter naturalist, John James Audubon, will not willingly see the beautiful forms he loved so well exterminated.

We propose the formation of an association for the protection of wild birds and their eggs, which shall be called the Audubon Society. Its membership is to be free to every one who is willing to lend a helping hand in forwarding the objects for which it is formed. These objects shall be to prevent, so far as possible (1), the killing of any wild birds not used for food; (2) the destruction of nests or eggs of any wild bird, and (3) the wearing of feathers as ornaments or trimming for dress.

To bring this matter properly before the public at large, we shall employ every means in our power to diffuse information on the subject over the whole country. Those who are willing to aid us in our labors are urged to establish local societies for work in their own neighborhood. To such branch societies we will send without charge circulars and printed information for distribution among their neighbors. A little effort in this direction will do much good. As soon as the association shall have a membership and shall be in position to organize and shall have attained an existence, we will hand the books and any funds which it may have, over to its members, who will thereafter take charge of it.

The work to be done by the Audubon Society is auxiliary to that undertaken by the Committee of the American Ornithologists' Union; and will further the efforts of the A. O. U. committee, doing detail duties to which they cannot attend. Those who desire to join the Audubon Society, established on the basis and for the purpose above set forth, should send their names at once to the FOREST AND STREAM, 40 Park Row, New York.

A SUPERINTENDENT OF PROTECTORS.

THERE are sixteen State Game and Fish Protectors in New York. They are subject to the supervision and direction of the Commissioners of Fisheries. The Commissioners are required to receive from each of them a monthly report of all his official labors, and are further required to certify to the Governor the proper performance of the duties of each protector as well as to report the delinquencies of each. This involves a vast amount of labor, which falls on the secretary of the Commission. It consumes his time. For it he receives no compensation whatever, save that he is paid by generous abuse whenever the public imagines it has a ground of complaint.

The present secretary is Gen. R. U. Sherman. With the highest appreciation of his faithfulness, public spirit, and efficiency, we suggest that he should be relieved of the care of superintending the protectors, and that that duty should devolve upon an official expressly appointed to the work and paid for doing it. Such a special man could give his whole time to the cares of the office—and they would demand all his time—and his duties being confined to this single branch of the public service, he could more effectively direct the protectors, watch them more closely, and double their efficiency.

The next important step in game protection at Albany should be the passage of a bill creating the office of State Superintendent of State game and fish protectors. Then put in a man known to have a deep interest in the cause of game protection, and possessed of energy, integrity and executive ability.

ASSEMBLYMAN FLOYD J. HADLEY, who was sent to Albany on the platform that the hounding law must be repealed, is making an active effort to please his constituents. He attended the monthly dinner of the New York Association for Protection of Fish and Game in this city last Monday evening, and over the champagne talked the club into an endorsement of his efforts to repeal the law. He did it by making them believe the silly statements that more deer have been killed by still-hunters this fall than in former years by still-hunters and hounders combined. If the members of the society had any intelligent conception of the condition of affairs in the North Woods, they would not have lent themselves to such a pernicious scheme as the restoration of deer hounding.

THE REPORT ON THE YELLOWSTONE PARK.—The Secretary of the Interior sent to the Senate on Feb. 1 the report of Mr. W. Hallett Phillips, who was last summer appointed special agent of the Department to inquire into the condition of the Park. As our readers will remember, this report was published in FOREST AND STREAM of Dec. 3, 1885.

ADIRONDACK DEER.—It has been suggested that those who are interested in preserving the Adirondack deer from the dogs should send to their members at Albany marked copies of the FOREST AND STREAM and other papers which print matter relating to the subject.

TO THE WALLED-IN LAKES.

X.—UP SWIFT CURRENT.

THE morning brought more wind, but the sun shone bright and clear from a sky whose brilliant blue was patched here and there with white clouds.

We were to-day to start on a two days' excursion to the Swift Current Lakes, and having seen them and the mountains about them, to return to St. Mary's and then to depart for the Agency.

Our scanty outfit was speedily collected and put on the pack horse. Blankets, bacon and bread, with a frying pan, bucket and a tin cup or two made up the load, and we were soon stringing out over the level plains toward Swift Current.

Something has already been said about this rushing torrent. Although neither very deep nor wide, it is not always an easy stream to ford because of its swiftness and the character of the bottom. Over the great smooth boulders, about which the waters foam, a horse has to pick his way with great care if he is to keep his footing, and the rider experiences a feeling of relief when his animal, after slipping and staggering through the flood, gets his forefeet on the dry gravel of the bank.

It happened that I rode down last into the water and just before me was the pack horse, which Yellowfish was leading. The bank on the other side was almost a cut bluff for twenty or thirty feet, but there was an easy trail leading up the bluff. I was close behind the pack horse, which hung back, and rode out of the water above the trail, rather than keep my horse standing in the stream until the way should be clear. Just as I had got clear of the water I saw the pack horse rear as if to put his feet on the bank and then fall over backward, nearly pulling Yellowfish out of the saddle. The beast fell squarely on the pack and the force of the current swept him along, rolling him over half a dozen times, giving him another turn every time he tried to regain his feet, until at length, exhausted, he lay still, with nothing but his head and half the pack out of the water. By this time we were all off our horses and down by the water's edge, and Yellowfish ran into the stream and caught the lariat and we dragged the dripping beast to shore and up the bank. From every corner of the pack the water was trickling in capacious streams, and it was plain that our bedding was well soaked.

While we apostrophised the unlucky author of our misfortune in no measured terms, the pack was jerked off the saddle and its contents exposed. The blankets were wrung out and spread in the sun to dry and the damp bread treated in like fashion. Then we sat down and while the horses fed and the blankets dried we grumbled.

Yellowfish said: "Some person is doing this. First rain all the time, then fall in the creek. Bad."

"If that is so," I said, "let us make a present to some god. which one shall it be, Appekunny?"

"The Sun, I suppose," he replied.

So we took a couple of the damp biscuits, and I gave Appekunny a piece of tobacco. Then he sang a little song in which he magnified the Sun, and prayed, saying: "*I yu Natose, I yu Napi, Kim-o-tit, Kim-o-tit.* Hear Sun, hear Old Man, pity, pity. Look down. Many days ago we started out, and all the time we have had bad luck. First plenty of rain, then fall in the creek; misfortunes all the time. Have pity, Sun. Give us good. Take care of us. Let us make a lucky journey and kill plenty of meat. Pity. Pity." And we all murmured *Kim-o-tit Kim-o-tit*. Then Appekunny put the presents up in a little tree and came back, and we smoked and waited for an hour or two longer, when the things, having become a little dry, we packed up and started on.

The way is merely a hunters' trail leading into the mountains; but it shows a good deal of use, and the Kootenays had evidently been trapping here recently, for their fresh horse tracks were often seen. Two or three miles above the Kootenay camp we saw where some Canadians the previous year had cut a large quantity of timber which, during the high water in spring, they floated down to the St. Mary's River and so over the line. A United States Deputy Marshall was sent after them, when the Piegan Indian Agent learned what these men were doing; but before he reached the spot they had gone. It is said that they took out many thousand feet of timber, to which, of course, they had no shadow of right. Where it comes out of the hills the valley of Swift Current is wide, though it has no true bottom, the terraces or benches extending quite down to the water's edge. It is fitly named Swift Current, for its fall is very rapid, and there are no quiet pools or reaches of water near where it pours into the St. Mary's. The water is cold as ice.

Six or eight miles from the stream's mouth we entered the gateway of the mountains which it drains. Hitherto the ridges which bound the valley had been rather low and rounded and timbered to their summits; but now we passed on the north a long, knife-edged mountain, showing on the side toward us only a bare pink and gray rock slope. This was immediately succeeded by one much more lofty and covered in part with snow. On the south side of the valley rose one equally high, but showing little snow on its exposed slope.

Before we could see these mountains to their bases, however, we rode over a little ridge in view of the lower of the Swift Current Lakes. These lakes were discovered a few years ago by a hunting party, and have been visited only once or twice by white men. They have been reported as

being five in number. The lower one is perhaps a mile in length and quite broad. Those above it are smaller, but still quite considerable.

The water of Swift Current is markedly different in one respect from that of most mountain streams. These are usually pure and as transparent as crystal. Swift Current, however, though by no means a turbid stream, is still somewhat roily, or at all events very far from clear, and where the water is a foot or two deep it is impossible to see the bottom. The color of the water is pale greenish, and its aspect, by the time we had reached the lowest of the lakes, led me to suspect the existence of glaciers at the head of the stream.

The bed of the stream is on the south side of the valley, which is here rather broad, and on the mountains which rise above it, the spruce timber comes down to the very edge of the water. To the north of the stream the slope is much more gradual, and there is at first but little evergreen timber, its place being taken by quaking aspen and cottonwood brush. Above the lower lake the immediate shores of the stream are low and marshy, and overgrown with high grass and clumps of willows—fine feeding ground, one would imagine, for moose and white tailed deer.

As we advanced, the confines of the valley drew closer and closer together, and the mountains became more abrupt. Finally on the north they became mere vertical walls of from three to four thousand feet in height, with a talus of finely broken rock at the base perhaps 500 feet high. At intervals of a mile or less, narrow cañons opened out from between the mountains, leading back into wide amphitheatre-like basins scooped out in time long past by the action of the ice. On the south side of the stream the mountains, though seemingly less steep, were higher and—because we could see more of them—more grand. Here on the northern slope of the mountains snow was much more abundant, and from every drift fell a long line of white waving mist, marking the course of some cascade down the nearly vertical side of the mountain. A few black pines clothe the lower half of the talus slope, but higher up nothing grows save occasionally in a ravine, worn out by some torrent, a few stunted willows maintain themselves, and here and there in a crevice of the rock a spruce strives to draw sustenance from the flint.

Ice is present in many of the ravines, but nowhere along the lower lakes did I see any that appeared permanent. As we advanced, however, and could see further up the valley, a superb glacier came into view. It lies on the south side of the stream and forms the source of a sixth lake, which is an arm of the fifth, which has, until now, been considered the uppermost of the Swift Current Lakes.

We made camp below fifth lake, in a little patch of green timber, it being thought that further up the stream there would be found no grass for the horses. Near this point was an old Blood camp of three lodges which had been deserted about six weeks ago. The bones about the camp showed that they had killed some sheep and goats, and not far off was a spot where, from the great quantity of hair scattered about, we saw that they had been tanning sheepskins.

Before doing anything else, Appekunny and I went up the trail to see the falls at the outlet of fifth lake, for we had heard them described in glowing terms as being one hundred feet high and of great beauty. We were greatly disappointed in them. They consist of a series of broken cascades, each about twenty-five feet high, the stream itself being about twenty feet wide and flowing between vertical walls of rock. The lake itself, walled in as it is by lofty mountains, is very beautiful. From an elevated point we could see something of the sixth lake, the greater part of which, however, was concealed behind a great mountain. The waters of this lake are green and milky—true glacier waters, in fact—and a well defined line in the fifth lake shows where its clear waters and the milky ones of its arm come together. Very impressive is the superb mountain which lies between fifth and sixth lake, and partially conceals the glacier which gives origin to the latter. Its base in sections is triangular, two of its sides facing the lakes being cut away vertically. Its acute angle is directed a little south of east. Along its lower third it is thickly clothed with brush, willows and alders and aspens. Above this is a narrow belt of evergreens. Still above, rise a series of narrow ledges one above another, and on each grow a few pines. These ledges indicate the different strata of rock which have weathered off from above. These rocks are all dark in color, black and dull green and dark red and purple; and these, with the different hues of the foliage and the white snow, gave the mountain a most varied aspect. Behind this mountain and over sixth lake the glacier was visible. We could see at least a mile of its width, and how much was hidden from view we could not conjecture. Its course, if uninterrupted, would make it a part of another great glacier which lies at the head of the main chain of Swift Current Lakes. The thickness of this mass of ice we estimated at several hundred feet, but as our efforts to reach it were unsuccessful, we can only guess at this. It extends back a long way on the mountain side, quite to the summit, in fact, and is broken in two by falling over a tremendous cliff, the height of which is greater than the thickness of the ice, so that the face of the rock is visible. We spent a long time examining the mountain sides, on which we detected many little white dots, which we thought might possibly be goats, but we could discover no motion in any of them.

Our fire that night was built in a little opening among the spruces, and as it burned high after dinner, the tips of the

overhanging boughs crackled sharply in the heat. On sticks set in the ground about were our damp garments smoking in the warmth. The tent, swung on a rope between two convenient trees, stood a few yards back from the fire, and as I surveyed the camp from my couch of dry pine needles on the opposite side of the fire it had a wonderfully comfortable and homelike aspect.

Even an old dweller in camps like myself is sometimes surprised by the very little it requires to make a comfortable home in the wilderness. Blankets and fire are all that is needed. You can really carry your home about with you on your saddle. The old camper instinctively selects the place which each piece of his camp furniture shall occupy almost before he has unsaddled his horse. The fire must be there because there is no chance of its spreading and there is a convenient log or rock where he can place his dishes while cooking. Here is the place for the bed, a smooth spot and level and near the fire, and he rides up and unsaddles there so that he will not be obliged to carry saddle and blankets from one place to another. His slender stock of "grub" is placed among the branches of a tree out of the way of any prowling fox, coyote or skunk that may visit camp during the night, or if no tree be at hand, is put under his head, so that if it is disturbed he will be likely to know of it. The water bucket has its place and so with every article he possesses. If he has to find anything in the dark he knows just where to put his hand on it. Needless to say that he takes good care of and keeps close watch over his horse, on whom his very life may depend. Usually the animal is allowed to wander hobbled or with his picket rope dragging until the approach of darkness, and then he is brought as close to camp as possible and picketed, if the surroundings will admit of it, where the grass grows thickest and best.

One wants to be as comfortable as possible at all times, and I have not the slightest sympathy with those who delight in making hardships for themselves. But when it is necessary to travel light, to go insufficiently provided, to sleep with a single blanket, to eat meat straight, or to get along for days or weeks on bacon and unleavened bread, a man, if he only looks on the cheerful side of things and laughs at hardships, can have a lot of comfort and can take a vast amount of pleasure out of this life. But I do hate to have to travel at night and to lie by without a fire during the day. However, those days are about over now.

Our talk that night was of the superb mountains about us, of the great ice masses that furrow their side, and of the possibilities of meat for the morrow. As we talked, the wind howled down the valley and made curious sad murmurs through cañon and ravine, while the tops of the spruces tossed themselves to and fro sighing in an undertone that was but faintly heard; but our fire burned bravely upward, for where we were the wind could not reach us, and it was warm and bright and pleasant. The pipes kept going well, there was plenty of wood, and we lounged about and chatted or dozed, until at length one by one we crept into our blankets and the wind sang our lullaby.

CAMP FLOTSAM.

XXIII.—AURI SACROFAMES.

LOAFING about camp, picking berries and spring hunting was fast becoming monotonous, but the blow on the water showed no signs of a let up and we were obliged to content ourselves in idleness. One night, just after sundown, we tried the white flies in the creek, but there was not a breeze stirring, and while we had a few small strikes from baby bass we had larger ones in the proportion of about six hundred to one of the former, from the mosquitoes from the marsh. It would have been an interesting spectacle from the shore, had any one been there to see, as we made a cast with one hand and at the same time a slap on the face with the other, then shifted the rod to the left hand to crush a patriarch which had settled on the off side and again dropped the rod altogether to smite the hoards upon our hands. It was too much to be enjoyed at a single sitting, and we got out of the creek into the lake as rapidly as possible.

We waited long and anxiously for the rain which the Colonel promised us would dispel the blow. It came after many days and lasted for twenty-four hours with a strong wind which we trusted would put us in the way of sport once more. When the rain ceased it left the weather cold with the thermometer at 56°. The blow had mostly disappeared from the water, although some signs of it were yet observable over the shallow stretches. A cruise among the adjacent islands resulted in two small bass, which we threw back, and on our way to camp a fair strike ended by fouling the leader on a log which stood upright with the end just below the surface, where we lost a gang of flies. The next day the blow was back on the water and the brimstone deposit on the beach, so the rod was unjointed and put away and we returned to loafing and prospecting.

One afternoon when we returned to camp, we found the household of Sabattis awaiting our coming on the slope before the tents. They had brought us a basket of field peas and half a dozen fine full grown chickens for our poultry yard, which yet consisted of the original two. The chickens had been procured for us from some one in the interior, while the peas, though they were from the fodder field of some farmer, were nevertheless good when prepared for the table. The Indians spent over half the afternoon in delight over a Grant memorial number of a New York illustrated paper which had been brought us from Kingston. Occasionally, they would jabber to each other as they turned over the leaves, and we wondered whether the pictures conveyed

any meaning to them. Only a single question was asked, and that was by the squaw who pointed to the paper and made the single inquiry "dead?" They had never heard of the great chief, and when we told them who he was and what he had been in his own land, Dame Sabattis pondered a moment, and then, in her broken English, told the tale how one of the chiefs of her tribe who, after being buried a hundred years, was disinterred and, upon being brought into the light of day, lifted his skeleton right arm and waved it over his people. It was saying in her own way that the influence of the great does not die.

Soon after the departure of our visitors, we heard sounds of an altercation in the poultry yard. The original family of chickens refused to welcome the new comers, and a champion had been selected from the latter whom the senior rooster of the resident household was entertaining without gloves behind the tent. Whether there was a foul or the champion was getting the worst of the combat we could not tell, but the bystanders suddenly interfered, put an end to the mill and drove our two "examples" into the woods. There was never any friendship between the two groups, each fed and roasted by itself until the lesser one was exhausted on the gridiron.

In spite of our resolutions, the creek tempted us once more to try the fly. We found the blow upon it equal to that on the lake, and though we worked from sunset till dusk we went home unrewarded. The dark nights had come on us again, and we could hardly find our way up the creek into the lake, so deep were the shadows from the trees on either side. But when we made the last turn, there was a burst of light from the western sky where the crimson of the sunset still hung upon the clouds. The aurora was making bright a spot in the northern heavens while the long shadows, reaching from the east and west across the water, made an ebony border to the silver sea which lay in front. While we paused to enjoy the beauty of the night, a skiff came out from the darkness on the left and halted a couple of lengths off. It was Sabattis on his way to his cabin; we answered his hail, held a short talk and then moved on, while he kept us company to the landing. From the tent door we could see the great square of Pegasus through an opening in the trees; from overhead myriad lights looked down; Cassiopeia with her chair invited us to linger without, but we turned our faces from the outward splendor, dropped the tent flaps and shut out the night.

The long, tedious days, during which the lake was working, dragged themselves away after witnessing now and then a futile attempt made by us to catch something, but the tedium and monotony were confuted to the slowness of the fishing, otherwise there was enough of novelty in cruising upon new waters and enough of enjoyment in the entertainments and receptions tendered us by the Colonel and Captain in the shade in the rear of their camp, to make us wish that each day might repeat itself. There were, too, vast amounts of information gathered concerning lakes only a day's journey to the north, where the entering streams were alive with trout and around which deer could be daily seen. One of these, a lake seven miles in length, interspersed with islands and nine miles distant from a human dwelling place, as described by an old hunter, so captivated us that full notes of how to reach it were taken for practical use in another summer.

Our outing was within two weeks of the end, when a violent storm of wind and rain at last cleared the lake, and the blow disappeared to return no more. For some time, Sabattis had been anxious to make a trip with us to the salmon trout grounds, nine or ten miles up the lake, but we had been reluctant to undergo the labor of a long day on the water with the lake in a condition which made us hopeless of success. But, just as the lake was clearing itself of the last of the blow, we were awakened early one morning by a light footfall in the tent, and there stood the younger of the two Indian boys beside our bunk. He had been sent by Sabattis to tell us that the former would be ready in half an hour to start for the trout water, that the bait (live perch) had been caught, and to ask us if we would go with him. Telling him to ask his father to wait for us at the point by Griffin Island, we hurried up a breakfast, hustled a launch into the boat, and with trolling lines, sinkers and A. N. C.'s two trout gangs, we put off. The old man was waiting for us at the point and the two boats, as close beside each other as the sweep of the oars would permit, took their way up the lake. The air was full of that indescribable softness which, with the haze on the far off forest, marks the Indian summer, though it was hardly past the middle of August. The southern shore was fringed with pine, between which could be seen an occasional clearing which was aglow with the scarlet of the sumac, tempered with the buff of the golden rod, and the dusky purple of the swamp oak stood out against a background of gray solemn hills.

It was just the day to listen to traditions and legends, and they were soon thronging about us. Again Sabattis unlocked his treasures and laid them at our feet. Here, near the ruins of the old Indian trading port, from which twenty-five years ago he had been taken to be tried for murder, John Brass had buried his gold in haste, together with his bloody fingers which he had severed from his hand, that they might keep his wealth in their unhallowed grasp after he had mounted the scaffold. On one of the Three Brothers, tradition had located another spot cursed with the white man's desire to preserve his gold beyond the grave, while beside a rock, opposite the entrance to Cady's Bay, strange and hellish forms made nightly rounds—infernal patrolmen guarding treasures to which the earth unfettered refused her keeping. And strange to relate, the old man was eager to learn some spell to which wraith and goblin damned would succumb, and by which the treasures in their keeping would be revealed and surrendered to him. Leaning over the gunwale of his boat and looking us in the face, he anxiously waited for our answer to his question whether, we in the States, had any means of determining the exact spot where money was buried. We could only suggest the witch hazel waud, but he was already versed in the my-teries of its use, and with a long drawn sigh turned toward the stern.

By the time we had reached Salmon Point, which Sabattis told us was the name of a long strip of land running out into the lake on the southern shore, it was after ten o'clock and here, at his suggestion, we arranged the troll. A fine lot of lively perch were put into the boat and with one of these, about four inches long, fastened on the gang, we made our maiden effort to take a lake trout. We moved along slowly for half a mile with two hundred feet of line astern which, with its sinkers, kept the boat within six or eight feet of the bottom in a depth of about eighty feet of water. In the middle of a broad open sheet of water, our first strike came, a strong firm tug. The line was brought rapidly in hand over hand, the weight at the end increasing with each

successive pull, until within twenty feet of the boat, when there was a wild dash downward, a scurrying around beneath us, a splash alongside, and a small-mouth bass that weighed three pounds and a half was whisked over the side into the boat. We felt all the disgust natural to the occasion but kept the fish. By the time the line had been paid out again we felt another tug, this time we were less confident, still we hoped for the best. But we were again to suffer disappointment, for a two pound small-mouth bass crushed our expectations. Two more were soon added to our catch, and after pulling half a mile further, the gang began to gather moss, when we turned about and went back over the course. No strikes of any kind followed and, after trying the water in every direction for an hour, we declared the trout experiment at an end. We found Sabattis off the point, where he had lost a spoon while trolling in the same depth as ourselves, and he showed us the end of the gimp which he said had been cut by a trout. We trolled through the shallow water to the bridge, taking a couple of bass on our way and then, hot, hungry and disappointed, we ran under one of the wide wooden spans where, tying up in the shadow, we spread our lunch on the seats. Soon a wagon rumbled over our heads, sending down a shower of dirt, and in a flash we were back through half a life to a scene five hundred miles away when, in one of those glorious "noonspells," we sat under the old bridge below the school house and divided the bread from our dinner pail with the red-fins which were darting in and out among the stones, and listening to the thump above us from the wheels of the farm wagons and the scuffling of the bare feet over the planks by the boys, running races down the dusty road. The cobwebs floated above us in all their dusky splendor, the damp odor from the water soaked timbers filled the brain with their ancient incense, the boyish eagerness and wonderings of twelve were thronging about us again, when a bearded face looked back into our own from the water and stayed them all.

By the time we had finished our lunch, a good breeze had sprung up from the west which, sweeping under the bridge, soon made us willing to drift out into the sunshine. As the wind increased, the sail was hoisted and Sabattis was for the moment forgotten as we began to make rapid headway down the lake. Suddenly our discourtesy in leaving the old man alone to pull six weary miles to camp smote us hard, and we rounded to and waited for him. He was pulling lustily twenty rods astern, with a determination apparent in his stroke to be left no further behind than his strong muscles could prevent. When he came up, we took him in tow, and he was soon stretched out fast asleep in the stern of his boat with the bright sun beating on his head and the breeze blowing his long hair about his face. Through the dreamy mellow afternoon we winged our course with well filled sail along the wooded slopes, through narrow channels and past green islands, without a word to break the silence. At the foot of the mast, with the end of the sheet rope in his hand which he had given a single hitch around the cleat at our feet, George was wandering in the same shadowy land as his compeer in the boat behind, while the master held the tiller and kept the course. The boat of Sabattis, with its long low line and no hand to steer, headed first to the right then to the left with sudden jerks until we shortened the line and drew his craft with the bow close to the stern of our boat, and thus we made our homeward way like "The dead steered by the dumb going upward with the flood."

It took repeated shouts to rouse Sabattis when we had reached the foot of Griffin Island and cast his boat loose for him to make his way to his cabin in the little bay around the point. Our day had been one of disappointment, for we had hoped to honor our trout gang and its donor with a catch of which we might be proud. But "fisherman's luck," that misfortune which comes to us all, had overshadowed us and in the gloom of defeat we drew up to our landing. It needed but a single drop more to fill our cup of humiliation and bad humor to the brim, and we found it awaiting us in camp. It was the inevitable which always comes about the same time in each year to render the balance of our outing a period of gloomy anticipation. There was a summons in which the limit to our camping was fixed, and we were to move on thenceforth, day by day, to the doom which was staring us in the face. The dream which had disturbed us at the beginning of the camp was soon to be realized, a blast like that from the trumpet of the Gideonite shattered the enchanted wall which we had reared about us, and through the broken battlements came to our ears the coarse din of toil.

WAWAYANDA.

Camp Fire Flickerings.

"That reminds me."

180.

DOCTOR R and myself were duck shooting from a double battery under the north shore of the Great South Bay, near Patchogue. The Doctor observed a single broad-bill coming up from the leeward and said, "Lie low and see your uncle roll this fellow over." On he came and at the same time came another on my left which the Doctor did not see. I killed the one on my left, while the Doctor emptied both barrels at the one he was to knock over. Recovering from his surprise at seeing his bird rapidly disappearing and seeing the water covered with feathers, he slapped me on the back and said, "Look at the feather bed I knocked out of that fellow." Imagine his surprise and consternation when I pointed to my dead bird and told him that was where his feather bed came from.

NEW YORK

181.

"Governor" David S. Crandall, formerly editor of the Lockport *Courier* and for many years well known in Western New York, used to tell a story of the great meteoric shower, which fell, I think, in November, 1833. He was at that time living temporarily upon a farm which he had purchased, lying at a few miles' distance from Lockport; and among his dependents was a chore boy twelve or fourteen years old. On the night referred to Mr. Crandall was engaged in writing after the rest of the family had retired, and saw through the window the shower of meteors. He aroused his wife, and then the boy, requesting them to come to the door, where the boy was at first struck dumb with astonishment, thinking that all the stars in heaven were falling through space. After a little he turned to the North star, and his courage returned. "By gosh!" he shouted, "the old 'dipper' hangs on yet, don't she?"

WILD ANIMALS IN CONFINEMENT.

IT is a well known fact that the grounds at Central Park now devoted to zoological purposes were chosen merely as a makeshift, not for their adaptability. It is a small cause for wonder, then, that little interest is felt by lovers of natural history in that collection. The curator, Mr. Conkling, is unremitting in his efforts to make a zoological collection worthy of New York's intelligence, but he is so hampered by a contention of interests that his efforts are rendered almost abortive. Property owners on Fifth avenue have asked the Board of Apportionment to refuse to grant any money for the purpose of maintaining the menagerie, on the ground that it is a nuisance. But the true objections to the menagerie are not the selfish ones brought by the Fifth avenue property owners. They are that it is a poor and utterly incomplete collection, and is badly situated for its purposes. The menagerie was started merely as a makeshift, and has grown to its present proportions in a more or less accidental way, and was put where it is without the intention of there establishing a great and permanent zoological garden. Hence for years past the necessity for removing the menagerie to some more suitable situation has been recognized by everybody familiar with the Park, and having a just conception of what a zoological collection ought to be.

There is at present little hope of establishing a zoological garden at all worthy of New York. That there is an inherent love of natural history in our people no one who has observed their tastes will attempt to deny. No show or place of amusement that ever New York held has attracted so many persons as that menagerie attracts on every fine day. "We have from 80,000 to 100,000 visitors on Sunday," says Superintendent Conkling. If, therefore, so many people are interested in the rather "mangy collection of beasts" now exhibited, how would it be if we had a zoological garden worthy of the name, comparable, for instance, with that in London, or even with that in Philadelphia?

I have spent considerable time in the Central Park menagerie studying the various habits and characteristics of the animals under confinement. Of the 600 different species in the menagerie not one is of foreign birth. They are all to the manor born. First in point of interest is the deer. To the hunter who has seen them in the pride of their liberty, bounding recklessly through valleys and up and down mountain sides, the deer in captivity presents a sorry picture.

"Do they retain many of their native characteristics in confinement?" I asked of Superintendent Conkling. "Well, yes," he replied, thoughtfully. "Deer are naturally voracious animals. In their wild state they are constantly feeding and never seem to satisfy their hunger. Here in confinement they soon lose that characteristic. They get accustomed to a fixed routine and look for their food at a certain time as regularly as mankind. Being herbivorous we provide them with a diet of that class. Our native deer do not stand captivity as well as those of foreign origin. I can account for this only on the ground that in their wild state they obtain certain herbs that are unknown to us. Deprived of them they become slab-sided and lanky and seldom live more than four or five years. I have noticed how vastly different in point of hardiness are our native and the fallow or park deer, of England. The latter have become so thoroughly domesticated that captivity and confinement are a second nature to them. They thrive in paddocks on such food as we give them. I have known some of them to live fifteen years."

"Do you think it possible to wholly change the habits of any wild animal by captivity so that in the course of time they will become thoroughly domestic in all their characteristics?"

"It has been done in the case of the fallow deer, but I am inclined to think that it was an easy matter to do so. They are essentially a park deer. From time immemorial they have been confined in the immense parks owned by wealthy noblemen in Europe. I fancy it would be difficult to find out anything about their habits in a wild state, if in fact they ever were in that condition. Our native deer do not take kindly to captivity any more than do grizzly bears, wolves, panthers, and other animals of very wild natures. Another peculiarity about deer that I have noticed is that they do not breed as readily in captivity as they do in their wild state. Observation has taught us that this is the fault of the bucks more than the does. The former seem to lose their amative spirit. Still we succeed in breeding a good many deer. A doe in captivity will generally produce one fawn at a birth when she is three years old, and two frequently thereafter; when wild, they breed at two years of age, but this is rarely the case when in captivity. Experience has shown that a doe is not strong enough to be allowed to breed at two years of age. If allowed to, she would undoubtedly drop a weak fawn—one not likely to live long. Most of the fawns that have been born in the menagerie, came between June and September at no stated intervals. One of the doe's most striking characteristics is her strong affection for her young, and she will defend it with great energy. Just before the birth of the fawn she will seek out some quiet spot secure from observation, and after it is dropped, she will carefully conceal it by covering it over with leaves. This precaution is taken to protect her young from the buck, who evinces a strange disposition to kill the young fawn as soon as it is born if he can get at it, he seems to take a fiendish delight in trampling and goring it to death. At the end of about four months, if the fawn survives for that time, the parent doe weans him and makes him shift for himself.

"A fully developed bear captured and brought into captivity here is very easily subdued. Bears are very intelligent animals, and they readily succumb to civilizing influences. All wild animals, captured when full grown, are always more easily tamed than those born and reared in the menagerie. The youngsters inherit all the savage characteristics of their parents, and seem to look upon their civilized surroundings as part of their natural state. Civilization, therefore, does not have the same subduing influence on their natures as it does on those accustomed to the forests. This has been our experience with all the various animals, with the exception of bears. We have had all kinds of animals born in this menagerie except them. However, I expect to be able to tell a different story, now that we have got the FOREST AND STREAM's pair of grizzlies in our care. They'll breed, I feel sure. In their wild state bears hibernate all winter, subsist

ing, as far as we know, on a very slim allowance of food. While under our care they lose that habit, and feed right along all winter as voraciously as any of the rest of the animals. Little difference is made in the habits of wolves, foxes, coons and such animals. Foxes and wolves born in captivity, however, seldom thrive well. Rarely one of them is born without some disease, the most prevalent form being that known as rachitis. Even if they are not afflicted with this disorder few are perfect in their formation, being knock-kneed and otherwise deformed. Those born with rachitis, which, by the by, is a scrofulous affection of the spine, rarely attain a full growth. The disease is generally fatal."

The one animal in all the strange collection that is more likely to stir unpleasant recollections is the once proud but now almost extinct lord of the plains of the West—the buffalo. I never could understand why buffalo killing should be the sport and toy of every fledgling who could straddle a horse or fire a gun. Why those noble animals should have been allowed to be slaughtered as ruthlessly and as pitilessly as one would kill a biting, snapping cur on the roadside, is one of those things which I will never be able to find out. Said Mr. Conklin, "Scarcely a week passes by that I do not receive a letter from some showman asking me the price of the buffaloes that we have here in the menagerie. They want to buy them to exhibit them as curiosities, for such they have become." The prices which showmen are willing to pay for buffaloes for circus purposes depends entirely upon the age and condition of the animal; strange to say, that no matter how high the price they may offer, owners of the animals are loath to accept, for they realize that in the present condition of things it will be difficult to replace them. At the present time in the Central Park one buffalo calf mopes about his cage unconscious of the importance which is attached to his existence in this bustling world. He is as carefully tended as though he was worth his weight in gold dollars. Buffalo breed readily in captivity, their period of gestation being the same as that of our domestic cattle, with which they naturally assimilate.

As stated already, every animal now in the Central Park menagerie, with perhaps one or two exceptions, was born there. Experience has shown that those of "foreign origin" are longer lived, and harder than the animals of this country. The record of the deers is one that will excite more regret than other records. In two pages of the ledger which I examined I found that during one year there had been fifteen deaths as against twenty-six births. Out of all the deaths only five were the result of natural causes, the remainder being principally due to tramp dogs, which infest the park in great numbers during the summer months. Deer have a mortal fear of dogs, and a great many of them have been actually frightened to death by curs which have attacked them in their cramped quarters. The park police and the keepers of the menagerie are not slow in shooting all dogs they find at large about the park. Notwithstanding their vigilance in this regard, the prowling canines occasionally succeed in evading them.

Such a zoological garden as New York requires should be put in a park wholly or chiefly devoted to it alone. There the necessary space for a complete collection, properly organized and classified, can be obtained, and the garden can receive the attention as an independent enterprise which its development requires. It would not be difficult to select such a park among those which are subsidiary to Central Park, and there, with the present menagerie as a basis, we could in time build up a zoological garden which would become one of the grandest and most instructive resorts on Manhattan Island. There is a latent disposition in the minds of some of our wealthiest and most public-spirited citizens to establish such an institution, and agitation of the matter is, to my mind, the most feasible method of stirring them up to immediate action. What worthier journal than the *FOREST AND STREAM* can be found to engage in this worthy work? TOM FRANCIS DAGGETT

A CAMP HUNT IN MISSOURI.—II.

IN recounting the incidents of a hunting excursion one must necessarily confine himself, in a large measure, to events witnessed or participated in by himself, and this must account for the frequent use of the personal pronoun "I" in these letters. Every hunter who ever attempted to recount the exploits of a day's shooting will understand this.

The second day of the hunt, Tuesday, Mr. Rhea and Mr. Coger, equipped with boat and reel and troll, set out for an interview with the finny tribe, said to disport themselves in the waters of a neighboring lake. They were the happiest men in camp that night. And well they might be, for as the dusk of the evening brought the straggling and hungry hunters into camp they displayed to our delighted eyes one of the largest and handsomest strings of game fish that ever rewarded the skill and labor of two fishermen under similar circumstances. A few days afterward they added new laurels to their well-earned reputation as fishermen, and to our supplies a still larger and handsomer string of the wide-mouthed shining beauties. They had the satisfaction of presenting to Col. Deal, who was with us, to take home with him, a string of six black bass, or trout, as we call them, the least of which was estimated to weigh four pounds. These were selected from a large number of beautiful fish of smaller size. But Coger was not happy. He had been beaten, fairly beaten, at his own game that day. He had hooked and safely landed in the boat, the famous "biggest trout of the season." There he lay, the monarch of the lake, with glaring eyes, and fins erect, captured at last. A splendid struggle he had made for life and liberty, but alas, the skill of the great fisherman was too much for him, and there he was, a prize worth a hundred of smaller size. A sportsman knows the worth of such a catch. Coger knew, and in exultant triumph he raises his great catch up by the line that he may realize his grand proportions. But the old fish was caught, not conquered. He was game to the last, and now's the time to teach his captor a little trick all his own. A mighty flounce sends him clear of the hook, clear of the boat, and as the waters of the lake close over him Mr. Coger begins to think he had let something go. And he had.

Mr. C. E. Burton, of the firm of C. E. Burton & Co., the great deer killer, whose memory haunts the bucks and does of Lawrence county, concluded I was lucky with turkeys,

and he would go with me on a turkey hunt, while Coger tackled the fish. So off we set on Tuesday morning to the place where I had killed the four turkeys the evening before. We soon found the one I had left in the bush. Sending my dog Jo ahead on a scout, we soon heard the alarm signal, *put, put, put*, of the remnant of the flock, as the dog rushed among them and scattered them. That is the time for a turkey hunter to be on the alert and use his eyes, for a good turkey dog will nearly always chase one or more of the startled birds in range of the gun. A fine fellow flew past us, but too far to shoot. I marked his course quickly, and turned just in time to land at the feet of Mr. Burton another that was flying almost directly toward us. Experience or something else had taught the others a lesson, and they would not answer to call. We spent afterward several hours in a fruitless hunt. Jo ranged the woods far and near almost with the speed of a greyhound, and crossed and recrossed almost every acre of the forest for miles without flushing a single turkey. We were returning disheartened when, not far from the place where we had killed the one in the morning, the dog suddenly ran into a small flock of four or five. One flew by us, but too far. As we were watching its course another came almost over us. This I brought down with a charge of No. 7 shot that I had put in to shoot a squirrel. Mr. B. declared I was a lucky man. I walked to where the dead turkey lay without reloading—an unfortunate act, for just then the dog routed another, that came flying toward us. I happened to be under a leafy bush, and fired a load of buckshot by guess through the leaves and missed. Just then Mr. B. fired also and missed. The turkey turned through an opening in the trees and passed in a clear space not more than thirty yards from us, offering a beautiful shot. My gun was not loaded. With surprise I asked Mr. B. why he did not kill it with his second barrel. His reply was, "I had in a load of buckshot." From the fact that he had carried buckshot to shoot turkeys with, I must conclude that seeing so many turkeys must have given him what hunters call the "buck ague."

This conclusion is strengthened by the fact that subsequent events developed that Mr. B. is subject to "buck ague" in the woods. He was caught in the very act with the chill on him. Mr. B. had entertained us with some marvelous yarns of his exploits in deer killing in Lawrence county. He told of a little deer that ran by him on one occasion, and of his firing his murderous gun at it as it passed, and of some woodsmen actually finding the carcass of a dead deer in woods some miles from the fatal spot some months afterward. He carried with him then the gun of the bloody record. We determined to get up a deer drive for Mr. Burton, and some of the young fellows concluded to watch him and see how he did it. Marshaling a few coon dogs from the neighborhood, we all took stands around an old "deadening," the lurking place of a few buck rabbits, while Mr. Burton was stationed where the buck was most sure to come out. A native was sent in to make the drive. Just before completing the drive a bark or two from the coon dogs put everybody on the alert for the exit of the buck. The eyes of the watchers were on the great deer killer of Lawrence county. With a quick glance around he drew from his pockets a bottle of quinine and hastily swallowing a heavy dose, is ready for the buck, with a dead thing on the buck ague. Around the camp fires that night we enjoyed no little sport at the expense of Mr. Burton and his quinine remedy for buck ague.

By the way, the party got the laugh on your correspondent on one occasion. There was a general dread among the less experienced of the party in regard to getting lost in the interminable swamps where much of the hunting was done. This feeling was not shared by me, as a long experience had made me feel pretty safe in the woods, particularly as I make it a rule, in unknown woods, to hunt by courses and landmarks. We were camped near a road that ran almost due north and south for many miles and was the only road of any consequence in the country. I boldly asserted that no one need fear getting lost if he would hunt in reference to that road. If he was to the west of the road, by traveling directly east he would certainly strike the road, and if hunting on the east of the road a west course would necessarily bring him to the road. A compass, the sun or the stars would readily give one the points of the compass. It frequently happened, however, that night and darkness would overtake belated members of the party out hunting, and signal guns were fired at camp for their benefit. Two of the party lost their course one night, and the Mississippi River only convinced them they were traveling east instead of west. They got beyond the sound of our signal guns. The party accused me of making my gun hotter one evening firing distress signals than I ever made it shooting at game. Three of us had gone up the road about three miles from camp one cold, cloudy afternoon, on a turkey hunt. Leaving my companions near the road, I followed a dim path down into a dense forest to the west of the road. This forest was known to extend, without a human habitation, for ten or fifteen miles. After following the path about a mile, my dog struck the trail of a flock of turkeys, as I supposed, and ran off at right angles to the path I was following. In momentary expectation of getting a shot at the turkeys, I followed the course the dog had taken for some distance, and not seeing them, I turned to retrace my steps to the path I had left.

It was getting late, and thinking I could save time by it I turned my course so as to strike the path some three or four hundred yards nearer the main road than where I left it. Owing to the darkness of the evening, the dimness of the path and the fresh fallen leaves that covered it in places, I crossed the path without knowing it. I had failed to take a compass with me and the sky was obscured by thick clouds. It was cold and night rapidly approaching.

In my search for the path I had left I came upon a trap set for wild hogs. Despairing of finding the path, I set out for the road where I had left my two companions. I knew I was about a mile or mile and a half west of the road and chose, as I supposed, a course due east.

After a rapid walk of half an hour as near due east as I could judge without compass or sun or stars, I found myself back again at that identical hog trap. I had made a circuit of perhaps two miles and came back to the very spot I started from. I recognized the situation at once. I was not lost; of course I was not. I knew right where I was, but concluded I would let my friends know also, and I wasted more ammunition right there letting my friends know where I was than I wasted in all the hunt besides. A cold rainy night in an unknown swamp, miles from any human habitation, is not an inviting prospect.

I did not venture into that swamp another cloudy day without a pocket compass. H. E. JONES.

Nashville, Tennessee.

HUNTING AT ARMY POSTS.

ABOUT a month ago a brief note was sent from this office to several of the outlying posts of the regular army, asking for information about the use of the Springfield shotgun, which is issued for use by the men in their leisure hours. The object of the inquiry was to see how far these guns were successful in the purpose of their manufacture and issue in keeping the company and post larder well supplied with game delicacies in season.

The responses from the army posts have been general and prompt, and show that the members of Uncle Sam's scattered frontier patrol force have not failed to take advantage of the opportunities for field sport thrown in their way.

The letters speak best for themselves, and the few we are enabled to give in this issue show that from the Canadian to the Mexican border there is always some manner of healthful exhilarating sport to be had:

Editor Forest and Stream:

Yours of the 9th is just received. Though by dint of hard work the more energetic of us manage to make fair bags in a season, this can hardly be called a game country. The whole vast expanse is prairie, more or less broken with cover for game only in the sparsely timbered bottom of the Missouri River, or in the yet more sparsely timbered creeks and ravines. A few red deer inhabit these timbered bottoms with the habits of a rabbit, lying perdu all day, feeding at night; not when disturbed running away with vigorous bounds, but sneaking off like a rabbit or wolf unnoticed. It is only by rarest good luck that any of these are brought to bag, though some of our indefatigable youngsters actually walk them down where the snow is deep.

We have the lynx, wildcat, wolf, swift or prairie fox, badger and skunk, and I have seen the skins of one or two raccoons offered for sale by Indians, but these predatory animals are less numerous here than in any wild portion of our country in which I have ever served. We have but one indigenous game bird, the sharp-tailed grouse (*Pediocetes phasianellus*). In August and September it gives the most perfect sport, lying well to the dog and acting in all respects like its cousin, the pinnated grouse. By Oct. 1 they begin to pack, gather in immense flocks, sometimes of hundreds, are very wild and will not lie to the dog. When snow covers their favorite feeding grounds they go to the bottoms and eke out an existence on cedar berries and the buds of the bullberry. Now they are great perchers and nearly all that are bagged are ignominiously potted from trees. Yes, I do it. It is a most toothsome bird, and if he will insist on sticking to the treetops instead of the grass he must pay the penalty. Their numbers of course depends on the condition of weather during the breeding season. In 1885 my bag was 726 and in my hunting book is this note: "It is estimated that over six thousand grouse were killed by the troops at Fort Sully between Aug. 1 and Dec. 31. The company hunters came in loaded down every day, yet there is no apparent diminution of their number." 1885 was a bad wet season. My bag dwindled to 358 and the company hunters came in usually with a round 0.

It is a glorious country for rabbits, but a man on foot might tramp the year round without seeing one. They live in the rosebush thickets two to four feet in height. On an alarm they dart away like lightning. I developed them accidentally by riding into such a thicket on horseback. From that "coin of vantage" their movements could be seen, and if any man wants to test his capacity as a shot, I recommend him to try this game. It is the very perfection of snap shooting. The little brown streak takes twenty courses in a minute, and to bag him you must have a quick eye, a steady hand and a good horse. My rabbit bag of 1884 was 201, of 1885, only 91. The season closes so quickly that we have a mere suspicion of duck shooting. In 1884 I bagged but twelve, in 1885 but five, and this takes in both the spring and fall shooting. The field plover arrives here about May 1 in fine condition, but one has hardly bagged a few dozen when he finds females with eggs already formed. No sooner do they get through their duties as parents than they clear out. By the middle of August no plover is to be seen. Curlew breed about us, but being scarcely eatable they are rarely shot at.

During this last fall and owing entirely to the immense emigration to this section of country, a few pinnated grouse have been bagged, and to the great joy of all our sportsmen, a covey of quail has located itself in the bottom below us. With the advance of civilization we may have better sport.

RICHARD I. DODGE, Colonel 11th Infantry.

FORT SULLY, Dak. Ter., Jan. 21.

Editor Forest and Stream:

In answer to your letter of Jan. 9, I will state that I have only been here since the 14th day of June last, the garrison now here relieving that of the Twentieth Infantry on the date given, and consequently am unable to give as correct and detailed account as I would wish. Early in the season I made an endeavor to find out all I could about the game in this vicinity in order to write to a friend in Chicago that it would pay him to make me a visit, he was anxious to know all about the larger game. I could not find at that time that such game was in sufficient quantities in the immediate vicinity of the post, to warrant my writing him that a successful hunting trip, such as he wanted, could be made near this place. During the winter several hunting parties have been out, but with little success. One man though, belonging to Company I, Eighteenth Infantry, who either understands hunting deer or is more fortunate than others, has been quite successful so far, killing seven deer. Citizens who live at a distance from here have kept this place very well supplied with venison. Wild turkeys are found in large quantities at a distance from the post, but seem rather hard to get as the supply has not been well kept up. Chickens this year are very scarce, none been brought in that I know of, nor have I seen one. Ducks are plentiful here and many have been killed. Quail are in abundance.

The shotguns referred to in your letter, so far as my company is concerned, are in constant use, and much of the smaller game is bagged with them. CARROLL H. PORTER, Captain 18th Infantry, Commanding Post.

FORT GIBSON, Ind. Ter., Jan. 24.

Editor Forest and Stream:

I take great pleasure in replying to your request of the 9th inst., but as I have only lately been assigned to this post my information is derived, not practical. My first hunt is to take place day after to-morrow.

The men inform me that there is quite a large supply of small game here. The list includes quail, both California and Messina; plover, meadow lark, curlew, rabbits, cottontailed and jack, etc.; and in large game we have deer, black-

tailed and white-tailed; antelope, mountain lion, black bear, wild pig, etc.

South of us, about seventy miles, is a mountainous "no man's land," through which Indians from both sides of the Rio Grande hunt; and although dangerous to hunt there in small parties, it pays very well to do so, provided, as above hinted, you can protect yourself. We have a party out there at the present time.

I notice you wish a statement as to merits of the Springfield shotgun. It is a very good gun for a single-loader, but in our troop not much used, as we have four double-barreled guns of good make, which the men prefer to use, as a general rule.

For large game we use the carbine habitually. Personally, I prefer the carbine as a hunting weapon, as it is very good practice for its more serious use.

GEO. H. MORGAN,

First Lieut. 3d Cavalry, Commanding Post.

CAMP PENA COLORADO, TEX., Jan. 26.

Editor Forest and Stream:

In reply to your communication of the 9th inst., I would respectfully state there is an abundance of deer, turkey, geese, ducks, blue quail, etc., around here in their season, and the shotguns referred to are used extensively by the whole command.

E. H. LISCUM,

Captain 19th Infantry, Commanding.

FORT RINGGOLD, TEX., Jan. 23.

Editor Forest and Stream:

Your letter of the 9th inst. has just been received, and in reply I have the honor to state that game—wildfowl and quail—is plentiful in this neighborhood, and the men in spare time bring in a good quantity. The Springfield shotguns are used when double-barreled guns of larger bore cannot be obtained. The guns issued not carrying sufficient charge.

J. H. BRADFORD,

Captain 19th Infantry, Commanding Post.

FORT BROWN, TEX., Jan. 28.

Editor Forest and Stream:

Your note of 9th inst. is at hand, and in reply would state that the large game, such as deer and antelope, have almost entirely disappeared. A few deer have been killed in the vicinity of the post, and they by hunters and trappers. The only small game we have are ducks (mallard and teal) and the willow grouse. The ducks are not very plenty, and we only get them during the fall flight south. The grouse are with us the year round, and occasionally give good sport. This part of Nebraska is filling up so rapidly with settlers and farmers that I believe the grouse will increase. The corn, wheat and oats fields give the young birds cover from hawks and other destroyers of small game. The Springfield shotgun issued by the Government to the troops is used by the enlisted men almost exclusively, and with fair success. For a person who has been accustomed to an 8 $\frac{1}{2}$ -pound Scott double gun the Springfield would not be a success. The Springfield is a better gun for the enlisted men, for the reason that few of them are good wing-shots.

Jack rabbits and the small bush rabbits are found in some places along the streams. The bush rabbits are plenty. There are no quail in this part of Nebraska.

D.
FORT ROBINSON, NEB., Jan. 26.

Editor Forest and Stream:

Replying to your letter of 9th inst., I would state that there is plenty of game to be had in this region, such as deer, prairie chicken, wild geese and ducks. The Springfield shotgun is much used, and is good at short distance only. The rifle is mostly used in deer hunting. Supply of deer and chickens unlimited.

J. N. G. WHISTLER,

FORT BUFORD, D. T., Jan. 28. Colonel 15th Infantry, Com'd'g.

Editor Forest and Stream:

Yours of Jan. 9 to hand this morning. There is no game on Mackinac Island, or in the immediate vicinity of this post.

GEO. K. BRADY, Brevet Lieut.-Colonel.

FORT MACKINAC, MICH., Jan. 20.

Editor Forest and Stream:

The commanding officer directs me to acknowledge the receipt of your communication of the 9th inst., and in reply to say that the supply of game in this immediate vicinity is limited to a few rabbits, and in the spring and fall to migratory ducks. The Springfield shotguns are used frequently by the men, and they seem to meet with fair success in their use.

E. B. ROBERTSON,

First Lieutenant and Adjutant, 9th Infantry.

FORT D. A. RUSSELL, WYOMING, Jan. 21.

Editor Forest and Stream:

In reply to your favor I would say that game in the neighborhood of this post consists of deer (common red), antelope, jack rabbit, cotton-tail rabbit (a variety of hare), geese, ducks, prairie chickens, plover and snipe. Elk and buffalo have practically disappeared.

In their season ducks, prairie chickens and plover are abundant and furnish sport and an agreeable change in the army ration for all.

Wild geese in immense numbers frequent the wheat fields of Burleigh county, on the east side of the river (we are on the west side) and a few drift over the post during the fall months.

The Springfield breechloading, single-barrel shotgun has been furnished to the enlisted men of the army for hunting purposes, and they do good execution. The Parker, however, is the general favorite among sportsmen out this way. The writer has used a number of different makes, but has found the Parker the most satisfactory for general shooting.

Setters are generally employed—Gordons, red Irish and English. A good retriever is a necessity in duck season, and is often extremely convenient during the early chicken shooting, as the wounded birds can readily conceal themselves in the thick prairie grasses found everywhere in the cooleys, ravines and dry creek bottoms, which are the haunts of the coveys in the early autumn. Later in the season the chickens frequent wheat stubbles and "sod" cornfields and the berry patches along creeks and springy runs.

The writer was surprised one day last autumn, while wading through a reedy bayou (an old bed of the Missouri River), by finding evidence of beaver. Afterward several houses, with a winter's supply of food piled up in the creek near by, were found. Very few of these animals are left in this section of the country. Raccoons are beginning to put in an appearance, and an attempt has been made to introduce

quail. It is very doubtful whether they can survive the severe winters.

Owing to the thick growth of willows along the banks of the Missouri River, it is very difficult to get at deer, and if dogs are not used, they will probably be abundant for many years to come, though high water is apt to drive them to the bluffs in the spring, and they are then an easy prey for lawless pot-hunters. It is to be hoped that with the admission of the Territory as a State, more stringent game laws will be adopted and faithfully executed.

Ducks and wild geese are shot in passes generally, though often boats are used on the lakes and wading done in the wet marshes. Mallards, teal, widgeons, scaup, redheads, spoonbills and other varieties are met with, but the two first named make the longest stops with us and afford the most sport. Marvelous stories are told by many of our sportsmen of the wagonloads of ducks killed every fall at Long Lake, which is about thirty miles southeast of the post; but the writer not being a wagonload sportsman cannot speak of his own knowledge on that subject; he can vouch, however, for the satisfactoriness of the early fall duck shooting in this neighborhood. The air is dry, clear and bracing, the scenery varied and enjoyable, the birds plenty. What more could be desired?

QUINCE SABLE.

FORT ABRAHAM LINCOLN, D. T., Jan. 25.

THE GAL FOR ME.

DANVIS, Jan. 3, 1886.—*Editor Forest and Stream:* Mrs. Lovel's rag bag lately gave forth the inclosed. S. L. appears to have been singing with some rhyme and more reason, to himself in the woods, for the lines are scrawled in pencil on the margin of a crumpled copy of the *Vermont* that he had evidently carried in his pocket for gun wadding. Yours truly, H. MUMFOS.

THE gal that treats my dawg aright.

Oh, she's the gal for me!

When I come off the hills las' night,

Consid'able tired, for me,

And my dawg, the same was he,

I saundered into 'Pepperells'

An' sot ri' daown mongst supper smells

To rest me for awhile.

'Twas there the slickest gal I see

An' she hed jes' the cutest smile!

An' she shed it ont'er me.

On ter the crane the sump pot hung

A bubblin' merrily,

An' as towards her it she swung

So low au' sweet a rhyme she sung,

A kitchin saint seemed she,

With lips an' cheeks like piny blows,

An' hair like yaller silk,

An' pas' describin' eyes an' nose,

An' when she fed me sump an' milk,

Till heart and stomack was full 's a bee

O' sweets in a July basswood tree,

Then thinks sez I to myself sez I,

"You air the gal o' the world for me!"

Jes' then ol' Drive come sneakin' in,

An' curled hisself the fire beside,

An' she commit a weeked sin—

She kicked him with her poofy foot

An' cried, "Git out, you nasty coot!"

Haum' dawgs I never could abide."

Kicked the dawg 't hes fellered wi' me

Till it aint me an' him, but we!

Then thinks sez I to myself sez I,

"You ain't no gal for me. Good night!

If we was wed an' hed some chicks

You'd be a givin' them yer kicks

When you wa' n't kickin' of my haum';

An' if he an' them wa' n't handy raoun',

Like 's not you'd be a cuffin' me.

The gal that treats my dawg aright,

Oh, she's the gal for me."

Truly not yours,

S. L.

NOTES FROM SOUTHWESTERN KANSAS.

A VERY severe blizzard visited this section of the country recently and the telegraph has already told you of the great loss of human life in the western counties. Several hunting parties who went down into the Indian Territory before the blizzard, have been heard from, but there was no great suffering among them. They were prepared for severe weather. The great suffering occurred where parties were living in board shanties on claims, with no fuel except buffalo chips, and seventy-five to one hundred miles from railroad stations where coal was to be had; or parties out hunting claims, or movers without any shelter whatever but their wagons. The indications and predictions of an open winter induced many land hunters and home seekers to go into these western counties without protection against severe weather. The result is what might have been expected. The storm came in a few hours and woe to the animals being caught out doors. It was impossible to distinguish objects a few yards distant. Several persons who perished were found within a few yards of houses where they would have been in complete safety. It is but fair to say that such a blizzard is almost unknown in Kansas, which a residence of twenty years enables me to assert.

I fear the quail have nearly all perished. The farmers tell me they have found a large number dead. However, as they have not been much hunted the past season, enough may survive for seed. Quail are considered rather small game here. When a person wants to take a hunt he organizes a party of four or five. They hire a mau who owns a team and tent, and the party starts for the Territory. It is only twenty miles to the line, and they go as far as their inclination leads them. Our markets have been well supplied with deer and turkeys, though by far the greatest amount of game brought to this market is shipped to Kansas City and other points. Average number of market hunters have been down there all winter, and the amount of game shipped is immense. Game is very plentiful, though getting shy. Deer and turkey are the principal game, though bear are numerous in some sections.

It has been extensively advertised that Oklohoma is free from cattlemen and "boomers," and that even hunters are kept away by the military unless favored with a special permit. Now I am not a "boomer," nor the son of a boomer, but have a natural "nose for news," so a hunting party was interviewed upon their return from a two weeks' cruise in Oklohoma a few days ago. They said they had no difficulty in driving through the alleged military lines, and were not molested during their stay. They said "the brush was full

of boomers," but saw no permanent settlements. The country has been written up and written down owing to the circumstances under which the party describing it saw it. As this party described it as a regular Eden, it is to be presumed they had a good time.

What has become of the geese and ducks? A few years ago they were very plenty upon the Arkansas. This year not a quack nor a honk has been heard. TENDERFOOT.

WELLINGTON, KANSAS, Jan. 17.

THE LYMAN SIGHT.

Editor Forest and Stream:

In your paper of Jan. 21 "Backwoodsman" has said a little more about the middle sight, and has given a rule for using my rear sight. I have said enough on the middle sight question in the *FOREST AND STREAM* of Dec. 31, but I must object to this rule. "Backwoodsman's" system of aiming could only apply to rifles of the flattest trajectory, and with any rifle it would not give very accurate results at short distances. The center of the aperture of my rear sight has a degree of light which is about the same as the light which is present outside of the sight. This light gradually diminishes as the rim of the sight is approached, and quite near the rim the light is rather poor for aiming purposes; so that if a partridge is to "lose his head" the chances are that the shooter will have to fire more than once.

This center of stronger light partly explains why the eye takes care of itself when no attention is paid to the sight, and why it naturally finds the center of the aperture.

The ordinary small peep sight gives a degree of light which is several shades dimmer than the existing light outside of the sight. In the *FOREST AND STREAM* of Dec. 31 Mr. "I," in reply to "Backwoodsman," gives an experience with my sight which I was pleased to see, and it is, no doubt, the experience of many. The last remarks about aperture might, however, mislead. His mathematics are correct, but it will not do to figure from the $\frac{3}{4}$ of an inch, which is the full size of the aperture, for with an ordinary bead front sight one cannot aim nearer than $\frac{1}{8}$ of an inch from the rim of the rear sight to the center of the bead of the front sight, and in trying "Backwoodsman's" method at fifty yards, by aiming from one extreme of the aperture to the other, the bullet holes will be only about three inches apart. In other words, with the fixed purpose of getting as far away from the bullseye as possible with the front sight on, one cannot place the bullets further than about one and a half inches from the center of the bullseye.

As regards the point blank range for a hunting rifle I think that from fifty to seventy-five yards, depending on the trajectory of the rifle, is far enough for ordinary hunting.

Now, with any rifle sighted with a bead front sight and my rear sight and no middle sight in the way, shooting becomes a simpler matter than many suppose. All that is required is to see that the front sight is on the object and up to seventy yards no allowance need be made. For a longer shot hold the front sight a little high, and as the neck of the sight is not as wide as the bead, this sight will not cover enough of the object to interfere with the aim. For a long shot which is occasionally needed in hunting, elevate the rear sight by turning the knurled sleeve, which, if one is in a hurry, can be done instantly and without looking at it, or if there is time to look at the graduated sight stem any exact distance can be obtained.

WILLIAM LYMAN.

THE WEATHER AND THE BIRDS.

COLD weather and driving storms I am afraid have killed off the few quail that were left hereabouts last fall: Never during my shooting experience have I found so few of these birds as last season; the year before, a drive of a few miles would take me to fields where I could any day find several coveys; during two days hunting in November two of us with three good dogs found but a single flock after a faithful tramp over this same ground; so too in Maryland and Delaware; a week's shooting did not give us as many birds as we often bagged in a single day; how are we to account for this? The winter of 84 and 85 was not a severe one and a number of coveys were fed and cared for by my "game keepers"—the farmers boys—and came out all right in the spring; what became of them and their broods I cannot tell. Many wild turkeys were killed and more seen than during any former season. The timber men tell me that there are a great number of grouse in the woods.

SPICEWOOD.

CENTRALIA, PA., Feb. 6.

Editor Forest and Stream:

Farmers in this vicinity report the finding of whole coveys of quail frozen stiff, in some instances they say a half bushel measure could be filled without moving out of their tracks, showing that entire flocks must have been destroyed. Prairie chickens began flying south from Northern Kansas and Nebraska much earlier the past season than common, and the flight lasted much longer, showing that an unusual hard and cold winter could be looked for. A passenger reports seeing 2,500 sheep in one pile frozen to death, near Coolidge, in the western part of this State, also states that he saw 500 head of cattle frozen stiff in one cañon close to the Kansas line. When the cold weather annihilates stock in such numbers as the above, there is little hope for the small game. Farmers from Missouri report the quail all right where they have shelter like underbrush or timber, but those in hedges or caught on the prairies are all frozen. The blizzard has been extremely severe with us in this part of the Missouri Valley, and the ice is over two feet thick on the "Big Muddy," and teams, sleds, etc., have been crossing for three or four weeks with wood, freight, etc. The jack snipe season generally opens here about the 20th of March, but it will be much later this season on account of the large amount of frost in the ground, and no sign of a let up.

The writer will forward you a sample of the new Leavenworth pigeon, now being perfected and pronounced the grandest flying target of the age, by all sportsmen who have examined it.

W. C. H.

LEAVENWORTH, KAN., Feb. 6.

Editor Forest and Stream:

Quail were very plenty last fall, but owing to the severe winter so far they are suffering badly. I have as yet found none frozen to death, but know of several coveys that have been materially diminished in number by something.

Chickens are more numerous than ever and are living fat on the corn still in the fields. Rabbits plenty but snow too deep to hunt with any satisfaction. Sportsmen in this part of the State are not in favor of abolishing spring shooting.

C. B.

ANITA, IOWA, Feb. 1.

ON THE BUFFALO PLAINS.

LOST! What heights of misery, what depths of despair, what worlds of suffering can be crowded into that one little word; and yet we of the every-day world never realize what a stupendous word it is. To awaken to a full appreciation of what the word does and can mean, one needs actually to be lost just once—and one need not be very badly lost either—to have the word indelibly impressed upon his memory. The experience of the writer was not very tragic in its ending, nor of such a character as to cause him any great amount of suffering; but it was sufficient to teach the meaning of the word lost, and though more than ten years have come and gone since the event, each trifling circumstance connected with that event is as well remembered as if it occurred but yesterday.

It was in the summer of 1874. With two professional buffalo hunters I was traveling over the vast plains which stretch in an unbroken expanse from the Arkansas River on the south to the Republican on the north. This wide waste of country was once known as a desert, and to the tourist of this day it still presents some of the features as at that time; but many changes have taken place, and the country is fast becoming populated. Towns and villages are springing up, thrifty farms and fine ranches can be seen on all sides, where only ten years ago roamed the remnants of that mighty multitude of bison or buffalo.

No doubt there still exist some traces to prove to the doubtful ones that the buffalo did feed upon those plains in vast herds, though it may be hard to believe it. At the time I write of, the herds had been seriously diminished and there were but a few thousand left roaming over the country which but a short time before had been black with them. Great trails out into the hard, dry, gravelly soil to the depth of nearly two feet, made by bands on their journeyings, would prove much, and if that was not sufficient thousands upon thousands of carcasses, which had not yet fully decomposed, bore silent witness that here had been the great feeding ground of the buffalo. On many little knolls one could stand and within a radius of two or three hundred yards count over one hundred bleaching skeletons, many with some of the hair still upon the skull and legs, as the "skinner" only took the hide off as far as the knee joints and to the neck. When one states that these carcasses could be seen for hundreds of miles through Kansas, Colorado and Nebraska, then we begin to realize what immense herds of these creatures had once inhabited this region. The years from 1870 to 1874 probably saw the largest slaughter made in the herds of buffalo, as the railroads had pushed their way so far west that they offered great facilities for the shipment of hides, and the numbers shipped in 1872 over the Atchinson, Topka & Santa Fe and the Kansas Pacific railways seem fabulous. The market had become glutted, and even in 1874 when the supply began to diminish, prices ruled low. Two dollars were given for bull hides, one dollar and thirty cents for cows. All hides weighing twenty nine pounds or over were classed as bulls; all under to thirteen pounds as cows; hides of less weight were called calves and only twenty to thirty cents were allowed for them. At this rate the business did not pay and very few hunters were sticking to the business. Take the outfit I write of as an example. We were out nearly six weeks and secured about one hundred hides. After paying for feed for the team, "grub," ammunition, etc., there was not much left for the men's time. The majority of these skin hunters, however, were men who would not work at any legitimate employment. They were, with few exceptions, a hard "tough" lot. They would go out on to the range, "kill a load," and take the hides to some railroad point, sell them and waste the proceeds on whisky and its general accompaniments. On the range they never washed their clothes, nor bathed their person, a "clean-up" when they went "to town" being all that was considered necessary. Their food consisted of meat, bread and coffee, cooked in as few dishes as possible and with little attention to cleanliness. A hunter and skinner, who also drove the team, comprised the usual outfit. Some time there would be three men in the outfit; and when the buffalo were plenty, still larger outfits would go on to the range; but in 1874 in the section of country mentioned two and three were the usual number. I thought these men were a bad lot taken all in all, they were not mean, nor to be despised in their way. Go on to the range as one of them and you would be treated with as much courtesy and kindness as among those whose ways of life were less rough; but the would "have you use" for any one who "put on style" or acted as if he felt above them.

On May 24 we started from the Arkansas River and drove north, crossing the Smoky Hill fork of the Republican at Fort Wallace, Kansas. Not having found any buffalo, we drove northwest from that point toward the headwaters of the Republican. The summer of 1874 was very hot, and it was one of the great grasshopper years. It was also a year that a general outbreak among the Indians was expected, but fortunately for us that did not occur. On the afternoon of June 4, just as we were unaking up our minds that it was time to camp, and all were on the lookout for signs of water, that great necessity and also great rarity on the plains, we saw a wagon coming out of a little draw and rapidly approach us. We halted, and presently two men drove up. One of them informed us that he and his partner were lost. They had left camp several days before, and had been unable to find the locality again. As they had only started for a day's hunt, expecting to make camp at night again, they had not taken any grub with them, and all they had was "fresh hump," which, while it would keep them from starving, they did not relish as an all round diet; "and say, partner, if you have any bread or bacon we will buy it of you. We hain't got no money, but have powder and lead and some hides." We speedily assured them they could keep their powder and lead, and as we had some bread left from dinner, they were welcome to it. Each man was soon munching bread and raw ham with much gusto, and as I sat and watched the great slices of raw ham disappear, I little thought that soon I would "give my old boots" for the same chance. Our friends seemed to feel like new men as soon as they had finished their lunch, and concluded that they could "find camp the next day, and if we would go with them we would find it a good place for permanent quarters, as there was a spring hole near by, and the buffalo were feeding near there." Traveling on a few miles further we found a hole in the prairie, which contained the remnants of the last heavy rain. The water was not very sweet; too many buffalo had been through it, but it did not do to be particular. It was this water or a dry camp, so we made the best of the situation and camped.

It was hardly daylight the next morning before we were all stirring, and our simple breakfast of hot bread, bacon

and coffee was dispatched, wagon loaded, horses saddled, and outfit moving. I rode a black pony, a very good buffalo horse, as he had been on the range before, and had also been used as a "cow pony." One of the hunters of our outfit rode a small Indian pony, the other drove the wagon, while the other two hunters rode in their wagon. I was prospecting ahead of the outfit, and had just reached the top of a little rise when I saw, several miles ahead, a herd of black objects moving along quite rapidly, but at right angles to our course. I did not require to be told what they were, and putting spurs to Nig, was soon at the wagons reporting. One of my comrades was for going for the herd, as it was our first chance, and he did not want to let the opportunity slip by. The rest proposed to find camp first. We compromised. J. and I were to go on after the herd, and A. and the two hunters were to go on to camp. We were to take a general direction north, as the herd was going that way, and in returning strike southwest, which the hunters thought would bring us near them. J. and I stopped only to fill our belts with cartridges, but very foolishly did not take any "grub." As the buffaloes had a good start of us and were not feeding much, it was quite late in the forenoon before we were near enough to "stake" the ponies and try for a shot. We had a long walk after leaving the ponies, and the sun came down on us in overpowering rays. The lay of the land was unfavorable, and though, it now being in the heat of the day, the herd was not moving or only doing so slowly, we could not get nearer than at least six hundred yards. There were several old bulls in the rear, evidently suspicious of the crawling objects they saw in the distance. We were now on our hands and knees, and I was beginning to think that there was not as much romance in hunting buffalo as I had read of, especially when I would plump my hand down on a cactus or strike my knee on a small stone. J. thought if we could get within one or two hundred yards, so as to make a sure shot the first fire, we might get a "stand," and then the herd would be our prey; but luck was against us. We could not crawl as fast as they would move, and we determined to open on them at long range. Wiping the perspiration from out of our eyes, and lying still a moment to get our breath, we each singled out a bull and the two Sharps spoke. A good story demands that those two bulls "quivered as the balls struck them with a sickening thud and then toppled over," but the truth demands that they did not do anything of the kind; they just jumped and "let out," the herd before them. We jumped too, and loading and firing as we ran, kept after them until they got under such good headway that I gave up. J. kept on as his wind was better, but he did not succeed in "downing" any, though we could see several of those in the rear running on three legs and gradually falling behind. I walked back for the ponies and rode after J. He was disgusted when I overtook him, and did not want to give up. We held a council of war, and he thought I might take a circle, ride hard and get ahead of the herd and turn them. J. reasoned that it was so hot that they would not run far. I agreed and started. By this time the buffalo were out of sight, excepting a few stragglers which we could see in the distance, and which, from the effect of the bright sun and mirage, appeared to be traveling in the air and looked as large as a good sized barn. This peculiar state of the atmosphere is often seen on the plains, and distant objects become magnified and appear much larger and nearer than they are in reality. I left J. and started, and rode as fast as I dared where there was constant danger from prairie dog and badger holes. I did not care to have a pony with a broken leg, nor did I care for a tumble. After a half hour's fast riding, I saw the herd again moving very rapidly and off to my left. I gradually drew in toward them, and if I had been so disposed, might have picked off a straggler or two; but being bent on turning the herd I kept on. I found that this would be no easy matter, as the buffalo had kept well up with me; and as I got nearer, they quickened their lumbering gallop, which appears very slow and clumsy, but which takes them over the ground much more rapidly than one would suppose who has not tried to ride up to them. I soon saw that I might as well give up the attempt to turn them, and glancing at my watch found it was after three o'clock. I turned and rode back in the direction I supposed J. would take and soon saw him coming. We met and compared notes. He agreed with me that we had better not attempt to follow the buffalo but start for camp. Camp! Where was it? We had not given it a thought, being engrossed with our exciting pursuit of the herd; but now we were cooler and had time to think. We looked at one another, and both concluded that perhaps we had done a very foolish thing. J. said he thought that from the general direction we had traveled and from what the lost hunter had said that he could so shape his course as to strike somewhere near where camp ought to be; but "there's the rub," we did not really know where camp was.

Mounting our tired ponies, we rode as rapidly as possible in the supposed correct direction. The sun was sinking lower and lower and soon put his great fiery head beneath the horizon. The evening shades were just appearing when J., who was a little in advance, stopped and waited for me to approach. "Look there," said he, "there goes our supper and what is as essential, our bed." I glanced in the direction he pointed and there I saw two buffaloes moving along slowly. They were about a thousand yards away, and it behooved us to hurry and make some effort to get nearer, or it would soon be too dark to shoot. A low place in the prairie favored us and we ran our ponies for several hundred yards. J. then sprang from his pony and started to sneak nearer. The old bulls, as we could now see they were, kept on slowly. I picked the ponies and crept up on to a little rise to watch J. From the lay of the land it was impossible for him to get nearer than six hundred yards, but with daylight to aid him he would have been reasonably sure of a bit as he was a splendid shot. I lay waiting anxiously the event, for much was at stake. If he got a buffalo we would not go supperless to bed, and then the hide would serve as some protection as a covering. Neither of us had coat or saddle blanket; each was clothed only in pants and shirt. If an earnest desire for a person's success would be of any avail I felt J. would succeed. It seemed to my overwrought senses a tremendously long time before he fired. I could not see him but could see the bulls as they kept moving and knew he must soon shoot. Presently a sharp report rang out in the still evening air. Then I heard the bullet sing as it sped on its way, and then, oh joy! came the spat of the ball as it struck one of the bulls. Again and again the old Sharps spoke out, but alas, either the balls were placed too far back or did not strike any vital point. They only served to start the buffaloes into a run, and there went one supper, "over the hills and far away." "No use, my boy," said J. as he walked back. "We won't feast on that old bull's

hump to-night." I heaved a deep sigh and whispered, "The saddest words, etc." As our ponies were pretty well fagged out, as we were ourselves, it was concluded to give them a rest and let them pick a little buffalo grass; so we took off the saddles and stretched ourselves on the ground. I was very tired and very hungry. I had only been out on the plains about ten days, and had come directly out of an office where the most laborious duty I had was that of wielding a pen. Not being a very strong man physically, the hard day's ride and excitement had made an impression on me; and an empty stomach did not help matters.

As soon as the stars came out and our ponies had eaten an hour or more, J. proposed we saddle up and proceed. I acquiesced, as I left the affair wholly in his hands. We were soon in the saddle again, and J., leading the way, set off over the prairie. Very little conversation was indulged in, and for my part, I was busy with my thoughts. I did not fear that ultimately we would not find our way out of it, but the present was sufficient. After riding some time in silence J. stopped. "Don't you hear a frog?" said he. I listened, and surely heard the peeping of frogs. "There must be a slough over there; let's investigate. I would like a drink." We soon found the low place where the frogs were singing, and the ponies were as glad to get some water as we. The water, though a little brackish, tasted very good. I struck a match and found it was 10 o'clock. "Well," said J., "shall we camp or move on?" "Let's camp, I am about used up, and we might as well wait for daylight." So we hunted a soft place near by in a sand draw, and, after picketing our ponies, lay down back to back for the sake of a little warmth.

Though the days are extremely hot on the plains, the nights are invariably cool. This one proved cold, and as a heavy dew fell—rather a strange occurrence for the plains—it was all the colder. We awoke about 2 o'clock nearly frozen, our teeth chattering and bones aching. "I can't stand this," said J., as he got up and waited about to keep warm. "Let's try and find some chips and weeds," said I, "and start a fire." At the risk of stirring up some wandering "rattler," we managed to find a few chips* and some weeds. With these we started an apology for a fire and managed to worry through two hours more of misery. As soon as the first streaks of light showed in the east we saddled the ponies, and, as it was soon light, set out on our weary way. J. seemed to have an instinct which told him the right course to take, and I followed silently. Any one could have bought my share of that "buffalo hunt" cheaply that morning, for if I felt miserably the night before, I could discount it in the morning. Oh, how I longed for something to fill my empty and aching stomach. Every jolt in the saddle seemed as if it would break me in two. I bore up as bravely as I could, for J. seemed not to mind it; but I thought to myself, "I don't want any more romance on my plate." I prefer something of a nature more satisfying to the inner man; not quite so ethereal, as it were.

We jogged on and scanned carefully the prairie in all directions. No sign of camp. At last when the morning was well spent and the hot sun was nearly over our heads again, J., who was slightly in advance, jumped from his pony and examined the ground very carefully. "There, I knew it," he said. "Know what?" I asked. "Knew I would strike their trail." And sure enough, there on the hard-baked soil was faintly to be seen the track of a wagon. Off I jumped, too, and getting on our hands and knees we soon determined which way the horses were headed by the imprint of their hoofs. That question solved, all we had to do was to follow the trail and we would strike the boys. With light hearts we mounted our ponies and urged them on. It was long after noon when I discovered two dark objects far off. J. said they were men, and presently we saw a smoke and heard a distant shot. "It is the boys," he cried, "bang away in reply." I fired a shot in the air which was answered by another. All doubt was now removed, and I "braced up" wonderfully at the knowledge that we would soon be with our friends.

Our ponies loped gaily along, but suddenly turned and bolted as a large dark object jumped up and bounded off from nearly beneath their feet. We were just going over a little rise, and in a small draw on the other side a buffalo cow had been lying. The ponies saw her before we did, and as we were riding with loose rein, after the custom with those western ponies, they turned before we could stop them. We soon brought them round, and saw the cow disappear over the next rise. I forgot how tired I was and how weak, but only thought of the opportunity to kill a buffalo. So handing J. my rifle, I gave the pony the spur and flew after the buffalo. She did not run far, being evidently suffering from a previous wound, which accounted for her being alone and lying down. My pony gained fast, and I was soon near enough to fire. My Colts .44 rang out, but the ball sped wide and only hit the buffalo in the body, but she stopped and turned to face me. A very ugly looking thing she was with her great "mop" hanging down over those blood-red eyes. She shook her head as if to say, "Beware, I can't run, but I will fight!" I rode up within ten yards and sent a ball into her forehead, then another and another. She quivered as the lead struck her, but did not fall. The warm bright blood came from the bullet holes and the white froth which flowed from the lips was soon flecked with red, showing she was done for, but she was "game." I had carelessly let my reins fall on my pony's neck and was endeavoring to turn the cylinder of my revolver, which had jammed in some way, and the pony, not seeming to care any more for the buffalo than if it was an ordinary cow, had begun to pick at the buffalo grass. I heard a slight noise and raising my eyes saw the cow making a desperate lunge at my horse's side. The spurs struck him before the buffalo did and he leaped out of the way. Quickly turning I rode round and with one more shot ended the poor creature's life. She fell to her knees, still facing me, and with a look of the deepest ferocity and rage made one despairing effort to rise again and then slowly sank to the ground. I had heard of wounded buffaloes being and looking ugly. Now I knew it. J. came up, and we took off the hide.

We were joined by our friends and they piloted us to camp, where we were soon hard at work filling the "aching void" and recounting our experience. Then congratulations at the happy termination of our adventure were in order. As I look back through the long years that have passed since I was "lost" and killed my first buffalo on the plains, I can again affirm what I expressed at that time and which is now sung in one of the topical songs of the day: "I hope it won't happen again."

PRAIRIE DOG.

DETROIT, Michigan.

* Buffalo "chips" were the only fuel to be found on the plains, excepting near the water courses.

NEW YORK PROTECTORS.

ALL of the State game protectors except Seymour C. Armstrong, of the fifth district, who is sick, have handed in their annual reports to State Fish Commissioner R. U. Sherman. The following abstracts, in connection with those already published, complete the list:

FIRST DISTRICT.

George W. Whitaker, of Southampton, protector for the first district, devoted considerable time last year to watching the markets. In May he seized two fyke nets and turned them over to a police officer. Soon after he sent a game constable to destroy them, but he was arrested, charged with having stolen the nets. He was afterward released on his own recognizance, and asked to assist in arresting Mr. Whitaker. A criminal complaint was made against the protector, but was afterward withdrawn. Many song birds were killed in the first district, but the protector was unable to obtain evidence strong enough to convict the offenders. Protector Whitaker says: "The game laws are more popular in this district than they were two years ago, and are more generally respected. I would suggest the wisdom of amending section 28 of the laws of 1879 so as to prohibit the use of nets in the waters of Long Island the meshes of which are less than 2½ inches. There is a clause in the section permitting the use of nets with small meshes in taking menhaden. Menhaden are caught in all the bays of Long Island, and fishermen now set nets for blue and other fish, claiming that they are set for menhaden. Hence the restriction as to the size of the meshes of the nets should be made uniform, or no such nets should be allowed in the waters. I think a net with 2½-inch meshes would take all the menhaden that should be taken at present. The fishing interests of Long Island are of great importance, and should be guarded with care. I am of the opinion that the game and fish laws should be kept separate as far as possible. I think the game protector should not be subject to arrest, as in my case last summer. The word 'wilfully' should be stricken out of section 11 of the game laws. The clause 'nor shall any person wilfully sell or expose for sale,' etc., will, I am afraid, prevent my obtaining a conviction in two cases I have pending for trapping partridges. It would be easy for a person to show where he got the birds if he did not snare or trap them himself."

SECOND DISTRICT.

Joseph Goodwin, Jr., of Kingsbridge, N. Y., State game protector for the second district, in his annual report says: "During the past year I devoted 150 days to the work of protection and expended \$136.95. In the cities and large towns in my district I find a growing disposition on the part of the marketmen to comply with the fish and game laws, and when an offense is committed it is more often from ignorance of the laws on the part of those violating them than from a disregard of the same, and the greater part of the violations are from the lower class or smaller dealers. Violations of the fish laws are becoming less frequent, and when they do occur it is usually through the ignorance or carelessness of employees in exposing for sale under-sized fish received from other States. There has been a large increase in the number of game protective associations in this district, and the members render invaluable assistance in the apprehension of offenders. I am informed that certain of the societies propose to see that the enforcement of the fish and game laws is made a part of the platform of a candidate for the office of county judge before supporting him in caucus or at the polls. I have the following suits pending: Against Rowell, Wood & Stillman for having twenty-three small trout in possession; John Walker, Geo. W. Lockwood, Zeas C. Crocker, Middleton & Carman, Peter Vincelette, Patrick Kelly, John Elsey and Samuel T. Skidmore for having in possession and exposing for sale striped bass less than one-half pound in weight; Middleton & Carman and John Griffiths for exposing for sale lobsters less than 10½ inches in length; Henry Sturcke for selling grouse out of season; Robert B. Mooney and William Sanders for having in possession and on sale hares killed out of season. I think it would be wise to amend the game laws regulating bass fishing, so that salt-water striped bass should not be classified with the striped bass of fresh water; that is, the close season should not be identical. I would also suggest that no black bass be taken from the State for propagating purposes. Where they are wanted in foreign countries the United States Fish Commission can supply the demand."

SIXTH DISTRICT.

John Liberty, of Elizabethtown, Essex county, State game protector for the sixth district, in his annual report says: "In the month of January, 1885, I visited Port Kent and the mouth of Ausable River. Alexander Eyo was fined \$15 for illegal fishing. In February went to Chateaugay, Chazy and Placid lakes, but discovered no traces of illegal fishing. In April I again visited Chateaugay Lake and obtained evidence against Lewis Perry and F. Patreau for crusting deer. In May I went to Plattsburg, Valcour and Ausable River. On my return I seized and burned a large seine. At Rouse's Point seized six large fyke nets and anchor ropes, etc., used for setting pound nets, and destroyed them. In June made a protracted trip in the Saranac country. In July again visited Chazy and Chateaugay lakes. In August went to North Elba to look up evidence against a party for hounding deer, but the offenders had gone out of the county. In October I obtained a judgment of \$50 against Joseph Dukett for hounding deer. Also secured the conviction of G. A. Stevens, Ellsworth D. Hayes, James Huntington and J. A. Stevens for dogging deer at North Elba in August. They were fined \$25 each. In November went to Silver Lake and Ausable Ponds, and in December to West Chazy and Rouse's Point. Only two suits brought by me are now pending—Philip Sawyer, indicted in the Court of Oyer and Terminer in Clinton county, in November, 1884, and Berry St. Germain, indicted at the same time and place. Both gave bail and I am unable to learn why they are not brought to trial."

THOUSAND ISLANDS DISTRICT.

State Game and Fish Protector W. M. Steele, who has charge of the Thousand Island district, in his annual report states that during the past year he worked 201 days and traveled over 4,000 miles in the performance of his duties on the St. Lawrence River. He captured and destroyed 62 nets valued in the aggregate at \$15,000, but was unable to prosecute the offenders as the nets were set at night. The protector says: "The illegal fishing has been very great in the St. Lawrence River in former years. From Tibbets Light, at the source of the river at Lake Ontario to Chippewa Bay, some fifty miles below, there have been for many years men who have mainly made

[Cut this out, put it on a blank, obtain signatures and send to your Member at Albany.]

A PETITION

For the Continued Protection of Adirondack Deer.

To the Honorable, the Legislature of the State of New York:

We, the undersigned, residents of _____ County, respectfully petition that the law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time.

(Signed)

their living by fishing with nets. It has been estimated that until the St. Lawrence Anglers' Association commenced its work, and prior to my service under the instructions of the commission, there were over 1000 tons of fish taken from the river annually. But this is a thing of the past; nets and netters are rapidly disappearing. I believe that the law passed during the last session of the Legislature which forbids the having in possession black bass and other game fish, will be of very great benefit the coming spring and until the time that the close season ends. The Canadian authorities have taken up the matter of protecting game fish of the river from capture in nets, and have greatly improved their laws and increased their protective service. There have been large numbers of nets destroyed on the Canadian side of the river by their officers and sportsmen. I think we can feel sure that entire co-operation from the other side of the river will be accorded us. With the work that is now being done, it can hardly be otherwise than that the fishing in the river will become even better than it has ever been before." Protector Steele acknowledges having received valuable assistance from Daniel Staring of Alexandria Bay, agent of the St. Lawrence River Association, and H. R. Clarke of Jersey City, N. J.

A LONG ISLAND GAME PRESERVE.

Editor Forest and Stream:

A week or so ago, I inserted an advertisement in your paper suggesting that those sufficiently interested in the formation of a gunning and fishing club on Long Island, should address themselves to me at my hotel. I received in reply quite a number of answers. The subject seemed to create so much interest, and the matter being now to a certain extent under way for the formation of a club, I thought that some of your readers would be interested in a more detailed account of the proposed club.

You recently suggested that many acres of land in the eastern portion of Long Island were lying idle; that the section was not of a character to be farmed to advantage, nor suited for manufacturing purposes. It was thought possible that this land might be controlled cheaply, and be stocked for the benefit of sportsmen generally, with game, but more especially deer. It is a well known fact that for many years past, deer have made their home upon Long Island, and during the time when the law was off, from Nov. 1 to the 15th, have been killed in comparatively large numbers considering the small space of ground. They have existed on Long Island in spite of pot-hunters and hunting out of season. My idea was, that as land on Long Island could be purchased at \$10 or \$15 per acre, as it was easily accessible by train from New York city, and as it was utterly impossible to get good sport without going long distances and putting up with inferior accommodations, it seemed that this was just the place for such a club. For instance, if twenty gentlemen of means were each to take a share of stock in such a club, at \$1,000 per share, that would be \$20,000 to work with; 500 acres to start with would cost \$5,000. A club house would cost as much more. Birds, deer, and all necessary game would cost about \$1,000. A kennel would cost about \$1,000. The wages of four gamekeepers would probably be \$3,000. In this way a comparatively large tract of land, well stocked with accommodation for members' dogs, which could be broken and trained on the ground, and accommodations for members themselves in a club house, run for what could be paid for by a small annual due from each member. Near the Great South Bay there would be facilities for salt-water fishing and wild duck and brant shooting; there also would be one or more fresh water streams, running through this land, which could be stocked with trout, which would afford excellent sport within the first eighteen months. At the same time, certain portions of this land could be cleared, cultivated and put in grain, etc., for the double purpose of supplying straw, etc., for the club stable, and for giving cultivated fields for birds to feed in.

A thousand acres would of course be better than 500 acres; and 3,000 acres better than 1,000 acres. Still, for a commencement, 500 acres with the privilege of purchasing four times that amount, would do very well. In this way, it seems to me, that one of the most satisfactory gunning and fishing clubs in the country could be started and maintained in excellent style. I have a place at Slip on Long Island, and know all about the land in that region and further east; know just what wages men would expect for the work as suggested, and know about the class of game that abounds there.

I am very much interested in this subject, having been forced for some years past to go even as far South as Sanford, Florida, to get anything like reasonable shooting; and quail shooting under a hot sun in Florida is not quail shooting in the North, as we are accustomed to it. One marked advantage of such a club would be the excellent accommodation near the salt water for members, and the advantage to be obtained in training a large kennel of members' dogs. Indeed, that could be kept the year around if necessary, and if the number becomes too large for a single kennel, one large kennel could be broken up into four or five smaller ones, with advantage of less danger from contagious diseases.

If any other gentlemen than those from whom I have already heard, are sufficiently interested in this subject to take from \$200 to \$1,000 in stock in such a club, I should like to hear from them; and I firmly believe, that in five years' time, shares in such a club cannot be purchased for

five times the original amount invested in them. Indeed I think, in that time, a forced sale of the land itself would bring enough money to reimburse all the members. SRO.
GEDNEY HOUSE, NEW YORK.

A FIRST EXPERIENCE.

A MAN can sometimes be made to appear perfectly ridiculous when he has his wits about him. My only deer slaying is stored in my memory in just such an association as that. It was a number of years ago that a party of us visited the Adirondacks to get such game as we could, and such experience as we couldn't help getting. We were four in number, and engaged at one of the most celebrated hotels in the woods, three guides to help us on a camping-out trip. The names of two of them I have forgotten, but the name of the third, on whom this story turns, was Lovell Newell. He has since died but his name will awaken many associations in the minds of some of your readers, who in remembering their own experiences, will doubtless take some pleasure in hearing of this one of mine.

We started out on a misty morning in three boats, and passed without special incident to the pond where we intended to camp. Here we found a party ahead of us. Out of this pond we ran into one of those slow "rivers" of the Adirondacks, and several miles down it made our camp. The place had been used as a camp before, and the labor of pitching a camp was greatly reduced, by the labor already expended there in setting up rude tables, fireplaces and laying out bushes for beds. Others may have found that a ready made bed in the woods means work after you get into it at night, as well as when you pitch tent. It didn't add any to our appreciation of the spot chosen to be obliged to clear the spring of celluloid collars and broken condensed milk cans; but it was so near night that we were obliged to accept the situation and we did so, realizing, as one of our party remarked, that this was a part of the experience that we had got to take. Passing over the night, which was a very active one for all of us, and so sleepless that there was no need of the assurance by our guides that they would awaken us at four in the morning "to go out for deer," it is well enough to mention our breakfast. This meal was served on the flat side of a single slab which extended the length of the camp. It consisted of ham and eggs, and some camp griddles served with maple syrup, and it would have been splendid if we could have eaten it; but we couldn't. We spent the morning in planning, and this resulted in our all taking to our boats and starting for a famous place for trout. The only fly-rod in the party belonged to me, and when we reached the place, my boat was pushed out so that I had the best position—the one worthiest of my superior tackle. The trout responded readily, and I was soon playing and running back to Lovell Newell one after another, and sometimes two taken at a single cast. He disengaged them and threw them into the boat. I was so excited that it never occurred to me that my companions were doing anything than watching me and wondering at my famous luck. A swing of the boat distracted my attention, and I turned to see how the rest were enjoying my sport, when to my bewilderment I found that while I had been taking in fifteen or twenty trout, those wretched pot-fishers behind my back had rigged themselves out with swamp alder poles, lines, plain hooks and pieces of pork, and had caught and piled up in a hollow on the bank over half a bushel of trout as large as any I had caught. We called a halt, and gathered ourselves up for the trip home.

Newell took me along rapidly, until we had gained quite a distance on the others, when he showed me deer tracks, and said the deer came down to the water at that time of day, and I had "better look out." I carried his gun in the bow of the boat. He paddled in the deaf noiseless fashion of a good guide, and I wasn't long in working up to the proper pitch of excitement for the second time in one day. In this somewhat intense state I remained during sweep after sweep past dark pool and shadowy turning, until I was tired with the strain.

Then I began to take in the situation. We were returning over the same route that we had noisily taken only a few hours before, and though I hadn't noticed the fact sooner my companions were within a few rods, making noise enough to scare tame cattle, and occasionally shouting and laughing. I couldn't feel delighted at the "take in," but I never betrayed the slightest doubt by any action or word that I had lost faith. If I couldn't do anything any better, I could make a subject for Newell's story to his next party, and I wonder that I never have heard of the episode since from any returned sportsman tourist from the Adirondacks.

J. D. P.

MEMPHIS, TENN., Jan. 30.—Deer carcasses without the head are selling in the Memphis markets for six cents a pound. Venison saddles for eight and ten cents. They are brought over the Kansas City, Springfield & Memphis Railroad from Arkansas. My three friends, Polk, Warner and Lowenburg, of Vicksburg, went duck hunting in their new steam launch Greenwing, Jan. 6, and were out in our phenomenal blizzard. They returned Jan. 9, with two hundred and four ducks, mostly mallards, killed in Yazoo River and adjacent lakes. They report that the ice accumulated so rapidly on gloves, clothing and decoys, that they could not make the most of their opportunities; otherwise they could easily have secured three times as many ducks. But the thermometer was below zero, which was a new experience for Mississippi duck hunters and they were glad enough to get back home unfrozen. —CHAS. BOLA.

A DAY WITH THE GOLDEN-EYES.

Of all the sports within reach of the votaries of the gun, in this little province by the sea, the one that has the most decided charm for me, is the shooting of the whistler or golden-eye duck. This bird, by far the most beautiful of any of the duck family, and whose name has always been a synonym for elusiveness, is, even now, considered so well qualified to take care of itself, that so far as I know, no law exists on our statutes giving it the slightest protection. Last winter our Legislature gave us a common sense ruffed grouse season (Sept. 20 to Dec. 1), and enacted a stringent non-export law that will effectually crush out the slaughter of game for the Boston market.

Shooting over decoys is little practiced here, and as the golden-eye can find plenty of shallow lakes and bars on which to feed where an unseen approach is impossible, he is, for the greater part of the year, master of the situation. But in the early spring, before the dead water thaws out, and again in the late autumn, for two or three days after it freezes over, he is obliged to feed close to the banks of the deep creeks, and then the sportsman goes for him. The man who tries to pot the whistler by a water shot will get left nine times out of ten, but he will be liable to think many times of the scriptural passage, "A little while ye shall see me and a little while ye shall not see me," and perhaps in this way be benefitted. I shall always look back with pleasure on the days I have spent in trying to circumvent this wary bird, and prominent among these memories is a day in 1883.

I had agreed to join Arch and Ferris in a hunt in the vicinity of Little Musquash Island, on the River St. John, and a certain Saturday, about the 17th or 18th of April, was the appointed day. Arch's home was our base of operations, and to reach it in time to get a square start with the rest it was necessary for me to make an eight-mile journey Friday evening. I found the major part of the population of the village gathered for a sort of farewell turn at "the mazy," and was easily persuaded by my prospective hunting companions to join them. It was 1 A. M. on Saturday morning when our heads sought and found their pillows, a circumstance that should be considered before judging our shooting too hastily. It is always amusing to see the malicious pleasure that the seniors, who stay at home, take in rousing out the juniors who have been out the evening before, and the alacrity with which the latter respond, in order to throw out the impression that they were home on schedule time. These motives, working together in pleasant concord, were instrumental in starting our hunting party before dawn; but not before justice had been done to a good, warm breakfast, and the old gentleman had assured us that a team would be at the shore in the evening to haul our game to the house. Musquash Island is at the mouth of Washademoak Lake, the waters of which swirl around it in deep, narrow creeks, that seldom freeze over; and should they by accident be betrayed into any such indiscretion, the slightest relaxation of the cold will clear them of ice with startling rapidity. The island has a lake in the center, which is connected with the St. John by a deep creek thirty feet wide.

Would that my pen were equal to the task of describing the beauties of that morning. The gray dawn was gradually gaining strength in the cloudless eastern sky. The air was so soft and mild that no gloves were needed, yet the snow which still enveloped the ground, and the ice in the marshes and on the lake were as solid as in January, apparently bound together by their own innate frigidity rather than by any lowness in the temperature of the atmosphere. And when the sun came up, giving the distant hillsides first a tint of gold, then the appearance of burnished silver, and causing the top of Bald Mountain, which towered in the distance like a monarch "head and shoulders above" the surrounding peaks, to sparkle like a jeweled crown, while the awakening of the world to life gradually deepened into a confusion of clanking chains, tingling bells, and the crunching patter of horses' feet on the frozen lake; it did seem as if we were being repaid for some of the cold, sleet and slush of the previous winter.

All our early morning attempts to corner a whistler, were fruitless. Sometimes it would be the crunching of the snow, then the flying of a wary old drake that would betray us. At last, a muskrat out of his morning plunge, was compelled to heave to by Arch's old muzzleloader, in the hands of our bow-paddle. One of our party climbing a tree, located a flock of whistlers in the outlet of the little island lake. The creek being far below the level of its banks, we had no difficulty in getting within 150 yards, and then on the author of this sketch devolved the duty of taking a "peep." Removing his cap, he slowly raised his head till four black dots showed against the snow on the opposite bank; and when they disappeared in quick succession we covered the distance with an energy that would have been no discredit to a winner in the Olympic games. A "she-whistler," as the boys contemptuously called her, came up, and as she winged her way down the creek, a furrow in the water a little ahead, told how I came to miss her. A second ran the gauntlet of both of Ferris's barrels, without the loss of a feather. A big drake came up, and with a gleam of defiance in his bright yellow eye, he dashed into the air, but at the crack of the old muzzleloader, his light was snuffed out so suddenly that he never moved after he touched the water.

I walked down to the point of the island. Cautiously looking over the bank I saw the head of a splendid drake close to the shore. Still as a statue I stood till it disappeared and a faint swish told me he was under, when I walked coolly out to within twenty feet of where he went down. When *cr-r-r* sounded forty yards down the bank and I gave to him full in the back. The dull "wop" of the shot on his feathers came distinctly to the ear, but he sailed on, only to be discovered later in the day completely devoured by crows. Hardly had I pulled trigger when I knew I had been fooled and the one marked down came up and went "his several ways," while I was energetically trying to get a shell into the gun butt end foremost. O for a double barrel! A single whistler dropped into the inlet two hundred yards away and dived almost as soon as he struck. I ran and fell flat on my face, watching the creek with the corner of one eye. He came up, gorged something he brought with him and explored the depths of the creek once more. When he again appeared, I was waiting to welcome him and he died of paralysis, brought on by violent contact with a charge of B shot. I then joined the boys who had hauled out the canoe by a hay barn and were preparing to lunch. Soon another canoe, bearing George P. and Scott G. who had been out all the morning and got no feather, arrived and the prospects for a lively morning increased considerably.

George walked to the canoe and picking up a duck, said with an innocent air, "Where did you find this, boys?" then tossing it to Scott with a well simulated look of contempt,

"See, it has been shot a week." "Wouldn't eat it for fawty dollars," returned Scott, who, it should be explained, has been to Boston, and to quote one of his reviewers: "Failing to strike a banana, and not being indispensable to the existence of the commonwealth," returned to his native land minus \$150 and the sharp corners in his vocabulary. "Get out! you nineteenth century Sancho Panzas," replied one of our party, "you should not always look at the situation from your own standpoint. What's the reason you got none? did the shooters at the head of the island retrieve all their wounded, or had some darky skimmed the pot before you this morning?" "We didn't get any for divers reasons," said George, dryly. We had such a good time that it was late in the afternoon before we again embarked.

The first event on the afternoon's programme was some rifle practice at a flock of geese, floating down the river on a cake of ice—no damage done. In speaking of the next incident, I could borrow a part of the language of the Hibernian, who sat down on a hornet's nest and becoming aware, in some mysterious manner, of the sort of cushion he had, got up and trampled it to pieces in his rage. "It was meself that didn't like it, and the hornets didn't like it, but it was darn fine fun for the boys." A single bird was sighted so far away that he took no notice of our canoe; and the boys put me ashore on the ridge, with orders to go up and rake him in. By a series of maneuvers similar to those before described, I got behind a very small drift stump within forty yards of where I last saw him. When he came up what was my chagrin to see him settle himself for a rest, instead of diving immediately, as I hoped he would. I was lying face downward on an icy glade, with the fierce afternoon sun beating down on my back, producing a sensation similar to that caused by a gigantic mustard plaster. The minutes seemed to stretch into hours as with cramped neck and eyes a-water I watched that confounded whistler, till at last he went under, and I stalked out to the edge of the bank, full of a grim determination to square the account with him when he came up. He appeared, with surprise and consternation plainly depicted on what little countenance he had, and also in every motion. Before flying he darted about a couple of feet one way, then turning half around made a quick dash in another direction, as if to take a look at me from two different points of observation, and seeming to come to the conclusion that I was not the sort of person whose acquaintance he would care to cultivate more closely, away he went into the air. When the smoke cleared I confidently expected to view his lifeless remains, but instead there was a cloud of feathers—more than ever I saw shot out of any six ducks, and my bird was pursuing the not altogether noiseless tenor of his way. My companions chaffed me unmercifully for lying and waiting for him to go down, instead of firing at him and either killing him or compelling him to dive, and also complimented me on my skill as a collector of "pillow-stuffings." I have often, when watching a game of checkers, seen chances for brilliant strokes in playing, when the persons engaged in the game were vainly thumping their brains for moves.

We started for home, Ferris gallantly giving his place to a young lady who was going our way and preferred a short canoe ride to a long walk. I have a suspicion that Arch hoped that I would join Ferris, and when I did not, he would have almost seconded the motion of the executioner in "The Mikado" concerning "all third persons who on disturbing *l'le-a-tâtes* insist," but I hardly think he would have gone so far as to say, "I'm sure he won't be missed." Glancing back to the day, I am vividly reminded of a few lines I once saw in a little English story book, and I can only trust to their close-fitting, blister-like applicability to our case to commend me to the lenience of FOREST AND STREAM's quotation fied exterminator. The piece was entitled "The Three Loyal Sportsmen," and one of the stanzas went something like this:

"We hunted and we halloed till the setting of the sun,
And we had nought to bring away when the hunting day was done.
Then one unto another said, 'This hunting does not pay,'
But we've powdered up and down a bit, and had a rattling day."

NOVA SCOTIA.

L. I. FLOWER.

MAINE GAME.

READING the FOREST AND STREAM's earnest plea for the retention of the New York non-deer-hounding law brings to mind the struggles of the Maine Fish and Game Commissioners a few years ago for the holding of just such a law upon the statute books of that State. The owners of packs of hounds, both at home and in neighboring States, sent lobbyists to the Maine Legislature, and members were approached with the same plausible arguments that are being used in New York this winter. But they were met by a force too great. The Hon. E. M. Stillwell, the strongest and truest friend the noble game of Maine has ever found, together with his colleague, Henry O. Stanley, aided by Dr. Hunter, of Machias, told the Legislature that winter that to let loose the dogs it would require but two years—three years at the most—to exterminate the deer. Said Mr. Stillwell: "A deer dreads a wolf—its natural worst enemy. Several times in the history of our State the deer have been driven almost to extermination by wolves. Our forests are just recovering from the last of such periods, thirty or forty years ago. A dog is a wolf's first cousin. Both are equally destructive to the deer. Turn off the dogs and your deer will increase. Let loose the dogs and your deer are gone forever!" How have these words proved? Everybody familiar with the Maine woods will grant that the deer have more than quadrupled under protection, the best part of which is a non-hounding law.

Is hounding destructive to deer? Yes. Why? Because every greenhorn who goes into the woods can, by employing guides and dogs, surely get a deer. For proof, take a case right here in Boston, hundreds of miles away from the Adirondack wilderness. Two years ago last August a party of young salesmen took their vacation in that part of the country. They went armed with repeating rifles and money enough to employ guides. The guides, of course, gave them the chance to kill deer. One of them explained to us how it was done. "The dogs were let loose. My guide took me in a boat. Soon the hounds drove the deer into the water. My guide began to pull for dear life, and as soon as I got near enough I began to pepper that deer. I was so excited that I fired ten times before I stopped him. I wanted to kill another deer, but the guides refused. They said I had had my share of fun."

Another Boston case dates only back to last November, and shows that in some sections of the New York wilderness the non-hounding law has been evaded. An old gentleman, a Boston merchant, who didn't even own a gun, but bought a new repeating shotgun for the purpose, killed his deer in

the Adirondacks. As in the case of the young salesman, the dogs drove the deer into the water, and, paddled out by the lusty arms of the guide, the old man pulled away on his repeating shotgun, crowded with buckshot, till the deer succumbed. Ah, such hunting! No. Butchery!

Now, in all fairness, let any advocate of deer hounding answer: How many deer could those young salesmen, reared in a city, unfamiliar with the woods or with firearms—how many deer could they or that old gentleman of sixty have killed without the aid of dogs? I have tramped all day through the woods, where the tracks of deer were too thick to single out one and follow it, never getting sight of a deer, or at the best, only a chance for a snap shot; and I am willing to do so again. I have lain in ambush more than one day beside a deer path, actually beaten like a sheep path, and yet have never obtained the much-desired shot in that way. But I am willing to do both again, and if I live long enough, I expect to kill my deer by legitimate still-hunting; but I trust I shall never so thirst for butchery as to allow a dog to drive a deer into the water for my shooting. Oh, the prowess of such hunting! Why not hire the guides to tie the legs of the poor creature and then fire away with the repeaters? Good FOREST AND STREAM, leave no stone unturned to preserve the non-hounding law in New York. Repeat it, and the days of the deer are numbered! Retain it and enforce it, and your deer will multiply.

Commissioner Stillwell writes me that the recent rains have made a bad crust over the snow in Maine, and that years ago he should have trembled for the deer, but the law has nagged the poachers so closely that they dare not follow their old tricks. The Commissioners, with their able corps of wardens, are as much on the alert as ever in Maine.

Some things distress me, but perhaps they are all right. I saw the head of a female moose at a taxidermist's the other day—the whole skin, in fact. It was a noble specimen. The head measured nearly two feet from the muzzle to the top of the forehead. It looked, as it lay over the taxidermist's block, very much like the head of Barnum's hippopotamus, so broad was the muzzle and wide the nostrils. The creature must have weighed 800 pounds. It belonged to a Portland, Me., gentleman, and is being made into a mat. It was either killed in open season or was killed unlawfully in the summer, for the skin had been some time at the tanner's.

The sight of that enormous head reminded me of the experience of a chap from Boston. He went down to Parmachenee, Me., and hired a guide to "call" a moose for him to shoot. As he told the story himself: "The guide kept up an unearthly roar on that old birch horn. It was about as dark as pitch. All at once I heard a crashing, when down came a giant beast close upon me. His head was in the air about twenty feet. His horns were ten feet broad, and knocked the spruce limbs into kindling wood. His eyes were as big as saucers, and from his nostrils came two streams of fire as big around as my arm! As for me, I dropped that little shotgun and ran!"

I learn from good authority that the case of the New Haven gentleman, who, after having been prosecuted for killing a deer at Rangeley, Me., in June, two years ago, began a suit against Commissioner Stillwell for \$1,000 damages, has been settled. I understand that the jury gave him \$1 for damage to his reputation. This is the first case of the kind in my recollection, and shows how juries regard the game laws. SPECIAL.

SAVE THE ADIRONDACK DEER.

Editor Forest and Stream:

Sportsmen, of all men, are prone to hobby riding. This one advances the true theory perhaps. If you investigate you will probably find that his theory is the one he finds most successful in practice. It might not suit the next case at all. It is just as absurd to say which method of hunting deer is least destructive to the game as to say which is the best gun. It all depends.

Deer vary in habit in different localities; the locality often determines the method of taking him. Given the nature of the land—whether level, rolling, or mountainous; whether well watered or dry, timbered or open—and the hunter will adopt the method so as to make nature serve him in the pursuit of his quarry.

In the high dry lands of Western Virginia I suppose the floating would be poor, and because of the absence of large bodies of water, hounding becomes in such sections an altogether different thing from hounding in New York. What I have to say in this article has reference solely to the methods in vogue of capturing deer in that most charming spot for an outing, the Adirondack wilderness.

Three principal methods obtain there—floating, still-hunting and hounding. The first is possible only during the months of summer, and cannot always be depended upon even in September. The second is practiced by the native hunters only, and not to any extent until after the first snows have fallen. The third method is possible any time, and can be successfully carried on by anybody who can buy a dog.

Now what are those aiming at who write for your valuable paper? It is to be hoped that the great army of sportsmen are not taking this means to assist each other to knowledge which may enable them to kill more deer, but to, if possible, find out how to get the maximum of hunting and the minimum of killing, *i. e.*, to have the most sport possible, and give the deer as many chances for his life as possible. Can we agree upon the above? Now I am bound to work for the suppression of hounding in the State of New York, absolutely, and at all times of year. I will tell you why as clearly as I am able.

In the first place we need to keep on foot as many deer as can be; the time is coming, all too fast, when there will be only hunting and no finding in the great northern forest. The woods will breathe their odorless balm, the delicious water bubble from the rocky crevices, the air will come laden with the incense of the pines and the balsams just the same decades hence, but the deer, the chief charm to many, will be gone if great care is not taken for their preservation.

Now, what does hounding enable a man to do? It enables a man to put out a dog to get venison every time. With the intersecting streams, the thousands of lakes, deer hunting can be reduced to a science and a certainty with dogs.

Suppose you wanted to procure twenty-five deer, for no matter what purpose, in a given time. You go up to the borders of the woods and find your "old guide," tell him your mission and ask if the thing can be done. Does any woodsman doubt what he would say? He would say, "We might float for 'em and have good luck, we might still-hunt, but we would run a good many chances; give me the dogs and we'll do it."

Dogs will and can hunt deer in all weathers; the exceptions

to this are not worth mentioning. The dog will run an old doe with young as eagerly as a buck in the short blue. Hounding enables the rich sportsman to monopolize as large a tract of country as he pleases. Hounding does not favor sharp shooting nor quick shooting. The deer is not killed on the full jump, but on the full swim. Hounding makes all other methods practically impossible, by driving the deer from their watering places, and making them too shy for successful still-hunting. Hounding allows the sportsman little exercise of skill, as the deer is shot in the water at short range; the skill is on the part of the guide, who works not for fun but \$2.50 per day.

Now the question comes, If this method of taking deer is unfair and ought to be unlawful, what methods are fair? I claim that floating gives many more chances to the deer than hounding. He who thinks that to kill a deer by means of a jack light is the same thing as seeing him, has had no experience with the "lanthorn" in the North Woods. Deer come to know the meaning of the light very quickly, and often all the intimidation the hunter has of the presence of game is a vicious snort and the musical thump, thump of vanishing hoofs in the darkness. To carry a lamp on one's head, sit still, aim the gun accurately enough while trying to keep the equilibrium in a frail boat or log canoe, and shoot a deer, knowing full well that what is done must be done quickly; all these factors supply an element of uncertainty to the problem which the man in the boat bounding over the waves after a deer run to water by dogs never has to take into account. There is something so weird and strangely bewitching about a mountain lake or river at night, that for me, at least, there is pleasure even in drifting over the placid surface, propelled, as it were, by an unseen, intangible force; and then to add to this, which, if you please, you may call nonsense, the thought that the snapping of a twig, a vague shape undefined in the darkness, may mean game, bring in those elements which always constitute sport, or uncertainty, skill, excitement, fairness.

Does any one object to my plea for floating? Very well. To please him, I'll not float; but he must be fair now, and to please me, he must not hound. I should be perfectly willing to pay the price of not floating, if by statute law the cowardly, destructive practice of dogging deer could be forever stopped in our glorious Adirondacks.

The only time a dog is in order is to catch a wounded deer. In such a case I would use and have used a dog. In no other case would I attempt to justify the practice. St. Lawrence county forbids bounding within her borders, but the law is practically a dead letter. Boundaries are not well defined in the great woods. I am glad for so much, however; but I for one who love hunting for its own sake, and find in the grand old woods my best recreation, hope that the present Legislature will maintain inviolate the law against hounding.

NITRAM.

GOUVERNEUR, St. Lawrence County, N. Y.

Editor Forest and Stream:

Last month in the northern part of Oneida county I met a number of sportsmen, and found by conversing with them that nine out of ten were opposed to turning the dogs loose again. If the Boonville *Herald* would print the whole of the correspondence sent to it instead of suppressing a large part, as they have done, then perhaps there would not be as many supporters of dogging as there are now. I think most of the cry for dogs we see in the Boonville *Herald* is self-interest. The owners of teams who carry the dog-hunting deer-slayers live in Boonville. All supplies that are not taken with parties from home are bought in Boonville. Some of the guides live there, and most of the hotels on the Fulton Chain get their supplies in Boonville. Is it anything strange then that the Boonville *Herald* and most of the people of the place should be in favor of dogging deer, when it brings so many sportsmen their way, besides all the pot-hunters? If more men went still-hunting than dogging deer, I have no doubt the same *Herald* would be as anxious for the law to remain as it is as any one. There is no doubt but self-interest has a great deal to do with the stand the *Herald* takes on the dog law. I am willing to admit self-interest has a bearing with all of us, and in many cases too much. The sooner our lawmakers make laws to protect the game regardless of self-interest the better. Call off the dogs.

C. D. F.

LITTLE FALLS, N. Y., Feb. 4.

MARKETING MICHIGAN VENISON.—The Marquette, Mich., *Mining Journal* has already called to the attention of sportsmen and others interested in the preservation of the game in this peninsula, the urgent need of a more vigilant enforcement of the laws, and of further protection for the deer in our forests. The figures then given were surprising to many, who had not supposed that such a wholesale slaughter of deer was going on, and the figures given related only to the single station of Munising, on the D. M. & M., at that. A letter written to a prominent sportsman of Marquette now lies before the writer; it gives the number of pounds of venison saddles shipped from the station of Floeter, on the D. M. & M., during the open season, from Aug. 15 to Nov. 15, and also estimates the amount, not included in the shipments, consumed in camp and other places. There was shipped from Floeter in the interval mentioned 66,840 pounds of venison, saddles only, while the number of pounds consumed in the vicinity is thought to be about 14,000. This means that in the vicinity of Floeter alone between Aug. 15 and Nov. 15, about 1,150 deer were killed; estimating the average weight of a saddle as 70 pounds it would give 1,147 killed, of which record was kept. It does not require much intellectual effort for one to decide from the above showing that soon, and very soon at this rate, our boasted hunting will be a thing of the past. Such has been the experience in other favorite haunts of game where such indiscriminate slaughter has been practiced, and such will be the result here unless steps are speedily taken to check the evil. There are enough prominent sportsmen in Marquette to whom the matter is of great moment, to have it in their power to bring about a change for the better, if they would but combine and make an effort in that direction. Violations of the game laws are common and notorious here, but the reporter has yet to hear of any one being prosecuted and compelled to pay the penalty for his infringement of the statutes. Is the object not of sufficient importance to warrant prompt action on the part of those who wish to protect the game hereabouts? The *Mining Journal* thinks that it is, and trusts that local sportsmen will organize at once and check the evil.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form. For sale at this office, or sent post-paid. Price 50 cents.

A MISLEADING DOCUMENT.

THE members of the Legislature at Albany have received copies of a pamphlet entitled, "The Preservation of Deer in Our Northern Woods." It purports to be sent to them by the Eastern New York Fish and Game Protective Association. The introduction embodying the argument is by Dr. Samuel B. Ward, the president of that association. We print this argument in full:

At a meeting of the Eastern New York Fish and Game Protective Association, held on Jan. 13, 1886, the President stated that soon after the organization of the Association the attention of the Executive Committee had been called to the present condition of the law in this State concerning the preservation of the deer in the Adirondack region, and that he had been directed to correspond with well-known residents of the North Woods and others—those who were most interested in the success of that district of the State, and knew most about it—and ascertain what their views were on this subject. A part of the letters, extracts of letters and documents which follow, were received in reply. It is to be regretted that lack of space prevented the publication of them all in full.

Concerning the number of deer in the Woods now, as compared with five and ten years ago, two or three correspondents think that it may have diminished; the very large majority think they have decidedly increased in number. In other words, it is clear that the provisions of the law of 1879 were, on the whole, wise and good, and resulted in permitting the deer to increase and multiply. Nevertheless there were many who thought that it would be a great improvement to forbid entirely the sending of deer to market, and not a single correspondent objected to this addition to the law. Those who objected to the hounding of deer at any season based their opposition on the fact that so many of these creatures were killed late in the season for market, and it is believed that the proposed law, which will be found further on, will fully meet this objection.

As to the most sportsmanlike manner of hunting deer, opinions were nearly equally divided between hounding and still-hunting, with a small preponderance in favor of the former method. Those who objected to hounding on the ground that when the deer was in the water he had no chance to get away. In the first place, many deer do get away after the dog has driven them to water. And it is very difficult to understand how the deer has any better chance against the still-hunter, when the latter, treading three or four inches of snow with the noiseless tread of moccasined feet, and cultivating all the virtues that adorn the sneak thief and assassin, deliberately puts a bullet through his unwary victim before he is apprised of the least danger. The letters will show that if the deer are not made shy by the pursuit of dogs, of whose approach they have ample warning, one still-hunter can kill more deer in a season than two or three guides with dogs. If the deer have been hounded during the proper season, still-hunting cannot of course be so successful. The experience of the autumn of 1885 shows that the still-hunters so glutted the market as to bring the price of venison down to ten cents, and in some localities to four cents a pound, when hounding was forbidden.

As to jack-hunting, not a single correspondent had anything to say in its favor. The objections to it were very numerous; first, because many deer are wounded and drag themselves off in the woods to die for every one that is recovered and used; and, second, because it is very difficult for the hunter to tell whether he is shooting at a buck, a doe or a fawn. Certainly no one can claim that it is sportsmanlike to be noiselessly paddled up within a few feet of an unsuspecting doe or fawn and blaze away, very much at random, with a double-barreled shotgun, loaded with buckshot.

With one single exception the correspondents were all in favor of rescinding the law of last year and of permitting the hounding of deer for a proper length of time, about the duration of which there was some difference of opinion. Those who preferred only a short season for the use of dogs, assigned as a reason that so many deer were killed for market in this way late in the autumn, the proposed manner of meeting which has already been stated.

The Executive Committee having attentively considered all the suggestions made in the various communications received, instructed their counsel to draw up a bill to be introduced into the Legislature at as early a date as practicable, which should embody the views of as many intelligent and interested persons, and antagonize as few as possible.

The law of 1879 has proved a success after five years' trial; nearly everybody was satisfied with it and the deer had increased under it in almost all sections of the Woods; where they had diminished it was due to the season being too long and, therefore, the proposed new law closes it two weeks earlier than did the law of 1879, and it is believed that no one will suffer any serious injury or inconvenience thereby. In all other respects the dates of the law of 1879 are adhered to.

The provision that no deer shall be sent to market from the Adirondacks was considered an absolute necessity by almost everybody who knew anything about the matter. The hotel keepers and the guides understand that the preservation of the deer is in their interest as much as in that of any one else—that the tourists and sportsmen who go there virtually support the region. Not one in twenty of the latter class is a still-hunter, or has the leisure to go there at the season when still-hunting is a possibility; ninety-nine one-hundredths of them find more sport in bounding than in any other method of hunting. To permit hounding will attract visitors; to forbid it will drive them else where. The testimony is universal that each deer killed by a summer visitor leaves in the Woods from a hundred to fifty to three hundred dollars; and that the number killed by them, in any and every way, amounts to nothing at all compared with the number hitherto killed for market, and which yield to the owner some seven or eight dollars apiece at the outside. To prevent the sending of venison to market from this region is a hardship to those only who do not live in the Woods; and it will be very little injury to them since it is estimated that in the large cities of this State not less than ninety per cent. of the venison comes from outside the State. If as many deer are killed annually in the future as were the past fall, under the anti-hounding law, in five or ten years the deer in the Adirondacks will become as scarce as the moose now are, the region will offer no attractions to sportsmen, the occupation of the hotel-keepers and guides will be gone, and the city will be no better off than under the proposed law.

The talk about its being unsportsmanlike to follow deer with hounds, bred and trained for the purpose, is as senseless. In all ages of the world, in all countries and climates, from time immemorial, it has always been, as it still is, the most exhilarating, exciting and sportsmanlike manner of hunting deer. It is one of the least destructive methods: very few deer, if any, are wounded and lost; and in this State it is objected to only by those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time, for the few paltry dollars that their flesh and hides may bring.

SAMUEL B. WARD.

ALBANY, N. Y., Jan. 25, 1886.

The remainder of the document consists of letters giving the views of a number of advocates of hounding. These views are stated to be "virtually epitomized in the above remarks" by Dr. Ward.

This pamphlet goes to the Legislature with the sanction of the Eastern New York Fish and Game Protective Association. It is put out as the result of an investigation undertaken by that society. When an association professedly working for right game protection institutes an inquiry into a subject of such grave concern as Adirondack deer hounding, it is bound by the professions of its title to conduct that inquiry fairly, without prejudice, and thoroughly. When it makes a statement based on the result of that inquiry and intended to influence legislation in the direction of right game protection, that statement should be fair, unworried by prejudice, and candid, giving the truth, and basing arguments and conclusions on well determined facts. The document now before us is not fair. It is not unprejudiced. It is not candid. It conceals the truth. It suppresses the facts. Its arguments are based on misrepresentations. It is not a safe guide for legislation in the interest of game protection.

1. It is misleading and deceptive because it purports to be the result of an honest inquiry by a game society. As a matter of fact, it is a collection of arguments gathered by

deer hounders to bolster up deer hounding. The president states that he was directed to correspond with well-known residents and others interested in the North Woods. By the further statement that with "one single exception," his correspondents were all in favor of rescinding the law of last year, he virtually confesses that only those persons were written to who were known or believed to be advocates of deer hounding. The "one single exception" was a mistake on his part; he had misjudged his man. The officers of the association, themselves deer hounders, instead of conducting an impartial canvass to truly determine public sentiment, constituted themselves a partisan committee to drum up ammunition for their cause. Mr. W. W. Byington, the association's secretary, wrote some of these letters of inquiry, and one of the published replies comes from the Boonville *Herald* editor, a pronounced advocate of dogging deer. This is the way the reply begins: "Yours at hand. I am exceedingly pleased to find that our ideas are alike on the deer-hounding law." Had Messrs. Ward and Byington, as private individuals, gathered this material for their purpose and presented it to the Legislature on their own responsibility, that would have been perfectly proper; but to presume to offer it on the pretense of its being a game society's public-spirited action is a different thing altogether. If the Eastern New York Association was not organized by active deer hounders for the express purpose of conjuring with its name at Albany to help their cause, the members owe to the public a disclaimer of this pamphlet sent in the society's name to the Legislature.

2. The document is misleading and deceptive because it pretends to represent public sentiment. After such a one-sided inquiry as this was, the result of necessity cannot in any way reflect public opinion. The compilers of the pamphlet studiously avoid giving the side (which in point of number and character is by far the most worthy of being heard) opposed to their own private dogging interests. They suppress the other side entirely, even when pretending to give the views elicited by others. For example, on page 14 they profess to give the views contained in the correspondence published in the Glens Falls *Republican*. But among the diverse views expressed there, they select and print only two letters, one written by S. J. Palmer, of Indian Lake, who wants the deer hounding law repealed because certain lawless ruffians in his neighborhood persist in slaughtering deer with hounds; and another from Oliver St. Marie, a store keeper of the same place, who trades supplies to these deer butchers in exchange for deer pelts. Now, if these pamphlet compilers who pose as game protectionists, honestly intended to give the Legislature a fair statement of public feeling on this question, why did they not print the letter from A. C. Clifton, of Hague, published in the *Republican* of Jan. 8. Mr. Clifton wrote:

"Moose and beaver were natives of the Adirondacks and no voice was raised to prevent their destruction. Our rivers swarmed with salmon and they too have disappeared. Deer and trout are sure to follow them, but by judicious management the day of their disappearance may be long delayed. One thing, however, is certain, we must give up the deer or the dogs at once. Of all the methods of deer hunting the use of hounds is the most destructive and inhuman. Crust hunting is but little less so when practiced, which is not once where dogs are used a hundred times. A hunter who is so disposed can use his dogs and kill deer any day in the year. The crust hunters' time is limited to a very few weeks, and the fact that the game at that season is worthless and unfit for food, is in itself a great protection. He who must hunt for skin-poor does, can do so only in fly time. For a certainty the dog is always resorted to. When his owner has no use for him he hunts for his own amusement, and, left to run at large, ill cared for and ill fed, he takes to the deer yards and the destruction is completed. I have said that the practice is inhuman, and to sustain the assertion will give you one instance among many in my personal experience upon which the charge is based.

"As hunting with a party at the head of the Boreas River. Returning late one day from starting dogs, while crossing a neck of the big swamp at the upper end of Saddlebag Pond, I heard a deer bleating loud and often. I made my way to the spot, which proved to be in a brook filled at that place with windfall and floodwood. Here was a tired-out deer, tangled in a mass of vines and brushwood, and one of the largest hounds I ever saw was eating from the quivering flanks of the living animal. As I approached, the dog (a strange one) made a vicious spring at me. I kicked him off and he returned to his ghoulish meal. The pitiful cries of the deer, and the savage demonstration of the hound toward my self, decided me at once, and I sent a bullet through his head. I cut away the brush with my sheath knife and approached the deer, a beautiful doe, which made no effort to escape, but looked up in my face with its beautiful, pleading, almost human eyes, as if to thank me for the relief from torture that had come too late to save its life. Had it been possible for the deer to live no harm of mine would have been raised against it. But an examination proved that it was a ruined pair, all hope of recovery and I shot it dead in its tracks. This is not an isolated case, but one of many I have seen, and such as are daily happening where dogs are used.

"The lines of the territory inhabited by deer are ever contracting, and are already nearly beyond our county limits. The present law enforced to the letter, as it will be unless the courts refuse to do their duty, we regard as the last chance for deer on the barren and useless mountains which occupy the northern portion of Warren county."

This eagerness with which everything in favor of hounding—no matter how false or preposterous it is—is seized by the pamphlet compilers, and the equal zeal with which they seek to conceal the actual sentiment of the great majority of intelligent and unselfish citizens, lay bare the covert purpose of the society's officers and stamp the document as untrustworthy, even though it bears the pretentious sanction of a "game protective association." No honest attempt at wise game protection ever yet demanded such perversion and suppression of truth to accomplish its ends—and never will.

3. The pamphlet is further misleading and deceptive when it states that hounding "is objected to only by those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time." The truth is that the most intelligent and public-spirited sportsmen recognized the imperative necessity of a law against hounding, worked to secure it, have been hearty in their support of it, and now demand that it be retained. To cite a few names—Hon. O. B. Matteson, of Wilmurt Lake, wrote to Governor Hill last

May urging him to sign the bill against hounding. Is Mr. Matteson a pot-hunter? Gen. R. U. Sherman, secretary of the Fish Commission, is on record in these words:

"The number of deer wantonly killed by hounding by far exceeds those killed out of season, and the slaughter of the animals for mere sport is an evil which demands prompt attention. Men seem to have just found out how easy a matter it is to get deer in this way. I am of the opinion that running deer with dogs should be prohibited, as there seems to be no other alternative."

Does Dr. Ward presume to class Gen. Sherman among the pot-hunters? Among the subscribers to a fund to pay a special officer to enforce the law against hounds in the Beaver River district last summer were Hon. Lansing Hotaling, of Albany; Prof. E. L. Richards, of Yale College; Dr. Spencer M. Nash, of New York city, and Charles Fenton, of Number Four. Does Dr. Ward mean seriously to tell us that these men are pot-hunters? Mr. Edward C. Litchfield, of Brooklyn, is strong in his condemnation of the injury of hounding. Does Dr. Ward class Mr. Litchfield among the pot-hunters? We might fill a column with such names as these, but it hardly seems worth while gravely to consider this silly and preposterous pot-hunter pretext.

4. The pamphlet is misleading and deceptive when it declares that "to follow deer with hounds" is a historic and sportsmanlike method. What if it be so? That has nothing to do with the Adirondack style of hounding. In the North Woods the sportsmen do not follow the hounds. They sit on the bank or in a boat and wait to be rowed out to within arm's length of the exhausted deer swimming in the water. There is nothing exhilarating about the water-butcher of deer until the butchers have become abnormally hardened to it. Ninety-nine deer out of every one hundred killed by hounding in the North Woods are killed in the water. Only the hundredth is killed on a runway, after the manner of hounding as practiced elsewhere in this country. To call this water-butcher historic and sportsmanlike is grotesque.

5. The pamphlet is misleading and deceptive when it represents that the welfare of the North Woods guides and hotel keepers depends on hounding. Of a thousand Adirondack tourists, less than one hundred go to hound deer. The nine hundred would gladly see the hounds kept out. The guides are not dependent on the hounders; they can find abundant employment in other ways. The most intelligent guides recognize that hounding destroys the deer supply and is opposed to their true interests. Many of these guides petitioned the Legislature last year to pass the hounding law. They have not since then changed their opinion of the wisdom of the measure—statements in this pamphlet to the contrary notwithstanding. We challenge the compilers of this document to name one man whose opinion is entitled to respect, who was last year in favor of a non-hounding law and is now opposed to it.

6. The pamphlet is misleading and deceptive when it argues that the deer supply has increased within the past "five and ten" years. The exact opposite is the truth, and no one knows it better than the dogger. It was in fact the alarming decrease of deer that started the friends of game protection to work for the abolition of hounding, the most destructive method of hunting the deer in the Adirondack region, and one which, if persisted in, means the extermination of the game.

7. The pamphlet is misleading and deceptive when it avers that hounding "is one of the least destructive methods" of hunting deer. Of all the modes employed in that region it is only less destructive than crusting, and crusting is very properly forbidden by the present law. Hounding is more destructive than floating or still hunting, because more sure. It can be practiced—and in fact is practiced—at all seasons. It requires no experience nor skill. The deer is driven into the water and the hunter is rowed within short range. It is a common thing for the guide to hold the deer by the tail while the "hunter" shoots or clubs it to death. Just because it is so sure and so easy it is clamored for by one class of guides and one class of tourists. By it they have killed 75 per cent. of all the deer killed in the North Woods. These classes are now clamoring for a law against floating. Why? Not because they believe that it will save the game, but because they hope thereby to regain the privilege of hounding. Why do they want to exchange jacking for hounding? Because by the latter method they can get more deer. Jacking is uncertain, often barren of result. Hounding is sure four times in five. They want the sure method. They demand that the hound be again put on the track of the buck and the doe and the fawn. But the men who ask for hounding are only a small class compared with the whole number of Adirondack guides and visitors, for—

8. The document is misleading and deceptive when it states that more deer were killed last season by still-hunting and floating than in any recent previous year by these methods and floating combined. The statistics given in the pages of the pamphlet and quoted from the Boonville *Herald* are wholly without foundation. They are not authenticated by any responsible person. Nobody but a highly constituted idiot would believe them nor expect others to believe them. Moreover, jacking was practiced last June, hounding was extensively practiced last summer, and crusting has been practiced this winter. By these three illegitimate methods, it is fair to presume, as many deer were killed as were taken by lawful jacking in the open season and by still-hunting. If venison was cheaper than usual, it was water-killed venison and crust-killed venison—

as set forth in the pamphlet, pages 14 and 17—both methods are forbidden by law and meat so obtained is contraband.

9. The document is misleading and deceptive in the plea that deer must be hounded that they may be made shy. Hounding does prevent the taking of deer by still-hunting. It does not prevent it by making the deer shy. It prevents it by killing them. A deer driven by hounds into the water and clubbed to death in August cannot be shot by a still-hunter in the autumn. That is exactly the way hounding works. If dogs are used no deer will be left to be taken by any other method whatever. The pretext that hounding is preservative of the deer is rubbish. The men who dog do not dog for the purpose of protecting. They dog to capture and kill. And they do kill. They exterminate. One of the professional gentlemen whose letters are published in this pamphlet has made it a custom for years past to dog deer by the wholesale, to kill more than could be consumed as food, and to leave the carcasses to rot in the woods. That is the sort of making shy the hounders call for and that is the way they practice it.

The excessive killing by still-hunting, it is admitted by the hounders, is the work of market-hunters. The way to stop this is to cut off the market. Forbid the transportation and sale of game. For years the *FOREST AND STREAM* has urged such a law. Every sportsman would rejoice to see that provision on the statute books. We strongly urge the passage of a bill to that effect by the present Legislature.

But to make such a law at the sacrifice of the present non-hounding statute would not save the game. The repeal of the present law, on any pretext whatever, would mean the doom of the Adirondack deer. The hounding law is wise and beneficial. Let it stand. Enforce it. The State of New York cannot afford to repeal it. The community cannot afford to put the hounds again on the track to drive deer into the water. It would be sheer and irreparable folly and improvidence to sacrifice the game supply of the Adirondacks to the selfish, time-serving and greedy clamors for permission to hound.

FIFTY-EIGHT FOXES, FOURTEEN DOGS AND TWO ITALIANS.—Hawley, Pa., Feb. 8.—About twenty years ago Randall Kellum, of Kimbles, Pike county, five miles below this place, on the Honesdale branch of the Erie Railway, purchased a horse for which he paid \$90. He worked it daily on his farm until one day last week when the horse died. The neighborhood of Kimbles, and in fact all through that part of the country, has been literally overrun with foxes this season. As has been the case in Sullivan county, across the Delaware River, the farmers have lost hundreds of chickens and other poultry by the bold raids of these usually timid animals. Farmer Kellum hit upon a plan that he thought might destroy a large number of the thieving pests, and that was to put strychnine in the carcass of the old horse, and place the body in a spot where foxes would be sure to flock to it. The deadly drug was accordingly placed plentifully in the flesh of the dead horse, and the carcass was hauled to an out-of-the-way spot in the woods, two or three miles from Kimbles, and left there. The next morning Kellum went early to the woods to see if his plan had worked successfully. He found lying scattered about in all directions, and none of them far away from the poisoned horse, 39 dead foxes. How many more managed to get to their holes or hiding places before they died was of course unknown. Mr. Kellum had the foxes taken home, and the next morning went to the woods again. There were no foxes found, as could hardly have been expected, as the horse during the previous night had been monopolized by half the dogs in the neighborhood, 14 of which were found dead at the scene of their feast. With barely an exception the dogs were animals that had long been suspected of habitual wholesale killing of sheep in the vicinity, so the night's work was regarded as an excellent one. The following morning Kellum visited the remains of his old horse again, and this time picked up 19 dead foxes. He was returning home loaded down with fox pelts, when about a mile from Kimbles, he heard moans and cries of pain issuing from the woods, some distance off to his right from the road. Kellum made his way to the spot from which the sounds proceeded, and found two Italian quarrymen rolling in the snow and writhing in pain. Upon asking them what the matter was one of the Italians told him that they had found a frozen horse in the woods, and had cut a piece of meat from it, which they had roasted over a fire and eaten. They were almost immediately seized with intense pains in the stomach. Kellum waited to hear no more. He knew at once that the Italians had eaten a piece of his poisoned horse. He started on a run for the station to telegraph for a doctor. Fortunately, Dr. Brace, of Lackawanna, had been called to Kimbles that morning to attend a patient, and Kellum met him as he was flying in for aid for the poisoned Italians. Kellum hastily told the doctor the situation and the two hurried back. Dr. Brace administered powerful antidotes to the Italians, and got them to the nearest house. He succeeded in counteracting the poison and in a few hours the Italians were able to go on their way. Kellum lost no time in burying his dead horse. The 58 foxes that fell victims to Kellum's baited horse will net him \$58 in bounties. The pelts he can sell for \$2 a piece—a total of \$114 from a horse dead that only cost him \$90 alive and had given him 20 years' faithful service. What the profits would have been if the Italians had died he does not care to cipher on.—*N. Y. Times*.

JUDGE CATON'S HOUSE BURNED.—About midnight of Feb. 8 the house of Judge J. D. Caton, at North Bluff, Ottawa, Ill., caught fire and was burned to the ground. No lives were lost. Judge Caton and his family were not at home, and only the servants occupied the house. Judge Caton's library and his large collection of natural history specimens were destroyed. Among the books burned was a complete set of Audubon's works, and many other valuable volumes.

"A CURRITUCK DUCKING SCORE."—It is suggested that the above heading in this column last week may convey the erroneous impression that the scores then printed were made on the grounds of the Currituck Club. As a matter of fact the shooting was done by the members and on the grounds of the Narrows Island Club, of Currituck Sound.

KENT COUNTY SPORTSMEN'S CLUB.—At the annual meeting held in the office of Dr. E. S. Holmes Feb. 9 the following officers were elected: President, Dr. E. S. Holmes; Vice-President, H. Widdicombe; Secretary and Treasurer, N. Fred Avery; Directors, L. D. Follett for one year; A. C. Horton for two years; T. Stewart White for three years; A. B. Richmond for four years, and W. C. Denison for five years. The President was authorized to make application for membership in the National Sportsmen's Association. The following were elected delegates to the State Association, which meets in Kalamazoo on the 9th inst.: A. B. Turner, A. B. Richmond, L. D. Follett, F. E. Blakely and N. Fred Avery.

SNIPE SHOOTING EXTRAORDINARY.—Portland, Ore., Jan. 30.—Dr. Jessup, the distinguished dentist and sportsman of this city, reports that on the day following a recent snow storm, he, with a common parlor rifle, from his parlor window, shot and killed eleven English snipe which had gathered on the lawn in front of his residence; that he fired only thirteen shots, and that each bird was shot through the neck, and not elsewhere. Ought the club to question the truthfulness of the statement?—C. T.

VIRGINIA COLD AND GAME.—Richmond, Va., Feb. 6.—We are having now the coldest weather ever experienced here. The thermometer registering Thursday morning five degrees below zero. In addition to this the snow is about eleven inches deep. From information gathered from farmers in the counties of Henrico, Chesterfield and Hanover, I am afraid poor "Bob White" has been effectually "cleared out." Whole conveyances are reported as found frozen to death.—W. H. C.

COLD WEATHER IN MAINE.—A Portland (Me.) correspondent who was compelled by the recent cold weather to abandon his fox hunting, writes that upon visiting a known grouse cover he discovered two of the birds frozen to death and covered with ice; the inference is that the ice storm was very destructive of the grouse in that section.

A TAME MOOSE.—Burlington, N. J., Feb. 1.—Ex-Congressman H. B. Smith, who announced some weeks ago that he was to establish a paper here has changed his mind. He has a pet moose from Canada, and, eschewing politics, is now putting the fleet animal over the road in high glee.

ATLANTICVILLE, L. I., Feb. 7.—One gun, three days, recently secured fifty ducks, mostly broadbills and whistlers, at the inlet on Shinnecock Bay.—J. W.

TAUNTON, MASS., Feb. 3.—We have organized a gun club here and own several good dogs among us.—So.

Sea and River Fishing.

THE STRIPED BASS LAW.

Editor Forest and Stream:

We thank you for the prominence which you so kindly gave our communication of the 1st instant, and the very courteous editorial comment on same.

It is quite true that the present law "does not cover the whole season for striped bass in the Hudson." It is equally true that the present laws in regard to trout and black bass do not cover the whole of the spawning season of either of these two last named fish. Every angler has taken gravid trout in July and gravid bass in August. If a law covers the time during which the large majority of any specific class of fish spawns, it does as much as any citizen has a reasonable right to ask; but it does not seem to us that the fact that a close season is too short is a good reason for making it still shorter.

So long as it is generally conceded that the chief, if not the sole, reason for anadromous fish ascending fresh-water streams is to spawn, and so long as it is true that in the case of all those anadromous fish, with whose habits we are anything like familiar, the period covering their ingress and egress covers their spawning season, it seems to us to be wise to protect them during the greater portion of the time they are in our rivers. Though no man can prove that all of the fertile bass which run up the Hudson do spawn during the present close season, yet no man will presume to deny that many of them do spawn then and there. Nor would the opinion that the constant and permanent supply of striped bass in our waters does not chiefly depend upon river spawning be seriously entertained by thoughtful students of fish life.

What you say about the propriety of enacting a law against dragging nets under the ice is most pertinent in this connection. But we believe that so long as there is no law against the sale of bass during the season at which this abomination is possible, this thing will continue. The philanthropic fish mongers say in their petition, "To fairly [fairly seems hardly a proper word under the circumstance] prepare for Lent, our cold storage warehouses should be filled immediately during the present cold season, when the supply is readily obtained." In their eagerness to secure striped bass for the Lenten season they may not have time to find out whether the bass were caught under the ice. And this, besides encouraging law breaking, would be a constant source of remorse to an excellent and necessary class of people.

ABBET & LUMBIE.

NEW YORK, Feb. 8.

[Our correspondents are reminded that the season named in the law, *i. e.*, Jan. 1 to May 19, is not known to cover any portion of the season of spawning of the striped bass in New York waters, for, as we have pointed out, but little is known of their spawning habits, and the few eggs which have been taken from them in the Hudson. Our main reason, however, for urging the repeal of the striped bass law, was because the framers of the law did not intend to protect this fish, but meant it for a small fish found in Lake Ontario, and in consequence of this the State Game Protectors were instructed by the Fish Commissioners with the sanction of the President of the New York Society for the Protection of Game, of which Mr. Lumbie is a member, not to take notice of this law or begin any prosecutions under it. The law being a dead letter—not because of any lack of enforcement by subordinates, but because the authorities so declared it—we think it better off the books than on it. As for the prohibition of netting under the ice in the Hudson, we believe it possible to stop it if a law to that effect is passed. That kind of netting is done out on the ice in full view of citizens along the bank and of passengers in the cars which run on both banks of that river.]

TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

I was much interested in your article announcing the discovery of a new species of trout in Sunapee Lake, and after thinking the matter over for a while it occurred to me that while I was a member of the New Hampshire Fish Commission we had planted the *Salmo ogassu* in that lake, and I accordingly wrote to my former colleague, Mr. A. H. Powers, of Grantham, N. H., a town very near the lake, to ask him about it, as he was the superintendent of the State hatchery from the beginning, until Mr. Hodge succeeded him on his resignation of his commission.

Mr. Powers writes me as follows: "On June 3, 1879, I planted 4,000 *ogassu*, or blue-backed trout, in Sunapee Lake, and these *Salmo sunapee* (?) may have come from that plant; they have a look like the fry, as I remember them. But could they have multiplied so, and grown to such monsters? I have no doubt that some of those we saw, for I was with Mr. Hodge at the time, would weigh from eight to ten pounds; we caught some of six pounds, and saw much larger ones. Now these fish are lake spawners. Not one of them came up the brook I planted them in, while the landlocked salmon of about the same weight did so. In Maine it was said that they were small, about one-quarter pound weight, and came into the river to spawn Oct. 10 to a day. That is as I remember it. Now the question is, could they change from minnows to whales and from river to lake spawners in so short a time?"

Now I am equally puzzled with my friend Powers. We know that the landlocked salmon which we placed in Sunapee Lake, from eggs procured at Grand Lake Stream, have attained a weight of over twelve pounds, though the Grand Stream fish seldom go over two or three pounds, and the same season's fry distributed in Squam Lake have gone up to fifteen or sixteen pounds.

This I attribute to the fact of their finding plenty of fresh-water smelts for food, for one reason, as well as to the fact that we usually find the size of the fish to correspond in some degree with that of the water from which they are taken.

This discovery is a very interesting one, and having found a possible *raison d'être* for *ogassu* trout in Sunapee Lake, I send it you in hopes that some other correspondent may be able to throw some light on the matter, and solve Mr. Powers's queries as to the possibility of such rapid growth and apparent change of habit.

SAMUEL WEBBER.

CHARLESTOWN, N. H., Feb. 2, 1886.

A WINTER CHAT.

Editor Forest and Stream:

"Little Sandy" is sad, and why not? Information has just reached us that the Legislature has repealed the State law to prevent seining, etc., in the waters of Kentucky.

For years we have been trying to effect a change in our community by distributing some of the wholesome teachings of FOREST AND STREAM to show up the evil effects of seining and kindred devices for catching fish. The State passed a law to prevent seining, and though badly enforced, it had a good effect. Last spring we appealed to the ever gallant and generous Dr. Henshall to furnish us, through your columns, with a description of suitable fly tackle, by which our sport might be heightened and made more interesting. We were congratulating one another a few days ago as a small nucleus of the "new fangled fishermen" (as we are sometimes ironically called) had met around a glowing fire to talk over our first year's experience in the most delightful of sports, *i. e.*, fly-fishing, when the sad news reached us of the action of the Legislature. While we grieve we have much to be thankful for.

Acting upon Doctor Henshall's suggestion last spring we sent for a pair of seven ounce lancewood fly-rods, reels, lines, flies, fly-books, and leaders, which came by express in a few days, and were secreted under lock and key so that no unhallowed eyes might pry into those precious packages, for it had already been noised about that my friend Skill (may he soon be released from his snow-bound situation and find a fair market for his mules) and I were going to use horse flies and gnats for our fishing baits instead of minnows the coming season. That night we were children again, it reminded me of the Santa Claus days. We put the rods together and praised their fine proportions, spring and workmanship. How we longed to be in some secluded nook on Stoner or Storde's Creek, where we might rig our first cast just to see if what we had been told was really true, "that fly-fishing was well enough up North or out East where fish are plenty, but fish had too much sense to bite at a feathered hook in Kentucky."

The rods are laid aside, a bundle of leaders receive but a passing glance, then the Orvis reels; these (at first) look awkward compared to a No. 1 Meek, of which the spool is not more than one inch in diameter, but then it takes up line very fast, and the perforated plates allow the line to dry without removing it from the reel. Next come the fly-books which are very handsome and well made. "What is this by the side of the little green box marked flies?" asked my friend. "Fishing with the Fly," Orvis-Cheney collections, a present." A hurried glance at the index shows articles from the pens of a host of writers of whom we had long ago become familiar through the pages of FOREST AND STREAM.

Since that night our fondest anticipations have been realized, and though we had entertained some fears that the light rods, in inexperienced hands as we were, might in a well-contested battle fail, yet victory on victory gave us more confidence, and at the end of the season have sustained their reputation. The flies, too, we ordered first (from names only) proved very successful, and that the notes taken from the different writers on the "most killing flies" were not made in vain. We have caught fish of all the representatives of our streams with the fly, excepting the sucker, and we can well afford to leave him to those who are willing to take their seats on the muddy and slippery bank, in February and March, at a place previously baited with dough balls, and fish with the humble "wum" for bait. Anglers as a rule are incredulous, and hold to the doctrine that "seeing is believing." One among my first essays was in company with a friend who thought "minnows were good enough." But it happened on one of those likely evenings previous to a shower, with a good breeze, and as it took me some time to rig my cast, he baited his hook with a minnow and commenced fishing down stream from the bank.

When I got ready I waded out in the middle of the creek, and cast right and left in his wake; he caught one bass, while I was getting a rise at nearly every cast, and at last he reeled up his line and said he "would rather watch me than to fish himself, it was so novel." I made a convert right there. This is not the only instance, for to-day we have

quite a number who are devotees of the fly-rod and have enjoyed its seductive pleasures. I received a letter from your correspondent "Vox" from Mt. Sterling, a few days ago, saying that "I have just received a split-bamboo fly-rod. I want a few instructions. Come up and spend a day with me. It would be like an experience meeting of old Methodists."

On the following day my genial friend E. P. B., treasurer of the Bourbon Gun Club, met me. "What say you on going to Mt. Sterling to-morrow?" "I can be ready by 8 o'clock." The next morning turned out to be one of those cold, disagreeable, misty days, the ground all covered with snow and slush, but just right to talk fly-fishing. We arrived at Mt. Sterling early, and as we sauntered into the office we found "Vox" in his little workshop at the end so busily engaged that he was unaware of our presence. I knocked on the door, and turning he hid something which to me looked like a fly-book. And with that whole-soul smile which characterizes him above all good fellows, "hail friends well met," introduced us to the Rev. Mr. S., formerly Fish Commissioner of Tennessee. After a hearty greeting he informed us that they had just been engaged in a conversation on the subject of fishing. Ceremonies were cast aside. My friend B. excused himself, having some business in town, which left the happy clover leaf in its glory. The rods were brought out and I soon ascertained that "Vox" had it bad. Fortunately the "weather conditions" were such that it kept all the toothache patients at home, which often prevents one of those pleasant *à-la-tête* chats that we enjoy so much, and then it gave us full sweep of the room.

The office was hardly high enough to make the overhead cast *comme il faut*, but taking off the butt joint we managed to lay out (an imaginary) line fairly well. Thrice the dinner bell rang before we could find a convenient stopping place. After dinner followed a long discussion on the action of legislators, which closed with the hope that the Senate would be awake to its duty and surely "kill the bill." We cast our eyes across to the court house clock whose hour hand already pointed a little after five and bade our friends a reluctant *au revoir* with the promise that as soon as the water was in right condition when spring has asserted her rights again I would telephone them when they would meet me to try the result of our meeting.

As we drove homeward through the falling mist and rain I could scarcely think of anything but the pleasant day spent with genial companions when everything was present but the fish.

LITTLE SANDY.
NORTH MIDDLETON, Ky.

ANOTHER WAY TO CARRY A LANDING NET.—Centralia, Pa., Feb. 6.—Any plan or arrangement that adds to the pleasure or comfort of a sportsman's "outing" I think should be common property, so let me tell of a contrivance that helps to keep this necessary but cumbersome article out of the way while always ready for quick use. I take it to be the invention of a friend, one who can entice more fish into his net with the gentle persuasion of his springy greenheart rod than any other fisherman I know: Fastened securely to the short handle of the net is a loop of say four feet of the very best elastic web, three-quarters or one inch wide; this is worn around the neck and when not in use is thrown so that it hangs down the back; when wanted and your fish is ready to be landed taking the handle the web will stretch as far as you can possibly reach; when the two pounder is taken care of a toss puts it back over your shoulders ready for the next one. In my early fishing days I was sorely bothered with the corkscrew twist that was always in my six foot leaders as I took them out to replace one that my largest fish had carried off; it was only after some minutes drawing through the water and making every trout in the pool think more about a water snake than of the white winged coachman, that it straightened out for business; now when starting on my trips I take a common tin oval tobacco box, one that can be handily carried in the pocket; then dampen a heavy piece of cotton flannel that has been cut the width of the box and twice its length; laying it in I place the leaders on it then fold the end back over them; very soon they are as soft and pliable as if they had been soaking in the water and are ready for immediate use. Both of these plans may be nothing new to most of your readers, but perhaps it may to some one of them save a tangled line or another fish for his creel.

—SPICEWOOD.

ADIRONDACK FISHES.—I will again appeal to the kindness of friends and ask them to send me such notes on the fishes of the Adirondack region as they may have. The few hundred copies of my "Memoranda" for Mr. Colvin's forthcoming Report of the Adirondack Survey, which were issued in advance of his report, are nearly exhausted, and it is proposed to extend the report on fishes. The following note, which is just at hand, explains it: "Albany, Feb. 4, 1886. Mr. F. Mather, Dear Sir: I think that you can rely upon having fully six months in which to get in all the addenda. I shall use every effort to make your report as perfect as possible, even if we have to cut the electrolyte plates. Sincerely yours, VERPLANCK COLVIN, Supt." My collecting tour was a hasty one, and it is very probable that I missed some species; in fact, I inserted the "Miller's thumb," *Uranidea*, on the authority of Dr. Merriam, as I could not find it. Some of the sticklebacks may also be found there, and then we want specimens of those "Morse Lake minnows," and "Seventh Lake minnows," which are mentioned, but which, owing to their decayed condition, could not be identified, and which Prof. Jordan thought might be new. Had it not been for the good friends who helped me out in making out the list of the distribution of species this portion of the work would have been omitted. This is a very important portion of the work and is not complete, and all volunteer help in the work will be thankfully received.—FRED MATHER (Cold Spring Harbor, N. Y.).

FLORIDA FISH KILLED BY COLD.—St. Augustine, Fla., Jan. 31.—I have just returned from a fishing cruise to the head of Matanzas River. The sight that I saw was enough to make the heart sick. Hundreds of large sea trout and channel bass were lying dead along the shore, killed by our last cold snap. One can understand how the sea trout were caught in the shallow water and frozen. But my surprise was great when I saw many sheepsheads among them, as they are fish which usually seek deep pools and channels. The buzzards are so full they will hold no more, and such a mass of decaying fish certainly will not be conducive to the health of the country. In spite of this wholesale destruction I had very good sport with rod and reel. And many a fine fish was replaced in his native element for fear of killing more than I could use. The nights have been rather cool of late, and I have been glad while sleeping in my boat to have my second sleeping bag around me.—WINDWARD.

BISBY CLUB.—Utica, N. Y., Feb. 3.—The eighth annual meeting of the Bisby Club was held here to day, and the following trustees chosen: Gen. R. U. Sherman, Hon. H. J. Cookinham, H. Lee Babcock, O. J. Childs, Thomas R. Proctor, A. G. Brower. At a subsequent meeting of the trustees the following officers were elected: President, Gen. R. U. Sherman; Vice-Presidents, Christopher Roby, W. W. Snow, D. W. Cross, Thomas R. Proctor; Secretary, Henry H. Thompson; Treasurer, S. P. Sherman; Legal Counsel, Hon. H. J. Cookinham. The club passed a resolution declaring against floating for deer, favoring the limiting of the shooting season beginning Aug. 15 and closing Nov. 1, and advocating hounding from Sept. 15 to Oct. 15.

NOT AN UNCOMMON CASE.—"Got any fish?" "Nary fish." "Got any bites?" "Nary bites." "Got any bait?" "Nary bait." "What are you doing there?" "Fishin'."—Texas Siftings.

Fishculture.

THE FULTON CHAIN HATCHERY.

Editor Forest and Stream:

At the annual meeting of the Boonville Sportsmen's Club, held at the Huriburt House, Boonville, recently, the following officers were elected: President, L. W. Fiske, Boonville; First Vice-President, S. T. Miller, Constableville; Second Vice-President, H. G. Emmis, Turin; Treasurer, C. W. Colton, Boonville; Secretary, G. A. Willard, Boonville.

The report of the committee on the new fish hatchery just completed on the Fulton chain of lakes, was read by Hon. H. Dwight Grant. The report stated that the hatchery house was located near Cold Spring Camp, on Fourth Lake of the Fulton Chain, on the recommendation of State Fish Commissioner Sherman. The site was selected for the purity of the water and its convenience as a central point for procuring and distributing trout fry. The plans of the building and plant were made and furnished by Mr. Sherman on the most approved methods for hatchery. The dimensions of the building are 20x36 feet. It is boarded and battened on the outside, and has a plain, tasty cornice and gabled roof covered with good pine shingles. It is lighted by 8 windows of 12 lights each, 9x14 inches, and has one door. The inside walls are lined with building paper and covered with matched spruce ceiling. The rooms are also ceiled overhead with spruce. Water is conducted to the building through a 3-inch main 136 feet in length from a reservoir built for that purpose. The inside reservoirs and hatching troughs are on the ground ready for setting up. Necessary wire cloths for hatching trays has been purchased and the frames are in process of construction. Owing to late commencement of operations on the building and the early forming of ice on the lakes, the managers were unable to transport and set up the hatching apparatus until after the time that the spawn had reached maturity, thereby making it unsafe to remove them from the State hatchery. The committee recommends that the apparatus be set up in early spring and everything be put in order for future use. A better building has been erected than Commissioner Sherman contemplated and it will be better equipped. It has already cost \$572.44, and \$50 or \$60 more will be required to complete it. The report was accepted. The treasurer's report, which showed a balance of \$90.95 on hand, was also read and accepted.

Hon. H. Dwight Grant, Geo. H. Beck, John Bruckerhoff, F. A. Barrett and C. W. Colton were elected managers. L. W. Fiske was delegated to go to Albany to confer with representatives in regard to securing aid for the new hatchery and to voice the sentiments of the club on the proposed changes in the game laws.

PORTSA.

UTICA, N. Y., Feb. 3, 1886.

BLACK BASS IN GERMANY.—We have received a pamphlet of eight pages from Herr Max von dem Borne, on the black bass. This gentleman, it will be remembered, has introduced the two species of bass into Germany and has sent us accounts of his success in breeding them. He has called the small-mouth *der Schwarzbarsch*, and the big-mouth *der Forellenbarsch*, *Forelle* being the German word for trout. The great success in breeding these fish, together with their growth and game qualities, causes Mr. von dem Borne to value them highly, and to recommend their introduction into suitable waters in his country.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 16, 17, 18 and 19.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elber, Secretary.

March 23, 24 and 25.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club, 8, B. Hemingway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club, Edward A. Mowley, Secretary, Boston, Mass.

April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3185.

EASTERN FIELD TRIALS CLUB.

THERE was an important meeting of the Board of Governors of the Eastern Field Trials Club at the St. James Hotel on Tuesday evening, Feb. 9. The Treasurer's report showing a balance in favor of the club of \$838.60 was accepted. Messrs. J. L. Breese, New York; C. L. Dick, Pittsburgh, Pa.; O. H. Denny, Pittsburgh, Pa., and J. T. Perkins, Brooklyn, N. Y., were elected members. The conditions of the Members' Stake were changed so as to allow any member to handle a dog owned by another member. The committee on running rules reported several amendments which we shall publish next week. The date of birth of entries for the Derby of 1886 was changed back from May 1 to Jan. 1, the entries to close May 1, with \$10 forfeit and \$10 additional to starters. The stake will be \$700, with \$400 for first, \$200 for second and \$100 for third.

THE FANCIERS' SHOW.

THE dog show held in connection with the New York Fan- ciers' Club opened on Monday last, and closed Wednes- day evening. The entries numbered 307, and the quality of the dogs was very high. The show of dogs appeared to attract more attention than any other of the exhibits, and the crowd about the benches and about the judging ring was often so great that it was very difficult to obtain anything like a satisfactory view of the animals on exhibition. The judging was conducted in a ring at the east end of the build- ing, by Messrs. C. H. Mason and Jas. Watson, and gave gen- eral satisfaction. In the case of the contest between the rough-coated St. Bernards Otho and the newly-imported Merchant Prince there was room for an honest difference of opinion, and we presume that in the opinion of the judge the bad condition of Merchant Prince gave Otho the first place.

POINTERS—(MR. MASON).

The pointer classes were not well filled. The average qual- ity, however, was very good. In the dog class, Beauvoir, win- ner of first, is a good young dog, with a fair head, good loin, quarters, legs and feet. He is a bit throaty and is too wide in front. Second was properly withheld. Corney, the only other in the class, showing more greyhound than pointer character in head and neck. The bitch class brought out two new ones, Faustina, winner of first, is a nice white and liver ticked. She is fairly good in head, shoulders, legs and feet and tail. She is faulty behind. Dawn, winner of second, is not so good as the winner. She has a fair head, good loin and legs, but is throaty, too wide in chest and has poor feet. In the puppy class, Beauvoir, the winner in the aged class, had to make room for his litter brother, Beau Brummel, a nice young dog, with good shoulders, back quarters, legs and feet. He is not quite clean cut enough in head. Vic, winner of third, was out classed.

ENGLISH SETTERS—(MR. MASON).

Foreman scored an easy win in the dog class. He was look- ing well, except that he was out of feather. Fairy King won second. He is a nice little dog; his ears are set on a trifle high and he is a bit slack behind the shoulders, but may im- prove in this respect with age. Four of the others were given hc., which was all they were entitled to. Shot has a good head, but is faulty behind, and was in bad condition. Tip has not improved upon his puppy form; his head is of the Clumber spaniel type, and he is faulty in quarters. Sussex Tramp is a big, heavily-made dog, too coarse all over. Rex is heavy in shoulders, round in barrel, has a curly coat and bad feet. In the bitch class, first went to Pet Berwyn, rather a nice little bitch, with no very serious faults except that she is a bit heavy in shoulders. Second went to Alice Dale. We rather fancied her for first. She is a very taking-looking animal, with good head, shoulders and legs, and a nice coat. She is too long-coupled and has flat, open feet. Neither of the two puppies were first-class.

IRISH SETTERS (MR. MASON).

In Irish setter dogs Tim won first. He has greatly improved and fairly won his place. Chip, second, was looking well. Glen, third, is a fairly good dog, but he was badly shown. Leo, hc., is too heavy in head and light in loin. He is also straight behind and has too much white on chest. Champion Rory O'More was on exhibition only; he carries his eleven years bravely. There was nothing else in the class worthy of notice. The bitches were better than the dogs. Mollie Bawn won first. She has greatly improved since we saw her last. Second went to Miss Nellie Husted. She won first in the puppy class at Philadelphia last fall. We then said of her that if she went all right she would do to show again. She is not yet fully mature and if she develops the proper amount of muscle she will hold her own in good company. Third went to Yoube; she was looking well. Fame, vhc., is only a fair specimen, with not much to choose between her and Katie Gates, hc. There were three nicely shaped puppies, all of one litter, that carried off the prizes. Redstone, hc., is too heavy in head and neck and his ears are set on too high.

GORDON SETTERS—(MR. MASON).

Only three of the seven entries in the Gordon classes were shown. Argus had an easy win in the dog class. Don, his only competitor, winning second. He is rather a well formed little dog with a nice flat coat. His color is not good and he has light eyes. The only entry in the bitch class was absent. Jess, the only puppy shown, was very lucky to receive first. She is fairly well formed, but has a poor head and a curly coat.

CLUMBER SPANIELS—(MR. WATSON).

Mr. Richardson was the only exhibitor in this class. Tyne was out of condition, and in consequence only received third.

FIELD SPANIELS—(MR. WATSON).

Newton Abbot Lady, winner of first, was the only entry in this class, but a miscellaneous spaniel or we should say a spaniel from the miscellaneous class was added and given second. He is a very handsome animal and the first field spaniel of the kind that we have seen.

COCKER SPANIELS—(MR. WATSON).

In the cocker spaniel class for black or liver, Miss Obo II. had an easy win. She has a good head, which is a trifle too large. She is well formed and has good legs and feet; her coat is not quite so straight as we like to see, but take her all round, she is a very nice bitch. Pearl Lake Obo, the winner of second, is not square enough in muzzle and is too tight in middle, too high up, and has a long up-turned tail. In the class for "any other color," Marion won first. She was much the best. Hornell Nance was second, and Wanda T., short of feather, was third. In the puppy class, first went to Newton Abbott, and second to Lady Abbott, his litter sister. Neither are quite right in head, but may improve with age. Third went to Jim. There is also room for him to improve in head and body both.

DEERHOUNDS—(MR. MASON).

Bran and Lorna, both well known, were respectively first and second; both were in good condition.

GREYHOUNDS—(MR. MASON).

Mr. Huntington entered Hawthorne Belle, but changed the entry to her litter brother Harlequin; but the correction, through mistake, was not made in the catalogue. He won first, and is a nice dog, with a beautiful head and neck; he is a trifle light in bone and might be better in feet. Second went to Begonia. She was looking well. Maud, winner of third, is rather a nice bitch, except that she has bad feet. Bouncing Boy, vhc., we preferred for third, notwithstanding his flat back.

BEAGLES—(MR. WATSON).

Only four beagles were shown, all good ones, we thought them, properly placed. Rye, winner of second in the aged class, was wrongly entered in the catalogue as Ringwood.

DACHSHUNDE—(MR. MASON).

Three only were shown. The two that were placed were fair specimens. Both are too tight in skin. The winner is faulty in color, and Badger is deficient in crook.

ULMERS—(MR. MASON).

Cafe-au-Lait was the only one shown in this class. He is better than the average and appears to have the best of dis- positions.

MASTIFFS—(MR. MASON).

There was a fine collection of mastiffs. Ilford Caution took first. He was in excellent condition and form. He is still weak behind, but his wonderfully good head (barring the ears) carried him through. Homer, second, is not so good in head and is small. Hector, faulty in muzzle and lacking

size, took third. Ned is bad in head. Shylcock was trans- ferred to the puppy class. He is bad in legs, houndy in head and is of bad color. In bitches Prussian Princess, looking very well indeed, took first. She has recovered from a stiff- ness behind which she formerly had, and moved very well indeed. She beat Rosalind in muzzle, and in that only. Both are very good bitches. Chinalotte, third, is too long in the face, carries her ears badly, and has faulty feet, but is of good size. Juno has a long, light head. Browning's Lucy is crooked on forelegs. In puppies Hannibal has a fair good body, legs and feet, but has not sufficient width of muzzle, and his eyes are light in color. Ajax, second, is of good size, has good legs and feet, but is too long in head. Nadine was transferred from bitch class to puppy class. She is bad on the forelegs, of a bad color and houndy in head. Leonidas is too long in head. Major has a bad head and bad feet.

ST. BERNARDS—(MR. WATSON).

The display of St. Bernards was very fine. In fact, they were the feature of the show. In the rough-coated dog class, Otho, looking better than we have ever seen him, carried off the honors. The celebrated English winner Merchant Prince, recently imported, came next. When we first looked over Merchant Prince we were of the opinion that Mr. Watson had made a grave mistake; but a closer inspection and com- parison of the two dogs showed that there was room for a difference of opinion. As we have before said, Otho is the grandest dog in front that we have seen. He is very straight behind and weak in quarters, but his increased weight, in a measure, improves his appearance behind, and he moves much better than one would expect, although his gait is far from perfect. Merchant Prince is an immense dog, but he has not much the advantage over Otho in this respect. His head is not so good, and his chest is decidedly inferior; his forelegs come out close together, and when the two dogs are placed side by side Otho shows up by far the best. Prince is much the best behind and moves nicely, both carry their tails too high and both were off in coat, Prince having the worst of it in this respect, his hair standing all the wrong way. He is but just off ship and should not have been shown until in good condition. Upon the whole it was rather a close thing between them, although we thought Otho a little bit lucky in beating his formidable antagonist. Schoonhoven, third, and Julien and Nero, both vhc., are all well known and need no description. In the bitch class Mr. Moore's recently imported Miranda scored a win, beating such well-known good ones as Millie II., Empress, Stella, and Baronne, respectively second, third, vhc. and hc. Miranda, with the exception of rather a weak muzzle, is one of the best we have seen. In the puppy class, although over age, Julien won first, he was also vhc. in the aged dog class. Second and third went to Fleur-de-Lis and La Duchesse, litter sisters, both are promis- ing puppies.

SMOOTH-COATED ST. BERNARDS—(MR. WATSON).

The smooth-coated St. Bernards were a good lot. St. Botolph, first, is a grand fellow, and we regard him as very cheap at his catalogue price. Ernst is plain in head, and has a bad expression. His tail is bad. Turk has a fair head, but is faulty in muzzle. In the bitch class Flora II. is good in head, as our smooth-coated St. Bernards go, though even in her we look in vain for the typical head and the grave, majes- tic expression which should characterize these dogs. She is faulty behind and is light of bone. In puppies, first and second were taken by two of St. Botolph's get, and third by Thuna, imported. She is snipy and light of limb.

NEWFOUNDLANDS.

It seems remarkable that so little interest is taken in this fine breed of native dogs which have so much to recommend them. Most of the specimens seen at our shows are very in- ferior. There were seven Newfoundlanders entered. Of these Major took first very easily. He is not very large, but is fairly typical of the breed. If he were a little flatter between the ears we should like him better. Juno, second, is on the small side, and her head is faulty between the ears and in muzzle. The others call for no special mention.

COLLIES—(MR. WATSON).

There were some nice collies in the bitch and puppy classes, but the dogs were a wretched lot and all awards in this class were properly withheld. Lady of the Lake, winner of first in the bitch class, we have not seen since the New York non- sporting show in 1884. We then wrote of her as one of the most promising young ones that we had seen and predicted that if she went all right she would eclipse some of the cracks the next year. She appears to have gone all right and will no doubt give a good account of herself at the coming shows. Dot, the winner of second, has improved since the Philadel- phia show. Ruth deserved her third, although she was out of coat. Gifford, in the puppy class, has a nice head and is very promising. Second went to Dandy. He also has a good head and coat.

BULLDOGS—(MR. WATSON).

In this class the winners are all well known. Bill was ex- tremely lucky in getting first over Tipppo. He is in better condition it is true, but the latter is so far ahead in head and shoulders that we think he should have won. In bitches both Bellissima and Britomartis, the latter looking well, showed up, and we think the two were well placed.

BULL-TERRIERS—(MR. MASON).

The dog class introduced a good terrier in the recently im- ported Count. He is a capital dog all round. He is a trifle cheeky, and would be improved with a bit more length in muzzle. Judas, winner of second, is rather coarse, with blunt muzzle and faulty in shoulders. He is also cheeky and carries his tail too high. Little Nell won first in the bitch class. She is also recently imported. She is a nice little bitch. Her chief faults are too full an eye and poor feet. Second went to White Rose, winner at Philadelphia last fall. Genesta, win- ner in the puppy class, is a nice puppy, with a coarse tail.

FOX-TERRIERS—(MR. WATSON).

In this class Richmond Jocky, first, is a little cheeky, but is after all a workmanlike-looking terrier. Rustic Flash, second, has a sour expression and is thick in skull, but has excellent legs and feet. Regal, third, is snipy and cheeky. Smash is leggy and light in body. Swipes has a bad head and shoulders and is too wide through the chest. In the bitch class Rich- mond Olive won easily. She was by far the best fox-terrier in the show. She is, however, becoming thick in skull as she grows older. Lady Winnie, second, is snipy, light of bone and faulty in feet. Shame, third, has a bad head. Di, vhc., is be- coming coarse in head. In puppies, Spot, Jr., second, has a poor head and is heavy in shoulders, but has a nice small ear. Gypsey is round in skull and carries her ears badly. Baby Jack, third, is a little round in skull, as is also Nina, first, who s besides cheeky. Lulu and Ouda are both faulty in head and ear.

WIRE-HAIRED AND IRISH TERRIERS—(MR. WATSON).

There were two good wire-haired fox-terriers in this class. New Year's Day was the best of the lot. Nailor, placed second, is an Irish terrier, fairly good, but not so good as his kennel mate, Molly Bawn, given vhc. Tiny Todger was placed third, she is a nice little bitch.

SKYE TERRIERS—(MR. WATSON).

Only two Skyes were shown. Nettie, first, has a soft coat, and Nypp a bad head and ears. They were well placed.

TERRIERS, ANY OTHER BREED—(MR. WATSON).

This class was made up entirely of black and tans. Vortigern was placed first; his mouth is gone and he should give place to younger animals. Second went to Britt, smutty in tan, full in eye, and shallow in chest. Queen, placed third,

was the best in the class; she has a good head, properly marked, and is of good color, she is a trifle light just below the eye.

PUGS—(MR. WATSON).

There was not a large collection of pugs, but the quality was good. Bradford Ruby, looking better than we have ever seen him, won over Young Toby, placed second. Dick and an unnamed entry were given equal third. Dick is faulty in head and ears, and is smutty; the other we could not see out of his cage. In the bitch class, first went to Beauty. She has a bad tail and carries one ear badly. Tra-la-la is round in skull. In puppies, Zoe, first, is round in skull and not very good in color. Jumbo and Fly are small in eye and faulty in head.

YORKSHIRE TERRIERS—(MR. MASON).

This class was divided into over and under seven pounds. In the large class first went to Ben, a nice little dog of good color, but short of coat. Second went to Young Hero, better in coat than the winner, but faulty in tan and not blue enough on back. In the small class first went to Ben, entered as three years old. He looks much older, and is short of coat. Second went to another of the same name. He is undershot and too long in back. Raggs, placed third, is faulty in color. Both of the bitches shown were off in color. Lillie, placed first, is not good in head and is too long in back. Viola was bad in coat.

KING CHARLES SPANIELS—(MR. WATSON).

Duke, the winner, is well known. We thought him well placed. Charlie, placed second, is faulty in head and coat. The others were perhaps as well placed as possible.

BLENNHEIM SPANIELS—(MR. WATSON).

King Victor won handsly over King Pippin in this class. He is a bit too large, but much the best.

TOY SPANIELS—(MR. WATSON).

Some pretty toys were shown. We thought them well placed.

ITALIAN GREYHOUNDS (MR. MASON).

There was only one Italian; a fair specimen only, as it is too large.

MISCELLANEOUS (MR. WATSON).

In this class first went to Mouton, wrongly printed as New- ton. He is a very fair white poodle. Second to King Guide, a well formed foxhound, and third to Black Bess, a black curly retriever, fairly good in coat, but faulty in head. Fol- lowing is a complete list of the

AWARDS.

POINTERS.—Dogs: 1st, G. Thatcher's Beauvoir (Beaufort—Faustina); 2d, withheld. Bitches: 1st, C. P. Wilcox's Dawn; 2d, J. Mat- thews's Faustina (Ranger—Clara). Puppies: 1st, Chas. D. Sheppard's Beau Brummel (Beaufort—Faustina); 2d, G. Thatcher's Beauvoir (Beaufort—Faustina); 3d, M. Hayden & Son's Vic (Fred—Fan).

ENGLISH SETTERS.—Dogs: 1st, Blackstone Kennels' Foreman (Dashing Monarch—Fairy II.); 2d, Blackstone Kennels' Fairy King (Foreman—Jessie). High com., Chas. W. Barnum's Shot (Dashing Dan—Miner's Bess); Miss L. Buxton's Sussex Tramp; R. E. Rockwell's Rex (Rackett—Petrel II.); A. J. Thomas's Tip. Bitches: 1st, Blackstone Kennels' Pet Baron (Dashing Berwyn—Vivax Druid); 2d, Blackstone Kennels' Alice Dale (Water Grouse—Daisy Dale). Puppies: 1st, Blackstone Kennels' Pansy (Plant—Jessie); 2d, Wm. Brooks's Rosalind (A.K.R. 2498).

IRISH SETTERS.—Dogs: 1st, Max Wenzel's Tim (Biz—Hazel); 3d, C. W. Redoubt's Cup (Chief—Dot); 3d, F. Wick's Glen. High com., F. M. Brasher's Leo (Chief—Moth). Bitches: 1st, W. Dunphy's Molly Bawn (Glencho—Biddy); 2d, T. J. Farley's Miss Nellie Husted (Glencho—Red Lussie); 3d, Max Wenzel's Yoube (Elcho—Rose). Very high com., Jas. R. Draper's Fama (Glencho—Nora). High com., A. W. Pearsall's Katie Gates (A.K.R. 1086). Puppies: 1st, C. L. Pierce's Owen (Snap—Peggy); 2d, C. L. Pierce's Mickey (Snap—Peggy); 3d, O. L. Pierce's Roger (Snap—Peggy). High com., A. W. Pearsall's Redstone (Shot—Katie Gates).

GORDON SETTERS.—Dogs: 1st, J. E. Thayer's Argus (Blossom—Moll II.); 3d, C. W. Tuttle's Don (Donna's Tom—Lucille). Puppies: 1st, R. H. Westbrock's Jess (Caro—Meg).

CLUMBER SPANIELS.—1st, M. Richardson's Newcastle; 2d, M. Richardson's Bateman; 3d, M. Richardson's Tyne.

FIELD SPANIELS.—1st, A. C. Wilmerding's Newton-Abbot-Lady; 2d, E. M. Oldham's entry.

COCKER SPANIELS—BLACK OR LIVER.—1st, J. P. Willey's Miss Obo II. (A.K.R. 2191); 2d, Walter Scott's Pearl Lake Obo (A.K.R. 1481); 3d, William West's King Colk (A.K.R. 2355). Com., Walter Scott's Flirt (Bengal—Darling). ANY OTHER COLOR.—1st, A. C. Wilmerding's Marion; 2d, Hornell Spaniel Club's Hornell Nance (Obo II.—Miss Nance); 3d, Ernest F. Thomas's Wanda T. (Col. Stubbs—Bell). Puppies: 1st, A. C. Wilmerding's Newton Abbott; 2d, A. C. Wilmerding's Lady Abbott; 3d, J. F. Johnson's Jim (Obo—Cithie). High com., William West's Queen Obo (A.K.R. 3082). Com., Walter Scott's Shina (Pedro—Jae W.).

DEERHOUNDS.—1st, John E. Thayer's Bran (Donald—Wyvis); 2d, John E. Thayer's Lorna II. (Bruce—Lorna).

GREYHOUNDS.—1st, H. W. Huntington's Harlequin (Champion Doubleshot—Napoleon); 2d, H. W. Huntington's Begonia (Bour- a-demon—Belladonna); 3d, Mrs. Dr. Mary J. McLeary's maid (Victor—Belle). Very high com., H. W. Huntington's Bouncing Boy (Walton Lad—Gudgeon's bitch).

BEAGLES.—1st, and UNDER.—1st, Westchester Kennels' Dot (Ringwood—Maida); 2d, Geo. Laick's Rye (Ringwood—Rozzy). Puppies: 1st, Westchester Kennels' Rover (Rattler—Dot); 2d, Westchester Kennels' Belle (Rattler—Dot).

DACHSHUNDE.—1st, J. W. Hornor's Bismarck (Fritzel—Gretchen); 2d, W. W. Wilvey's Badger.

ULMER DOGS OR GREAT DANE.—1st, J. W. Clark's Cafe-au-Lait.

MASTIFFS.—Dogs: 1st, E. H. Moore's Ilford Caution (Crown Prince—Ilford Claudia); 2d, Winlaw Kennels' Homer (Cato—Queen D.); 3d, Winlaw Kennels' Hector (Nevison—Venus). Bitches: 1st, Winlaw Kennels' Prussian Princess (Crown Prince—Nina); 2d, Winlaw Kennels' Rosalind (Crown Prince—Lary Rowena); 3d, Joseph L. Hope's Chinalotte (A.K.R. 2628). Very high com., S. S. Browning's Lady Stella (Thor—Augusta). High com., Buena Vista Kennels' Baronne (Champion Barry—Champion Mont Cenis). Puppies: Buena Vista Kennels' Julien (Cesar I.—Daphne II.); 3d, The Hospice Kennels' Fleur-de-Lis (A.K.R. 3015). Daphne II.; 3d, The Hospice Kennels' La Duchesse (A.K.R. 3022). Com., Mrs. J. F. Orr's William Tell (Pontiff—Alice).

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st, Briarcliff Farm Ken- nels' St. Botolph (Grosvenor—Monk); 2d, H. H. Chittenden's Ernst (Rex—Alma I.); 3d, W. J. Ehrich's Turk (Swiss Farmer—Swiss Flora). Bitches: 1st, W. J. Ehrich's Flora II. (Swiss Farmer—Bellina); 2d, Briarcliff Farm Kennels' Belle of Stirling (Ch. Bayard—Brands). Puppies: 1st, Briarcliff Farm Kennels' Not Named (St. Botolph—Belle of Stirling); 2d, Briarcliff Farm Kennels' Not Named (St. Botolph—Belle of Stirling); 3d, The Hospice Kennels' Thuna.

NEWFOUNDLANDS.—1st, J. W. Burke's Major; 2d, H. W. Lacy's Juno; 3d, Henry Beerman's Pride (Hero—Lady of the Lake).

COLLIES.—Dogs: Prizes withheld. Bitches: J. D. Shotwell's Lady of the Lake (Champion Eclipse—Meta); 2d, Mitchell Harrison's Dot (A.K.R. 2709); 3d, Martin Dennis's Ruth (A.K.R. 2127). Puppies: 1st, J. D. Shotwell's Gifford (Charlatan—Flurry); 2d, Martin Dennis's Dandy (A.K.R. 3109); 3d, C. F. Thompson's Lillie Stark II. (Tweed II.—Lillie Stark).

BULLDOGS.—Dogs: 1st, John E. Thayer's Robinson Crusoe (Cham- pion Monarch—Panzy); 2d, Mrs. J. Patterson's Mill (Bo—Jennie); 3d, John E. Thayer's Tipppo (Champion—Ida). Very high com., W. W. Russell's Hamlet (Belle of Stirling—Ida). Bitches: 1st, John E. Thayer's Britomartis (Cham- pion Monarch—Panzy); 2d, John E. Thayer's Bellissima (Sancho Panza—Ida). Com., M. V. B. Davis's Galatea (Boz—Molly Maguire). Puppies: 1st, J. P. Sharkey's Young Boxer (Champion—Panzy) and Trouble (Boxer—Bessie); 2d, F. J. Sharkey's Gussie (Boxer—Lassie).

BULL-TERRIERS.—Dogs: 1st, Frank F. Dole's Count (Marquis-Kitt); 2d, Thos. Blackburn's Judas (Marquis-Patch). *Bitches:* 1st, T. B. Varick's Little Nell (Little Victor-Daisy); 2d, Frank F. Dole's White Rose (A.K.R. 2709). *Puppies:* 1st, E. Lever's Genesta (Dutch-Jr.-Young Vener); 2d, H. W. Holmes's Alice (Dutch, Jr.-Nellie); 3d, Mrs. J. R. Gildersleeve's Lillie.

FOX-TERRIERS.—Dogs: 1st, Robert Lyon's Richmond Jockey (Marlborough Jockey-Twinkle); 2d, J. W. Clarke's Rustic Flash; 3d, Chas. Hyland's Regal (champion Royal-Warren Lass). *Bitches:* 1st, J. A. Garland, Jr.'s Smalls (Terror-Julip). *Puppies:* 1st, John E. Thayer's Richmond Olive; 2d, J. H. Shepherd's Lady Annie (Sam-Nell); 3d, John E. Thayer's Rame (Baby Tyrant-Richmond Olive). *Very high com.*, John E. Thayer's Di (Baby Tyrant-Richmond Olive). *Puppies:* 1st, John E. Thayer's Nina (Mixture-Slame); 2d, J. B. Welsh's Spot, Jr. (Spot-Nell); 3d, John E. Thayer's Baby Jack (Mixture-Slame). *High com.*, Chas. Hyland's Ouda and Dr. C. O. Bailey's Miss Slick (Briar-Judy II.). *Com.*, H. R. C. Watson's Gypsy (Chance-Nellie).

WIRE-HAired AND IRISH TERRIERS.—1st, Ronald H. Barlow's New Year's Day; 2d, Singleton Van Schaick's Nailer; 3d, Ronald H. Barlow's Tiny Todger (Todger-Nellie). *Very high com.*, Molly Bawn and J. A. Garland's entry.

SKYE TERRIERS.—1st, Mrs. J. R. Gildersleeve's Nettie; 2d, Mrs. J. R. Gildersleeve's Nipp (Nipp-Nettie).

TERRIERS.—ANY OTHER BREED.—1st, Ed. Lever's Verticern (E. K. C. 8633); 2d, Ed. Lever's Lilly II.; 3d, G. D. Woodbull's Queen. *Very high com.*, G. D. Woodbull's Victoria. *Com.*, John Hammond's Pussie (Cuss-Fannie).

PUGS.—Dogs: 1st, City View Kennels' Bradford Ruby (E. 13,834); 2d, Chequasset Kennels' Young Toby; equal 3d, H. Samson's entry, and Mrs. J. R. Gildersleeve's Dick (Punch-Beauty). *Bitches:* 1st, M. J. McGovern's Beauty; 2d, Chequasset Kennels' Tra-la-la (Toby-Taurinus); 3d, City View Kennels' Zoe (Bradford Ruby-Daisy). *Puppies:* 1st, City View Kennels' Zoe (Bradford Ruby-Daisy); 3d, Briarcliff Farm Kennels' Jumbo (Wallie-Gypsy).

YORKSHIRE TERRIERS.—Dogs: 1st, Mr. Cassidy's Beau; 2d, Jas. Bowden's Young Hero; 3d, A. W. Cabot's Lancashire Star (Bismarck-Elmer). *Bitches:* 1st, Mr. Cassidy's Lillie (Young Spark-Lillie); 2d, Charles Hyland's Viola.

TOY TERRIERS.—ROUGH-UNDER 7 LBS.—1st, Wm. W. Silver's Ben; 2d, Mr. Cassidy's Ben (Bradford Hero-Nell); 3d, John Hammond's Rag.

ITALIAN GREYHOUNDS.—1st, Mrs. Annie M. Kramer's Babe.

KING CHARLES SPANIELS.—1st, A. W. Lucy's Duke; 2d, Mrs. J. Hammond's Charlie (Charley-Miss Saker); 3d, Mrs. A. W. Lucy's Lucy Simpson. *Very high com.*, Louise Goethe's Priceless (Memph-Priceless). *High com.*, Jas. B. Reddie's Pitou (Sancho-Ouida); Jas. B. Reddie's Nellie.

BLenheim SPANIELS.—1st, William Phillips's King Victor; 2d, Miss Mamie Phillips's King Pippin (Bowsie-Countess Blennie).

TOY SPANIELS.—ANY OTHER COLOR.—1st, John Hammond's Young Ching (Ching-Fanny); 2d, Mrs. A. W. Lucy's Sister Francis; 3d, Frank E. Lucy's Roses Red. *Very high com.*, Frank E. Lucy's Flora McFlimsey.

MISCELLANEOUS.—2d, D. C. Paulding's King Guide; 3d, Mrs. J. R. Gildersleeve's Black Bess. *Very high com.*, Mrs. S. S. Browning's Napoleon.

Best King Charles spaniel owned by a gentleman, Duke. Best owned by a lady, Charlie. Best Newfoundland, Major.

POINTER SWEEPSTAKES AT PITTSBURGH.

Editor Forest and Stream:

In addition to the large number of specials already offered by the Western Pennsylvania Poultry Society, the following sweepstake classes for pointers have been arranged by the society in answer to Messrs. Anthony and Munson's letters, under the following conditions: All dogs to be entered in the regular classes before competing in the sweepstake class, each entry to sweepstake to be \$10, the society to add \$10 to each sweepstake class required to fill. Entries to close March 8, the entrance money in sweepstake class and money added by society to go to winner. Following are the classes:

Best pointer dog over 55 lbs.; best pointer bitch over 50 lbs.; best pointer dog under 55 lbs.; best bitch under 50 lbs.; best pointer dog or bitch in the show; best brace of pointer dogs or bitches as a brace; best kennel of five pointers, dogs or bitches, owned by one person, kennel or club. C. B. ELLEN, Sec'y.

Pittsburgh, Pa., Feb. 1, 1886.

NEWARK SHOW.—Jersey City, Feb. 6.—*Editor Forest and Stream:* Owing to the refusal of express companies to make satisfactory arrangements for transporting dogs to and from our show, we have adopted the following plan, for the benefit of exhibitors: The Penn. R. R. and branches: N. Y., Lake Erie & W. R. R., Lehigh Valley R. R., N. Y., Susquehanna & W. R. R., and Philadelphia & Reading R. R. will carry free both ways, all dogs when accompanied by their owners or care takers. The club will provide wagons to call at all of the depots in Newark during Monday, March 22 and Tuesday morning March 23, to transfer dogs arriving on the above roads, to the Metropolitan Rink, and will return them the day after the show closes to the depots, without charge to our exhibitors. At our last meeting the club made four extra classes, by dividing the dogs and bitches in the mastiff, rough-coated St. Bernard, smooth-coated St. Bernard and collie puppy classes, making Class 4, mastiff puppies, dogs, \$10 and \$5; Class 4½, mastiff puppies, bitches, \$10 and \$5; Class 11, rough St. Bernard puppies, dogs, \$10 and \$5; Class 11½, rough St. Bernard puppies, bitches, \$10 and \$5; Class 12, smooth St. Bernard puppies, dogs, \$10 and \$5; Class 12½, smooth St. Bernard puppies, bitches, \$10 and \$5; Class 13, collie puppies, dogs, \$10 and \$5; Class 13½, collie puppies, bitches, \$10 and \$5. The club offers the following special prizes for kennels, to consist of dogs or bitches, to be owned by one exhibitor, the prizes for each being \$10: Pointers (any weight), English setters, red Irish setters, black and tan setters, mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards and collies.—A. P. VREDEBURGH, Sec'y.

JUDGES AT NEWARK.—Mr. John Davidson of Monroe, Mich., has been invited to judge the setters and pointers. Mr. J. A. Stovel, of Philadelphia, will judge the beagles.

KENNEL NOTES.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Moulter. By Geo. E. Reading, Flemington, N. J., for liver and white-coated pointer dog, whelped July 4, 1885, by Lancaster's Frank out of Voorhees's Nelly (Dash-Jersey Lily).

Snap. By Geo. E. Reading, Flemington, N. J., for yellow Italian greyhound bitch, whelped July 1, 1885, by General out of Snap.

Do-Peep. By Mignon Kennels, Cortland, N. Y., for black cocker spaniel bitch, whelped Nov. 10, 1885, by Kiddlevink (A.K.R. 997) out of Gretchen (A.K.R. 996).

Jetty. By Mignon Kennels, Cortland, N. Y., for black cocker spaniel bitch, whelped Nov. 19, 1885, by Kiddlevink (A.K.R. 997) out of Gretchen (A.K.R. 996).

Bertha. By Mignon Kennels, Cortland, N. Y., for black cocker spaniel bitch, whelped Nov. 19, 1885, by Kiddlevink (A.K.R. 997) out of Gretchen (A.K.R. 996).

RANGE AND GALLERY.

WORCESTER, Mass., Feb. 4.—Within a few weeks there has been a decided movement in this vicinity to revive the interest in the rifle. The first event of the week was the first of a series of six consecutive meetings at the South End Gun Club range. These meetings are on Tuesday afternoon; at each meet there are to be five regular events as follows: 5 glass balls, 5 Maomber targets, 5 blackbirds, 3 pairs of doubles, 5-day pigeons. The club offer 10 cash prizes that aggregate \$100, also a special prize of one-half keg of powder. The arrangements are in the hands of Corren Doone, E. F. Swan and A. B. F. Kinney. It is the intention of the committee to keep the individual score as near a secret as possible until the end; in that way it is hoped to increase the interest. This week the contestants were: Albert Houghton, Cyrus Holman, Corren Doone, R. Jones, W. R. Dean, Wm. L. Davis, B. Franklyn, M. D. Whitner, J. B. Tongos, H. W. Webster, E. P. Smith, M. D. Gilman, E. F. Swan, C. H. Parker, E. S. Knowles, C. S. Day. It is generally understood that the best score was 21 out of a possible 26, mixed shooting.

At the meet to-day of the Worcester Rifle Association at Pine Grove Range the wind was unfavorable and very cold. The American standard target was used:

Record Match.	6	10	7	10	9	8	6	8	10	82
Brown	8	6	5	8	5	5	7	5	7	65
Morse	7	9	5	5	5	5	5	8	9	62

C Griswold	11111111111111111111	20								

Weather cold and raw.—WALPOLE.

HAMILTON, Feb. 2.—The pigeon shooting tournament, under the auspices of the Wild Fowling Gun Club, was opened at the Halfway House, Dundas road, this morning. Over a hundred sportmen attended. The weather was very cold, and the experts needed all their enthusiasm to carry them through. The shooting was at 21 birds each, and the men divided into squads, occupied two days in disposing of the match. The record stood:

First Squad.—E. M. Moody (Lockport) 14, W. H. Case (Lockport) 7, J. A. Andrews (Lockport) 12, Wallace Price (St. Williams) 13, I. Koch (Buffalo) 16, O. Bessor, Jr. (Buffalo) 6, Alf. Downs (Buffalo) 11, E. Smith, (La Salle) 13.

Second Squad.—C. Carter 14, C. M. Stark 10, D. R. James 11, A. Garner 4, W. S. Perry 15, W. Schiebert 12, W. Carrothers 5, J. Townsend 13.

Third Squad.—A. Baker 15, A. Whitney 15, R. Perry 15, W. Watts 9, C. Humphrey 11.

Fourth Squad.—E. T. Hetherington (Toronto), 7, retired; H. Graham (Hamilton), 2, retired; G. Harrison (St. Catharines) 5, retired; McFarlane (Huron, Ont.), 1, retired; Westbrook (Brantford), 11; Chapman (Sydney, N. Y.), 11; C. Hart (Hamilton), 12; Spink (Jackson, Mich.), 11.

Fifth Squad.—P. Wakefield (Carlton West), 8, retired; C. Smith (gonac, Mich.), 9, retired; Harwood (Woodstock), 7, retired; Ward (Dundas), 14; Williams (Rochester) 12; Lutter (Sydney), 15; Neff (Port Colborne), 15.

Sixth Squad.—Sheridan (Sayre, Penn.), 8; Wilhelm (Buffalo), 5, retired; Crooks (Hamilton), 6, retired; G. H. Smith (Port Colborne), 7, retired; McAvoy (Hamilton), 7, retired; Courtney (Sydney), 10; D. Bay (Toronto), 10; Jones (Buffalo), 5, retired.

A sweepstakes match, 10 smoked glass birds at 15 yds. rise, was won by F. A. Crowell and C. Gregory.

NORTH SIDE GUN CLUB.—Twenty-fourth monthly shoot, Feb. 3, 2 yds (Chevallier 29 yds), for badge:

Chevallier	1011111	6	Duryea	1111111	7
Vinholz	1110101	5	Biglow	0001100	2

RIVERSIDE SHOOTING CLUB, Topsam, Me.—At the annual meeting of the Riverside Club held on Feb. 1 the following officers were elected for the ensuing year: President, M. C. Hall; Secretary, Chas. Goud; Treasurer, A. Q. Goud; Assistant Treasurer, A. S. Alexander. The club is in a flourishing condition and the members are expecting to enjoy sport before the traps the coming season, which will open with us in April.—CHAS. GOUD, Sec.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHERIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARR, April 18, 1885.—Adv.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, trips, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY.—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, accompanied by the recommendation of an active member of the A. C. A., together with the sum of \$3 for initiation fee and first year's dues, to the secretary, who will present the names to the commodore. Money should be sent by registered letter, or money order on Saratoga Springs, N. Y.

WIDE OR NARROW CANOES.

Editor Forest and Stream: In Mr. R. W. Gibson's very sensible letter, published by you this week, the writer seems to infer that a wide and comfortable sailing canoe must necessarily be too cumbersome for easy handling, and also have an excessive draft of water. As my name is mentioned by him in this connection, will you permit me to reply by giving the dimensions, etc., of a sailing canoe which I have now nearly finished for my own use, and which it is my intention to take to the A. C. A. meet next summer, where I trust she will have an opportunity to try conclusions with other double-enders worthy of her beam.

In designing this boat, the model of which, for all I know, is quite original, there has been no attempt made to attain extreme lightness at the expense of strength. Part of her planking is 1/2 in. thick, the balance 5/16 in. It is of clear white pine; therefore heavier than cedar. Her timbers are of buttnerut wood 1/2 in. x 1/2 in., with deck beams of same material 1/2 in. x 2 in., all fastenings being brass screws. She weighs complete, exclusive of her centerboard, 115 pounds, which is a weight easily handled, out of the water, by any ordinary man. The shape of her bottom below the waterline, is somewhat like a longitudinal slice cut from the under side of a very stout cigar. She will draw 5 in. water at midship section, and nothing at bow and stern, when carrying over 300 pounds. The rudder is of the balance variety, guided by a regular tiller, with no tiller ropes, steamboat fixings, or unhandy kickspaws of any kind. The dimensions of the canoe are: Length 14 ft. 6 in., depth amidship 12 in., beam 4 in., sail area, for cruising, 104 sq. ft. I shall probably use this sail for racing, as is a right, and possibly the addition of a staysail. For my part I can see no valid reason why wide sailing canoes should not enter against narrow ones of same length on equal terms, or perhaps with a time allowance based on sail area only, without regard to size of boat. If this latter course were pursued there would at once be a damper put on the present ridiculous over rigging, and canoes would not be no need for more than two classes of sailing canoes.

THOMAS CLAPHAM.

ROSLYN, L. I., Feb. 6.

"KATRINA'S" NEW CANOE.—Mr. Ruggles, of Charlotte, New York, has lately shipped a new canoe to Mr. R. W. Bailey, 240, of Pittsburgh, a modification of Rear Commodore Andrew's Sofronia, out with a flatter floor. She is 15 ft. long, 30 in. beam, depth at gunwale, 10 1/2 in., and at fore end of cockpit, 14 in. Just forward of the cockpit is a bulkhead with brass door fastened with a thumbnut. Forward of this bulkhead about 17 in. is a centerboard trunk, and in the stern is another, the aft end of slot being 2 ft. from the stern post. On each side of the after trunk is a metal air tank. The boards are each of 1/16 in. brass, hung like the Lassie's, and weigh under 6 pounds. The boat is built after Mr. Ruggles's system of smooth skin and narrow plank and presents a very handsome appearance. She is not yet named. Mr. Ruggles is now at work on Commodore Rathbun's flagship.

A WINTER EVENING'S REVERIE.

WINTER is the time to gather in the memories of the season, and garner them with the accumulated stores of a dozen years of boating reminiscences.

Reposi in my armchair with the pipe of peace, I have but to look around my room for inspiration. A moment's glance would provide the tastes of the occupant. Models of favorite canoes, pictures and photographs of cruises and canoe men recall many a joyous cruise and many a friendship conceived and nurtured on home and foreign waters. Here we see a group of the bold paddlers of the Mersey, a fitting pendant to a similar picture of the Clyde men and their craft. There a bookshelf full of boating literature, from Taylor's "Verie Merrie Whorrie Ferrie Voyage," the first account of a genuine pleasure trip—for it is some three hundred years since Taylor first set out—to the McGregors, Bishops and Stephensons of the present time.

Then there are the charts and maps, the accumulation of many a year's cruising, and with their assistance it is pleasant, sitting in my comfortable armchair, to set sail once more and in imagination thread the mazes of the thousand fir-crowned islands of Stockholm and Norway, or drift lazily down the winding stream of some fair English river, flowing so peacefully amid wooded hills, past ruined abbeys and quiet old country towns. How much all seems to come back again, and as the smoke from my pipe curls upward I seem to trace in its blue wreaths many a well remembered face. Where are they all, those pleasant companions of the paddle? Drifted away. Some to distant colonies and far-off foreign lands, carrying with them, let us hope, the same golden memories of many a bright summer cruise and joyous bivouac. Others have come to anchor in the tideless harbor of matrimony, and find enough to do to paddle their own canoes in the metaphorical rather than the literal sense. Like a ghostly procession my various canoes sail past, each in its day the subject of anxious thoughts, each for a time, in its owner's eyes, perfect, and each beloved with that love which only exists, I think, between canoe and canoeist. But from it all one fact takes special form—my first canoe. What a charm lies in these three words. Ten years' familiarity may have blunted the feelings with which each succeeding favorite was thought out, planned, watched during building, and ushered into waters of life

SAIL PLAN OF CANOE LASSIE.

us. With us all is of the plainest, and rough shaggy pilot coats and shocking bad hats are the fashionable wear.

We generally sail double, and many a pleasant cruise has this season added to my log. The week has dragged on its weary course and Saturday dawns, and with it the prospect of a respite. Toward mid-day leighers and account books are closed with a sigh of relief, and my first lieutenant, who, enjoying more leisure, has to look to the fitting out, comes up beaming with smiles to report all ready for sea. So down to the harbor. Yes, there she lies, the little Ægir, as neat a little craft as ever bearded old Neptune.

"Is all ready?" "Aye, Aye." from the shore. "Then cast off," and we pull down to the harbor's mouth, let go centerboard, up mainsail, and away flies the little craft, lying down nicely to her canvas. Mainsail is sheeted home, mizzen set, ropes coiled away, all made snug, and now for a pipe.

There is something grand about the Humber. No innocent looking fresh water river reflecting on its breast the peaceful country side, but a broad expanse sparkling in the sun, its low banks receding in the distance. Full of life too, the noble animation of peaceful commerce. There comes a mighty four-masted Atlantic liner, and great steamers from India and many another distant land lie at anchor, and the tall masts of the graceful clipper ships lift high in air the delicate tracery of their rigging.

Fussy tugs dart hither and thither and are the frequent cause of anxiety and bad language on board the Ægir, as her steersman has to solve in one brief moment a problem in which the strength of the wind, the set of the tide and the speed of the advancing tug, are at once important and conflicting elements. Result, one of those narrow shaves which set the heart beating and confirm the idea that the canoeist, like the cat, is blessed with nine lives.

A yacht or two flit by with a cheery greeting from their owners and the red sails of a fishing fleet give warmth and color to the scene, but wind and tide bear us out of the crowded roadstead and its busy life blends with the background of smoky Hull.

The evening sunlight casts a glow over the broad surface, broken here and there by buoy, of the river. Silently the low banks glide by. It is a scene almost Dutch in character, the very river craft carrying out the idea with their hunt bows and great square sails.

The noble tower of Hedon church shows above the bank, rising from its surrounding elms, and sets us thinking of the old time when the ships of Hedon came and went and helped to build up the wealth of many a merchant prince, or swelled the fleets when the Edwards and Henrys of the middle ages called on their subjects for help in their endless wars. It has looked down upon a harbor crowded with shipping and its chimneys have sounded sweetly through the hum of the busy life on its quays, the creak of cordage and the sailors' chorus. It has entered into the everyday life of the men of Hedon, seen them as children playing beneath the surrounding elms, or gazing open-eyed upon the shipping and listening to the fabulous tales of mariners, fresh from Ormus and far Cathay. It has witnessed their marriages and watched them take their places as mercantile adventurers, rising to places of honor and renown, and its bells have tolled for their departure.

Where are they now, these men of a long past age? At rest in the quiet churchyard, heedless of the passing centuries and no longer concerned for the fate of their laden argosies or jealous of the increasing rivalry of their youthful neighbor Kingston upon Hull.

What matter to them that the glory of Hedon has gone forever, that her harbor has sunk into an insignificant stream, up which a few river sloops painfully make their way, that the voice of commerce is forever hushed and that Hull has left their old town far behind while the great stream of commerce rolls by all unheeding and forgetful and knows Hedon no more save as a passing landmark.

But time has dealt less harshly with her than with Ravenspurn and other sea ports whose very sites are a subject for antiquarians to wrangle over, and she retains the nobility of her many churches though her once busy streets have grown into grass grown country lanes. But her decay has more of the sadness of ruin about it. It is rather the peaceful evening of a once vigorous life.

But wind and tide bear us onward and we are running past dear old Paull. Though only a little fishing village it is quaint and picturesque, with its one straggling street of tumble down houses, with the seaweed clinging to the piles which fence it from the encroachment of the Humber, and the setting sun lights up the red roofs with a ruddy glow and brightens the gray church tower standing on the slope amid its encircling trees.

Paull is the one spot in the neighborhood where the hand of pro-

gress has not been busy. No pretentious villa residences dot its breezy slopes, and as yet no one has thought of improving it into that abomination—a modern seaside resort.

At one time the Dock Company threatened its peace of mind and spoke of fish docks, etc., and the lovers of the quiet old world spot trembled. But the peril passed and the docks went west instead of east and Paull was left to slumber in peace once more.

But evening draws on, and the banks grow dim and objects become mysterious and vague in the twilight. It is time to come to anchor somewhere for the night. The merits of various adjacent creeks are discussed as we run along the Lincolnshire coast. In the darkness it is difficult to detect the entrance of the desired creek and a sharp lookout is kept ahead. The mate's eyes are the sharpest. "Here we are at the Skitter-Haven. Luff up!" and obedient to her helm the little boat glides into the haven whose quiet waters are a strange contrast to the choppy waters outside, which we can hear chafing and roaring outside the spit. "Let go mainsail, up centerboard!" and after answering as far as possible the question "How shall we lie at low water?" "How shall we get out to-morrow morning?" "How much cable does she want?" the anchor is let go, a shore line is run out and sails made snug for the night. Then up goes the tent over the well, and the riding light shows what is, if a limited, at least a snug interior.

Soon the stove is burning brightly and coffee bubbling, while the Mate is laying the table for supper. We have grown fastidious in these latter days and must needs have a table cloth, and from deep recesses are produced various necessities and not a few of the luxuries of life.

Supper over, the bed clothes are brought out, and with many an acrobatic contortion we shake down into our blanket bags. This is the pleasantest half hour of all, as we repose side by side, each with his little pannikin of grog on the little shelf by his side (we are great at shelves), and pipe in mouth, we discuss the events of the day and the plans of the morrow. Then lights out and good night.

The last awake perhaps feels the boat ground on the soft mud as the tide leaves the creek, and knows that all is right, and sleep comes with the noise of the Humber coming with softened sound to the drowsy senses.

OAKLAND C. C.—On Jan. 23 the Oakland C. C., of California, effected an entire re-organization, starting anew with fifteen members and ten canoes, the latter as follows:

Length Beam.			
Name.	Ft.	In.	Build.
Columbia.....	13.6	28	Racine.....F. Gonzalez.
Water Lily.....	15	32	Carvel.....W. Morrow.
Flirt.....	14.6	32	Lapstreak.....Milton Jones.
Undine.....	16	36	Racine.....A. D. Harrison.
Falcon.....	15	30	Carvel.....E. R. Cooper.
Zoe Mou.....	14	33	Lapstreak.....R. Engelbrecht.
Black Dwarf.....	15	32	Racine.....H. Darneal.
Zephyr.....	13	28	Shell.....R. Engelbrecht.
Mystic.....	14	29	Lapstreak.....W. W. Blow.
	15	35	Racine.....W. W. Blow.

The new officers are: Com., W. W. Blow; Vice-Com., A. D. Harrison; Sec., E. R. Cooper; Treas., Harvey Darneal. The club is collecting the addresses of California canoeists, and has in view a State meet on Oakland Creek, with paddling and sailing races. The club is now well housed in the old quarters of the Mystic Boat Club on Oakland Creek, where they have a boat room 18x46ft., a meeting room and dressing room each 18ft. square, and a workshop. Races are held through the season and the club promises to be the nucleus of a large canoe fleet in California.

INSURING CANOES.—While there is comparatively little danger of a canoe being destroyed by fire, many of the canoeists about New York and Albany have their boats insured. Those of the New York C. C. were insured by Messrs Wemple & Hutchinson, 32 Liberty street, New York, the policy reading, "For insuring from loss or damage by fire the property hereinafter described not exceeding the sum specified on each article, viz.: — dollars on his canoe — including her furniture and apparel while in any of the waters of the States of New York, New Jersey or Connecticut or in any boat house in said States or in transit by rail or boat, and while at builder's at Staten Island for repairs. Other insurance permitted." The rate is one per cent, and the term 3 years, only costing 33¼ cents a year, no policy being issued for less than \$2.

SAIL PLAN OF CANOE LASSIE.

THE balance lug sail was first introduced to America in 1879 by a member of the New York C. C., who rigged one from the drawings published in England. In 1880 the canoes of the New York C. C. were nearly all rigged with leg of mutton sails. Elfin, Clochette, Psyche and many others having this rig, while the only lug sails were a balance lug on the Rosalind, a standing lug on the Dot and a diminutive sail of the same rig on the Star, an old Rob Roy. In this year Mr. W. F. Stephens fitted two large balance lugs to the Queen Mab and also to several other new canoes, and by the time of the fall regatta the strong prejudice against the lug as compared with the leg-of-mutton had disappeared, and all the leading racers came out with large balance lugs. Since 1880 the growth of canoeing has set hundreds at work on the problem of rigging a canoe to the best advantage, and from the many plans and suggestions several excellent rigs have been evolved, but after thorough trial none has proved so well suited for use about New York as the balance lug. Its details have been modified and improved, but the main points of the sail are the same.

Foremost among American canoeists as an authority on sails and sailing, is Mr. C. B. Vaux, of the New York C. C., a canoeist widely and favorably known not only as a most successful racer and skillful sailor but as the author of many contributions to canoe literature, foremost among which is his valuable and instructive book on "Canoe Handling," the wide-spread popularity of which has carried it in little over half a year to a second edition, now in preparation. Mr. Vaux's first experience, ten years since, was with the primitive and useless rig furnished by the builder of his first canoe, a sliding gunter with a jib and a sprit mizzen, very soon discarded for a more effective if small sail plan. In 1878 the Dot, Mr. Vaux's first and most famous canoe, was fitted by her owner with a standing lug of about 45ft., and a mizzen of similar shape, with which rig she sailed in the race of the New York C. C. in 1879, the first date in the revival of canoeing which has since extended to all parts of America. The excellent qualities of the lug were shown even in its crude form as then rigged, but the absence of keel and board prevented the Dot from covering the course in a strong tide. Next season she entered, with the same rig but with a keel added, and succeeded in defeating the leg-of-mutton rigs. In the fall of the same year, 1880, a suit of balance lug sails were made for her, being fitted with bamboo spars, and battens in the regular style. With this rig the Dot raced until 1882, when she was fitted with the sail described in the FOREST AND STREAM of May 31, 1883, which she carried until sold in 1884.

The present sails, shown in the accompanying cut, were planned by Mr. Vaux for the Funbeam canoe Sea Breeze, Class B, and have since been used by him on the new canoe Lassie, Class A, illustrated last week. The principal points in a balance lug sail are to make it sit absolutely flat and to keep the luff taut, for which purposes it is essential that too much of the sail shall not be set forward of the mast. In the present rig the forward portion is very small, and the yard is also set up by a powerful tackle, devised by Mr. Vaux. A special feature also is the proportion of the sail, the boom, yard and two battens all being of the same length. The sail as now hung is almost a standing lug, the tack coming to the foot of the mast, but the battens are retained as in the old balance lug. The halliard is rigged as follows: A single hloock is lashed to the yard forward of its center; the parrel is made fast to the heel of the yard, leads through this hloock, and at its end a second single block is spliced in. At the masthead are two single blocks, each fitted with a strap over the masthead, or a hole may be bored through the latter, as shown, and a short line passed through, a block being spliced in each end of the line. The halliard, which is longer than usual, is made fast to the yard near the peak, leads through one block at the masthead, thence through the hloock on the end of the parrel, thence through the second masthead block and to a block at deck, thus setting up both peak and throat.

The sails are made of fine muslin with bights 6in. apart, the latter running parallel with the leach in each portion of the sail. In bighting the canvas, that for the lower portion, below the second batten is first lighted, then the widths of the bights in the upper part are so laid off that when cut on the required angle they will correspond with the widths of the others, which are, of course, cut nearly at right angles. The two parts of the sail are then stitched together along the line of the second reef. The peculiar shape of the sail is designed to give as large an area as possible with the shortest spars, the cutting away of the lower after corner reducing the length of boom and battens much more than it does the corresponding area. The sails shown

At the morning the old man again appeared, and with many well wishes cast off my lines, remarking, that if he were still young he would follow my example. From New Brunswick to Trenton, a distance of 35 miles, the canal is on a gradual ascent until the "divide" is reached at Trenton. On the Delaware side of the ridge, the slope is so abrupt that the descent is made in a series of cuts, and a series of six deep locks, three on each side, are believed within the city limits. The first of these locks is the rude lessons of the previous day divined the soothing influence of the five cents upon the average barbarian on the towpath, that sum was forthcoming this day at the outset, and so the locks were taken one after the other without serious difficulty. The driver would catch the stern line and upon the boat upon entering, and would tow her out clear by hand. And so the boatmen, by pulling in up, he poked his head in, and in a quick moment so that the frightened towmen were left over them, the Coot taking the middle of the canal, the rafts hugging the bank. A series of long bends are followed by a straight reach from which are caught the first glimpses of the Delaware's limpid waters as the river comes leaping down over its rocky bottom. Only a narrow channel is navigable up to Trenton, which is the head of navigation. Below the city, a narrow channel is cut in some places, and a small boat is being changed from rock to mud and sand, and it is this prevailing character at Bordentown. The last lock was reached as the sun broke forth bright and warm, and nature assumed a cheery garb all round. Passing up the remnant of the official receipt to the collector's office, the gate swung open, and at last

SCHUYLKILL Co. Pa.—Now and then hunters in the woods of this and adjoining counties of Pennsylvania come across wild, wolfish looking dogs in isolated mountain regions, but the brutes have always managed to disappear so quickly among the rocks, on being discovered, that none have ever been killed. They are supposed, with good reason, to be descendants of wolf and a mongrel dog, which were bred together in 1825. Wolves were becoming scarce in the region sixty years ago, but a few lingered in the woods, and were a great nuisance to the farmers, making frequent raids on their sheep pastures. In 1822 one wolf in particular made great inroads on the farmers' sheep, and defied all efforts to catch it. There was a superstition among the pioneers of the region that there were such things as "were-wolves," wolves that bore charmed lives, and possessed the power of roaming about without leaving any trail by which they could be followed. Tom Ballard was a famous hunter of the day. He was entreated by the farmers who had been losers by the raids of the mysterious wolf, to hunt it down if the thing was possible, although many believed it was a were-wolf. Ballard started out in the spring of 1822 with his dogs and gun for the purpose of killing the wolf. He roamed the wildest part of the woods for several days, but could find no trace of the animal. At the end of the fifth day he came to a crevice in the rocks on the southern edge of a hill known as Mount Pisgah. There was no outward evidence that it was a wolf's den, but he resolved to enter the cave and find out. He crawled on his hands and knees and found two wolf whelps a week or two old. He wrapped them up in his blanket and quickly withdrew from the cave. He did not meet the old wolf and started for home with the two young ones. He placed them in his wood house. Three nights later he heard a great noise in the yard. Looking out he saw an old wolf trying to get into the wood house. It was the mother

of the whelps. Ballard shot her. She was an unusually large one, and as no more raids were made on the sheep pastures of the region it was believed that she was the one that gave them so much trouble. The whelps grew up in captivity. They were both females. In 1824 Ballard sold one of them. The next year the other one was bred to a mongrel dog. She gave birth to a litter of whelps resembling their mother. After becoming a mother the wolf, which had never been fierce, changed to a most ferocious animal, and no one dared to go near her. Her offspring early developed wild and vicious characteristics and it was thought best to kill the whole family. One night before the decision was carried into effect the wolf and her half-grown hybrid whelps took to the woods. They were followed, and the mother and one or two of the young ones were killed. The others escaped and have bred among the rocks ever since.—*Exchange*.

A young lady whose father is one of the wealthy men of the city, went abroad last summer in company with two relatives. They sailed from this port and returned hither. They allowed their general baggage to be inspected without protest. The young lady carried a diminutive pug dog in her

arms. The animal was particularly ill-natured and vicious, but the young lady appeared to be very fond of the brute and carried him in her arms all the time. He wore a blanket and a collar around his neck. I got close enough to see that the blanket was a mass of expensive lace, tacked on to the blanket to enable her to evade duty on it, and that the collar was literally studded with diamonds. What could we do? If we held the dog there would have been a great howl over the indignity, and the girl's father had influence enough to have us all discharged. We consequently allowed the \$10 pug with his \$2,000 blanket and his \$10,000 collar, to pass free of duty.—*Philadelphia Times*.

"I hear of a woman of fashion," says London *Truth*, "who has ordered a dress to be trimmed with canaries. It would be well if the crack-brained votaries of such detestable innovations were to be boycotted in society. If any woman tries the experiment of going to court ornamented with singing birds, I will venture to predict that she will be ignominiously turned back, as the Queen strongly objects to all such barbarities."—*Evening Post*.

PUBLISHER'S DEPARTMENT.

IT PROMPTS THE MEMORY.—Erie, Pa., Jan. 26.—Inclosed please find \$4 for another year's sport with *FOREST AND STREAM*. That's about all the sport I have now a days; but each number of your paper is so refreshing that after perusing its pages I call on my old chum and "swap shooting and fishing lies" for an hour or so, and feel a good deal better.—*F*.

CANSTO DO WITHOUT IT.—I may as well say here that the *FOREST AND STREAM* is gaining in favor every week. Our friends all say it has very much improved and is by all odds the leading sportsmen's journal in the country; they cannot do without it. G. E. N. (Bath, Maine).

A PECULIARLY CREEKY REQUEST.—Narcoossee, Orange County, Fla.—*Editor Forest and Stream*—Dear Sir: Can you inform me where I can procure — and the necessary apparatus, i. e. spring trap, etc. By doing so you will greatly oblige yours, A. W. HALL, P. S.—As I do not see your paper, would you kindly insert my note, as then some manufacturer may reply direct to me by mail.—A. W. H.

TO FLORIDA ANGLERS.

Keeping fully abreast with the times, we have the last few seasons given particular attention to the manufacture and introduction of tackle specially adapted to the needs of Florida anglers.

We have an unusually fine assortment of the following goods, used and recommended by expert Florida anglers:

Pearl Florida Spinners, Mottled Pearl Baits, Pearl Squids for Spanish Mackerel, Pearl Mullet, Florida Bass Flies, Tackle for Channel Bass, Red Snappers, Sheephead, Salt Water Trout, Etc., Etc. Also a New and Special Tackle for TARPUM, including our famous **Tarpum Line**.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page folio illustrated catalogue.

NEW MAPS FOR SALE.

New maps of BREVARD COUNTY, FLA., just published by J. Francis LeBaron, C. E., Deputy U. S. Surveyor for the District of Florida. They include the entire INDIAN RIVER country and the Kissimmee Valley, showing the drainage operations of the Okeechobee Drainage Co. and the Disston Company. These maps are complete and accurate, and are made from actual surveys by the author, supplemented by the official surveys of the U. S. Deputy Surveyors, the U. S. Coast and Geodetic Survey, and the U. S. Engineers, U. S. Army. They show all the new towns, post offices and settlements, projected and constructed canals, railroads, wagon roads, etc. They show the depth of water in the ocean, river and lagoons, and are invaluable to the land hunter, settler, sportsman or tourist. They are mounted in three styles as follows:

Mounted on Rollers, Cloth Backed, Varminished,	\$4.00
On Strong Linen Paper, bound in Covers for Pocket use.....	3.00
Plain.....	2.00

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette*.

Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus: **JAMES EPPS & CO., Homeopathic Chemists, London, England.**

GOLD MEDAL, PARIS, 1878.

BAKER'S
Breakfast Cocoa.

Warranted absolutely pure Cocoa, from which the excess of Oil has been removed. It has three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

Specialties in Fishing Tackle. Please send your address for circular and sample card of lines. **E. J. MARTIN, Rockville, Conn.**

The canoe, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 30 ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will answer the wants of many who desire a canoe as being simple and yet desiring a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

ANSWERS TO CORRESPONDENTS.

CHEAP AND EFFECTIVE.

THE sub-committee of the House Committee on Indian Affairs is reported to have agreed upon the sum to be appropriated for the support of these people during the coming year. The estimates called for \$6,052,259. The committee cut this down \$525,806, and the bill as now framed calls for \$5,526,453, being \$67,642 less than the bill of last year.

Such devotion to economy is most laudable, but it is not unexampled. We have seen it before when there was question of appropriating money for some worthy object, but it is apt to be lost sight of when a measure like the Arrears of Pensions bill comes up. Then a little cheap political capital is to be gained, then the soldier's vote is to be captured, and the people's money is squandered.

Congress has blundered over the Indian question quite long enough, but its experience has not been wholly wasted. At last it has hit upon the true solution of the problem. This is to cut off the Indians' supplies. The solution is startling in its simplicity, and it costs next to nothing. Besides, the development of the country has made all the conditions favorable to the success of the plan. In many cases it can be carried out without the slightest expense. In others it may perhaps cost a few white lives and a few hundred thousand dollars. This first outlay, however, will be all the expense connected with it. After that there will be no need to vote further appropriations for the Indians.

The large game of the West is exterminated in many localities. It is especially rare in the neighborhood of Indian reservations. The wild creatures whose flesh used to support these people are gone. A few prairie dogs and birds alone remain. The Indians' food is now what the Government gives them.

This food has never been enough to keep the Indians alive. For years they refused the Government rations. Then came a time when the rations and what game they could kill supported life. Lately they have often starved on Government rations alone.

The course adopted by Congress is simply to decline to longer furnish these supplies. Having nothing to eat, the Indians will in due course give up the ghost, and when they have done so, the Indian question is settled. These people will give no more trouble. There will be no more discussions about keeping the whites off their reservations, no more

Indian appropriation bills, no more plans for civilizing them. A lot of trouble will thus be saved. And then it is so cheap!

There are some localities where this course may cause a little annoyance. Where cattle ranges border on a reservation, the Indians may perhaps kill a few cows, but when the starving people do that, they can either be killed themselves, or if apprehended can be sent to jail for ten years, as was done the other day with an Arapahoe boy. Or it may happen that in some places the desperate, hunger-stricken men may sally out and kill a few whites. If they should do this we hope that they will be sternly and successfully dealt with.

The Congressmen probably think that the cows can be paid for, and the white lives do not count for much. Congressmen do not live near Indian reservations, as a rule.

Is it not best that the Indian question should be settled in some such way as this? It is scarcely to be expected that the Indians themselves will regard it exactly from the white man's point of view; but from the truly philosophic standpoint, is it not better that these people, their wives and their little ones, should perish now from off the face of the earth, even though it be by the lingering torture of starvation? Then, at all events, their troubles will be over, and gnawing hunger will no longer, for half the year, make their lives miserable. And it certainly will be a great saving to the country.

Congress will then have deserved the gratitude of the American people for cutting down their expenses, and for ridding the public conscience of the burden of the Indian question.

THE AUDUBON SOCIETY.

IN our last issue we briefly outlined the plan of the Audubon Society, which we hope may result in the protection of our birds. It is only within a few years that such protection has been really needed, for it is only recently that any wholesale slaughter of these innocents has taken place. Nevertheless, the sentiment which calls for the preservation of these species from wanton destruction is no new thing, for laws having this in view have for many years been on the statute books of most of the older States. Such laws, however, in most cases are wholly inoperative, since there is no public sentiment on the subject which insures their enforcement. Unless such a public sentiment shall be awakened, unless the laws which we have shall be enforced, and new and more perfect ones enacted, we may make up our minds to bid a long farewell to our beautiful songsters.

The birds have indeed a hard time. Men and boys scour a district during spring, summer and autumn, killing off all the permanent residents and a large proportion of the migrants. In and near the cities and towns, where the human killers have less liberty to destroy, the pestilent English sparrow quarrels and fights with the native species, and what is worse, destroys their eggs and tears to pieces their nests. Add to these agents of destruction the cats, weasels, skunks and snakes, and the hawks and owls, and it will be readily seen that the checks upon bird increase are very great.

The common remedy proposed for the protection of our birds from these human enemies is the enactment of new and more stringent laws, but at present it is hopeless to accomplish anything by this means. This is beginning at the wrong end. Let us rather try to induce people to live up to the laws now on the statute books. After they have been educated up to that point it will be time enough to make the protective laws broader and more stringent. Who ever heard of any violator of the small bird laws being punished? Who ever heard of such an one even being arrested? One such instance is related in another column, but they are very unusual.

The remedy for the deplorable state of affairs now existing with regard to our birds must be looked for only in such a general and popular awakening as we have indicated, and this awakening must take place soon, if it is to serve any useful purpose.

The history of the extermination of North American game shows this. For many years the slaughter of the buffalo went on unchecked, and to the demand for protection, and the statement that unless the slaughter was checked the species would be exterminated, came the reply that there were millions of them, that they blackened the plains, and could never be killed off. A few years went by, and one day the dwellers in the buffalo range awoke to find that there were no more buffalo. A year or two later the information spread through the country at large. As with the buffalo, so with the elk and the antelope and other large game. It is being destroyed, if not so swiftly as were the buffalo, at least as surely.

No serious results to the country at large are likely to follow the destruction of these large species of animals. It is melancholy to see them become extinct, but the feeling is at best but a sentiment. The case will be very different when the consequences of a continuance of the present destruction of our small birds make themselves manifest. The punishment for our neglect of these species will surely make itself felt, and in a way that will affect every class of our community.

Armies of noxious insects will attack the growing crops of the farmer, and his year of work will be lost. A failure of the farmer's crops means that he can buy less of each of the commodities sold by the merchant, whose trade must thus fall off. It means that the railroads will have less freight to move, less grain to carry to the monetary and manufacturing centers, less manufactured goods to transport to points of distribution. The railroads, having less freight to transport, must cut down expenses and so must reduce the wages of employes, must purchase less rolling stock, do less repairing, discharge men, give out less work. On every hand receipts of cash will be diminished. Every one will feel poor. Times will become hard.

Does any one fancy that these are great results to follow the killing of a few small birds? The picture is not over drawn. Of all the perils to the farmer's crop, there is none which is so much to be dreaded as insects. The Eastern farmer as a rule knows little about this danger, though there be some who have fought the army worm, but let the farmer of the East consult one of the West. He who has dwelt in Kansas or Nebraska or Dakota or Minnesota during a grasshopper year can tell a moving tale, if he will, of the utter devastation and ruin which a single species of insect has wrought in a day.

It is not improbable that the next season may witness the beginnings of such calamities as we have foreshadowed, for the number of our birds slaughtered during the past five or six years has numbered hundreds of thousands each year. Such destruction, together with the diminution of the production of young, which must result from it, cannot fail to exercise before long a very marked effect on the insect life of the sections where the birds, once numerous, now exist only in small numbers. The reproduction of insect life goes on at such a tremendous rate, and the multiplication of individuals is so enormously rapid, that this great decrease in the number of their enemies is sure to be followed by a much more than corresponding increase in their numbers. The number of insects seen during August, which have sprung from the comparatively small number of individuals which survive the winter may give us a hint of what this increase is. The danger is a real and a pressing one, and measures should be taken to face it at once. The only successful way to do this is to foster and encourage the natural checks upon this insect life.

This is the purpose of the Audubon Society, and to assist in this good work we desire the aid of all. Even if one can do no more, he can at least lend the influence of his name against the wholesale slaughter which is now going on. We have already received a number of letters warmly commending our plan and expressing a strong desire to aid in carrying it out. Let every one who is willing to help send in his name and those of any whom he thinks would take hold.

THE PROPOSED NEW STANDARDS.—We have published some of the standards recommended by the standard committees of the American Kennel Club and others may be found in the kennel department this week. The remainder we presume will be forthcoming shortly. It is not our purpose at this time to criticize the work of the committees, but to draw the attention of our readers to the fact that the different standards are placed before the public for the purpose of obtaining the views of all parties interested in the improvement of the different breeds of dogs, as to the advisability of the adoption of new standards, and also for the purpose of eliciting from them their opinions as to what changes they may deem desirable. We sincerely hope that no one interested in the matter will neglect the opportunity thus offered and that we shall have a full expression of opinion upon all points from all who have the future welfare of the dog at heart. There is not the slightest danger that the American Kennel Club will adopt any standard that is objectionable if breeders throughout the country will come forward and freely give their opinions upon the matter. It is perhaps needless to say that the columns of FOREST AND STREAM are open, and we hope to see a full discussion of every point that may affect for good or ill the future of the different breeds of dogs.

NO RAILROAD IN YELLOWSTONE PARK.

TWO bills for a railroad through Yellowstone Park are now before Congress. They are essentially the same in character and provide that a right of way shall be given the Cinnabar and Clark's Fork Railroad Company across the northern portion of the Yellowstone National Park between Cinnabar and the Clark's Fork mines. The route somewhat vaguely indicated is up the Yellowstone to the East Fork, up that to and up Soda Butte Creek, and thence to the headwaters of Clark's Fork. Both bills provide that the location of the right of way shall be approved by the Secretary of the Interior, and that if the railway be not completed in the course of one year (in the case of the House bill) or two years (in the case of the Senate bill), the right of way shall be forfeited.

The present bills are an attempt on the part of those interested in the Clark's Fork mines to get railroad communication from Cooke City to the outer world. And the route specified is chosen by them as the best for this purpose.

No railroad should ever be allowed to penetrate the Yellowstone Park. If one is built there it will be the signal for a dozen other companies to force their way into this region, which should be sacred. It is not generally known that the Park has already been overrun by surveyors, acting in the interest of various railway companies. Their stakes may be found in the most secluded valleys, and if all the railways that have been surveyed there should be built, the delightful quiet of this now peaceful region would be gone forever. A population would follow the railroad and settlements would spring up along the track. Sparks from the locomotives would fire the prairie and the forests, and the visitor would see only blackened wastes, hillsides bristling with dead burned timber, and mountain tops shrouded in smoke. The shriek of the engine and the rumble of the train would drive away the game, and the beautiful and wonderful Park would become commonplace and unattractive.

If the Cooke City people wish to reach the railroad there is another and easier route which they may choose, but they must leave the people's Park undisturbed. There is a good way for a railroad to the Northern Pacific without passing through the reservation, and we insist that the rights of the whole Nation shall not be encroached upon to please one corporation.

No. No railroads in the Park. We have fought too hard for its protection to see such a backward step taken. The region is now in good hands. Public interest on the subject has been awakened. Each season more people visit it, and no one comes away without feeling a deep interest in the region and its wonders. No one who realizes what the Park is and what its future is to be would willingly see a railroad enter its boundaries. Let it be carefully protected. Railroads within it mean forest fires, game destruction, and a host of other evils.

GAME IN THE YELLOWSTONE PARK.—Reports of the abundance of game in the Yellowstone Park continue to come in. We have many times urged, and the event has proved the truth of our statements, that protection within the Park was all that was needed to make game abundant there. The varied natural features of the reservation render it both a winter and a summer range for game. We understand that a band of about two hundred head of elk have wintered in the vicinity of Swan Lake, which, as many of our readers will remember, is only five or six miles from the Mammoth Hot Springs, and in full view of the road. We have recently conversed with a gentleman who has resided for the last three years continuously in the Park. He states that the game seems to know that within the reservation it is safe, and that if a band of elk get out of the Park and near its borders are shot at or disturbed, they head directly for the Park, and soon after crossing the boundary line seem to lose all fear and stop to feed or lie down. We have no doubt that this statement is exact. The wild creatures have learned, as we long ago said they would, that there is a place where they are safe from molestation, and having learned that lesson, they may be depended on to keep within this refuge or near to it. With this continuance of the protection will come a great natural increase in the numbers of the game, and this increase will overflow from the Park into the surrounding region. In the time to come we look to see the vicinity of the Yellowstone National Park the great hunting ground of the United States for elk, deer and mountain sheep, just as it will be the only place in the world where one can hope to get a shot at the almost extinct bison.

A SUPERINTENDENT OF GAME PROTECTORS.—A bill has just been introduced in the Legislature at Albany authorizing the appointment of a superintendent of game protectors. The text of this bill we have not seen and we do not know its form; but we understand that it is framed to meet needs that we have already alluded to as pressing, and of which we spoke last week. Mr. Floyd J. Hadley has done a good work in bringing this matter before the Legislature, and we commend this action as much as we condemn his introduction of that other bill to legalize again the water-butcher of deer. If Mr. Hadley's superintendent bill should become a law, and his deer-hounding bill should fail to pass, the State protectors of the Adirondack region will have their hands full, and it will be a very excellent

thing to have some reliable, energetic man behind them to spur them on to greater efforts. In case these bills are acted on in this way the number of game protectors ought to be increased, for all the Adirondack waters should be watched. Then, when the hounding season is over, we may expect to see the game protectors concentrate and form a kind of body guard about the solitary still-hunter of the Adirondacks, of whom Dr. Ward, in another column, tells us.

THE PERILS OF ANGLING have another illustration in the case of the English tenor, Mans, whose death was the immediate result of his love of angling. While suffering from chronic rheumatic gout he went a-fishing at Christmas time, and paid the penalty with his life.

TO THE WALLED-IN LAKES.

XI.—A PORTENT OF EVIL.

LONG before the sun had made his appearance over the high mountains we were astir. Our simple meal was soon finished, and Yellowfish at once started off on foot alone. A little later Appekunny and I departed up the trail, and the camp was left in charge of the dogs and horses. I was extremely anxious to get to the ice on the other side of the stream, but my efforts in this direction were not successful.

Following the trail to the fifth lake we went down to the water's edge, and scanned the landscape to see how most readily we could reach our goal. By crossing the creek just back of camp and clambering for several miles along a very rough and precipitous mountain side, we could reach fifth lake at a point where only its width would separate us from the great glacier which overhangs it, but it seemed very doubtful whether we could get around the lake, which appears to run far back into a deep gorge in the mountains. By following the trail, on the other hand, it seemed likely that we might find some spot where it would be practicable to cross the creek and thus approach the northernmost of the two glaciers. We did not yet know what the stream valley contained above fifth lake. Just as we were about to turn away from the spot two tiny white moving objects were seen on a green slope in a ravine half way up the great mountain to the south of our camp. For a little while we watched them as they moved along up the slope, now clambering quickly or again stopping for a short while, and satisfied ourselves that they were goats, a mother and her kid, for one was much larger than the other.

Appekunny was much excited, and was for at once going back to camp, crossing the stream and climbing the mountain to try to get a shot, but I persuaded him to continue up the trail until we could determine whether it was possible to cross over to the ice, to reach which just then seemed to me much more important than to kill a goat. We therefore kept on up the trail until we had gone some little distance beyond fifth lake, and then taking a game trail which branched off toward the stream, followed it in the hope of finding a crossing. It soon turned back toward the mountain, however, and we were forced to keep to it, for the timber was so thick that it was very difficult to force a way through it. We tried a number of trails, but all of them sooner or later turned toward the hills, and we finally gave up the attempt to cross here, and breaking our way through the timber and underbrush, made what speed we could toward the higher ground.

After getting out of the timber the hillside was terribly steep and slippery, but we worked our way slowly up it, and crossing a mountain torrent which rushed down the slope in a symmetrical, clean cut trough scooped out of the shale, found ourselves not far below the first ledge.

All through the morning the skies had been growing darker and more threatening from hour to hour, and now as we looked up the valley, angry clouds were seen rushing forth from the black-mouthed cañons at its head. The sombre mountains were soon hidden by sheets of driving rain, which now and then changed to snow, and rushed down upon us before the driving wind. Before we had reached the ledge the storm was upon us, and we took shelter behind a low spruce bush, where, muffled in our rubber coats, we waited for a lull in the storm. This came in half an hour, and we continued the ascent. The climbing was difficult, for the ledges rose one above another in a seemingly interminable series. We would clamber up one, almost hand over hand, and then, having reached a little bench, follow it until some place was found where the next wall above us could be scaled. Sometimes the course of a tiny brooklet would furnish a way up over the rocks, at others a series of projecting knobs would offer foot and hand hold. Less often a slide, where the rock had slipped away and exposed a shelving mass of loose shale, gave an insecure footing for a quick scramble upward. About every half hour it would rain or snow with great violence, and during such times we would shelter ourselves as best we could beneath some projecting rock, and start on whenever the rain stopped. All the while the wind blew most furiously, and on this account the climbing was not altogether safe. Much of the walking was along narrow ledges only a foot or two wide, and when a violent gust of wind struck one on these narrow places there was always a possibility of its throwing him off. On one side there was nothing but the smooth rock to cling to, and on the other side there was a vertical fall of from 20 to 200 feet.

At one place where a gust rushing down a narrow gorge caught me I positively flattened myself against the rock. Appekunny had seated himself after a bit of rough scrambling, and I had gone on along a ledge to see what it led to. This ledge was only ten or twelve inches wide, and beneath was a drop of perhaps forty feet, while my shoulder brushed against the cliff that towered I knew not how far above me. A sheep trail followed the ledge and led me to hope that the way would be an easy one to ascend. After going thirty or forty yards, I came to a narrow gorge only six or eight feet wide, and the trail turned sharply at right angles, about a projecting point of rock, the path being so narrow that I had to exercise a good deal of care to turn the corner without falling off. As I rounded it the wind caught me with a violence that for a moment sent my heart into my mouth. Back from this corner ran a deep narrow chasm or cañon, cut out by a small mountain stream, and twenty feet in front of me the ledge on which I was walking ran out, and the sheep trail crossed the chasm. The distance across was only four or five feet—an easy leap for a sheep or for an ordinarily active man—but the landing place on the other side was on another narrow ledge about eight or ten inches wide and broken down on its outer side for several inches into a sharp slope to the edge of the cliff. Forty or fifty feet below I could see the gleam of the stream, and in the hells of the wind hear the tinkle of its waters, as they fell from rock to rock. The jump might well enough be made in the excitement of pursuit or flight, but I did not feel like attempting it in cold blood. One would have to alight on his feet just rightly balanced. If he went too far he would strike the cliff with his body and might rebound and fall off; if he did not go quite far enough, of course he would lose his balance and fall. I looked at the jump for a moment or two and then very gingerly turning myself about, went back to look for an easier way.

The rain and the snow and the fog continued, and often it was impossible to see any distance, while at short intervals the blinding sheets of rain descended with such violence that we had to stop where we were and wait for the storm to abate. We climbed in this halting way nearly to the top of the mountain, and at length found ourselves on the upper edge of a grand amphitheater of rock, whose back and opposite side were formed by a mountain considerably higher than the one on which we were. The red, purple and green shales which formed its floor and side were wholly without vegetation, and were tilted at an angle of 45 degrees, and thus being about at right angles to the surface of the ground at the back of the amphitheater; but the side opposite to us was very nearly vertical. Down through the midst of this great basin, which was a mile in length and nearly as wide, foamed a great torrent, the sum of a thousand springs which trickled from the rocks, and as many rivulets, which crept out from beneath the snow banks, which lay in all the ravines and sheltered spots. Everywhere over the shale ran sheep trails, and fresh signs were abundant; but the almost continuous rain and fog made it impossible to see far, and we could detect no living thing.

During a lull in the storm and a gleam of sunshine, we had from the highest point which we reached, a fine view of fifth lake and those above it. Counting the four which were not in sight, there are at least twelve in the chain, of which eleven are in a continuous series, and one, as has been said, is an arm of the fifth lake. From this point we had also an excellent view of the glacier at the head of the lakes. In character it is very similar to the one to the south of the stream, and like that, it falls over a great cliff, which shows through it. It seems thicker, however, and is beautifully fluted on its vertical face where it breaks off to make its plunge downward. It is quite possible that these two apparently distinct ice masses may be merely the two extremities of one glacier of great size; but this point can only be cleared up by some one who shall visit this interesting country, properly equipped with a pack train, so as to reach the ice.

The green color of the waters of the glacial lake is due to the grinding to powder by the slowly-moving ice mass of the green slates, shales and schists which form so large a proportion of the mass of these mountains. This finely comminuted rock is carried down by the water of the melting glacier and for some little time held in suspension by it, giving the water its peculiar tinge.

During this short brightening of the skies the mountains about the lakes were spread out before us in a wonderful way. They are incomparably ragged and inaccessible, and seem all to be knife edges or pyramids or cones. It is unusual to see one that is square or round-topped.

Up here on Swift Current, where it is so much higher and colder than at our permanent camp, the foliage has changed much more than about the St. Mary's Lakes, and the combination of colors that we looked down on was startling in its variety and its magnificence. An artist's palette, splashed with all the hues of his color box, would not have shown more varied contrasts. The rocks were of all shades, from pale gray, through green and pink, to dark red, purple and black, and against them stood out the pale foliage of the willows, the bright gold of the aspens and cottonwoods, the vivid red of the mountain maples and ash, and the black of the pines. In the valley were the greens of the deciduous shrubs, great patches of the deep maroon of the changing lobelia, lakes, turbid or darkly blue, sombre evergreens; on the mountain sides foaming cascades, with their white,

whirling mist wreaths, gray-blue ice masses, and fields of gleaming snow. Over all arched a leaden sky, whose shadows might dull, but could not efface, the bewildering beauty of this mass of color.

Down the mountain side we slowly picked our way, and at dark, tired, hungry, wet and without game, reached the camp. There we found Yellowfish, who had been in since noon. Soon after starting out, he said, he had got among goats and had shot away all his ammunition, twenty rounds, at them without getting one. He said that they had been very plenty, and it was very amusing to hear him tell how, when he would shoot at one it would jump down out of sight behind the rocks, and another would pop out from behind some other point to see what the noise was about. He said that he had hit several, but all too far behind, so that they got away among the rocks, and he could not find them.

"Some one," he said, "is surely doing this" (*i. e.*, bewitching us) "first we had rain, then we fall in the creek, now I can't shoot. Some moons it is so—a man cannot shoot—and when it happens so, one knows that the medicine is bad and some of his relations are going to die. Then the people make many sweat lodges and they get well."

Although we nodded gravely as the Indian made these statements, accepting them without question, as we did almost everything that he told us, no doubt Appekunny and I smiled inwardly at the crude superstition of the savage who thus expressed to us an article of the Piegan faith. We do not believe such things, we intelligent white men; to us signs and portents are nothing. We fear at those who fear the ticking of the death watch or the howling of a dog and believe that they foretell some direful event. But it did seem just a little queer, when we got back to the agency, to learn that a young man, a relative of Yellowfish, who had been off on a horse stealing expedition, had been killed by the Crows, and that the news reached the Piegan camp just about the time that we were up on the Swift Current. A coincidence you will say. No doubt, no doubt. But you would find it a difficult matter to persuade an Indian that it was merely a coincidence. It was certainly odd and worth making a note of.

We are disbelievers in this age, agnostics we call ourselves, perhaps without very well knowing what we mean by the term. Is it not possible that we disbelieve too much? I have seen so many mysterious and altogether inexplicable things during my wandering among the Indians that I am slow to believe or to disbelieve anything. Some day I purpose giving for the benefit of the readers of *FOREST AND STREAM* a little exposition of the things that I have seen and those that I have heard from thoroughly reliable sources. The history of the medicine workers among these people has never been written, and, indeed, never can be, for in many cases their wonderful practices have been abandoned and almost forgotten; but the feats that were accomplished by some of the Indians of the Southwest, by the Panis and Rees of the Missouri River region, would be simply incredible to one who has not seen them.

It seemed curious that the Indian should have made such wretched work of his shooting. He has the reputation of being one of the best hunters in the tribe, and is said to be a good shot as well. We were interested in his story, for we needed meat, as our rations would only suffice for one more meal; and desirous as both Appekunny and I were to get a goat, its meat was even more important to us than the satisfaction of killing a new species of game. Our provisions consisted of a small piece of bacon and four biscuits, and unless fresh meat could be obtained on the morrow, we should be obliged to return to the St. Mary's.

Soon after supper my companions turned in, but I lay long by the fire, watching through the branches the stars in the sky, and listening to the soft whispers of the wind in the treetops and the distant murmur of the rushing stream.

A CAMP HUNT IN MISSOURI.—III.

THE two members of our party who lost their way in returning to camp after dark, and who brought up on the Mississippi River, fell in with a most remarkable character, who was pressed into service and piloted them back to camp. His name was Cassius Crosswhite, familiarly known as Cash Crosswhite. A regular swamper, born and bred in the swamps. He knew every tree and every stump, every stream, pond and thicket in that country, and traveled by night as by day. He could not read, but knew the language of every wild animal and bird in the woods. Could, with his mouth, imitate with wonderful precision the signal, or call of any bird or animal you can mention. We engaged his services for the rest of the hunt, very much to his satisfaction and our own, as he proved to be a useful adjunct to our camp.

Mr. Will C. was the handsome and dashing duke of our party. He had a brilliant record as a "masher" on "Ward's licks" at home, but soon concluded his gun was not a success on mallards and wild geese, and determined to devote one day with me in paying our respects to the wild turkeys. After an unsuccessful tramp of a couple of miles through the favorite haunts of our chosen game, we emerged into the road at a place where the tall trees of the dense forest made a wall as it were, on either side. Just then the note of a round in full chase after a deer, burst upon our ears. A moment's listening satisfied us that we were in the line of the chase, and as we stood expectant and ready to give the deer

a warm reception, a flock of wild turkeys, startled by the approach of the dog, ran into the road some two hundred yards above us and came running down the road directly toward us. They soon rose to wing and came flying straight down the road between the walls of forest trees on either side. The sight was a beautiful one, but it was too much for Mr. C. He unfortunately had no quinine and Mr. Burton was not within reach to supply him, and before the nearest turkey came in range of our guns his excited nerves got the better of his judgment and he fired both barrels, and lost as fine an opportunity as he will ever have to bag a brace of wild turkeys, right and left. His firing caused the flock to separate and take to the woods on either side, but still passing in range I killed one, but missed with the second barrel. Mr. C. had in the meantime reloaded and gave them a parting shot, but without effect, as they passed.

In a few minutes my dog ran one into a tree not far off. By careful creeping I got a long shot at it and brought it wounded to the ground. It did not stand on the order of its going, however, and "ran like a turkey." Carrying the dog to the place where it came down he soon got the scent and after a chase of two hundred yards, caught and killed it. A young man on horseback, coming along the road soon afterward, kindly consented to take the two turkeys to the camp for us and Mr. C. concluded he had enough of turkey hunting for one day, left me and went back to camp. After remaining quiet for a time, I succeeded in calling up one more of the flock, which I killed. The others would neither answer nor come to call. Returning that afternoon toward camp through the same woods we had hunted unsuccessfully in the morning, my dog flushed and scattered a flock.

Selecting a place near where they were flushed, and remaining quiet for half an hour, I had the pleasure of calling up and killing two fine turkeys at one shot. Having now as many as I wished to carry, I concluded to try an experiment. I stood the three dead turkeys up at a convenient distance, near where I had shot the last two, to act as decoys. Thinking that I might in this way kill two or three at a shot. After arranging my decoys, I began to call and brought up two. One came and stood almost in the very place where I had just killed the two. But he paid no attention to the decoys and in a few moments both walked off. I might easily have shot the one, but I took my chances for two and got neither. After carrying the three already killed about a mile and a half, I considered myself lucky that the others had escaped. The flock of turkeys that ran into the road that morning and flew to Mr. C. and myself, looked to me, in the distance, as black as ravens, but Mr. C. insisted in camp that night, that they were all sorts of colors. He saw yellow ones and spotted ones, and blue ones, and a general rainbow mixture.

He had never encountered a flock of wild turkeys before. Thus the time passed rapidly; every day adding to our game supply, while around the camp-fire at night the incidents and jokes of the day added zest to our enjoyment of the occasion. At the end of two weeks we broke camp, having bagged four hundred ducks, thirty wild turkeys, seven wild geese, squirrels without number, and one enormous pelican, measuring eight feet from tip to tip of its wings. The pelican resembles the swan in general appearance, and is a very rare bird in this part of the country. Its general color is white, but the wing feathers are tipped with black, and so are the wing coverts, or small feathers on the butts of the wings, giving it a beautiful appearance. The distinguishing feature of this bird is its pouch, or food sack. It has a beak about eight inches long, from which depends a phable and self-adjusting sack, composed of skin resembling india rubber. It is capable, when distended, of holding as much as a pint or more of food. When empty, the pouch contracts so as to be scarcely noticeable. The breast of the bird was covered with a coat of soft feathers and down much thicker than that of a swan. It was a great pity that so fine a specimen could not have been preserved.

Rarely did a hunting party ever enjoy an outing more, and we left our happy hunting grounds with a resolve to repeat our visit with the next autumnal frost.

NASHVILLE, TENN.

CAMP FLOTSAM.

XXIV.—THE RETURN OF THE PRODIGAL.

ALTHOUGH the day which we spent in trying for salmon was barren of results, yet we were rejoiced to see the last of the blow disappear from the water, and a faint hope rose within us that in spite of what the netter had done, we might yet have some sport. Thus far, our outing had been full of disappointment, so far as the fishing was concerned, and a letter or two from A. N. C., who was having grand success in the Back Bay of Lake Champlain, but served to increase our chagrin. Though our success was incomparably greater than any possible at Greenwood or the free for all lakes resorted to by anglers in the vicinity of New York, yet it had been less dazzling than we anticipated. Not that our scores had been insufficient for our needs, but it had been our ambition to make in an hour or two what would require from sunrise to sunset in the lakes above mentioned. Three years ago this was possible, but the man from the island has ended it all.

On the morning of the day after our fruitless quest above the bridge, we secured a pair of fine perch bait and soon after breakfast were anchored on the long shoal off the upper end of Lost Spring Island in a depth of about ten feet of water. Our tackle was, with the exception of substituting a hook for the flies, the same as we had used in casting. A furious strike greeted our first bait before it had fairly settled, and in a moment we were engaged in tussle with a four-pound pike, whose escape with only a single gut between it and liberty, was assured from the beginning. It was not, however, until we had the fish along-side and thought our game safe, that the catastrophe came. A single flourish of the tail, a wriggle of the body, and the slender gut was cut and the fish was gone. There was no regret at parting, except for the loss of the sprout hook, for pike were rather plentiful. Before our fishing for the forenoon was ended, the calamity twice repeated itself, and another pike and a small mouth bass each left us minus a hook. But these were our only escapes, and the net proceeds of the morning's work were ten bass averaging two pounds apiece. Before we finished, Sabatis's two girls anchored their skiff near us and enticed the bass in vain for an hour, at the end of which they followed us to camp, where they spent the remainder of the day. The older of the girls, whom we called the Princess was about seventeen and had high cheek bones, a dark, sallow skin, and long, coarse, black hair. She was short in stature but well formed, and could swim, row a boat, handle a canoe or chop wood, with all the grace and ease of her brother. The younger one was about ten and

had regular features, an olive complexion and soft, dark eyes, and bade fair to be a beauty. The former was the Madame's guide and was competent to take care of her mistress in any emergency; beside her other accomplishments, she was a most successful fisherman.

There was a manifest improvement in the fishing after the blow was fairly off the water, but with the date for our breaking camp fixed to the dead certainty, so that we could count the remaining days on our fingers, our enthusiasm was gone and we were satisfied to sit down and await the end. Instead of fishing, we were willing to drift by the hour in the open lake or idle away the time in the shade of the rocks among the channels between the island. Here were rare opportunities for reflection, and communion with solitude. To the north and south, east and west across the long stretches of water as far as one could see, not a moving thing was there to distract the thoughts. Islands rose about us on which few men had ever trod, while the signs of civilization on the shores were scant indeed. It was a very paradise for a hermit—at least in the bright summer days, but with six feet of snow and the thermometer at 30°, with norwesters sweeping up the lake for twenty miles, the soul of the anchorite would yearn to cast aside his furs and snowshoes and be transported to the white sand beaches of the gulf. For places where to idle away the time there was little choice between the water and the camp. Each had attractions of its own, and with a hard attack of laziness, wherever one might be he would long for the other. The island, with its thirty acres of forest, furnished a good roaming place and the bunks in the camp a retreat when a fit of drowsiness came on. But in these remaining days all that the lake or forest could give of pleasure, was concentrated around the camp-fire. With the incense of the resinous knots was mingled the fragrance from pine and spruce which loomed up darkly behind us, and upon which the firelight, cast strange and fantastic shadows—the very giants which used to gather in the gloaming in the corners of the old kitchen, and from which we used to flee to the shelter of a mother's apron by the broad fire-place, giants, which now as of old, waved their shadowy arms and danced their weird dances, but from whom the older terror had departed, for fifty years had made the boy a man and a greybeard, one who had faced all the ogres of which these were the prototypes, and contended with "the phantoms vague and van which beleaguer the human soul." But now, the giants and shadowy conception of long ago were naught, there only remained the golden memories, sifted like wheat from the tares, memories which were born again and came floating back in their olden reality to hover over and surround us here. Boyish faces, the companions of many an angling trip through the meadows of the past, sterner faces bronzed in the sports of flood and field, on whom manhood had set the seal of consecration to loftier duties, aged faces, mellowed by years into the dreams and sports of youth again, faces all of them now lying in the dust, looked out of the whirl of flame aglow with the ancient light of friendship and love as though they would live over with us all that life's brief dream had been to them.

It was among these latter days that the Student made his way once more to the camp to pay one of his ever welcome visits. Before it was over, we were invited by him to attend service at his parish church, fifteen miles from camp, on the following Sunday. The preparations were duly made, and by seven o'clock on Sunday morning breakfast had been finished and we were ready to embark. Our retainers gathered at the landing to witness our departure; the chickens assembled on the bank, the "ki"-dog took his position in the bow and the calf hung its head in dejection over the stern. When we pushed off, the latter gave a mournful bellow and before we were ten rods from shore, it was in the water beyond its depth and swimming lustily in our wake. By the time we had rounded the point where we passed out of its sight, it was a hundred yards from shore and still heading out to sea. We congratulated ourselves that we were rid of the beast, and indulged the hope that it would never touch land again unless it were in the bottom of the lake. But it was not so to be. A half hour later, while the Colonel and Captain were yet making the groves of Garden Island resound with their nightly notes, the calf made their landing and, thrusting its head in the open door of the tent, greeted the sleepers with a thundering *ba-air*. "What in —, I say Jo!" shouted the senior officer, "what's that?" The Captain drew himself up into a sitting posture and calmly surveyed the intruder. "Arthur's calf, by Jove, they've unloaded it on us." But, when an hour afterward it swam after the Captain's boat as he went ashore, and made the land half a mile away the suspicion was dropped as groundless. Had it not repeated the performance, explanation would have been in order from the American camp.

When we rounded the head of the island we found a strong wind was blowing up the lake, so we hoisted sail and were soon going before it at eight knots an hour. Swiftly we shot by the low outlying islands, turned the headlands and swept through the narrow channels, passed the Brothers' and over Cady's Bay, radiant with the memories of an idyllic day with Truthful James a summer ago, and in an hour from the starting drew up the Pizen Ann on the bank at the end of the bridge. Three or four dirty, miserable looking Indians were lounging about a shelter built against a tree on the hillside as we landed, who greeted the party with looks of wonder and a deal of jabbering among themselves. Just over the crest of the hill we were welcomed at the house by the Student and his kind-hearted and hospitable household, and after a pleasant hour we were loaded in a large farm wagon and started off for church. The road led over the granite hills for two or three miles, then turned to the westward and followed the range which overlooked the lake. We could see it stretching away for five or six miles on the west, until we made another turn to the right and were soon among well cleared and cultivated lands, dotted with comfortable houses around which were many evidences of thrift. Another turn to the left and we soon came to the plain stone church which marked the end of our journey. The building was filled to overflowing, and the worshippers were kneeling at the very threshold as we entered. At the altar stood a gray-haired priest under whose hands was wrought "the mystery of faith"—the mighty sacrifice of the Catholic church. When he turned to the people it was a kindly face of perhaps forty which looked upon them. This was Father McWilliams, the foremost in the front rank of the priests of Canada, the staunch friend of the Premier, the ripe scholar and man of culture. After the services were concluded, we were most kindly received at the parochial residence. Upon the library wall hung a portrait engraving of Sir John A. McDonald and near it a miniature flag of the Union. The Rev. Father is a Yankee, being from Vermont, which accounted for the stars and stripes, while in Dominion politics he is a conservative and an ardent

admirer of the great chief whose face adorned the wall. At parting he promised to visit us and spend a night in camp, a promise which unforeseen duties afterward compelled him, much to our regret, to retract. Twelve weeks later, he stood on the scaffold beside Louis Riel, and saw the sun of the northwest rebellion set in the gloom of unaccomplished purposes and the price paid to the uttermost, of treason to a crown.

It was three o'clock and after before we were again back to the lake, where after dinner with our friends we set out for camp in the teeth of the wind which was still blowing hard up the lake. It took three hours to make the landing in front of the tent, and by the time we were housed the Colonel and Captain were on hand to hear the tale of the day's adventures. Sabbatis too, in wonderment at the deserted camp which he had discovered in the forenoon, dropped in to learn the cause. It was the first visit from the old man which we had received since our unlucky expedition for lake trout, a failure which he cudgeled his brains in vain to explain. That trout were plenty in the lake was evidenced by the stories of Sabbatis and others who had taken large numbers together with quantities of yellow bass, (*M. salmoides*), through the ice in winter, but why we so signally failed to take any of the former we could not understand.

In regard to the latter, it has become an accepted dogma in a certain school of anglers, that the black bass hibernate during the winter. While this, within certain limits, may be true as regards the small-mouth, it can hardly be said to apply to the big-mouth variety. Changes of feeding ground in our northern lakes after they have become ice bound, together with the fact that few bass anglers fish in the winter, has led many to a hasty and erroneous conclusion, formed largely from the habits of the small-mouth, which is identical with our big-mouth bass, remains in the state of activity throughout the winter, and his congener of the north partakes of his nature and habits. Big-mouth bass are frequently taken through the ice by pickered fishermen, in shallow water, a fact which proves their activity in winter, while the number of those who fish during that season in deep water, is so limited, that much experience tending to prove the non-hibernation of the big-mouth, has never been made public. One of the principal reasons for this may be, that few of the winter fishermen follow the sport at any other season, and of these, there is rarely one who has ever read a line upon the subject, or given the habits of fishes a thought. It may, however, be safely set down as a fact that the big-mouth can be taken in all seasons of the year, and let no one be surprised when some angler reports to *FOREST AND STREAM* a fine string of small-mouths caught in January.

On the following Sunday afternoon, while the tide of discourse in the tent was at the flood, there was a hesitating footstep heard without, a rap on the pole of the tent nearest the water, then a light tread of one approaching the headquarters, and in a moment the face of Truthful James was peering in the tent door. Was it he, or a phantasy conjured up by the Colonel's cheese? We clasped the outstretched hand, it was solid flesh, the prodigal had returned. Now we could understand the meaning of the flight of that calf. Some warning from a wandering bird perhaps, or a premonition of coming evil it might have been, but it was apparent that our bovine didn't intend to linger about a camp where prodigals were liable to drop in unannounced. We suspected that Truthful James had been wasting his substance on guides and was filled with the husks of summer boarding places, but we forbore interrogating him, and he was given the chief seat at the table, and with Sabbatis for his oarsman, he haunted his old fishing grounds during the remainder of our stay. Once more the camp responded to the inspiration of his presence, and we were soon living over the olden days as though there had been no interval between the first careless hours which joined us here, and the later ones which reunited us in what was once the clysium of perennial bass.

WAWAYANDA.

[For Auri Sacro Fames (in last issue) read Auri Sacra Fames.]

THE COON'S HAUNTED HOME.

NO one had been in Burton's Woods at night, but once—and that was at the beginning of the war—since old man Burton died some fifty years ago. It was the one place in Old Virginia that had supported through half a century of peace and prosperity and war and privation an aristocratic ghost and its long line of pale-faced descendants.

Exactly what old man Burton had done to oblige him and his deceased olive branches to haunt the forest, no one ever could tell, but if what both the white and colored folks said was true—and most sincerely they believed it—was the woods at night were filled with spectre Burtons most terrible.

Now I myself don't believe that old gray-wooled Uncle Jordan, the oldest slave on the plantation, who started the story, ever saw the spirit of his master come hobbling along with his ghostly gouty foot through the old woods. But Uncle Jordan came one night into the store at the head of the Neck, as if he had been shot out of a cannon, and almost scared every darky there white for life by shouting out:

"Fo' de Lor', chil'en, if de ole man Burton ah com' tu right smart, I seed 'im mesel a-shinen wif de blue flame bie' in de ole woo' so'?"

If a bomb had exploded it could not have created a greater panic. Uncle John Wise, old Jordan's son, dropped on the floor and crawled under the counter, and young Jeems-Gordon-Burton-Cecil-Mason junior to John Wise, as he called himself, the twelve year old grandson of old Jordan, was seized with such a fright that his two big ears, that it was said he used to turn under for a pillow when he went to sleep, wiggled with terror. The other darkies crowded together in a dark corner where nothing could be seen but the whites of their eyes and their chattering teeth. Then it came out that old Uncle Jordan had come out for a stroll that piping hot night, and that when he stopped by the edge of the wood to wipe his face and "wonda if it wou' eva again snow," he saw old man Burton's ghost come limping toward him down the old wood road.

Like wildfire the news of what Uncle Jordan had seen ran through the county, and for months after the hero of old man Burton's ghost was besieged by questioners. Jordan, however, stuck to his story with a religious conviction, so that it was believed by every man, woman and child as gospel truth. From that time out the long belt of timber-land that walled in the Burton plantation from the rest of the world was given a wide berth by every one. The wood road with which it was traversed became obstructed with fallen tree-tops and moss-covered logs. A dense underbrush of young pines and holly sprung up, and the tall trees became festooned with vines and creepers, whose stems throbbed and moaned when the wind struck them, and whose leafy tendrils, like a canopy, shut out the sunlight. The wood

always in the low ground became damp and mouldy and tall rank grasses and canes fringed its briery outskirts.

No longer did the booming of the axe against a hollow gum tree, and the rumbling of the wood cart awaken the vibrations of the forest. No longer did the mocking bird stop to listen to the quait carolling of the light-hearted wood choppers. The forest was as silent as the grave, save when some rogue of a fox barked on the track of a cotton tail, or the eagles who had been duck hunting all day on the adjoining breakwater came screaming home to their nests in the tall, dead oaks. Then when the winter winds blew, the pine tops gave back as echoes the roaring of the distant surf and made people shudder and like to crowd round the fire. Of course, under such conditions Burton's woods became a safe harbor for game and ground vermin. There the night-partridge, as the woodcock is called down South, sucked his julep in peace; and when the snows came the quail huddled for shelter in the brush heaps safe from the tracking pot-hunter. And the stories about the coons in Burton's woods! Why, they would almost set the hounds a-barking a mile off; but as often as the conversation started on coons, it invariably ended in ghosts, so that the family of coons lived and prospered as all well-regulated coon families do. The wood had come to be dreaded with such an overwhelming fear, that no one could be induced to penetrate its shadowy recesses. It was so horrible a place, that Dr. Willis's standing offer of \$5, posted at the store, for any one to go there coon hunting, though very tempting, was a perfectly safe one for the doctor.

Thus time crept on. The old folks died and young folks took their place. Then came the war and the departure of the white men to join the Southern army. Northern troops invaded the county I write about, and one of the first things two of the officers did was to begin to chaff Dr. Willis about old man Burton's ghost, which they at once heard all about. Right, jolly, good fellows were the Major and the Captain, so that one night they inspired the timid Doctor with sufficient courage to promise to take them a coon hunting in Burton's woods. When the news of the proposed expedition got about, the greatest excitement prevailed and all the old darkies tried to dissuade the foolhardy hunters. It was a dark, drizzly night, just such a one when coons and ghosts are said to like to get about, when the three, equipped with an axe and a bag of light wood, started from the store to the haunted forest. Besides the coon dog, Dr. Willis's bulldog Grip was taken along, an animal of undoubted courage and one that had been known to face the most obstreperous bull in the county and throw him; so he was boasted about as a dog that knew nothing of fear. In the cornfield adjoining the wood the hound led off on a coon trail and was soon heard barking in the woods where the coon had treed. The hunters were making their way to the place along one of the old wood roads, when Grip, who was on ahead, uttered a low growl and came running toward them with his tail between his legs. Then the astonished and now thoroughly terrified hunters saw a great burning object descend an old rotten tree and come toward them. The hunters faltered, but the plucky Major picked Grip up and flung him toward the bright figure whom they described always afterward as resembling a red hot cylinder stove—and then they took to their heels and fled. Through green briar thickets which tore their clothes and scratched them till the blood flowed, tumbling over logs and into ditches and bumping up against trees, they went crashing on. The crowd at the store heard them coming and a few of the bravest ones stuck their heads out of the door, breathless with excitement, while the rest shivered with terror. Not a word was said until "junior to John Wise" asked from behind a barrel if "ole man Burton ha' yet com' in sight?"

"Gu' Lor', chil'e," replied his father, "dun' say tha' but I know he's shua to com'."

These terrifying words produced a chorus of moans and groans, and all the darkies had just begun praying with all their might, when Grip and the tree hunters tumbled up the store steps and fell headlong and panting into such a crowd of scared darkies as has never been seen before or since in Old Virginia. But old man Burton, as the fiery spectre was generally supposed to be, must have climbed the tree again, for he certainly did not follow the hunters. The story of what they had seen and the fight that had caused their demoralized retreat, only went to confirm every one in their belief that the woods were the roosting place of ghosts, or such brave soldiers as the Major and Captain would not have been frightened so badly. Shortly after this the Northern troops were withdrawn from the outlying county, and from that time forth for many years the spectre Burtons and the coons carried on their revels in the haunted woods without let or hindrance. But the talk of the pranks of the Burton wood goblins was kept alive by strange sights and noises in its impenetrable fastnesses. The good wife of the old Methodist parson who filled the dual role of preacher and storekeeper, saw globes of fire hop out of the wood and roll like ten-pin balls down the road, and yet not one of these good people ever suspected that the ghosts of the Burton tribe were nothing more or less than "fox-fire," which in some marshy localities in the Southern States is startlingly brilliant and curious to contemplate; and the noises, the scraping of the trees against each other when the wind blew,

BOB WHITE.

AFTER all what is there in the whole line of field sports that equals the autumn shooting of the Atlantic States as it used to be twenty-five or thirty years ago? We may talk of excitement and skill and courage and scenery, of bounding bucks and charging bears, of beetling cliffs and roaring brooks, but there is nothing to which the memory of the old time sportsman more fondly returns than "the happy autumn fields" in "the days that are no more." Is there a veteran of the dog and gun who reads these lines that does not remember what a fever the first sight of autumn leaves used to stir within his veins? Does he not even now feel a strange, restless yearning when he sees the ripe pumpkins shining among the shocks of corn, the maple reddening upon the hill and the butternut yellowing in the vale? And can he forget the change that came over the old dog when the bright crimson of the gum tree began to blaze along the lowlands and the prickly burrs of the chestnut to open amid its golden leaves? In summer he tapped out a lazy welcome with his tail at his master's approach without raising his head or opening perhaps more than a single eye. But in October he jumps up at his approach, cocks his head first one way and then the other, and with glistening eyes and anxious whine tries to fathom his master's intentions. Right well he knows that autumn has come and that any moment he may be whistled off to the field.

Bob White was the leading spirit that lent such a charm to the autumn fields. The ruffed grouse and the woodcock

added untold loveliness to it, but both could have been more easily dispensed with than Bob. The first genuine quail hunt I ever had seems still the brightest because all was so new and wonderful and the dogs behaved so well. I was a mere child of twelve, and though for two or three years I had been worrying squirrels and rabbits, robins and high-landers with a long single-barreled gun, I had never seen a pointer or setter work in the field, and the few quails, woodcock and "pheasants" that I had started were always gone before I could recover from the surprise caused by their sudden burst from cover.

It was the first of November, and as the sun's first rays began to kindle the russet tops of the white oaks and shine on the bare twigs of the red oak, we started out over the fields. Along a tangled wood that sloped away toward a little brook where I had speared many a sucker, lay an old field overgrown with weeds and briars, where I had shot at many a rabbit, and part of this was now a buckwheat stubble sparkling with frost.

The action of the dogs changed at once upon reaching the field. There was no more of the wild exuberance of joy with which they started from the house. They no longer raced and barked and tried to jump over their masters' heads; but with noses raised to the breeze and tails carving elliptical comes out of space, they settled each to a rolling canter, beating from side to side, crossing each other's track at quite regular intervals, occasionally slackening speed and taking a delicate sniff of the breeze as they approached some clump of briars.

Fine dogs they were, too, and as I look over the long list of dogs with which I have hunted since then I can remember no superiors and few equals. My companions, two gentlemen who had been kind enough to let me go with them, will, if still living, smile when they read these lines. But it will be a smite of sadness as they think how short-lived are such friendships as those between the sportsman and his faithful dogs.

Old Sancho had crossed and recrossed the stubble several times, and finally went galloping down the edge of it where it bordered on the old field of briars. When nearly at the end of it he suddenly stopped and wheeled half around, stood still for an instant, and then, with lightly swinging tail, walked slowly over into the weeds and briars. Here he stopped for a moment and looked around at his master with a mingled expression of triumph and tremendous responsibility, then crawled along with thievish tread and gradually stiffening tail. Don, a hundred yards away on the stubble, had caught sight of Sancho's first step and backed him with as firm a point as though he had himself taken the scent of game, and now came crawling slowly along behind him, stopping when he stopped and moving on again when Sancho moved.

Sancho suddenly stopped again, but there was a slight wavering in the tip of his tail and an unsteadiness about his head for a few seconds. Then crouching low he took three or four steps as carefully as a sneaking cat, then suddenly halted again and stood as firm as a rock.

"Now he has them sure," said his master.

But scarcely had he finished when the quivering of Sancho's rigid tail changed suddenly into a wavering motion. Slowly he turned his head an inch or two, crept stealthily along a few feet, then suddenly became as stiff as an icicle, and with eyes fixed in a wild stare at the dead rag weed a few feet ahead, head bent a little on one side, one forefoot upraised, stood as if carved out of stone. And full seventy yards behind him with head just visible above the weeds stood Don, quite motionless and looking as wise as if he had himself found the game.

We moved slowly up beside Sancho, but nothing moved. Ahead of him was nothing but rag weed and briars. From the brown old oak came the harsh cry of the bluejay, the high-holder squealed from the gum tree, from the cedar came the piping of the robin and from overhead the melancholy "peep" of the bobolink as in his altered suit he bade farewell to his summer home, but there was neither sight nor sound suggestive of quail.

Another step forward, and there was a sudden flash of whirling wings in the weeds and the air fifteen feet ahead of us was filled with bustling life, whizzing for the timber with arrowy speed. Quickly my gun came to my shoulder and dimly along its barrel I caught a glimpse of buzzing brown—that is I thought I did. Confidently I pulled the trigger, but the brown went on without shedding a feather and ten yards further on whirled over at the report of a gun on the other side of the dog. In a moment more we were alone with the dogs and the only sign of game was a few feathers drifting back upon the breeze. The dogs both lay down while we loaded and when sent ahead picked up three quail which my friends had killed.

After entering the timber in search of the scattered bevy the dogs quickly changed their pace. Instead of the wide ranging canter we saw in the field they took a trot and ranged much less, quartering the ground and testing every bush with their keen noses. Don was soon missing, and after some search, was found standing as if in full run he had struck an invisible bank of clay and stuck fast in it. His master gave two or three kicks in the grass ahead of him, nothing moved, and Don still kept his point, standing almost in a sitting position with head bent downward. His master gave another kick nearer to the dog and almost from under his nose sprang a bird which wheeled over the man's head and vanished behind the scarlet crown of a dogwood tree, through which went two charges of shot, sprinkling leaves and twigs below. But we heard nothing drop and saw no feathers floating on the air.

For two hundred yards or more around we then beat the ground in all directions, but the dogs made not another point. "They are lying close and holding their scent," said one of the men.

"Yes," said the other "let's give them half an hour or so and try that next stubble."

This seemed strange to me at the time. But many a time since I have seen quail lie so close that the best dogs would walk right over them, and their power of withholding scent seems beyond question. The only doubt is whether such withholding is voluntary or not—a point hardly worthy of discussion.

After spending about half an hour in beating two other stubbles, we returned to the scattered bevy in the wood.

"Let's call them and get them running first," said one of the gentlemen. Sitting down on the fence he gave the autumn call of the quail a few times and soon from several directions and from the same ground that the dogs had before so carefully hunted came the tender *clot-ee, clot-ee, clot-ee, clot-ee*. When we reached the place from which came these sweet notes both of the dogs were pointing in a moment and each upon a different bird.

Old Sancho stood between two bunches of long grass on the border of a bit of swampy ground, looking very intently first at one bunch and then at the other. It was evidently the old story of the ass equally distant between two equally tempting bundles of hay. Dogs generally solve this problem as speedily as an ass does the hay question; but old Sancho with body and tail motionless turned his head from one bunch to the other several times as if undecided which was the finer flavored bird.

A kick into one of the bunches started nothing but Sancho, who moved up a foot or two closer and looked wild with excitement. Another kick, and still nothing moved but Sancho, who ran around to the other side of the bunch of grass and crouched low to the ground, with head bent at right angles and the tip of his nose only an inch or two from the grass. Another kick, and the dog, unable to contain himself any longer, pounced upon the grass, running his nose half way through it. Out from the other side went a quail, curling upward among the treetops, with one barrel of my friend's gun roaring harmlessly in its rear. But just as it went wizzing away on a straight course the dead leaves flew from a white oak sapling in the line with its course and down came the bird with a broken leg and wing, falling directly in front of Don. He cast a wistful glance at it as it hobbled away, but still kept his point.

Sancho quickly transferred his attention to the other clump of grass, over which he stood looking down into it with an air of intense curiosity. At the first kick into this out darted a bird, and in a twinkling vanished in a thicket near by, with a charge of shot scattering the blackhaws in line with it; and a faint thump in that direction made my friend look at me and smile with satisfaction as he pulled out his flask to reload.

Meantime the other gentleman flushed the bird upon which Don was pointing. Swiftly upward and away went the dim line of whizzing brown that marked its course among the yellow leaves of a little grove of hickory saplings, but turned as quickly eastward at the report of his gun.

When ordered to retrieve it, Don refuses and disappears in the brush in the direction previously taken by the wounded bird. He remains so long that we have to go to look for him, and a few moments' search reveals him in a clump of cat briers some fifty yards from his former point still as a statue. In his mouth is a live bird apparently as contented as if on its nest, its neck projecting from one side of the dog's mouth with head erect and bright black eyes calmly surveying us. It is evidently the wounded bird that fell near him, and having picked it up he has evidently met the scent of a well one on his way back with it.

That performance struck me then as wonderful, but since then I have seen enough to satisfy me that a dog could point a new bird with one perfectly unharmed in his mouth. It is marvelous enough how quickly a dog distinguishes between a well bird, a wounded one and a well one. But still we can understand this. But can you understand how a dog can stand in the midst of half a dozen closely-lying pinnated grouse or even lie down among them and do nothing but turn the direction of his nose from one to another when told to go on after the guns are loaded? Or can you understand such a trick as I saw old Sancho do two or three years later, stand immovable when a bevy of quail had risen before him and three or four had fallen before the guns, and refuse to stir when told to retrieve them because another quail remained hidden there—a thing that very rarely happens? There are dogs enough that would point the remaining bird, but how many would do it without breaking the first point and making a new one? And how does a dog know how many have risen?

As we came up to Don three quail rose from the briars in front of him. But at the report of one gun one of them came down bounding on the ground, and at the report of the second another rose towering fifty feet in air, folded his wings and sank stone dead, while my gun belched innocuous thunders at the third, giving me intense satisfaction to think I had mustered sufficient courage to shoot at him at all.

The rest of the flock were soon found. Some spun away in safety through the brush, while others, whizzing through dense thickets or among the treetops, came plunging down before some well directed charge of shot.

On we then went through a mile or more of the autumn scenery that has furnished such everlasting grist for the American doggerel mill, when on a hillside covered with saplings Don suddenly came to a point among some crimson maples. Before we were quite up to him a dark brown bird with twittering wing and twisting flight whirled upward from the dead leaves in front of the dog, and came in a moment whirling down again, stopped in its swift career among the treetops. No game ever made such an impression on me as that, the first woodcock I had ever seen dead. The rose-wood colors of its back, the large, lustrous, black eye set far back in the head and wearing even in death such a look of tranquil dignity, its long odd looking bill, buff vest and delicate pink stockings, all made me feel that I was in the presence of nature's nobility.

Down among the alders that fringed a little brook Don was soon found crawling along with great caution, and as we went toward him there rose some twenty yards ahead with roaring wing a large brown bird, vanishing like a rocket among the distant tree trunks. Bang, whang, bang went three barrels almost at once, but dimly we saw the bird, with tail outspread and unruffled wing, fade in the outer circle of brush. We followed in its course, and Sancho soon began to creep and in a moment more brought in a dead ruffed grouse. As I surveyed its crested head, its

swelling breast, black glossy ruffs, and the banded fan that formed its tail, I felt my young soul swell with pride at the thought that I had shot at it. From this delightful standpoint it was quite easy to jump to the conclusion that I had killed it. Though it went into the netted game bag of one of my companions, the item

Pheasants.....one

formed for the next year the leading item on the best-thumbed page of the only game record I have ever kept.

On we went for another half mile, I reflecting on the fate of merit in this unjust world, and wondering whether I would receive an invitation to assist at the dissection of that pheasant, when the vigorous tail of Sancho began to flag. But for the bright look he gave us as he turned his head about to see if we were coming, one would have thought he had suddenly become tired out and was about to quit hunting for the day. He dawdled about for a while with legs as draggy as though each foot were a sack of shot. But the tendency of his movements was all in one direction, and in a few moments his pace became a wary tread with Don stiff-legged and solemn close in the rear. On he went winding around tree tops, crawling through cat briers with ever slower step and more slowly waving tail. On he went one hundred, one hundred and fifty yards, until his pace became suitable for that of chief mourner at a snail's funeral; but still he did not stop. A hare scampered away from almost under his nose, but with a contemptuous glance at it he went on for another fifty yards or more. Then he suddenly stopped, and crouching low, raised one forefoot.

"Now we've got!"—My friend was interrupted by the obstreperous Bbbbbb of another ruffed grouse. It rose some fifteen yards ahead of the dog and went booming through the timber like a brown-feathered shaft from a giant's bow. Vainly my com-

SKATE EGG ATTACHED. MOTHER SKATE CARRYING EGG.

panions' guns spattered fierce destruction among the dead leaves along its path, and I could not resist a chuckle of satisfaction when it faded darkling into the back ground of tree trunks and brush. It was evident enough that grouse were not going to drop much that day without my aid. Harboring no hard feelings toward the dog because his master took my "pheasant," I remarked that he "did that mighty well." But Sancho, quite insensible to flattery, went on, passed right over the place where the grouse rose and went on as cautiously as before, while Don stopped there but a second, gave a transient and dubious sniff at the ground and surrounding air, and resumed his march in the procession with an air of wisdom that plainly showed that meeting the grouse was quite accidental, and that other game was on foot. Some sixty yards further on Sancho stopped again with a faint tremor of anxiety in his knees. But in a moment his tail began to wave, he raised his nose and sniffed the air with great caution, then crept a few steps with stealthy tread, and stopped again on the side of a little knoll beside the brook, where the wild stare of his eyes and the trembling of his tail with his efforts to hold it still showed that the trail was ended at last.

Rarely in the Eastern States can one see quail upon the ground, especially at this time of year; but upon a little sand bar on the side of the brook, some twenty yards ahead, was a medley of little blue tails, speckled breasts, white and yellow collars and brown coats, from which came the soft, musical tee, tee, tee, tee, tee, tee.

Young as I was, I had already heard that the "true sportsman" never shoots game on the ground. Imagine then my surprise to see the man who had pocketed the grouse raise his gun at the quail. Imagine next his surprise when my gun went off first. If there is anything I ever was good at it was a "pot shot," and a marvellous aptitude for quick and comprehensive work in this line was developed in advance of most of my other faculties. Only two or three birds flew away, and these he missed in his wrath with both barrels, while nine or ten lay dead in a heap upon the sandy bar. It is almost needless to remark that that was my last hunt with those two gentlemen.

T. S. VAN DYKE.

SKATES AND THEIR EGGS.

THE electric ray, saw fish, sting ray, cow-nosed ray, butterfly ray, and the immense devil fish of the Florida and North Carolina coasts, the barn-door skate, little skate, big skate, prickly skate, and starry skate, all belong to the great order of *Rajidae*. Then comes the angel fish, or angel shark, which seems to be a sort of stepping stone, or tapering off, variety, from the great shark family into that of the rays. In fact the sharks blend into the rays so gradually as regards their structure, and often their ovo-viviparous egg cases, that it is hard for one not high up in fish science to determine where the blending of these two great families of fishes takes place.

In the largest tank in the Aquarium (100 feet long) I determined to place all the varieties of the ray or skate family that I could procure, particularly those comical little fellows the cow-nosed stinging rays, which I was never tired of watching, as they constantly swam the entire length of the tank forward and backward all day long in Indian file, one close behind another, moving their large pectoral fins, or wings, with all the grace of a bird. At one end of this tank I had caused to be laid a flooring of Coney Island sand, in which the skates delighted to bury themselves. For, unlike the stinging rays, they rarely took an extended swim as long as they were bountifully fed. One day when admiring my cow-nosed pets, I noticed a large female "big skate" (ocellated ray) rapidly moving about on the bottom as if in search of food. Knowing that this could not be what she was

seeking, as all had just been bountifully fed on bull-nosed hard clams, I became interested in her movements. At last, when reaching the upper end of the tank, she had to turn, and in so doing exposed her under side, when I discovered that in her mouth was firmly held a newly laid egg case, from which flowed the long, silken tangles that are so abundantly provided by nature to this particular variety of skate. Constantly and anxiously she moved from one part of the tank to another, carrying the egg case about with her. Closely observing her every motion, I saw her at last settle on a lot of old oyster shells, on which were masses of acorn barnacles and that beautiful, crimson-colored and tree-like sponge which goes by the name of "oyster beard" with the oyster-terms of Long Island Sound and Prince's Bay. Over the mass of shells she pressed down her wings, all the time moving about in small circles and half circles. At the end of half an hour she swam away to the sand end of the tank and buried herself. But the egg case was firmly anchored, as shown in the illustration.

Every few days some of the skates were depositing their egg cases, but none took such great pains to securely anchor them as did the ocellated rays. In the illustration is shown one of these curious looking egg cases which is attached to an oyster shell by the four silken tangles that start from the sides of the egg case. It will be noticed that the four hook-like terminations of the egg case are also intended by nature to aid in more securely anchoring the egg to any marine plant that they may come in contact with. Neither the male nor female pays the slightest attention to the egg cases after they are once securely fastened. To enable the young skate contained in the egg case to breathe, there is an opening at the end nearest the head of the young skate. Through this opening passes a sufficient quantity of water to supply the young with oxygen with which to aerate its blood. After the expiration of a few days, the time being longer or shorter, according to the temperature of the water, the young becomes strong enough to push his way out of the ingeniously constructed opening at the end of the egg case, through which he has received his supply of well oxygenated water. After the young skate has left its egg case, it is several days before the umbilical sac is absorbed, and during this time a rare chance is offered to study the circulation of the blood and the action of the heart, as the body of the young skate is nearly transparent.

In England the skate eggs are called "pixy purses" and

"land barrows," but the egg cases of the spotted shark with its curious curling tendrils (see illustration), are called "mermaids' purses," "sailors' purses" and "sea purses." I

have never found or known of an egg case of any of our sharks or dogfish to be found on our neighboring coasts, though in Europe they are very common.

Mr. Mather informs me that when visiting the Southport Aquarium, he witnessed a spotted shark attack or entangle to a mass of algae, the curling, tendril-like terminations of one end of her egg cases before the egg had been entirely extruded; but that as soon as the tendrils became fastened to the mass of algae she moved along, thus causing the egg to be delivered from her ovary.

During the winter months, after a severe storm, I have often gathered numbers of the fruitful egg cases of both the "barn door skate" and the ocellated ray, which were very interesting studies in embryology during their development in a self-supporting marine aquarium. In England, Scotland and Ireland, the flesh of the skate is highly prized and is eaten both fresh and salted, but in this land of abundance only a few Scotchmen ask for it. A. W. ROBERTS.

HERBERT'S LAW TO PROTECT BIRDS.—It may not be generally known that "Frank Forester" prepared the first effective law for the protection of insectivorous birds passed by the New York Legislature in 1858, and that this law, with a few trifling amendments, is still in force. This enactment, known then as the "Herbert law," was prepared by him only a few weeks before the tragic death of the great sporting author, and therefore was among the last productions of his pen. Through the courtesy of our correspondent "Canonicus," who has the original manuscript in Herbert's characteristic chirography, we recently had the pleasure of examining the historic scroll, which fills ten pages of foolscap paper. "Canonicus," who was active at that time in urging the necessity of a law to protect songsters and insectivorous birds, submitted to us his correspondence with Henry William Herbert, Hon. O. B. Wheeler, Senator (the late General, killed at the Wilderness, May, 1862) Wadsworth and others in regard to the subject and the absolute necessity of the law. The original MSS. of the Herbert law would prove most interesting to all, and any devoted admirer of the late "Frank Forester." Our correspondent desires us to say that inasmuch as the law is in such shape as to be divided and then mounted and framed, he would be glad to have it become the property of some club. In order to meet this idea he is willing to part with it at a low figure, so that the rare souvenir may meet more generally the public eye. Address W. T. Evers, this office.

A GOOD EXAMPLE.—Many persons when they see birds destroyed wantonly by boys, or for mercenary purposes by men, feel convinced that the law ought to be enforced, but rarely take the trouble, or have the courage, to act up to their convictions. I am glad to be able to say that there is in Delaware at least one man who protects the birds under any and all circumstances. In a recent letter regarding the heronry mentioned by him in the *FOREST AND STREAM* of January 21, Mr. R. B. Gilmer, of Wilmington, states, "The birds return every year, and apparently in increased numbers. I do not think the place has been destroyed to any extent, save by boys of the locality, who at one time were wont to destroy the whole heronry. I succeeded in scaring them away and in having some of them placed under bail for their good conduct. The heronry has been kept intact for several years and I do not want it molested by skin hunters." Let others follow the good example of Mr. Gilmer.—WILLIAM DUTCHER, (of the A. O. U. Com. on Protection of N. A. Birds).

AN ULSTER COUNTY WILDCAT.—Flathush, Feb. 6.—I have just received for mounting a very fine specimen of wildcat or bay lynx from Mr. J. O. Beers, of Saugerties, Ulster county. The cat is the largest I have ever seen, measuring nearly six feet in length. He was killed by a boy fourteen years of age. The boy being armed only with a club, had a tough fight of it, and was well scratched about the arms and breast.—H. B.

HOW DO THEY GET THERE?—Suspension Bridge, N. Y., Feb. 14.—Whenever we have a very dark and stormy night at this season of the year, we find on the following morning dead and wounded ducks in the river just below the falls. I have seen nearly a wagon load picked up in one morning, usually just after a blinding snow storm. Now, the question is, are they ducks that have come over the falls or did they come from down the river and fly into the sheet of water?—O. E. L.

BLUEBIRDS.—Salem, Mass., Feb. 16.—Some bluebirds (*E. sialis*) were seen at Everett, Mass., just before the last severe cold snap.—X. Y. Z.

Camp Fire Flickerings.

"That reminds me."

182.

MY friend, Dr. E. Bradley, of New York, told me of a little fishing incident which came under his observation. An eight-year-old son of one of his friends was out with the party on a fishing trip, and on returning to the hotel rushed in to his mother, exclaiming, "O, mamma, I caught the biggest fish you ever seed. He was longer'n my arm, and you'd just ought to have seen him, for you never did see such a big one." "Well, where is it, Charlie," asked the mother, "didn't you bring it home with you?" "No, I didn't bring him. He bit and I pulled as hard as I could, but when I got him most up to the boat, he just unbit and div." F. M.

THE WEATHER AND THE BIRDS.—Huntingdon, Tenn., Feb. 10.—For a week the snow has lain upon the ground to the depth of twenty two inches, something remarkable for this latitude. The lowest temperature reached 16° below zero. A few coveys of quail perished, but the most of them have come through in a depleted condition, the survivors hardly able to fly. Squirrels are scarce. Since the snow fell a number of our young men have enjoyed the sport of tracking up raccoons, cutting down the trees in which they den, and letting their dogs to them for a fight. In Beaver Creek Bottom, which lies adjacent to our town, within a radius of one mile square, they bagged about forty coons, in some instances finding as many as four in one tree. As they are useless and pestiferous vermin such great destruction is looked upon as beneficial rather than otherwise.—L. L. H.

THE TRAJECTORY TEST.

THE full report of the *FOREST AND STREAM*'s trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

CURRITUCK CANVASBACK SHOOTING.

IF to those who are fond of the sport of shooting wild fowl any account of their favorite pastime is welcome, even though the bag may not be phenomenally large, nor the species those which may take an exceptional high rank among the Anatidae; how much more gratifying then may it be, when the subject treats of unusual numbers and of no less eminent abird than the royal canvasback. Gamest of all web-footed fowl, this celebrated species deserves the very highest rank among the creatures worthy of a sportsman's attention, and the opportunities afforded any one of meeting them in their haunts in uncommon numbers, are surely worthy of being recorded. Canvasbacks are eminently cold-weather birds, at least upon our eastern coasts, and they rarely appear, save in the case of a few stragglers, until winter is well advanced, say in Currituck about December. On their arrival their serried ranks are seen high in air, as they traverse the length of the waters they have chosen for their winter home, seeking suitable places to alight where their experience tells them that food is abundant. They frequent the open waters, following the channels in their flights, and rarely enter the bays, or approach the marshes until the severity of the weather compels them to seek some kind of shelter. Among the swiftest of birds upon the wing and endowed with immense vitality, besides having the ability to dive and remain under water almost equaling that of a fish, it requires something more than a tyro's hand to stop them in mid-air, and bring them securely to bag.

The shooting of which I propose to give a brief account, was obtained on grounds which is the property of one of the well-known clubs in Currituck and which may without exaggeration be styled historic ground, for under former owners it has been known far and wide as the most celebrated place for canvasbacks and redheads (our two finest ducks) upon the eastern coast of the United States, not even excepting the flats of the Susquehanna below Havre-de-Grace. Every winter these birds congregate there in immense hosts, and large numbers are brought to bag, especially if the weather is cold or stormy.

Before January, this season, the weather had been mild, indeed some days fairly warm, and consequently the shooting had been moderate, although many good bags had been made, and the total score had assumed very respectable proportions. The canvasbacks had gathered in goodly numbers and the club members were sighing for a freeze so that the birds would be driven to the marshes. The sky had borne a threatening look for several days, and the weather-wise, the Wigginses of those localities, prophesied a storm from out the north, and for once they were true seers. The barometer began to fall rapidly on the 8th of January and the wind rose, while toward evening the mercury made frantic efforts to hide itself altogether in the bulb of the thermometer. It blew a furious gale that night, at times from the southwest and then from the northwest, and the water of the sound, driven before the wind, flooded the marshes, where it froze. Next morning a large portion of the sound was covered with ice and the wind blew as strongly as ever and cut like a knife when one's face was exposed to it. As the ice was not strong enough to bear much weight, but too thick to push a boat through, the members were compelled to amuse themselves indoors. Next day was Sunday, when of course no shooting was permitted. The wind still blew, but not so fiercely, and the cold continued. It was the freeze we had so longed for. From the top of the club house, immense quantities of ducks, geese and swan could be seen flying over the frozen sound, standing on the ice or crowding the airholes of which there were several in view, until they absolutely could not hold one bird more. It was a marvelous exhibition of bird life, under peculiar circumstances, and of the immense clouds of ducks that were constantly rising and circling in the air, nine-tenths were canvasbacks. How beautifully they appeared as they went through their various evolutions, stringing along in well-kept ranks, then suddenly bunching together and executing a wide circle, now shining like silver, again presenting but a grayish mass to our view.

The next day the freeze still continued, and the ice was growing thicker, but still treacherous about the shores. However, about the middle of the day, the writer and a friend determined to try and get somewhere, and gather in out of the cold a few of the birds that were so near us. So, sending the men in charge of a light skiff with some decoys along the marsh, we started to walk across to a point facing the sound, where we could see great numbers of birds flying. The water which had been all over the marsh had now subsided, but had left a coating of ice upheld by the reeds a foot or more above the solid ground. Of course as soon as we stepped on this we broke through, and as it was impossible to tell whether our feet were over firm ground, soft spots or muskrat holes, our progress as may be imagined was difficult, slow and wearisome, varied occasionally by falls. Although our objective point was a short half mile away we did not reach it until about an hour before sundown, and were both nearly used up with our frantic efforts to make headway. Our men had tried the ice, but it would only bear in places, and they had had as much difficulty to reach the appointed spot as we had ourselves, although they had a different kind of obstacle to overcome. We were at the mouth of the creek opening into the sound, with an island in front of us, around the point of which the canvasbacks were passing constantly in flocks of many hundreds. That point we wanted to reach, but could not, as the ice would not bear us, so we put out our decoys in an air hole close by, and gathered eighteen birds in the short time remaining before sunset. The birds did not want to come where we were, so we determined that on the morrow we would get to the other side of the island in front of us, and see where the birds all went to. From the upstart that came from the opposite side, we felt sure there must be an opening in the ice of some extent into which the fowl were settling. Leaving boat and decoys we shouldered guns and game, and with the men on the lead to break a road through the marsh, we reached the club house before dark.

The next morning we had less difficulty in crossing the marsh to our boat, as we had beaten down a good path, and we then crossed the ice, (which had now become some three or four inches thick), to the island we could not reach before. It was still intensely cold, and the birds were everywhere in undiminished numbers. On rounding the point we saw ahead of us a large air hole filled with birds, the ice in the vicinity being also covered with them. As we approached the fowl all took wing with a deafening uproar. It was an impressive sight, for there were many thousands of them. They scattered about seeking other openings in the ice. Fortunately this air hole was close to the island, so we were able to make our blinds of reeds on the bank, and set out our decoys in front of us. We had but few of them, their weight preventing us from carrying them. We had hardly got ourselves into position, when the warning "here they come" was uttered, and a small bunch were seen approaching the decoys.

Canvasbacks are peculiar among ducks for the boldness with which they approach the stools, if they intend to come in, for they seem to pay no attention to anything else save their wooden representatives. No duck, however, on being alarmed, can recover its speed and get away more quickly, and on account of their size, the novice is very apt to be deceived as to the rapidity of their flight, imagining it to be much less than it really is, and therefore shoots behind. To stop them cleverly and neatly, it is necessary to hit them in the head, neck or crop, for if struck behind, their vitality is so great that they are almost certain to escape. In water of any depth, it is useless to follow a wounded canvasback, for on discovering that he is pursued, he will dive, and likely as not, he will never appear again. The birds that were heading for us rapidly approached, and as they were coming against the wind, it was not necessary for them to swing around, so they set their wings and threw their bodies partially upright, preparatory to descent among their supposed kindred. We were watching them closely, remaining perfectly motionless, and as they came to what we deemed the proper distance, a low "now" was uttered, and we rose to our feet, each selecting his bird at the same moment, and like one report the guns were discharged, and two noble drakes, killed in mid-air, but carried still onward by the impetus of their flight across the open water, fell heavily upon the ice. Gathering themselves instantly the survivors with apparently undiminished speed hastened to quit the dangerous neighborhood, but were obliged to leave one more of their number with the drakes upon the ice. And almost without intermission the birds kept coming throughout the day, singly, in pairs, or in small bunches, until at one time we had fifty canvasbacks lying upon the ice in front of us, besides many in the open water. Nearly all were drakes, and we remarked upon the scarcity of females, but we were glad that it was so, for the species had a better chance of being continued if the females survived.

Occasionally a flock of geese would fly near, when a well delivered "honk" would cause them to swerve and come down to us, for we had three or four geese decoys riding in front of the ducks. I know of no more pleasing sight than that presented by a flock of geese sailing in to the decoys. Their great wings spread to the fullest extent, the long necks stretched out before them, they come floating toward the waiting sportsmen who is ready to give them such a warm reception. A very wary bird too is a wild goose, and in spite of his size, he can get out of a dangerous position with a celerity that is perfectly amazing.

As the day drew to a close, our ammunition began to get low and we also commenced to feel that we had shot enough for once. In every direction in front of us birds were lying, for we had shot fairly well, not killing every time (we are not of the class of sportsmen who can do that), missing sometimes perfectly easy shots, killing at other times birds that it would seem almost impossible to stop. Word was passed to the guides to pick up the trophies and get ready to leave. It took some time to gather the birds and they made a goodly show—the largest number of canvasbacks I ever saw killed in a single day from one blind. Leaving our decoys we loaded up the boats with our game and started over the ice for the club house. We were obliged to leave our boat at the marsh and carry the birds to the house overland. We found that the other members had not been idle, and our grand total, considering the number of guns, was very large. *FOREST AND STREAM* has given the scores made for four days of this time, it is not therefore necessary for me to say any more. I left the grounds the following week, but I learn that the shooting has continued good and that a great many of the royal birds have been killed. WILDFOWLER.

FEB. 10, 1886.

"MIDWINTER PERILS."

Editor Forest and Stream:

Camp Annie is all broken up.

In yours of the 4th you publish an article headed "Midwinter Perils," and quote from a Bangor paper under date of Jan. 26. As a sequel I inclose a clipping from same paper Feb. 8. I do this to let you know that you will get no more "notes from (our) winter camp" for some time. Camp Annie, which was started last July under such favorable auspices, proved almost a death trap to us both, but fortunately Mr. Allison received no permanent injury and I but a slight one.

The article reads: "Our readers will remember that a few weeks ago Mr. C. A. Allison, a New York sportsman, narrowly escaped drowning by breaking through the ice on Moose River while coming out of camp on Brassua Lake. Mr. Allison and his friend, Mr. T. C. Huntington, came from New York and went into camp on Brassua early last spring and they seem to have been ill-fated. Mr. Allison left Mr. Huntington alone in camp when he came away, and everything went well with him until about two weeks ago when he had the misfortune to put his ankle out of joint. This left him in a bad plight. He was on the shore of Brassua Lake, miles from any human habitation, and at a place where no lumbermen, or in fact any person was at all likely to pass. By making a great effort Mr. Huntington pulled his ankle back into place, but he was then unable to step. He lay in his camp until one week ago yesterday, when a hunter and guide who was exploring around the lake thought he would visit him and tell him of Mr. Allison's adventure. When the visitor reached the camp he found Mr. Huntington nearly ready to give up all exertions to keep from freezing. He had a small amount of food left, but he had broken up all his benches and camp furniture for fuel. The guide relieved his wants and then went to Kinco and obtained help, and one week ago to-day Mr. Huntington was hauled out to the above place on a sled. He came down on Saturday night's train, attended by two other gentlemen, and was at the Penobscot Exchange yesterday. Mr. Huntington ex-

pects to recover in about six weeks, and he says that he shall then return to Brassua and go into camp again. He certainly has an unlimited amount of pluck."

I sincerely hope that no one, on reading this, will be deterred from going into a winter camp if he feels so disposed, as I can assure you that some of my pleasantest camping days were spent in Camp Annie during last December and January. One thing I will urge, however—never go into camp, winter or summer, alone. I camped once before by myself in Colorado, during the winter of 1869-70, fifty miles from the nearest known habitation, for five long winter months, and I then was deprived by an accident of the use of my left arm, and was obliged to snowshoe those fifty miles alone in search of help. So you see I am fairly able to judge of the disadvantages of camping alone.

I should like to mention here the exceeding kindness I received from all with whom I came in contact in the woods, and I take this opportunity to thank them for all favors extended toward me. To some of them I undoubtedly owe my life. I hope that our experience may serve as a lesson to others to be careful while in the woods, and that FOREST AND STREAM may have no more "Midwinter Perils" to chronicle.

T. C. H.

JERSEY CITY, Feb. 9.

LESSONS OF THE TRAJECTORY TEST.

"OLD Fogies to the Front" should perhaps be the title of this article, for that is most certainly where we have arrived, if I am any judge of arrivals. The test certainly sustains in the fullest manner all that Major Merrill, Mr. Romer, I or others ever claimed, viz., that the old American muzzleloader, as an accurate rifle at ordinary hunting ranges, has not yet been equaled, much less excelled by any rifle in which the ball was started below the grooves of the rifle. It was commonly supposed, ten years ago, that the superiority of the breechloader was settled by the international match of 1876. But every American rifle in that match was loaded as a muzzleloader, either by running the ball down the muzzle or shoving it up from the breech and pushing the shell charged with powder after it. The only earthly difference was that in the English rifles the breech-blocks were screwed in and in the American rifles were easily movable. In every long-range match ever shot since then the breechloaders have been thus loaded, or the ball was so lightly seated in the shell and so long in body that it was almost entirely in the grooves at the time it received the first impact of the powder.

Directly after this match of 1876, up rose a set composed of two classes—those who were carried away into blind idolatry by the superior speed of fire and convenience of the breechloader, and those who had never shot a muzzleloader and did not know what good shooting was. This set, fired with that absurd and false spirit of progress which feels bound to decri as worthless everything old, suddenly discovered that the rifle of their daddies was not only inferior at long range to the production of their own wondrous age, but never did shoot anywhere at any distance; that the whole art of rifle-making had, in fact, but just been discovered, and that anybody who thought otherwise was an old fogey, etc. The fact that any such heretic constantly used a breechloader for hunting because of its convenience, as I did, and would use nothing else, only made his offense the more rank. As far back as ten years ago, to say that the wonderful American breechloader was anything but perfection, was only to prove yourself an ignoramus and a bungler who did not know how to shoot.

The trajectory test has quietly buried all such questions. Of course the report passes no judgment upon rifles. It is not expected to discriminate between any rifles or makers. But the facts are all there and the conclusions irresistible. We not only hear of no wild or corkscrewing balls from the muzzleloaders, but are expressly told that they "maintained a high degree of accuracy," etc. When a breechloader comes up to the muzzleloaders we hear of it at once. It happens, however, in but one case. On page 406 of FOREST AND STREAM, we read of the Ballard, 40 70:

"This arm is one of the fine, close-shooting, patched-bullet weapons, and, so far as compact bunching of the shots on the target, seemed to be fully equal to the high-charged muzzleloaders in the test." This was a patched ball, very long in body, with not over one-eighth of the ball seated in the shell; a rifle specially made for fine target work. Its accuracy was due to its approach to the muzzleloaders, fully seven-eighths of the ball being in the grooves of the rifle at the explosion of the powder. A careful reading of the whole report makes it pretty safe to assume that if any other rifle had equalled "the high-charged muzzleloaders" we should have heard of it. On the contrary, it is full of apologies and explanations, but the muzzleloaders don't seem to need any of them.

But in reality the muzzleloader was far ahead of this Ballard rifle, the difference in trajectory being for a hunting rifle *per se*, a difference in accuracy. The Romer rifle made 200 yards with a rise of about 4½ inches less than the Ballard 40 70. The principal part of the claim always made by the old fogies was that no American breechloader could shoot from the shell with accuracy as short a ball with as heavy a charge of powder as was done with the old muzzleloaders by those who knew how to load them. This claim is fully substantiated if anything is. That carries all else with it; for if accurate with such charges, they certainly are with less powder and longer balls, except for long range, for which their twist may not always be sufficient.

This point seems to have been overlooked by your London correspondent "J. J. M.," who expresses surprise that I should have thought it good shooting to keep on a half-inch bullseye all day at twenty yards. I expressly said "with four or five inches of powder behind the ball." Will he show me a breechloader that will do it with that amount of powder and the ball in the shell? He will find few in America that will do it with over one inch of powder and a very long ball will be needed then.

I was merely combating the old idea that "too much powder drives the ball wild," and showed that it did not apply to many American muzzleloaders and was not necessarily true. In the "Still-Hunter" I said that the "express or high speed system is by many supposed to be an English invention, but on the contrary is as old as the history of American rifle shooting." I was trying to show that high speed and accuracy were combined many years ago. Almost any rifle will shoot well with a very small charge of powder. This is the cause of the great accuracy of the 22-caliber rifles and it is the difference in the amount of powder that makes the .22 short more reliable for a long series of shots than the .22 long. In spite of the fact that they do not fill the chamber, they are still about the most accurate of all the breechloaders—a thing that would be almost impossible with

[Cut this out, put it on a blank, obtain signatures and send to your Member at Albany.]

A PETITION

For the Continued Protection of Adirondack Deer, AND AGAINST WATER-BUTCHERY.

To the Honorable, the Legislature of the State of New York:

We, the undersigned, residents of _____ County, respectfully petition that the law (Chap. 557, Laws of 1885) which makes it "unlawful to pursue any wild deer in this State with any dog or bitch" may not be amended in any such way as to permit the use of dogs for hunting deer at any time. The present non-hounding law is absolutely essential to maintain the supply of deer in the Adirondacks. The use of dogs and water-butchery would surely cause the extinction of the game.

(Signed)

a fair charge of powder. The combination of accuracy with tip-top speed was the great point in the old muzzleloader, and it will be a few days yet before it is beaten.

Nor has "J. J. M." any real ground for surprise at the statement of "Mississippi Lowlands" that two of the leading American breechloaders missed a 2½-inch disc at 40 yards, the one five shots out of ten, the other three shots out of ten, while a muzzleloader that was older than any of us hit it every time. That is just exactly the trick that a breechloader can play, while a muzzleloader carefully loaded, never does. Either of those breechloaders might at the next ten shots hit it every time. But you can't depend upon their doing it as they would if they were loaded as muzzleloaders.

Another trick that a rifle can play when the ball is started below the grooves instead of in them is that played by the .30 express that "J. J. M." mentions which shot several balls accurately at 40 yards, yet would not be accurate at 100. Those balls at 40 yards must have been rotating a little off the true axis, and their grouping in the mark may have been accidental, a thing that wild bullets will often do, or else he 40-yard target was exceptional and could not be repeated. "J. J. M." certainly will not assert that a bullet whose axis of rotation is correct up to 40 yards could without touching anything begin to wobble before it reached 100 yards. A small round ball may do it, but any ball long enough to make a good 150-yard target at all, if rotating on the proper axis at 40 yards will still be there at 100 yards, unless deflected by something.

These same principles will explain the accuracy ascribed by "J. J. M." to smooth-bores. I used to see plenty of what were once called "smooth-bored rifles" by the country folks to distinguish them from "cut rifles." With a moderate charge of powder, and tight, well-shaped round ball, they will do fair shooting; and if you count out the wild balls will do fine shooting. But they work just like the breechloaders of fifteen years ago, throw so large a percentage of wild balls that they are unreliable. They may also act like a good rifle defectively loaded, throw a majority of the balls fairly in the center and the rest far enough off to miss an elk at 100 yards. All such work may be tolerated, provided we can get nothing better, but only on such condition.

The FOREST AND STREAM deserves the sincerest thanks of all riflemen for the careful, exhaustive and impartial nature of this trajectory test. Its results will stand for many a year as the arbiter of all disputes and the basis upon which the trajectory of any new rifle may be very nearly calculated without actual trial. The most important of its lessons is, however, one that is liable to be wrongly read by many, to wit, the effect of low velocity in hunting or shooting at unknown and ever-varying distances within such range as one is likely to get a shot at any sort of game.

It would be quite natural for one who gave little thought to the question to say that the difference of a few inches in the height of the curve at 100 yards would be but a small matter, easily remedied by holding a little lower and not worth half the fuss that has been made over it, and that on the first and last part of the course the difference was still more trifling. When we come to the trajectory for 100 yards, the difference at 50 yards between any of the rifles there tested seems still more contemptible, and by no means balancing the increase of powder, noise and fouling.

But this position would be founded upon the tacit assumption that the hunter always aimed so as to hit above the center at all objects between him and the point blank of the rifle. Such persons figure in imagination an antelope standing at 100 yards, with several rifles sighted for 200 yards aimed at him with the same sight as for 200 yards, with the bullets striking 6, 8, 10, 12 and 14 inches too high, some missing entirely and the others only crippling the animal, and quite naturally conclude that holding a little lower will bring them all nearly even. Such would be the case if that were the way the rifle were used in hunting. But that is precisely the way it is not used; and the error is, in fact, generally about four times what it thus appears to be.

The hunter always wishes to hit his game in the exact spot at which he aims. He never wants to hit it too high. This is what the novice generally does when he hits at all, and his improvement from a bungler to a good shot upon game consists almost entirely in shooting lower without getting too low. He must make a center shot as often as possible. In other words, if the game does not happen to be at the point blank of the rifle he must change the point blank to suit the game. Whether he does this by taking a finer front sight or by holding the sights below the mark the effect is precisely the same as if he lowered the back sight and reduced the point blank in that way. So that when the crack shot shoots at the antelope at 100 yards with the rifle sighted to a point blank of 200 and makes a center shot, he does it by reducing the point blank to 100 yards. His ability to do this quickly is mainly what makes him a crack shot on game.

If now the game is a few yards closer than he aims for, he hits it but a trifle too high. But if a few yards further off, he hits it—not the same distance too low that he would before have been too high—but a great deal more. Here is where

he generally errs. The tyro will err the other way and think his game is further than it really is, but the skillful shot upon game has got over that error, and in trying to avoid it, runs into another, less dangerous indeed, and the lesser of two evils, but still an evil—underestimating distance. If game appears to be at 125 yards and there is the least doubt about its being only 100, the careful hunter will always decide in favor of the shorter distance.

Now, not only does a difference of six inches at 100 yards in the rise of two trajectories for 200 yards make a great difference in the difficulty of holding a finer sight or holding lower for intermediate game or higher for game beyond the point blank, but makes an enormous difference if the game happens to be a little further off than the hunter thought it was. To understand this last difference the rifles must be viewed as fired, with sight's set parallel with the axis of the bore, and the fall of the bullets below the line of sight will quickly show what actually takes place in hunting. The fall of any bullet from gravity alone is, at any point, about four times the height of the trajectory required to make a point blank at that distance. Thus a bullet requiring a rise of 6 inches to make 200 yards would, if fired from a level, drop 4x6 or 24 inches at 200 yards. I use round numbers all through for convenience, but they are very near. And the ball taking a rise of 12 inches, would therefore drop 48 inches at 200. Dividing these figures all by 4 again will give us very nearly the figures for 100 yards, the two rifles having but 1½ inches difference at 50 yards by the ordinary way of measuring trajectory, but actually four times this at 100 yards, or 6 inches as the hunter measures trajectory in the field. The influence of air resistance we must leave out for convenience.

Now, to whatever distance the point blank is set, either by adjustment of sights or by taking an extra fine sight or holding under, this same result, the difference in the fall of the bullets, begins immediately after passing it. Now, draw yourself a diagram of two trajectories, the one striking at 100 yards 6 inches below the center and at 200 yards 24 inches below; the other at 100 yards 12 inches below and at 200 yards 48 inches below, and you will see exactly the difference between the two or nearly all shots that happen to be further off than you aim for. Yet the difference between the two at 100 yards as trajectories are ordinarily measured would be but 1½ inches at 50 yards, an error that many would quite naturally say was of little consequence.

Now, compare in this way the muzzleloader of Mr. Romer with its 6-inch rise with the rim-fire .44 long, shown on page 387 of FOREST AND STREAM. This is the cartridge, I believe, of the old Henry and Winchester of 1866, and very nearly represents the trajectory of the average breechloader of 12 or 15 years ago. Its rise at 100 yards is 19 inches, making a drop of 76 inches at 200 and at 50 yards its rise is 4½ inches, making a drop of about 18 inches at 100 yards, both about three times that of the muzzleloader. Were those fools, old fogies, duffers, etc., who, ten years ago, pronounced such things inferior in accuracy within hunting ranges to the old muzzleloader? If any one thinks this difference overestimated let him try at unknown and varying distance and at natural marks two such rifles up to 200 yards. He will be apt to say it is underestimated.

Applying this test we can quickly see what our rifles, "for small game," are worth. They are good for small game only because they do not tear it. A rifle with a rise of 4 inches at 50 yards or a drop of 16 at 100 is a nice thing to hit small game with, isn't it?

It may be said that the fault of the breechloader is in its ammunition. True enough. But if we complained of the ammunition it could be said that the fault is in the rifle. It is immaterial which way we look at it.

The trajectory test certainly proves one thing which I claimed several years ago in this paper—that a hunting rifle should be made to shoot two different kinds of bullets and charges, one a light bullet with a heavy load of powder for all short range hunting, and also be fixed so as to be loaded as a muzzleloader where extreme accuracy is needed and there is no haste. This last is easily done by pushing a patched ball through an empty shell into the grooves and then inserting one filled with powder. This is the method I have generally used as much quicker and more convenient than loading from the muzzle with a ramrod. But it seems an easy matter to invent some much better and quicker way.

T. S. VAN DYKE.

SAN DIEGO, Cal.

Editor Forest and Stream:

I have taken great interest in the trajectory tests conducted by the FOREST AND STREAM this winter. The reports thereof have helped me out with one idea which I had spent some thought and experiments upon before, but never with the facilities you had. That is the gyratory motion of some bullets. I had heretofore formed the idea that the more twist there is to the rifling the greater the danger of bullets taking this motion, and your reports confirm me in that opinion. But I cannot coincide with "Common Sense" in his reasoning as to the cause of this eccentricity in some bullets. I think the real cause lies in the fact that through

some means the center of diameter and the center of weight in these individual bullets is not the same.

To demonstrate, take a rifle bullet with a flat base and drill a hole into the base on one side of the center nearly through the bullet, so as to cause one side to be lighter than the other, fire this bullet over the water, and you will see that when it strikes the water it does not skip straight forward as a bullet should but glances to one side, showing that it was not following a course directly parallel with the line of sight but was revolving with a corkscrew motion around it. If it touches the water in the lower part of the gyratory motion it will glance to the left, but if in the upper part it will glance to the right. Shoot the same kind of a ball from a smooth-bored gun and it will skip straight forward, because it has no revolving motion. Again, take a baseball and insert a piece of lead or other weight just under the cover on one side. Strike this ball with a flat bat, so that it will have no revolving motion as it flies, and the line of its flight will be a true line, no matter which side of the ball the weight may be. But throw the same ball from the hand and it will have a revolving motion, the axis of its revolution being at right angles with its line of flight. The line of flight of the ball will be a wavering line, being first upon one side and then upon the other of a direct line. Now if you can throw the ball in such a way that the axis of its revolution shall be parallel with its line of flight (like the motion of a rifle ball), you will see the gyratory motion.

Now what causes some rifle bullets to have their center of weight differ from their center of diameter? is the question. Can any one explain that to me? Can we look for an explanation in the fact that most rifle bullets at this day are composed of a combination of two metals? When two metals are melted together, will the lighter rise to the top as in liquids? Who can answer this question for me?

LEW WILLOW.

MALVERN, Ark., Feb. 10.

HUNTING AT ARMY POSTS.

[Continued from Page 45.]

THIS week we print another batch of letters from our friends at the army posts, giving interesting bits of information about the sort of game prevalent and the use of the army Springfield shotgun:

Editor Forest and Stream:

In reply to your note received yesterday I forward the inclosed from Major Kellogg, U.S.A., concerning small game.

Of the larger sort there are a few antelope still left, very few indeed compared with the vast herds that roamed on these plains some years ago. Buffalo, once numbered by the hundred thousand, have wholly disappeared from this section of country. A few straggling buffaloes, remnant I presume of the old southern band, were reported near the upper Cimarron during the summer.

I have not seen nor heard of an elk since our arrival at Fort Hays last June.

Our larder at Hays is helped out by prairie chicken, quail and a very small amount of antelope or venison, each in its season.

J. J. COPPINGER.

FORT HAYS, KAN., Jan. 22.

My dear Colonel:

As a reply to the note from FOREST AND STREAM, which you referred to me, my short residence at this post would lead me to make these remarks:

There is no large game in this section. A few antelope are sometimes seen, but a hunt for them would seldom be successful. We have several varieties of game birds, some of them—the pinnated grouse and the quail—in sufficient numbers to make their pursuit good sport. Local sportsmen say that waterfowl shooting is sometimes tolerably good in the autumn, and usually fine sport in the spring when the pond holes are full of water. There is no close season for these birds. The pinnated grouse are becoming more numerous each year, and during the first half of the open season, which is from Sept. 1 till Dec. 31, a fair shot can make a good bag of them. The open season for quail is from Nov. 1 till Dec. 31. But few of these birds can be found within a radius of five miles from the post; but beyond that distance, on Big Creek (running through the reservation), on the Saline River, on the north fork of Big Creek, and probably on every stream in this vicinity, they are in such numbers that one who is an average shot can, with a good dog, bag from fifteen to thirty or more in a day's shooting. Occasionally a bevy may be found a few miles from any stream.

From information given by local sportsmen I believe quail are yearly decreasing in number. This is undoubtedly mainly due to the ubiquitous pot-hunter and trapper. The severe cold and deep snow which we have had during the last twenty days have doubtless killed great numbers of these birds, and I scarcely hope for a great measure of success in the pursuit of Bob White this year.

I am told that a few snipe can be obtained during the spring migration, and one can sometimes bag a golden plover, but plover are not often abundant here.

The Springfield shotgun, the delight of the company pot-hunter, is utilized by him to the fullest extent, and by him alone; in his hands it is left by the true sportsman, who, as he is a gun lover, is a gun owner. It is an effective arm for all small birds, and also for ducks in the early autumn. At some posts it gives variety to the company mess.

E. R. KELLOGG, Captain 18th Infantry.

FORT HAYS, KAN., Jan. 21.

Editor Forest and Stream:

In answer to your queries addressed to the commanding officer of this post, I was requested by him to reply, and it gives me great pleasure to be able to give you the information desired. The supply of game, both large and small, is abundant. Black-tail deer and antelope are found, not, however, in the immediate vicinity of the post. Hunting parties are compelled to go about fifteen to twenty miles away; this is owing to the fact that immediately surrounding the post is a large Mexican population, who own considerable sheep and goats which roam around, followed by herders and dogs, which cause the game to keep further away than otherwise.

There are stationed here 300 troops of the 3d Cavalry, headquarters and band of the regiment. From these organizations frequent hunts are made, the parties numbering from three to five and six, and they have been invariably successful in bringing in a large supply of deer and antelope meat. As a sample of what was done here lately, I will take the hunt of four handmen, all excellent shots. They left here on a ten days' hunting pass to get a supply of game for Christmas and New Year's; they succeeded in bagging five large deer and twenty-two antelope. This was also accomplished by hunters from the three troops, with quite if not equal success,

The men reported the deer and antelope "plenty," and could have killed many more, but having plenty to supply the wants of the garrison for some time, refrained.

There are among the enlisted men here a great many ardent sportsmen, sportsmen in the true meaning of the term, who deprecate the wholesale slaughter of game for the sole purpose of killing and letting their carcasses rot on the prairie, which I am sorry to say is being done by hunters in the West for the "hide," and by hunters from the East for the pure sake of killing, which work, if allowed to continue without let up or hindrance, will soon result in the extermination of the elk, deer and antelope as the buffalo has been exterminated. So much for the large game. The blue quail is plentiful around here, and one occasionally meets with the black or Messina quail, a most beautiful bird, which is not numerous and is very hard to find. Ducks, the mallard, blue-winged teal, the hooded merganser were met with in the ponds and on Lympia Creek in the earlier part of the winter, and a great number were killed, but there seem to be none here at present. Curlew were plentiful last summer, as were the mountain plover. We have had a surfeit of quail; the officers are continually out hunting them. For two hours' work, twenty would be considered good shooting; occasionally one can take a dog and gun and stroll out from the post a short distance and get a few quail, but for good shooting, four to five miles must be traveled in order to reach good shooting ground. The enlisted men do not seem to take so much to shotgun shooting as they do to shooting with the rifle or carbine, probably because they are more familiar with the latter arms, and cannot get the time or lack facilities, but small game shooting is almost entirely confined to the officers. There are some men in each organization here who use the shotgun and go hunting frequently and are very successful. You continually meet the same men, and very seldom a new face appears, but there are always plenty of volunteers for large game hunting. Probably the smallness of this garrison in enlisted men compared to the amount of work required of them prevents many from availing themselves of the pleasure.

I can bear testimony to the uniform excellence of the Springfield shotgun and of the excellent results from the use of them by enlisted men, and they admirably serve the purpose for which they were designed. Of course, the ambition of most of the good hunters among the men is to own a double-barreled shotgun.

F. H. HARDIE,

FORT DAVIS, Texas, Jan. 23.

First Lieutenant 3d Cavalry.

Editor Forest and Stream:

In reply to your letter of the 9th inst., in reference to game in this vicinity, I have to say that deer can be found in abundance not very far from here. About 100 have been brought into the post during the winter.

Mountain sheep and goats are found about 100 miles from the post, but it is very difficult to get them. Bears can also be found from 50 to 100 miles from the post.

Prairie chickens (i. e., sharp-tails) and blue grouse are very plenty all around us. Large numbers of them are brought into the garrison in their season. There are also some ruffed grouse and a very few sage hens about here.

The Springfield shotgun does some good work.

Deer improve the post larder somewhat. Small game does not amount to much in that direction, except in officers' messes.

A. S. DAGGETT, Captain 2d Infantry.

FORT SPOKANE, W. T., Jan. 27.

Editor Forest and Stream:

Your note of the 9th ultimo came duly to hand, and I submitted it to Major Jackson, of my regiment, for reply. He made the following note on its back, which I send for your information:

"There is no game other than willow grouse in the immediate vicinity of the post. From fifty to one hundred miles south-southwest and southeast, game, large and small, can be found, consisting principally of willow grouse, ruffed grouse and blue grouse, deer, elk and bear. Antelope and buffalo are about extinct.

"The company shotguns are used considerably by the enlisted men, and they vary their diet in some small degree by the grouse and ducks killed with them; but the extent to which they are turned to profitable account is not appreciable."

N. A. M. DUDLEY, Colonel 1st Cavalry.

FORT CUSTER, W. T., Feb. 1.

Editor Forest and Stream:

Yours of the 9th inst. just received. In reply thereto, would state that game has almost disappeared from this vicinity. When I came to this post (1881) game of some varieties, as turkeys, deer, quail, plover (upland), was very abundant. In the spring and fall geese and ducks were to be found in numbers sufficient for rather good sport. Game continued to be quite abundant until the winter of 1884. Since that time it has decreased in quantity very rapidly. This is due, I think, to the unusual cold winters and the presence of large herds of cattle held here for grazing purposes. Moreover, during the years 1884-5, much of the country has been burned over in fall and winter, destroying the food supply. Last year and the year before, turkeys in large quantities migrated, going toward the south and east. This occurred late in the fall of those years and they have not returned. Last year the quail were almost all destroyed by the extreme cold weather and want of food. Coveys of twenty and twenty-five were found frozen to death in January last. This winter has been equally destructive to those that were left over. The geese and ducks no longer come in, except now and then a few scattering bunches.

In regard to the shotgun referred to, I consider it a perfect failure. It might be used in killing tomcats, I presume. Many of our men own good double guns, generally of gauge No. 12, and use them with effect.

I was out early in last month with a party of one officer and some enlisted men and Indian scouts—eight. Went south to the main Canadian, some sixty miles from this post. We found some deer, killed fifteen. Saw very little other game. Very few turkeys—killed fifteen. Two years since we should have killed all the turkeys wanted on the same ground. This year all the country had been burned over and the game had left.

X.

FORT SUSTY, I. T., Jan. 28.

Editor Forest and Stream:

The commanding officer has requested me to answer for him your letter of Jan. 9, knowing that I have been here longer and that I am better acquainted with the subject of your letter for that reason.

Last winter at least 400 wild turkeys were eaten at this post, this winter about 225 have given us a rest from the

beef of this region. At least four-fifths, I believe more, of these turkeys were killed by double-barrel shotguns, the remainder by the company shotguns, rifles and carbines. The proportion given will hold good with the other game we kill here, but the wild turkey, from Sept. 1 to April 1, is our principal game, ducks and prairie chickens coming next. Deer and antelope have become very scarce indeed. I have never fired the Springfield shotgun, but have been out hunting a number of times with good hunters who had them and have seen those same men with the double-barrel shotgun, and in comparison with the average double-barrel shotgun the Springfield "company shotgun" stands a poor chance. It is only a makeshift better than a rifle or carbine, which would mangle the game so as almost to render it worthless for table use. I believe the cartridge of the company shotgun will not hold a load large enough for turkey hunting.

C. J. CRANE, First Lieutenant 24th Infantry.

FORT SILL, I. T., Jan. 30.

Editor Forest and Stream:

In reply to your communication of the 9th inst., I have the honor to inform you that no regular account of bag, except in one or two cases, has been kept; but as near as we can figure up we find our killing for the past season about as follows, viz.: Deer, 1; ducks, 163; geese, 2; chickens, 1,059; snipe, 50; rabbits, 40.

About two-thirds of the above game was shot by three officers at the post with double-barrel guns; of the balance, probably one-fifth was procured by enlisted men with the Springfield shotgun, which, while very convenient and serviceable in the early season for young birds, is not strong enough for waterfowl or late chicken shooting, and the men then generally resort to their rifles, in many cases using reloaded shells with reduced charges and round bullets.

We have chickens and rabbits in abundance in the vicinity of the post, a fair number of geese, ducks and snipe in season; but their feeding and breeding ground is principally about fifty miles north of this place. We have few or no deer in the immediate vicinity of the post, having a large Indian camp that keep them hunted out; but they are reasonably plentiful forty or fifty miles from here in the hills between this and the Yellowstone. No regular hunting camps have been out from this post this past season, and our shooting has been principally confined to ordinary day spotting, except in one or two instances during duck season.

The Indians destroy considerable small game—chickens and rabbits—during the winter months, shooting the chickens from the trees, but do not exert themselves much in hunting large game.

There are few or no buffalo or elk in this part of the country, all killed or driven out.

W. T. HARTZ, Captain 15th Infantry.

CAMP POPLAR RIVER, Mont., Jan. 26.

Editor Forest and Stream:

Your communication of the 9th inst. to the post commandant has been referred to me and I take pleasure in replying to your inquiries.

The supply of game, both large and small, within reach of this garrison is practically, so far as our own desires are concerned, unlimited. In the immediate vicinity of the post the variety of small game embraces willow grouse, geese, brant, ducks, sandhill crane (the young ones being quite edible), plover, curlew, robins, meadow larks, sage hens, snipe and vast numbers of doves. We have good duck shooting all the year round, while the best season for small game in general is from March to October 1.

Within a few miles of the post, representing from one to two days' journey, we find deer, antelope, mountain sheep, etc. The season for large game shooting is from October to March.

In the above enumeration I neglected to mention the hare (jack rabbit) and the cotton-tail rabbit. The former are so numerous as to be termed a nuisance, while there are but few of the latter. The jack rabbits afford us much valuable practice with the rifle, but except just at the present season it is never found on the white man's table, although the Indians eat them at all times.

The Springfield shotguns are capable of good execution and for a single barreled gun are very satisfactory, but as there are but two issued to a company they are but little used, as every man who is at all fond of hunting owns his gun, and as a result the Springfields fall to the lot of the occasional hunter and poor shot, and consequently do not add much to the company larder.

We have the finest kind of trout fishing, and, I may add, both the hunting and fishing is all that the most enthusiastic sportsman could desire.

As to the extent to which the supply is laid under tribute to enrich the post larder I have to say that it is limited only by the desire of the sporting portion of the garrison to go out and bring it in. As for myself I never let a week go by without going to the meadows, and one month I hardly missed a day. There are nine shotguns in the post and many fine shots with rifle and gun; you can imagine the result.

In conclusion I will write you the result of our latest hunts in Steen Mountain, Oregon. Party of eight hunting four days, killed 15 deer, 3 antelope, 5 coyotes, 1 badger, ducks, geese, sage hens, willow grouse. Other party of four hunting three days, killed 11 deer and 1 antelope, with smaller game. The first party killed about 50 jack rabbits, with the rifle only, at range from 50 to 300 yards. As for the small game, 109 sage hens represent one day's shooting, party of ten, and same number have brought in 160 ducks, the result of one day's shoot. The highest catch of brook trout was 123 in one day, by two of our crack fishermen. We have a fine trout stream running through the post which affords good fishing for miles up and down. Ten-Mile Creek is a still better stream, while McDermitt Creek, at Disaster Peak (twenty-three miles), cannot be excelled in its number or quality of fine game trout.

With abundant transportation and every facility for camping out, a distance of twenty-five or even seventy-five miles, only add pleasure to our sport, and I venture to say that there is no finer hunting or fishing in the country than that within easy reach of this garrison. But hunting and fishing is about all we do here, as eighty miles of sage brush desert separate us from "civilization and the railroad."

W. A. MERCER, Lieut. 8th Infantry.

FORT McDERMIT, Nev., Jan. 31.

SOUTHERN ILLINOIS SPORTSMEN'S ASSOCIATION.—Du Quoin, Ill., Feb. 11.—*Editor Forest and Stream:* The sixth annual meeting and tournament of the Southern Illinois Sportsmen's Association will be held at Du Quoin between the 15th of May and 15th of June.—C. P. RICHARDS, Secretary.

THE ADIRONDACK DEER.

Editor Forest and Stream:

Among the devices adopted last fall by pot-hunters, wishing to evade the anti-hounding law, was a ruse which worked successfully wherever resorted to, for the game protectors did not learn of the dodge until after the hunters had left the woods or ceased shooting. I will cite a case by way of illustration: A party of hunters, six or eight in number, entered the wilderness and encamped on Moose River. They devoted their time to sitting on the runways, ostensibly watching for any deer which might, of its own free will, wander their way. Under ordinary circumstances, as every hunter knows full well, such a proceeding would be sheer folly, for the chances of getting a deer in this manner are very slight indeed, especially at the season of the year when this party was on the warpath. That the hunters knew what they were about was demonstrated by the fact that from one to half a dozen deer could be taken by them in a day. At first their success appeared to be due to chance, but the seldom varying good fortune attending their silent vigils led other sportsmen who had unsuccessfully tried the same method of hunting to suspect something "rotten in Denmark." When questioned closely the hunters said that it was almost an every day occurrence for one or more "strange dogs" to run deer into the stream, and the party depended on the so called chance visitations for its supply of venison.

To experienced woodsmen the story looked decidedly thin, but it was not until after the hunters left the woods that the truth of the matter came out. The facts as stated by one who knows are these: Before entering the woods the hunters sent a guide with three or four hounds on ahead of them, with the understanding that he should occupy a shady half a mile distant from the stream and never, under any circumstances, appear at the other camp. He was instructed to keep away from the other members of the party as far as possible while in the woods, and was to receive orders from one of the hunters who would stealthily visit his quarters about sundown and map out the work for the next day. His duties were to care for the dogs at his lodge during the night and to put them out after deer in the morning for the benefit of the hunters on the river. It was the understanding that the dogs should be started on fresh tracks only in order that the run might be brief and the chances of detection correspondingly lessened. In case a stranger happened along and saw or heard a hound in pursuit of a deer all hands were expected to swear that it was a stray one. A dog was never to be allowed to stay at the main camp.

The ruse worked well last fall, but the game protectors are better posted now and will be on the lookout for such chaps next season.

This is one of the many dodges resorted to by pot-hunters to obtain a supply of deer for the market, and there is no doubt but that hundreds were killed in this manner last year. It is a conceded fact that hounds could be heard running in the woods every day last fall, in the vicinity of lakes or large streams, but it was an extremely difficult matter to find a man who would confess to owning one.

The opposers of the anti-hounding act are strictly non-committal on this subject, as they are seeking to make it appear that the still-hunters killed all the deer. I am indebted to one of this class, however, for the facts concerning the ruse adopted in the Moose River region.

PORTSA.

URICA, N. Y., Feb. 12.

[From the New York Times, Feb. 14.]

It is not necessary, however, to share the acrimony of the contest in order to arrive at an impression with regard to its merits. Nor is it necessary to go into the incidental questions as to the comparative demerits of "dogging" and "jacking." It may be proper, however, to explain for the benefit of those who know nothing about the subject that dogging or hounding deer has very little likeness to the stag hunt, as described and depicted by romantic writers and painters, in which the mounted hunters as well as the hounds pursue the quarry. As practiced in the Adirondacks, it is not even the form of sport in which the hunter establishes himself at a stand where the lay of the land makes it likely that a hunted deer will pass him and take a shot at him as he goes by. The dogs run the deer to a lake, on the surface of which the hunter is afloat, and when the deer takes the water he has no chance for his life, because his speed is destroyed when he takes to swimming. On shore, if a bad marksman misses him he goes free for that time. But on the water the bad marksman has as many shots as he chooses to take at an animal that can neither fight nor run. There are even stories of guides paddling alongside the swimming deer and holding him by the tail while the adventurous sportsman beats out the victim's brains with a club.

It will be admitted that there is nothing inspiring or picturesque about this method of destroying deer. Those who practice it declare that those who object to it are pot-hunters, while those who oppose it insist that its practitioners are inspired either by the hope of gain or by the love of mere slaughter. Mere slaughter is not "sport" in any sense that entitles the sportsman to any consideration from the Legislature, or from anybody else.

The question, however, is not to be settled according to the dictates of good taste in sporting matters. The preservation of wild animals, birds and fishes, if they are not noxious or dangerous, and the prevention of unnecessary cruelty are the only considerations that justify the passage of game laws. The tourist who desires to kill deer by way of resting his intellect from the cares of business, and the pot-hunter, for whom the tourist entertains a fine scorn and who shoots for market, are entitled to equal consideration. The question is, or should be, what legislation is desirable in order to prevent the extirpation of deer in the Adirondacks as moose and beaver have already been extirpated?

From this point of view the main objection to be found to the law of last year is that it does not go far enough. Hounding is objectionable to those who wish to preserve deer, because it is too nearly "a sure thing." The very first requisite is that no more deer shall be shot than are needed for the consumption of those who shoot them. If this plain rule was enforced a short season of hounding might possibly be allowed—say the ten days that are now permitted in Suffolk county. But the taking of venison out of the Adirondacks for market ought to be strictly prohibited, and the prohibition could be enforced only by prescribing penalties for taking it out for any purpose whatever. The Adirondacks now contribute but a small fraction to our supply of venison, though this fraction is important in its relation to the number of deer still surviving in the Adirondacks. It would perhaps be necessary to prohibit the killing of deer altogether for a term of years, though such a prohibition would be opposed by the residents of the region, whose support it is,

of course, desirable to enlist, and whose support would be enlisted if they were convinced that their own ultimate interests required a restriction to be put upon deer shooting.

The State has two interests in the Adirondacks. One—the most important—is to prevent the wanton destruction of timber, and the other to prevent the wanton destruction of game. When the timber is all cut and the game all exterminated the region will be almost entirely worthless. It will be difficult to attain either object so long as the lauds are held by private owners. The oftener the question comes up and the more it is discussed, the clearer it appears that the acquisition of the tract for a State park is the ultimate solution of the problems that arise with regard to its treatment by the Legislature.

[From the New York Evening Post, Feb. 12.]

Dr. Samuel B. Ward, who is President Cleveland's camping companion in the Adirondacks, has written an argument in favor of the repeal of the anti deer hounding law by the New York Legislature. FOREST AND STREAM takes up this argument and disposes of it very effectively, going so far as to charge, point by point, that Dr. Ward's statements are "misleading and deceptive."

[From the New York Sun, Feb. 14.]

The Adirondack woods should be preserved, and so should the Adirondack deer. To that end the present law forbidding the hounding of deer should stand.

The following was published in the Times of Feb. 14:

"I am very sorry to see the stand your paper takes on the deer hounding question. I, for one, wish to be put down as a sportsman that does not favor the hounding of deer. I am an old sportsman and know a great many who are opposed to changing the law. In fact I am happy to say that I do not know a single genuine sportsman that favors driving deer in that manner. What sport there is in hounding a deer to the water and then either clubbing him to death or blowing him full of buckshot while the guides hold him by the tail, I fail to see. As a member of the Society for the Protection of Game of this city, I wish to correct the statement you make, that we favor a change of the law. I was present at the meeting when this was brought up, and we were decidedly opposed to it and sent a resolution to that effect to the Governor at his request. Hounded venison is not fit to eat; it soon turns black and will often cause sickness. Would you like to eat beef that had been driven for hours before being killed? I do not understand why, if so many more deer were killed under the new law, these people wish it changed. I should like to see a law passed forbidding the use of shotguns in deer hunting. Many deer are wounded that escape to die, where if a rifle was used they would either be killed or missed. Cockney sportsmen need hounds and clubs and buckshot to kill deer, and do so kill them out of mere wanton love of killing, leaving them to rot where they fall. True sportsmen can kill them, at least enough for food, without these aids.—W. HOLBERTON (New York, Feb. 8)."

In a misleading and deceptive pamphlet recently sent to the Legislature by the deer hounders were the following statements:

"I have talked with Mr. Roosevelt and Mr. Henry Bergh, who neither of them fully understood the case last year, and I do not think they would object this year to the modification of the law that I propose."

"I have also seen Mr. Henry Bergh, and I think he is convinced now that hounding is not as cruel as he supposed."

Very truly yours, JOHN T. DENNY.

Mr. Denny's evident purpose was to put Mr. Henry Bergh into the position of an advocate of deer hounding. What Mr. Bergh really thinks of deer hounding in the Adirondacks is shown in the following letter:

THE AMERICAN SOCIETY FOR THE
PREVENTION OF CRUELTY TO ANIMALS,
Headquarters, 4th Ave., cor. 22d St.
New York, Feb. 12, 1886.]

Editor Forest and Stream:

I am in receipt of two letters from you in relation to the hounding of deer. You therein refer to a pamphlet which has been sent to the Legislature—and which I have not seen—citing me as being in favor of the cruel and unsportsmanlike practice. How such an inference could be drawn from any conversation I ever held with any one on the subject is astonishing.

To do so would be to approve of fox hunting, rat baiting, pigeon trap-shooting, prize poultry killing and the like and would bear about the same relation to legitimate sportsmanship as standing a cow up in a field and firing at it. In the deer hounding case the men are technically the sportsmen, but the dogs are the real hunters.

Viewed from a sanitary standpoint, there cannot, logically, be two opinions as to the damage done to the flesh of the animal at the time of its death. It is universally admitted that the flesh of fish is surely deteriorated by every minute of captivity even before it is killed; and experienced fishermen who care to preserve its quality speedily kill the creature by a blow on the head with a stick or club. Lobsters, with wooden plugs driven into their claws, experience a similar deterioration. Inflammation is occasioned, suppuration ensues, and the matter, having no means of escape, is taken up into the circulation and is absorbed. It is an undeniable law of nature that the treatment of an animal at or previous to its killing is imparted for good or evil to its blood and tissues. Can there exist a doubt that the abuse which cattle receive during their long voyages by rail is imparted to their flesh, and may not many of the diseases we suffer from be the consequence of such abuse? Half-starved, thirsting, and terrified by blows and shouting, its blood boiling with fever, the creature is driven to the slaughter house and killed, and the next day, perhaps, its flesh is put upon the table for consumption. Something equivalent to mind in man exists in the brute economy. Anger, terror and every extraordinary emotion is liable to poison the milk of female animals to such a degree as to instantly kill the infant that partakes of it.

I have briefly referred to these physiological phenomena in illustration of the danger, as well as inhumanity, of prolonging the tortures of deer hunting in the manner proposed by the bill presented to the Legislature.

I congratulate the public, as well as the animal creation, that there is a paper so widely circulating as the FOREST AND STREAM to stand sentinel over the extravagant practices of thoughtless and misguided sportsmen.

HENRY BERGH, President.

THAT MISLEADING DOCUMENT.

Editor Forest and Stream:

My attention has been called to an article in your issue of Feb. 11, entitled, "A Misleading Document," which is itself so full of misleading statements, that I must ask a little space, in common fairness, to reply. If we must differ in opinion as to the propriety of hounding deer, let us do so honestly and honorably. I am willing to grant that you really believe that to take deer by hounding is a very destructive and unsportsmanlike method of so doing, and am entirely willing to listen to any arguments that you may bring forward in support of your views, always remembering that misrepresentation and abuse do not constitute argument. Please believe in return that I, in common with a great many others, find more pleasure in taking advantage of the instinct which the Creator has implanted in dogs in following deer, than in any other mode of hunting them, and also that I honestly believe that the majority of men who are familiar with the Adirondack region, know that it is the least destructive method at present in use.

Now as to your objections to the pamphlet referred to:

1. You charge that the circular of inquiry was addressed only to those persons "who were known or believed to be advocates of deer hounding." This I deny squarely. When the circulars were sent out I was as ignorant as you are today of the sentiments on this subject of much more than one-half of those to whom they were addressed, and I also knew that some to whom they were mailed, like Mr. C. E. Fenton, at Number Four, were opposed to hounding. I confess that I was amazed at the almost entire unanimity of the replies—that those who lived in the woods or visited them every year and thereby became familiar with the results of the various modes of hunting deer, all favored hounding with the exception of some in the Beaver River country. Having come to the conclusion that it was wise to make an effort to have the anti-hounding law of last year repealed, and having been credibly informed that you had already declined to publish letters on that side of the question, we thought that it was entirely safe to trust you to lay before the Legislature all the letters and arguments that were necessary to a full understanding of your side of the question.

The Eastern New York Fish and Game Protective Association are responsible for the pamphlet to just exactly the extent stated in the opening paragraph. The meeting was regularly called by the secretary and what occurred is distinctly reported.

2. You ask why we did not publish a letter from Mr. A. C. Clifton, addressed to the Glens Falls Republican. Our reason for not publishing it was that we had never chanced to see it. Besides, while I have no doubt that Mr. Clifton's pathetic report of a very sad incident is entirely true, I respectfully submit that such occurrences are far too rare to be used as a legitimate argument against hounding, and this exact occurrence might just as well have taken place by the accident of a dog's getting loose without his ever having been intentionally put on the track of a deer at all. In fact there is not a particle of evidence that this dog had been "put out" that day. We might just as well refuse to ever read another newspaper because typographical blunders occasionally lead to entire misstatements. You would not expect a reply to your courteous characterization of the facts which we present as "false and preposterous" or "the perversion and suppression of truth."

3. You find fault with the sentence which reads that hounding "is objected to only by those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time." Well, we will admit that that statement is a little sweeping; but we were thinking when it was written only of those who replied to our circular or who kill enough deer every year to have some tangible effect on the number left. You have named a half dozen gentlemen who are also opposed to hounding, and give a quotation from Gen. Sherman, for whom, as well as the others, I have the greatest possible respect. You make Gen. Sherman say that "the number of deer wantonly killed by hounding by far exceeds those killed out of season, and the slaughter of the animals for mere sport is an evil which demands prompt attention." I have been in the Adirondacks every summer for several years, and have talked with hundreds of others who have been there longer than I have, and unhesitatingly state that Gen. Sherman is in error as far as the region at large is concerned. No doubt Gen. Sherman was so informed, and believed at the time he wrote the sentence quoted; the statement may have been true in some particular season, in some small district of the Woods. But I repeat that as applied to the Adirondacks in general, the statement is erroneous. Why did you not also include Gen. Curtis among the anti-hounders? His great personal familiarity with the subject under discussion led him to state before the Governor last year, in my presence, that summer visitors to the North Woods ought to get all the sport they wanted by still-hunting. I asked him if he meant in August and September, and he replied yes. In response to further inquiries he said that he had never killed a deer in his life, and knew nothing about the subject except what he was told. Evidently a man who honestly proposes to us to still-hunt in August does not know much about the woods.

4. While it is undoubtedly true that it is occasionally possible to row close enough to a deer to kill him with a revolver, yet it is to my personal knowledge also true that many deer escape after being driven to water by dogs, and that to get them many long and difficult shots have to be made. I also think that you underestimate the number of deer killed on runways. If you think it possible to enforce it, I should be very glad to see a law passed forbidding the killing of any deer while swimming in the water.

5. I assure you that you are mistaken when you say that nine hundred out of every thousand Adirondack tourists would gladly see the hounds kept out. Perhaps the hotel keepers and guides in the North Woods do not know as well as you do what they depend for a living, but if you will read a letter in the Essex County Republican of Feb. 11, from Capt. James H. Pierce, of Bloomingdale, you will see what he thinks about it, and his opinion is precisely that of the large majority of hotel proprietors and guides. There are plenty of gentlemen in your own New York Fish and Game Protective Association who were "last year in favor of a non-hounding law, and are now opposed to it," and I could easily meet your challenge by naming a half dozen of my personal acquaintances; but I do not propose to subject others to the annoyance of being misrepresented and abused as I have been.

6. In reply to your sixth objection I can only reiterate what I said before, that the evidence from my correspondents, taken by chance from Stoddard's Guide Book, is clear and distinct that the number of deer in the North Woods in-

creased under the operation of the law of 1879, and I am satisfied from personal observation that it is so in the Saranac region, with which I am familiar. You may think it gentlemanly and very convincing to charge me with lying about it, but that does not alter the fact.

7. You object to my stating my belief "that hounding is one of the least destructive methods of hunting deer." Read Mr. Wardner's letter in the pamphlet referred to—himself an old still hunter. Inquire of Paul Smith, or of anybody who knows what he is talking about and you will get the same reply. Read Mr. Fuller's letter; read Martin Moody's letter; read Mr. Manning's letter; read Dr. Dodge's letter; read Mr. Francis H. Weeks's letter. It is a very short way out of the trouble to accuse, as you do, all men who do not agree with you of being liars; but, my dear Mr. Editor, abuse is not argument, and your calling people liars, aside from being very discourteous, does not make them so. It is the method usually resorted to by those who have no better argument to use and always reminds one of the lawyer who having lost his case in court revenged himself by swearing at the judge and jury. I have repeatedly heard it stated that not more than one deer is taken in every three races prior to Oct. 15 in the Adirondack region at large, and I believe that average to be pretty near the truth. I recollect well one series of eight consecutive hunts, with two or three does each, by a party, some days of five and others of six, in which not a single deer was killed or wounded. I recall another occasion when a party of four of us with five guides and four or five dogs, hunted five days and killed two deer. Not less than two deer were started each day on each of these occasions. There are, no doubt, certain portions of the woods and certain seasons late in the fall when the proportion of deer killed is larger than this. But the statement is made on excellent authority that single still-hunters on the snow last winter killed, each, from thirty to fifty deer, and that there are many carcasses hanging in the woods this winter, killed by still-hunters for market and never carried out because the price of venison went so low that the sun received would not pay for the labor. Allow me to suggest that you dispose of all these statements also by simply characterizing them as untrue, in fact I see no other course for you to pursue.

You have also, my dear Mr. Editor, a very fascinating and convincing way of arguing, by attributing motives to your opponents other than those which they themselves honestly set forth. For example, you say that we are clamoring for a law against floating, "not because they [we] believe that it will save the game, but because they [we] hope thereby to regain the privilege of hounding. Why do they [we] want to exchange jacking for hounding? Because by the latter method they [we] can get more deer." Now, I object to this. We don't say of you that you spouse the anti hounding law in order to sell your paper, because we find at the bottom corner of page 41 a suggestion that those who are interested on your side should send marked copies of your excellent paper to their members at Albany. That would be mean and probably untrue. But it would be no more untrue than your statement that we are actuated by the motives which you attribute to us. We have given the reasons why we object to jacking. Why don't you show that there is true sport in sitting cramped up in the bow of a boat for hours and then blazing away with a double-barreled shotgun, at a distance of a boat's length, at an entirely unsuspecting doe or fawn? Why don't you show that it is perfectly easy to select your game and let the dogs go, as we do in hounding? Why don't you show that the killing of one doe does not exert at least four times as much effect on the future number of deer in the woods as the killing of a buck? Why don't you show that one-half the deer wounded by jack-hunting do not crawl off into the woods to die a painful death of their wounds and starvation? If you could do some of these things you would, and thereby add to the sum total of human knowledge facts on which legitimate arguments could be founded. No one with the spirit of a man in him, who has ever heard the bay of the hounds, would think of resorting to jacking except as a dire necessity to provide food for his camp.

8. You attack the statistics, furnished by pretty much everybody, to the effect that the still-hunters killed more deer last year than usual. If you have facts from reliable persons to show that still-hunters did not do so, bring them forward. We will cheerfully give due weight to evidence which you may adduce, but must respectfully decline to accept as conclusive your bare statement that statistics "quoted from the Boonville Herald are wholly without foundation."

9. Read over Mr. Fuller's letter again. Here is a difference of opinion between yourself on the one hand, and Mr. Fuller, and every other woodsman that I ever talked with, on the other. You think that the deer are not made shy by hounding; the others all think that they are. Mr. Bergh is driven almost into convulsions over the fright which a deer experiences at the approach of a dog. Pray calm his nerves with this positive assurance of yours; and while you are about it assure him also that, during the proposed hounding season, no dog ever "tears into fragments one of the most beautiful and harmless of God's creatures." I never knew or heard of a dog's overtaking a deer in the North Woods in my life, unless the deer had been previously wounded by some night-hunter. You know this also, and, of course, he will believe all that you say. A deer can take to the water and throw off a dog in ten minutes any time that he is tired of the race.

In the same interview, please reassure Mr. Bergh also on the sanitary question. Tell him that you have it on the authority of a physician of more than twenty years' practice, that even if a dog were excited, yes, "intensely excited," so much excited that he could catch a deer and bite it, so excited as to be really "rabid" when he bit the deer, that even then the flesh of that deer could be cooked and eaten with entire impunity; that while the flesh of a deer killed after a long run in warm weather may not keep very well, it is perfectly harmless while it does keep. At the same time whisper quietly in Mr. Bergh's ear that if this physician is mistaken, and the meat is, under these circumstances, deadly poison, so much the better. You will soon be rid of these cruel brutes of "sportsmen" off the face of the earth, and they are perfectly willing to take all the risks.

SAMUEL B. WARD.

ALBANY, N. Y., Feb. 15.

The shrewdness, wit and incisiveness of Dr. Ward's reply combine to make it forcible, and we presume that no one who has read it enjoyed it more than we did. It is charmingly ingenious. The injured side is always effective. To appear to have been abused and misrepresented is always to win sympathy for one's cause. We have so high a regard for Dr. Ward's personal sincerity in this matter that we feel sure that he would regret, even more than ourselves, should

sympathy for him as an injured being blind the Legislature to the real points at issue. Dr. Ward will agree with us that it is of much more importance that the truth about deer hounding should be clearly presented, than that he should receive the sympathetic regard always accorded to injured innocence. Dr. Ward will therefore understand our motives when we firmly but kindly point out to him that this position is untenable, and is likely to mislead. We did not call Dr. Ward a liar; we called his document misleading and deceptive. Dr. Ward, in the third line of his letter, calls our statements misleading. We do not, therefore, imagine that he intends to abuse us or to call hard names, and we shall not seek to pose as maligned and insulted. We are much more concerned that the truth about deer hounding shall appear than about anything else in this matter.

Dr. Ward would perhaps think it scarcely fair if we were to point out to him that there are many men who "find more pleasure in taking advantage of the instinct which the Creator has implanted in dogs" to fight other dogs, than in any other mode of using these animals. If we were to make this suggestion it would only be to show that his graceful method of introducing his points could be used in more ways than one, and not for the purpose of comparing deer hounding with dog fighting. We are not discussing the brutality of Dr. Ward's favorite pastime.

If Dr. Ward will calmly reread the objections to which he takes exception, we are confident that in this cooler moment he will see what must be patent to every one else, that we nowhere questioned his own individual veracity. Our remarks were applied to the pamphlet itself, and the truthful or untruthful character of that document was a perfectly legitimate subject of discussion. Dr. Ward's assumptions to the contrary may be ingenious, but are they fair?

Taking up the points of Dr. Ward's reply we will endeavor to show him in language very mild and not at all abusive that he is in the wrong. Come now, let us reason together, Dr. Ward.

1. Dr. Ward acknowledges that, of the replies received in response to his letters of inquiry, he suppressed the portion unfavorable to the hounders, and explains that he did this because he thought the FOREST AND STREAM could be depended on to give "the other side." Now we mean no offense when, in the kindest spirit, we point out that this explanation of the reason of the suppression does not dispose of the suppression itself; nor does it answer our charge that, because of that suppression, the document which professed to be fair and impartial, was, in fact, partial and one-sided, and therefore, as an expression of public sentiment, misleading and deceptive.

We did not question the regularity of the meeting of the Eastern Association, we simply intimated the suspicion, which Dr. Ward's acknowledgment goes to confirm as a fact, that the association was shrewdly organized by active deer-hounding advocates to influence the repeal of the present law.

2. We cheerfully accept the explanation of the omission of Mr. Clifton's letter and are willing to make the same excuse cover the entire omission—from a pamphlet purporting to represent public opinion—of every written and printed statement of fact and opinion adverse to the cause of the hounders. The fact remains that there was such an omission, and for this reason again—however ingenious the action of the compilers—the document was misleading and deceptive as an exponent of public sentiment.

If Dr. Ward imagines that this incident of a doe being devoured alive by a hound is one of similar "occurrences far too rare to be used as a legitimate argument against hounding," we congratulate him on his ignorance of one phase of the subject; but again, without meaning any offense, we suggest that however blissful that ignorance may be to its possessor, it is unbecoming in one who undertakes to instruct the Legislature on the subject of Adirondack deer hounding. Perhaps the dog was not "put out." It is well known that dogs go off "by accident" to pull down venison for themselves; but is that any valid argument for maintaining a horde of half starved hounds in the North Woods? We do not expect any reply to our characterization of the statements as false and preposterous, for we honestly believe that there is no reply to be made to it.

3. We said that the statement that "hounding is objected to only by those pot hunters and still-hunters who desire to kill the most deer in the shortest possible time" was misleading and deceptive; and we cited names to prove it. Dr. Ward says it was "a little sweeping." For Messrs. Sherman, Hotelling, Richards, Litchfield, and the others whom we named, he has the highest respect. Do you commonly show your respect for your friends, dear Dr. Ward, by dubbing them pot-hunters, eager to kill all the game they can for a few paltry dollars? But the statement did not refer to these men; it referred only to those who replied to the circular. Well, let us see who they were:

In this State [hounding] is objected to *only by those pot-hunters, etc.*—Dr. WARD in pamphlet.

We were thinking * * * only of those who replied to our circular, or who kill enough deer every year to have some tangible effect on the number left.—Dr. WARD *supra*.

With one single exception the correspondents were all in favor of rescinding the laws of last year and of permitting the hounding of deer.—Dr. WARD in pamphlet.

The only opponents of deer hounding are "those pot-hunters," who were "those who replied to our circular," who were "one single exception." It is "a little sweeping," beautifully sweeping. It sweeps away the whole army of deer hounding opponents, and reduces them to one man. Now, tell us, Dr. Ward, are you not giving yourself altogether unnecessary vexation of spirit in writing pamphlets and letters to combat the opposition of all those one single exception? Would it not be more sensible to go to this individual and quietly reason with him, than to pay printer's bills and worry the members of the Legislature with your documents? Or why not whisper the name of all this single man to Mr. Howe, who is reported to have gone to Albany provided with money to put the hounding bill through. Do you not indeed honestly believe, Dr. Ward, that Mr. Howe would be more successful in an appeal to that one meek pot-hunter than he will in trying to find any members who will heed his blandishments? If this host—one man—who are making this opposition at Albany cannot be disposed of in any other way, why not corral him until the excitement is over, or use more severe measures? Why leave to the valiant Little Tailor of Duleek the proud boast "I'm the only one of all min, that killed three score and tin, at a blow?"

Dr. Ward argues that the anti-hounding law should be repealed because he has discovered that Gen. Curtis who introduced the bill last year is not a sportsman. Will Dr. Ward ask us to repeal all our game laws if it shall be dis-

covered by some one who wants to shoot game in May that the bills were not introduced by members who were sportsmen? Shall we repeal all our banking laws because the bills were not introduced by bank presidents? If the community were threatened with a scourge, would you, Dr. Ward, seriously ask the repeal of all legislation relating to contagious diseases, unless it could be shown that the bills had been introduced by members who could produce medical diplomas? Believe us, when we say that we do not think you would. Believe us also when we express our sincere conviction that if every member of the present Legislature were a practical deer hunter, the bill to permit hounding would promptly meet the fate of the bill offering a bounty on Indian scalps, introduced into the Colorado Legislature some years since, and promptly in accordance with an unanimous vote, "chucked under the table."

4. We are glad to know that Dr. Ward is not an advocate of killing hounded deer in the water, but if he will make inquiries on that point among the deer hounders, he will find himself in a very lonely position, almost lonely enough to pair off with the "single exception." Dr. Ward knows as well as we do that however much he may desire an anti-water-killing law, such a measure could not be enforced; and in all kindness we warn him that if he attempts to secure a law of that nature, he will speedily lose the support of the very men who are now working with him.

5. Well, not to be outdone in magnanimity, let us admit that the estimate of nine hundred out of a thousand may be "a little sweeping." Call it eight hundred. As to the N. Y. Association we have a letter from a member stating that the members present at the meeting the other night which indorsed Mr. Hadley's bill did not represent the sportsman element of the association.

6. If the correspondents taken by chance from Stoddard's Guide Book think that the deer of the Adirondacks have annually increased in number beyond the annual destruction, we advise Dr. Ward to learn the truth by applying to some others whose names do not happen to be in the Guide Book. We urge him to broaden the field of his inquiry, and to give in the next document sent to the Legislature the fruits of this broader inquiry. Here again it is ingenious in Dr. Ward to assume that because we declared the conclusions drawn from a limited inquiry misleading and deceptive, we called him and all his correspondents liars. We did no such thing. We are now even quite willing to modify our characterization of the pamphlet itself. Let us call it not misleading but "a little sweeping."

7. Dr. Ward did not state it as his "belief" that "hounding is one of the least destructive methods of hunting deer." He stated it as a fact. We did not question that he believed it; we questioned the statement as a statement of fact. We still question it. We have read the letters and have found them "a little sweeping." As to calling these men liars, we have not done so. Dr. Ward, as a physician, knows that there are some things that cannot be handled with kid gloves. While it is sometimes perfectly practicable to kill deer from a boat without soiling one's gloves, it is not always advisable to discuss such a practice gingerly. And we have not "lost" this "case" yet.

Dr. Ward recollects a series of eight hunts with hounds in which not a deer was taken. Well, we can match it with one single hunt in which eight deer were driven into the water by the hounds and killed, and another in which in one day three fawns were killed. The advocates of deer-hounding will do well to let cold figures alone. Dr. Ward asks us to dispose of the statement that single still-hunters killed from thirty to fifty deer on the snow last winter, and that there are many carcasses hanging there now. Before undertaking to dispose of this, we beg to ask, do you, Dr. Ward, seriously mean us to infer that you believe it yourself?

There is more fascinating ingenuousness in Dr. Ward's evident endeavor to put the FOREST AND STREAM among the advocates and defenders of jack-hunting. If among any of his acquaintances there happens to be one who has read this journal for the past six months, we beg of him to inquire respecting our attitude, past and present, on the jacking question.

That Dr. Ward may have no further misconception on this point, we make what seems to us to be a perfectly far proposal, viz., if the members of the Eastern New York Fish and Game Protective Association honestly wish to prohibit jack shooting in order to protect the deer, and not simply to trade off jacking for hounding, they can readily show this by causing to be introduced a bill for the total abolition of jacking—but not giving permission to bound. We here pledge ourselves to support that bill and to work for its passage; we also pledge to its active support most of the advocates of the present law with whom we are acquainted; and if the Eastern Association will do their share we think we are safe in promising that the bill shall pass. If they refuse to do this, they cannot reasonably object to the charge that in their present efforts they are less anxious to forbid the jack than to replace the hound on the trail.

It is unfair to attempt to blind the Legislature by the flare of the destructive jack-light.

8. Dr. Ward is aggrieved because we do not accept the ridiculous assertion that more deer were killed by still hunting last fall than in former years by still-hunting and hounding combined. If the Boonville statistics are not without foundation, will Dr. Ward kindly inform us if he knows who avows their paternity? And will he tell us whether he accepts the proposition they are intended to bolster up?

9. Ingenious again. We did not deny that deer are made shy by hounding. On that point there is absolutely no difference of opinion between us and Mr. Fuller and other woodsmen. We do differ from Mr. Fuller in his notion that the deer is such a tame creature and so sure to rush, from afar off, into the arms of the still-hunter, that hounds and guides and boats full of "sportsmen" equipped with magazine rifles, and repeating guns loaded with buckshot, and oar butts and clubs and sheath knives must be employed to make this abnormally tame creature "shy." That is where we differ. And of the letters the FOREST AND STREAM did not publish, and out of the refusal to publish which Mr. W. Denny and Dr. Ward have made so much capital, one was from Mr. Fuller, of Meacham Lake, submitting this "shy" argument, and the other from Mr. Denny repeating the same "shy" argument. We do not question that these men may honestly believe what they say, but how can they ask us or anybody else (except a pamphleteer trying to "sweep" the Legislature) to print such stuff? That they are even so honest in their conviction as to put it into practice, we do not deny. The spectacle of Mr. Jno. T. Denny, in a boat on Meacham Lake, pumping bullets out of a Winchester magazine rifle at a deer

in the water ten feet from the muzzle of the gun, lends abundant evidence that these men practice what they preach. If Dr. Ward wants his "shy" argument, we are generous enough to say to him that he is welcome to it.

Dr. Ward has seen fit to refer to Mr. Henry Bergh. Will Dr. Ward pardon us for saying that we think it would have been in better taste for him not to have done this? When Mr. Denny wrote to Dr. Ward the other day that—of all men—Henry Bergh was not opposed to deer hounding, and when Dr. Ward, in all sincerity, put that statement into type and sent it to the Legislature, he had as an excuse that Mr. Denny had clearly misled him. But after Mr. Bergh had repudiated such a use of his name and had stamped Mr. Denny's assertion as—a little sweeping, would it not have been fair and manly, Dr. Ward, to acknowledge your error, instead of writing those closing paragraphs?

No; no dog ever "tears into fragments one of the most beautiful and harmless of God's creature," because as in the incident recorded by Mr. Clifton, and which you have accepted as true, Dr. Ward, a man always comes to shoot the dog before it accomplishes its purpose; is that it?

Perhaps the purpose of calling in Mr. Bergh (we made no reference to him last week) may be to take advantage of any difference of sentiment which may be supposed to exist between American sportsmen and the Societies for the Prevention of Cruelty to Animals. If that be the object, we assure Dr. Ward such efforts are misdirected. We may claim to be somewhat familiar with the sentiment of the sportsmen of this country as learned during the past twelve years of the publication of the *FOREST AND STREAM*. It may surprise the Adirondack water-butcher, but we give it as our sincere conviction that on all essential points the two classes are united. When, by such a stupid blunder as that of Mr. Denny, the S. F. P. C. A. is led into taking a position antagonistic to any "sport," it is quite likely to be one which, as in the case of Adirondack dogging, the great body of sportsmen condemn.

In conclusion we beg to express our entire confidence in an experienced physician's opinion on the sanitary qualities of hounded venison. The numbers of whole carcasses of hounded deer, known by us to have been abandoned by eminent physicians and left to rot in the Adirondacks, warrant the belief that these professional gentlemen were excellent judges of how long hounded deer would keep, and of the proper time to pull up the tent and move away from it—it being too "shy." Lest Dr. Ward should twist this assertion into our "calling him a liar," we hasten to add that we do not know that he ever wasted a pound of venison. We are gratified to believe that he would not approve of such wanton destruction; more than this, we believe that if Dr. Samuel B. Ward knew one-half of the abominations and atrocities incident to and inseparable from the sport of hounding, and annually committed by hounders under the shelter of the North Woods, he would not now be working to legalize the "sport," but would be heartily with the *FOREST AND STREAM* and the great majority of right-minded sportsmen in their demand that the anti-hounding law be not repealed.

"AN OFFICIAL SLAUGHTER."

Editor *Forest and Stream*:

In your issue of Jan. 7, "A. P." tells of "an official slaughter" of large game in the neighborhood of Fort Fetterman by a "law-breaking, game-murdering" officer of the Army during the late war, an author not unknown to fame, but "whose name for shame shall not be told." Your correspondent seems to know full well of the shameful operations of this man who with "several friends, a detachment of U. S. soldiers, about a dozen citizen teamsters and packers in the U. S. employ, and three guides," killed "elk by the score and antelope by dozens, and in nearly all cases leaving the flesh to rot where the murdered animals fell," etc. etc. Your correspondent closes his communication with the hope that some one will hold this person "up to the public gaze and contempt for the unparalleled meanness he displayed" in the wanton destruction of so much noble game, and says, "Who will rise to the occasion? Where is Capt. Nessmuk?"

Now I submit that this course on the part of "A. P." is very hard to understand if he really wishes to have the author of aforementioned outrage publicly exposed.

Why in the name of good sportsmanship and honest indignation does not "A. P." himself give the readers of the *FOREST AND STREAM* the name of the offender? Thus far, to your readers, "A. P." is the only one who can expose the man. I do not understand the "shame" which induces him to withhold the name but which can permit him to call upon Captain Nessmuk or some one else to give it. For one, I want to know the name of this game-murderer, that I may, with all lovers of gentlemanly sports, mark him and help in whatever way we can make him and all his kind suffer for such meanness.

Let "A. P." come to the front and tell what he knows and he will have the thanks of all good sportsmen. Unless we are all willing to do this upon occasion, game-murdering will go on till there is no more game to be murdered.

C. H. A.

Boston, Jan. 10.

SOUTHERN SHOOTING PRESERVES.—For all the purposes of the hunting of the most favorite game there is no place on the Atlantic coast like the islands of South Carolina, and especially those in the vicinity of Charleston. It is gratifying to know that interest is being exhibited in fields so abounding in game and fish of the choicest description, and it must appear a matter of surprise that so little is known outside the borders of the state of its conspicuous advantages in this line. Every year hundreds of sporting men and others in the pursuit of the pleasures of field exercise and sport go either to Canada and the Northwest and to the prairie lands, where as a general rule the enjoyment of the season is marred by the intensity of the cold. One of the advantages of the climate of South Carolina will recommend itself to all lovers of sport under the best of conditions, and that is the equable temperature of our hunting season. It may be said, however, that a very rigorous climate is necessary for the appearance of the best qualities of game. This is not true to an extent that would in the slightest degree interfere with the fact that ordinarily cold weather is sufficient to send to our coasts the kinds of migratory game that is usually sought in more distant regions. For instance, the appearance of the woodcock and snipe begins early in the winter on our seacoast, and they remain during the season unless the winter is phenomenally mild, which does not often occur. The rice fields on the coast are always in the proper season stocked with snipe, and the breaks and thickets near and in marshy grounds are alive with the splendid and delicious bird, the woodcock. The low country of South Carolina is

known the world over to be the finest hunting ground for the deer and wild turkey. From September until March the partridge is found in abundance, and the wild duck in endless variety flocks to the inland rivers, the rice fields and the estuaries along the coast. The whole of the ocean front of the State is dotted with islands, and on many of these all the kinds of game that have been mentioned exist plentifully. There is scarcely a plantation on the coast of South Carolina which does not embrace in its extent lands on which high land and lowland game may not be found in the winter season. Nearly every one of these plantations, in fact, is composed of highlands and marsh or rice lands, and, indeed, the sites of these old-time domains were selected with a view of comprising such qualities of land. The fishing along the coast, in the inlets and along the banks near Charleston, is well known to be of the most profitable and attractive kind, including the most favorite qualities and species of fish. There was scarcely a homestead, either on the islands or inland near the coast, which did not have its avenue of live oaks, and in many instances these alone remain to tell of the former glory of plantation life and to mark the spot where the "Memorial hall" once stood. The oaks have not lost any of their beauty by the lapse of time, and it would be easy to restore even on a grander scale, one of these homesteads to its original attractiveness and interest.—*Charleston News and Courier*.

AN ADIRONDACK WOLF.—It was reported last Monday that a panther had been seen near the Rome and Floyd town line, and that a number of hunters were in pursuit of the animal. The panther turned out to be a wolf. It was killed about 3 P. M. on Monday in Bentley's swamp, in the town of Floyd and brought to Rome this morning by David Carpenter. It is a large and fierce looking male. The wolf's tracks had been seen by different persons for several days. On Monday morning a party of hunters turned out with shot guns and rifles prepared to do or die. The party was made up of William Kilbourn, H. Parsons, Eugene Cleveland, Thomas Bennett, Welcome Carpenter, W. Hogle, and D. C. Carpenter. The latter has a good fox dog which he put on the scent, but the animal refused to follow it. The hunters ran the wolf about ten miles in the woods and fields. Kilbourn got the first shot at him with a shotgun. Thomas W. Bennett had three or four "cracks" at him with a shotgun and one with a rifle. Then he crossed Hogle's path and was made the target of a shotgun. Then Bennett got head of the animal again and fired three times with a shotgun. Eugene Cleveland next had a chance at him with a rifle. The wolf ran through the door yard of a man named Murphy and he fired a revolver at him. Hogle next tackled the beast with a shotgun. It is not positively known that any of the shots hit the wolf up to this time, for he ran just as though nothing had happened. He became very tired, however, and finally crawled under a bush to rest. W. Bennett found him there and, having no ammunition, called his brother Thomas, who went very close to the wolf and let him have a charge of buckshot in the head, killing him instantly. Thus ended the only wolf hunt that has taken place in these parts in years. It is supposed that the animal strayed away from the North Woods. He had been subsisting on the carcass of a cow that laid in the woods. The dead wolf has been on exhibition in front of Petrie's meat market to day. It weighs fifty pounds. There is a State bounty of \$30 for every wolf scalp.—*Rome (N. Y.) Sentinel*, Feb. 10.

NEW JERSEY QUAIL.—It was only a few years ago that the *FOREST AND STREAM* went to the trouble and expense of making a complete canvass of the State of New Jersey as to how the quail had fared during the winter. Such a canvass had never been made before in this country, and it proved to foreshadow the coming shooting season with wonderful accuracy. Were such an investigation now to be prosecuted the result would show that since the first of the year the destruction of quail has been very great. This was due to the great and sudden fluctuations in temperature, deep snows and their immediate melting, and the intensely cold weather. At the beginning of the last open season in New Jersey there was an abundant crop of quail in both Warren and Sussex counties. The birds had been favored with a fine breeding year, and the crop was an unusually healthy one. In almost every case the birds were full ones and well grown when the shooting began. Taking it as things go nowadays, they were not harassed as much as one would suppose, and when the season drew to a close there still remained a goodly showing of birds on the sunny side of the brush-covered hillsides. Then came the terrible cold weather, and now the sportsman hears on all sides that the birds have perished while being protected from want of protection. The shooting outlook is the most gloomy we have had for years.

RUMSON NECK GAME ASSOCIATION.—A number of prominent business men in New York city, who own property on Rumson Neck, a long stretch of land between Seabright and Red Bank, N. J., have banded themselves into a game protective society, which hereafter will probably be known as the Rumson Neck Game Association. It is their intention to stock Rumson Neck with quail and then protect them as much as possible. To effect this Mr. David Keeler, of Rumson Neck, has at present over 650 quail in his barn, and he has ordered 1,000 more quail from the West. The birds will be liberated when the spring has fairly opened. Prior to their being put out, the farm owners have contracted to brush their fences to afford cover for the birds. They will also, later on, plow a ten-foot-wide furrow along the fences, which will be planted with wheat and buckwheat, and remain uncut throughout the season. This, it is thought, will provide ample food for the birds. Six keepers will be engaged to exterminate hawks, cats, foxes, and to warn off all shooters. In fact, everything that can be will be done to protect Mr. and Mrs. Quail and the Masters and Misses Quailina. It is only by such determined efforts as these that the shooting can be restored in this vicinity.

AMESBURY, Mass., Feb. 9.—Owing to the unusual severity of this winter, the birds are having a hard show to find food to retain life, as the woods are covered with such a coating of ice and snow as was never seen by the oldest inhabitant. While driving to Haverhill Sunday, I saw a flock of eight quail feeding in the road on the droppings of horses; they were as tame as chickens, and only hopped on the wall to get out of the way.—J. O. L.

THE ACCIDENT FLORES of the Travelers, of Hartford, Conn., indemnify the business or professional man for his profits, the wage worker for his wages, lost from accidental injury, and guarantee principal sum in case of death.—*Adv.*

CEDAR STREAM.

THE letter of "S. G. G.," in the last *FOREST AND STREAM*, describing his experience in taking suckers with the fly in the Millsfield ponds, has sent my thoughts wandering to the forests of Northern New Hampshire and recalled a day spent the summer before last on an almost unknown stream, whose name furnishes the text for this letter. Seminalized all the past summer by the effects of an attack of malarial fever, caught at the far South the autumn before, I have led a very lazy existence, and after trying unsuccessfully some of the old brooks where I spent many happy hours in my boyhood, finding little water and less fish, I put up my rods, too indolent to pull a boat on the river in the broiling sun for the chances of hooking a capricious bass, and devoted the balance of the summer to what an old friend of mine was wont to call "flower catching."

Many a delightful hour was whiled away in this pastime, gathering in the successive harvests from the gorgeous, candle-bra shaped *Silene canadensis* of the meadows and its more brilliant and solitary cousin, the *Silene philadelphica* of the hills and prairies, the drooping harebell and the glowing cardinal flower, the aster and the golden rod, until the frosts of October finished my botanizing, when they killed the fringed gentians, which were the last of my trophies.

Then I got out my old double-barrel and diligently explored what is left of the old oak and chestnut woods which once crowned all the hills in this vicinity, but in vain. Not a gray squirrel was to be seen. The oaks that had escaped the axe, which has converted almost all the old trees of the region into sleepers for the railway or fuel for the locomotive, bore few or no acorns this fall, and the chestnuts blossomed late and bore a scanty harvest. The woods were voiceless; save the rustle and squeak of an occasional chipmunk, nothing disturbed their stillness. One ruffed grouse, rising a hundred yards in front of me, as I emerged from an old wood road into a sapling pasture, and as instantly disappearing in the bush, was the only living game I saw in several long tramps over the hills, and the only time I pulled trigger was to drop a sassy blue-jay who crossed my path one day, chattering and screaming, as I neared home after a bootless ramble.

So the gun was returned to its case, and put away with the rods for a more auspicious season, and my sporting rambles have been solely spiritual on; for have I not been to the "Walled-In Lakes" with "Yo" and "Appekunny"; have I not listened to the chats of "Wawayunda" with the "Colonel" and the "Captain," and read to the madame who sits by my side the adventures of the one who accompanied the historian of "Camp Flotsam" in his delightfully described excursions? Have I not explored Florida with that master of woodcraft, "Nessmuk," and hoped that the day may come when I may meet him in the body; and has not *FOREST AND STREAM* thus done my angling for me while I have enjoyed it over the winter fire?

Verily it has, and as the old war horse rouses himself at the sound of trumpet, so do my thoughts go back to the days when I loitered by the brookside and watched the play of the sunlight on the ripples as it flickered through the green leaves overhead, or listened to the bobolink as he trolled out his musical tinkle from the top of a "poke stalk," in the adjoining meadow.

The tastes and habits ingrained in boyhood hold through life, and so it is that, although I like to feel the pull of a big fish at the end of a light rod, still "it is not all of fishing to fish;" and the leisurely saunter by the swift rippling waters, the song of the birds, the sunshine and the flowers, have charms which more than compensate for the lesser weight of the basket at the end of the day. I like the free use of my legs, too, and they are too long to be comfortable when cramped up in a small boat, and so, after much preamble, I come to my text again.

I had been fishing for a week at Second Lake, when a message was brought in to me requiring my presence as a witness at court in Concord the next day. Dropping everything, I walked out through the woods to First Lake, got a horse and wagon, and drove down to Colebrook that evening so as to take the stage at four the next morning, catch the first train at North Stratford and reach Concord early in the afternoon.

The case was on trial, and my evidence short, and the next day I returned to Colebrook, and the following one to First Lake, where Mr. Shoppe, the landlord of the Lake House, informed me that my son, who I had left at Tom Chester's camp, had come "out" the night before with a young friend from New York to attend a dance, and that they had gone that day to Cedar Stream with the intention of coming back at night, and going "in" to Tom Chester's in the morning. I therefore decided to wait for them, and just after dark they appeared, with two baskets full of trout, besides a "string" on a willow branch about two feet long, and the report that they had given away another string of seventy-five trout to the man who had taken care of their horse. To be sure the trout were small, from six to eight inches long, but they said that they had gone far up the stream to begin, and by the time they got down to where they had no room for any more; it was almost dark, and my son Bob had changed places with the fish, and been to the bottom of the deepest hole they had found.

The next day was Sunday, and we went leisurely in to Second Lake again, where we staid a few days longer, and when Bob had to return to his business Joe and I came out to the Lake House with him and staid there a few days to try that neighborhood. Joe earnestly advised me to try Cedar Stream, beginning where he had left off, and a young man employed about the hotel said he had been up on Sunday and caught 400.

Of course, I discounted that a trifle, but determined to give the stream a trial, and Joe, who was not very well, said he would drive me down the river road to a point opposite the mouth of it, and call for me again at night, which he did.

The stream rises in the hills south of Connecticut Lake, and after a course of six or seven miles empties into the river about three miles below the lake.

Reaching this point, I crossed the river on a convenient sandbar and struck into the woods to follow up the side of the stream, but soon had to give it up and take to water.

The old spruce forest had been cleared many years ago, and the new hardwood growth of birch, maple, poplar and alder was so dense as to render the bed of the stream preferable. At places I found gravel beaches on alternate sides of the stream, all marked by the tracks of the young man

who had been up on Sunday, and sometimes the shallow stream filled from bank to bank, with scattered stones sticking their heads above the water here and there.

Up the stream I kept, crossing from side to side to take advantage of the beaches, for I was equipped with canvas shoes and long stockings, until I came to a pool perhaps 100 yards long and ten wide, with a beach sloping up from one side and a rocky ledge on the other, with a slight fall at the upper end, where the water came in. Here the foot tracks stopped, but I decided to go on a little further, and soon came to another and higher fall of about twelve or fifteen feet into a deep pool, with steeply sloping rocks on each side. Here I put my rod together, and climbing up on the rock to cast to the foot of the fall, I saw a series of scratches on the rocks leading down to the water, which were the most indubitable marks of Master Bob's boot heels when he made his plunge the week before.

Gaining a seat on the edge of the rock, my first cast was followed by an instant pull, and before leaving my seat I basked sixteen trout of from eight to nine inches long each out of that pool. I then determined to look a little further, and climbing up through the brush around the fall, for the rock was impracticable, I found where two streams came together, the one red from the cedar swamp from which it came, the other beautifully cold and clear. Following up the clear one a short distance and only getting a few small fish, which went back to the water again, I looked at my watch and found it was 1 o'clock.

A fallen birch by the side of the stream furnished a convenient seat, and my lunch was soon disposed of with the aid of a pocket cup and "Kingsfisher's" beverage, and my footsteps turned down again. Floating my bait before me, for there was no room to cast a fly, it suddenly stopped in mid current just in a rift in the rock where the two streams came together, and a gentle twitch resulted in a vigorous pull, which ended in the addition of a half-pounder to the basket.

One or two smaller ones were taken from the larger brook, and I then returned to the large pool, where I got but one small one; it had evidently been pretty well cleaned out on Sunday. Then I struck back toward the river, keeping always in the water, and floating a line the length of my rod ahead of me, with a single No. 2 shot on the upper end of the gut, to keep the hook steady in the swift currents.

I could usually keep in water not over ankle deep, letting my bait down into the deeper currents and around the big stones and under the fallen logs on the bank; and the fun kept me comfortably busy.

I had got short of hooks, and when I went down to court had bought a dozen No. 3 Sproats at a country hardware store, and the three bigger fish I hooked on my way down were lost, hook and all, before they were fairly lifted out of the water, by the tying slipping on the gut. This caused more or less delay, and at 6 o'clock, when I had promised to be back at the river, I had not got half way there.

However, my basket, a ten-pound one, was full, literally "jammed full," so that I had to keep my thumb in the opening to keep the fish from getting out, as I slipped about over the smooth stones, which were also somewhat slimy and slippery at times; and I willingly unjointed my rod and made the best of my way to the river, with a load of trout ranging from two to eight ounces each.

Wading the river again, the wagon was waiting, and I was soon back at the Lake House, and enjoying a trout supper. I do not know whether I tramped two miles or four; I only know that I had a glorious day, caught as good trout as there were in the brook, and enjoyed it far better than I should have done broiling in a boat, with my legs cramped under me, and holding a hand-line with a minnow on the end of it, waiting for a four-pounder to happen my way. For that is the way, to tell the truth about it, in which many of the big trout we hear about are really taken. Enough for this time.

CHARLESTOWN, N. H.

CATFISH AS SPORT AND FOOD.

Editor Forest and Stream:

I have been much interested in reading of the catfish (bullhead) as a food fish in the report on "Adirondack Fishes" and it suggests a little incident. First, however, I wish to say that I have been greatly interested in that portion of the work relating to the *Salmonidae*. The portion relating to the differences between *Salmo* and *Salvelinus* has been particularly instructive to me, as there had been some confusion in my mind regarding them until I read the description (p. 20) of the difference in shape of the vomer and the arrangement of teeth on that bone.

But to the bullheads. As for their being better for the table than trout surprised me at first, but on reflection I think that I must agree with Mr. Mather. I have every summer become tired of trout, but never had a sufficiency of bullheads; to be sure I never tried to eat as many of them as I have of trout and therefore have never tired of them, and this reminds me of the incident I started to tell.

While making a trip through the Adirondack wilderness in company with a friend and two guides, we stopped at "Ike" Kennels on Raquette Lake for dinner. My guide, "Ike" Stone, and I, were standing on the wharf quite anxious to get away, when a boat came to the landing rowed by a guide while a gentleman was seated in the stern. The latter said to a clergyman standing near: "Come Brother —, get your tackle ready, I've found where we can get some splendid fishing. My guide thinks we can catch some bullheads to-day." My own guide has never gotten over it and speaks of the "splendid fishing" at Raquette Lake every time we meet. That year the trout fishing was not very good, neither was there any black bass taken in that region, and "Ike," who is one of the old timers who dislikes the innovation of cottages in the wilderness, had been cast down all the time I was at Raquette, and the "splendid fishing" capped the climax. He never smiled again.

S. M. N.

NEW YORK, Feb. 1.

LARGE PIKE-PERCH.—Randolph, N. Y., Feb. 9.—*Editor Forest and Stream:* I send you by United States Express this day (charges paid), one fish head which please name in your next paper, as there is considerable difference of opinion here as to what kind of a fish it is. The fish was speared in the Conewango Creek; none like it ever caught there before. The stream has yellow bass, pickerel, or muscullonge, and wall-eyed pike. This fish was 31 inches in length, 8 inches wide and 6 inches thick, and weighed 14½ pounds. Yellowish brown, with scales; there were about 8½ pounds spawn about half grown.—C. M. [It was a large pike-perch, *Stizostedion vitreum*, called also wall-eyed pike, and when large, yellow pike.]

THE OUTRAGE AT LITTLE CLEAR POND.—Shortly after the nets of the N. Y. Fish Commission—which were set to capture spawning fish—had been cut, the following notice was posted throughout the Adirondack region: "Pledge of Saranac hotel keepers and guides. Saranac Lake, January 1, 1886. We, the undersigned, hotel proprietors, guides and residents of the Adirondacks, having learned with regret that some vandal has been committing depredations upon the State Hatchery property at Little Clear Pond, do most heartily condemn such a dastardly outrage, and do pledge ourselves to use every lawful means to bring such perpetrators to speedy and condign punishment: Milo B. Miller, proprietor Saranac Lake House; H. H. Miner, taxidermist; L. Evans, boarding house; John Erylefeld; F. G. Hallock, guide; Geo. W. Musson, guide; Aaron Golchmitt; R. E. Woodruff, proprietor the Berkeley; Horace Peck; Stephen Merchant; Wm. A. Walton; Dan McKillip; Geo. E. Johnson, guide; R. M. Banker; Edwin Goodell; Aaron Hays, miller; Philip McManis, guide; John Bergen; Geo. W. Fayzett, guide; Latour & Platto (stage line); F. M. Bull, druggist; A. S. Wright, builder; S. C. Martin; Geo. Neise-reu; Orlando Blood; Ryland Blood; J. P. Blood; Geo. A. Berkley; T. N. Spaulding, merchant; Peter Segun; C. H. Kendall, proprietor Riverside House; James B. Miller, stage line; Andrew J. Baker; Jason Vosburgh; Rant Reynolds; J. A. Morhous; Chas. Manning; Sylvanus Marrou; E. L. Trudeau; B. Woodruff; C. M. Walton; Reuben Reynolds; R. A. Morehous; Joseph B. Lamoy, guide; Edgar Trembley; Thomas Dewey; Z. A. Wilson; John W. Slater, guide; A. W. Dudley, guide; C. F. Wicker; Edwin E. Sumner, guide; Eugene Allen, guide; T. Edmund Krumbholz; Allen Bunnell; John H. Lunt, guide; George Sweeney, guide; F. H. Bassett; Wm. P. Moody, guide; Wm. Fortain; Thomas Parker, guide; Daniel Ames, lumberman; Charles C. McCaffrey, guide; Leonard Nokes; John Benham, guide; James H. Peck; Millard F. Otis, guide; Fayette Moody, guide; Hosea B. Colbath, guide; H. L. Lobdell; E. W. Harrison; Byron P. Ames, guide; Wallace Slater; Dan. Denney; Will Manning; M. J. Norton, proprietor Adirondack Cottages, Saranac Lake, N. Y.; Pat Carey; George Washer; A. Parsons, guide; Wm. H. Hinds; Warren J. Slater, guide; Chas. Hays, guide; Lowell Brown, guide; John King, guide; O. M. Boutwell; Mayne Whitman; Simeon Torrance, guide; Malcolm Smith; J. D. Alexander, proprietor Alexander House, Saranac Lake; George Williams, Jr.; Milton C. Patten; Charles Wilkins; Marshal Brown, guide; Wm. Stearns, guide; Henry Davis, guide; Jesse Corey, proprietor of Rustic Lodge House, Upper Saranac Lake; Orion O. Terry."

LARGE RAINBOW TROUT.—On Monday last we saw a rainbow trout weighing 5 pounds 14 ounces, at Mr. Blackford's in Fulton Market. The fish came from the ponds of the South Side Sportsman's Club of Long Island and was five years old. It had died and was sent for exhibition to show the great growth. The fish was a female and had not yet spawned, but the great mass of eggs which were displayed on a platter looked to be nearly ripe.

NEWPORT FISH AND GAME ASSOCIATION.—Newport, R. I., Feb. 13.—At the annual meeting of the above association the following officers were elected for the ensuing year: President, J. P. Cotton; Vice-President, Rev. F. F. Emerson; Secretary, F. H. Wilks; Treasurer, W. H. Hammett; Directors, Thos. Burlingham, W. P. Sheffield, Jr., E. S. Hammond, S. E. Greene, B. M. Thurston.

THE OTHER DAY a fish peddler's horse balked on the street and refused to budge an inch. The vender began to belabor the beast with a stick, when an old lady thrust her head out of a window and exclaimed: "Have you no mercy?" "No, ma'am," replied the peddler, "nothing but mackerel."

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

WORK IN MAINE.—The hatching station at Grand Lake Stream has a good quantity of eggs of the landlocked salmon. This station, under the charge of Mr. Charles G. Atkins, one of America's best fishculturists, is operated jointly by the State and the United States, each bearing a portion of the expense. The work here is almost entirely with the landlocked salmon, at present there are now in the troughs 50,000 eggs for Moosehead Lake, 25,000 eggs for New York waters, 50,000 for New Hampshire and some for Europe and other parts, as well as 200,000 eggs of the sea salmon, the fry from which will be placed in the St. Croix River. At the hatchery at Orland, the United States has a large number of eggs of the Penobscot salmon which are developing and will be distributed to State waters. Many have been sent to New York and other places. At the State hatchery at Cold Stream, Enfield, there are now 700,000 eggs of the sea-salmon which will be used to stock the Penobscot. The work in this State has borne good fruit in the way of restoring salmon to the exhausted streams, many having been caught during the last season with the fly, while the nets yielded a supply for the markets far in advance of the catch during any season for the past twenty-five years.

A PET BEAR ON A TEAR.—The Ashtabula Record says: Some time ago Councilman Manning, agent of the Lake Shore Company at the Harbor, bought a cub bear and kept it near the Harbor depot. On Friday the bear escaped from its confinement, and going over into the road on the east side of the river proceeded along it until the farm of Albert Fields was reached. Here it turned off, and going to the house, of which the doors were left open, proceeded to take possession. Mrs. Luce, the wife of the tenant of the farm, was alone in the house, and one can imagine her astonishment and feeling at seeing a half grown bear walk in. The dinner table had not been cleared away, and his bearship at once took control of matters, getting upon the table, and after eating everything within his reach demolished most of the dishes. Evidently entering heartily into the spirit of demolition, he next tackled a sewing machine, which was soon in ruins, and then chairs, stands and other furniture went down under his paws, until in a short time the interior of the house looked as though it had been struck by a cyclone. During this time Mrs. Luce was, of course, unable to prevent the doings of Mr. Bruin, and just as she was giving up in despair her husband returned and succeeded in cornering the bear, which, though young and destructively mischievous, was not savage. A visit from a live bear is an extraordinary occurrence for this section, and, judging from this one, is not very desirable.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 22.—Eight annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 16, 17, 18 and 19.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club. S. R. Hemingway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club. Edward A. Moseley, Secretary, Boston, Mass.

April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3333.

THE ENGLISH SETTER STANDARD.

WE have carefully read the standard for the English setter submitted by the committee of the American Kennel Club and must say that we are greatly disappointed. We had a higher opinion of the ability and intelligence of the committee men than the result of their labors seems to warrant. A document of this kind, above all else, should be entirely free from ambiguities and couched in language that is perfectly plain to all. Some portions of the standard are lamentably deficient in this vital point. This is not its worst fault, however, as a strict adherence to some of its provisions would result in serious harm to the animal it professes to serve. Take the first paragraph in the description of the head which we quote: "The skull is of a peculiar character, not so heavy as that of the pointer and without their narrow and marked prominence of the occipital bone. It is narrow or of medium width between the ears, and should have a decided brow over the eyes." Stonehenge's standard, from which this is largely quoted, is as follows: "The skull has a character peculiar to itself, somewhat between that of the pointer and cocker spaniel, not so heavy as the former's and larger than the latter's. It is without the prominence of the occipital bone so remarkable in the pointer, is also narrower between the ears, and there is a decided brow over the eyes." It will be observed that Stonehenge says the skull "has a character." The new standard calls for a peculiar skull and we have no doubt that if the requirement called for in the following sentences is adopted by the breeder, that the English setter in a few years will not only have a peculiar skull but that it will be without character. Stonehenge says the skull is narrower between the ears than that of the pointer, the new standard calls for a skull "narrow or of medium width." This means less room for brains and indeed a new departure and a most decided breaking away from the old traditions. If the intelligent breeders of the country will consent to revise the characteristic head of the English setter by following such a pernicious course as this points out, we very much mistake their temper. There is no portion of an animal's anatomy so characteristic of its pure breeding as the head; eliminate this characteristic and you have a mongrel; reduce the brain room and you have an idiot after a certain limit is passed. We have had considerable experience with dogs with narrow heads and almost invariably have found them to be deficient in sense, especially in what is called hunting sense, one of the most necessary attributes of the sportsman's companion. Many of these dogs are possessed of abundant ambition to hunt, good noses, and with the pointing instinct strongly developed, but as a rule they cannot be taught to work to the gun. This of itself is enough to condemn them, to say nothing of their lack of intelligence in other matters. A little further on the new standard says: "The jaws should be exactly equal in length, a snipe nose or pig jaws, as the preceding lower one is called, being greatly against its possessor." Aside from the ambiguity of this sentence it is inconsistent with the demand for a narrow head, as a snipe nose will almost surely be the result of this conformation in the English setter.

In addition to the faults noticed in the description of the head there is a painful lack of every necessary information as to the relative value of the different points described. In fact this fault is conspicuous in nearly every sentence throughout the work, and a most serious one it is. Even were the new standard perfect in other respects, this fault would render it absolutely worthless for practical use, as the collection of words means anything or everything according to the fancy of the reader.

The description of the neck commences with a very singular statement. "The importance of a long lean neck has not been fully realized until quite recently," and then to make the matter doubly sure the statement is repeated by adding, "or at all events, there has not been sufficient stress laid upon the point." This statement very forcibly strikes us as being diametrically opposed to the facts in the case. Our acquaintance among breeders and owners during the past forty years has been extensive, and we fail to call to mind a single individual of them all whose expressed opinion would afford the comical of them all particle of ground upon which to base such an assertion. As to the next statement, "Length of neck tends to high-headedness," we refer the reader to the article of "Antwerp" in FOREST AND STREAM of Jan. 14, who places the matter in its proper light. He says:

"Inasmuch as the three upper bones of the forelegs, viz., the shoulder blade, the upper and lower arm, are placed at compensating angles to each other, the greater slope of the shoulder naturally resulting from the altered direction of the true ribs also necessitates a less inverse angle at the elbow. The dog stands straighter on his forelegs from point of shoulder to foot and carries no more weight in front of the perpendicular line of his forelegs than is necessary; how much this I am at loss to define, except after seeing an individual dog's balance when in motion. This conformation also increases the apparent length of the neck and facilitates its high carriage. Length of neck alone does not do this, as I can recall many dogs with a very long clean neck, but with a horizontal back, to whose bad field form but little would have been added by cutting it off altogether."

The section devoted to shoulders and chest is so laboriously studied in its ambiguities and inconsistencies that there is absolutely no tangible ground for intelligent criticism. The last sentence, however, has a definite shape and is quite a curiosity in its way. "A longer dog than the present type of

desirable, but with the additional length and weight in the middle there will follow a tendency to sway-back, which is to be met with a slight arch or additional strength in the back." Whatever is meant by "present type" we are at a loss to understand, as the comparatively recent decisions by judges, members of the committee, shows us quite a variety. The New England foxhound is notably one of the most hardy and enduring breeds of dogs known. A continuous run at speed over the roughest of country of more than a hundred miles is of frequent occurrence. For this work the performer must possess staying powers inherent only in perfect organisms. Had the committee consulted the first experienced foxhunter they chanced to meet, they would have learned that comparatively long dogs, although nearly always in the lead for an hour or two in the morning, could never stay out a long race, but were invariably left behind long before night by their better formed brothers; or had they consulted the English Coursing Calendar they would have found spread upon its pages the record of many a brilliant performance, in first heats, by the style of animal they admire, but they would also have found that where long continued, punishing work was the rule, only well formed and comparatively short animals were in at the finish. The committee appear to have been captivated by the brilliant dash and phenomenal speed that lasts but a brief half hour, but it will be a long time before they will succeed in inducing the sportsmen of this country to sacrifice enduring qualities for mere show.

In the section devoted to back and loin the new standard says: "It is very much the custom to treat of a dog's loin as all that constitutes his back." The committee could have made a very instructive contribution to dog literature by informing us where and among what class of men this custom prevails. These portions of the dog's anatomy play a very important part, but the committee give them but six points as a whole. Upon the loin depends the ability to stay, and of course it follows that without a proper conformation at this point the value of the animal is more or less depreciated, yet the committee tell us absolutely nothing that will serve as a guide to determine the proper form to select except that they inform us that "an arched loin is desirable." In the section devoted to quarters and stifles we are told that "the stifles should be moderately well bent, excessive bend, although fashionable for a time, is no longer thought necessary." It is not clear what the word "moderately" implies; if it means straight stifles or even moderately straight, the word is decidedly out of place. In describing the legs, elbows, hocks and feet, we are told that "the feet should be carefully examined, as upon their capability of standing wear and tear depends the utility of the dog." This is most true, but except a very meager mention of good qualities there is nothing in the description to assist in determining whether the feet are good or the reverse. In the section devoted to the stern we are gravely told that "the tail should be carried straight, or with a slight curve upward, either slightly above level of back or down." We are pleased to note that sideways was not added to the list.

Regarding the numerical value of the points as apportioned by the committee, there is, to say the least, a lack of harmony with the text that is very inconsistent. The standard calls for a longer dog; one of the results of increased length will be increased weight, to support which the committee have taken one point from the feet which must carry it. We have briefly criticised some of the most important points of the new standard, and in conclusion will call attention to the omission of a very important point. There is not a word said regarding the disqualification of animals of faulty formation nor a word as to the penalty to be imposed when the fault is of lesser degree. It should be impossible for a dog to successfully compete for bench show honors when his faults, either natural or accidental, are such as would seriously hamper him in his work.

EASTERN FIELD TRIALS CLUB.

THE report of the Committee on Running Rules, which was unanimously adopted, is as follows:

- Rule 4. Is stricken out entirely.
- Rule 10. To read: Dogs shall be drawn by lot and numbered in the order drawn. Each dog shall run in the first series as a brace with the next available dog in that order, and the winners run in heats again in the order so obtained, except as hereinafter provided. Any dog absent during the first series more than twenty minutes after his number is called, shall be disqualified from further competition.
- Rule 11. If two dogs owned or handled by the same person should come together in the first or any succeeding series, the second dog so owned or handled shall change places with the first dog not so owned or handled in the order of running. If after the first series such separation is found to be impracticable or without benefit, the running together of two such dogs may be permitted.
- Rule 12. If in any series of heats there should be a natural bye, such bye shall run with the winner of the first heat of the previous series as the first brace of the next series.
- Rule 13. Each dog must be brought up in its proper turn without delay; if absent for more than twenty minutes, its opponent shall be entitled to the heat, subject to Rule 10.
- Rule 14. Strike out the sentence: "In Members' Stake a dog must be handled by its owner."

Prefix to Rule 17: "No owner or handler shall be permitted to withdraw his dog or dogs from a stake on the field or at any time during the holding of a trial after such dog or dogs have been allotted a position in any heat or race without the consent of the governing committee on the grounds. Any such owner or handler withdrawing his dog or dogs without the consent of this governing committee may be debarred from any further trials or be penalized at the discretion of the club."

A dog may be withdrawn with the consent of the governing committee on the ground.

Amendments to instruction to judges: "The fifth section was stricken out and the following substituted: "Judges are requested to avoid as far as possible holding a dog so long on a point for the purpose of securing a back or otherwise, as to enable the birds to run."

Dogs should be brought up to back only when opportunity offers, without interfering with the pointing dog. A dog drawing on or pointing game shall be afforded ample opportunity to locate the game, without competition, it being left to the discretion of the judges to direct the opposing dog to be held in check.

THE POINTER STANDARD.

THE committee on the pointer standard recommend that Stonehenge's description of the pointer remain intact, but they advise that the division of points be changed by taking five from the head. Our remarks upon the proposed change of the head of the English setter will apply with equal force to that of the pointer. The committee advise no change in form but merely suggest that less value should be accredited to the head. We do not believe that either of the gentlemen comprising the committee would award a prize to a pointer with bull-terrier lips, pig eyes and spitz ears, no matter were he perfect in all other respects, yet under the standard they propose, such an animal would score ninety-seven out of a possible hundred points, unless the judge saw fit to cut him for symmetry. The improvement of the dog is a most worthy object, anything that tends in the opposite direction is nothing less than a crime. The characteristic head of the pointer is his crowning glory—destroy its character and disastrous results are sure to follow. To take from the value of this most important indicator of pure breeding is certainly a step in the wrong direction.

STANDARD COMMITTEE REPORTS.

BLACK AND TAN SETTER STANDARD.

Skull should not be so heavy as in the Gordons, should be clean cut, with occiput well defined, and good stop. Length of skull from eye to occiput, not less than five and one half inches. Free of top knot.

Muzzle should be straight from eyes to nostrils, without coarseness, should not be less than four inches in length; nostrils should be rather full and black in color; jaws should be exactly equal in length.

Lips should be slightly pendulous.

Eyes should be dark brown in color without the outer yellow circle so often seen in Gordons; should be of good size and mild in expression.

Ears should be set low on the head and lie flat to the cheeks; should be rather longer than the English setter's and well coated with fine silky hair, which should be straight or slightly wavy, extending an inch or two below the flap.

Neck should be of good length, with gradual rise from shoulders to head, and slightly inclined to arch; should not be throaty, but is not expected to be as perfectly free of leather as a pointer's.

Shoulders should be deep, sloping and strong, not so heavy as the Gordon's, and showing great liberty.

Chest should not be wide but deep; ribs well sprung back of the shoulders but not so much as to make the animal appear round in barrel; should extend well back toward the quarters.

Back and Loin should be strong and slightly inclined to arch, a tendency to sway-back being objectionable.

Quarters should be well muscled but not lumbery, muscles extending well down toward the feet.

Legs. Forelegs should be straight, with elbows neither standing out nor under the chest; should be long from point of shoulders to elbows; should be well feathered to the feet. Hind legs should be long from hips to hock joints; stifles fairly well bent. Hock joints neither bending inward nor out, the former being the most objectionable; feather should not be extended below the hocks.

The Feet should be round, hard, arched, and somewhat padded with hair between the toes; should neither point inward nor out, the latter being the most objectionable.

The Stern should be set on in proper place; should be straight and carried on a line with the back, should have a fine, straight, silky flag, any inclination to curl or ropiness being objectionable.

The Coat should be fine and flat.

The Color should be deep plum black, with rich tan markings clearly defined, and without admixture of black, showing on lips front of cheeks, throat, over eyes, on front of chest, on feet and legs, also at vent, but should not extend into the flag more than four inches. Any white is objectionable, but a small spot on the breast should not disqualify an otherwise good dog.

Symmetry and Quality.—The general character and form of the black and tan setter should be very similar to that of the English setter, possibly a shade lighter throughout; very blood-like in appearance, and combining great symmetry and quality.

H. CLAY GLOVER, }
LOWELL T. FIELD, } Committee.

IRISH TERRIER STANDARD.

The Irish Terrier Club's scale of points, and description of the true Irish terrier:

POSITIVE POINTS.		NEGATIVE POINTS.	
Head, jaw, teeth and eyes.....	15	White nails, toes, and feet.....	10
Ears.....	5	Much white on chest.....	10
Legs and feet.....	10	Ears cropped.....	5
Neck.....	5	Month undershot or cankered.....	10
Shoulders and chest.....	10	Coat shaggy, curly, or soft	10
Back and loin.....	10	Uneven in color.....	5
Hind quarters and stern.....	10		
Coat.....	15		
Color.....	10		
Size and symmetry.....	10		
	100	Disqualifying Points.—Nose cherry red. Brindle color.	50

DESCRIPTIVE PARTICULARS.

Head.—Long; skull flat, and rather narrow between ears, getting slightly narrower toward the eye; free from wrinkle; stop hardly visible, except in profile. The jaw must be strong and muscular, but not too full in the cheek, and of a good punishing length, but not so fine as a white English terrier's. There should be a slight falling away below the eye, so as not to have a greyhound's appearance. Hair on face of same description as on body, but short (about a quarter of an inch long), in appearance almost smooth and straight; a slight beard is the only long hair (and it is only long in comparison with the rest) that is permissible and that is characteristic.

Teeth.—Should be strong and level.

Lips.—Not so tight as a bull-terrier's, but well-fitting showing through the hair their black lining.

Nose.—Must be black.

Eyes.—A dark hazel color, small, not prominent, and full of life, fire and intelligence.

Ears.—When uncut, small and V-shaped, of moderate thickness, set well upon the head, and dropping forward closely to the cheek. The ear must be free of fringe, and the hair thereon shorter and generally darker in color than the body.

Neck.—Should be of a fair length, and gradually widening toward the shoulders, well carried, and free of throatiness. There is generally a slight sort of frill visible at each side of the neck, running nearly to the corner of the ear, which is looked on as very characteristic.

Shoulders and Chest.—Shoulders must be fine, long, and sloping well into the back; the chest deep and muscular, but neither full nor wide.

Back and Loin.—Body moderately long; back should be strong and straight, with no appearance of slackness behind the shoulders; the loin broad and powerful and slightly arched; ribs fairly sprung, rather deep than round, and well ribbed back.

Hind Quarters.—Well under the dog; should be strong and muscular, the thighs powerful, hocks near the ground, stifles not much bent.

Stern.—Generally docked; should be free of fringe or feather, set on pretty high, carried gaily, but not over the back or curled.

Feet and Legs.—Feet should be strong, tolerably round, and neither turned out nor in; black toenails are preferable and most desirable. Legs moderately long, well set from the shoulders, perfectly straight, with plenty of bone and muscle; the elbows working freely clear of the sides, pasterns short and straight, hardly noticeable. Both fore and hind legs should be moved straight forward when traveling, the stifles not turned outward, the legs free of feather, and covered, like the head, with as hard a texture of coat as body, but not so long.

ered, like the head, with as hard a texture of coat as body, but not so long.

Coat.—Hard and wiry, free of softness or silkiness, not so long as to hide the outlines of the body, particularly in the hind quarters, straight and flat, no shagginess, and free of lock or curl.

Color.—Should be "whole-colored," the most preferable being bright red; next wheaten, yellow and gray, brindle disqualifying. White sometimes appears on chest and feet; it is more objectionable on the latter than on the chest, as a speck of white on chest is frequently to be seen in all self-colored breeds.

Size and Symmetry.—Weight in show condition, from 16lb. to 24lb.—say 16lb. to 22lb. for bitches and 18lb. to 24lb. for dogs. The most desirable weight is 22lb. or under, which is a nice, stylish and useful size. The dog must present an active, lively, lithe and wiry appearance; lots of substance, at the same time free of clumsiness, as speed and endurance, as well as power, are very essential. They must be neither "cloddy" nor "cobby," but should be framed on the "lines of speed," showing a graceful "racing outline."

Temperament.—Dogs that are very game are usually surly or supphish. The Irish terrier, as a breed, is an exception, being remarkably good tempered, notably so with mankind, it being admitted, however, that he is, perhaps, a little too ready to resent interference on the part of other dogs. There is a heedless, reckless pluck about the Irish terrier, which is characteristic, and coupled with the headlong dash, blind to all consequences, with which he rushes at his adversary, has earned for the breed the proud epithet of "The Dare-Devils." When "off duty" they are characterized by a quiet carelessness-inviting appearance, and when one sees them endearingly, timidly pushing their heads into their masters' hands it is difficult to realize that on occasion, at the "set-out," they can prove they have the courage of a lion, and will fight out to the last breath in their bodies. They develop an extraordinary devotion to, and have been known to track their masters almost incredible distances.

POINTER STANDARD.

G. Edw. Osborn, Esq., Secretary A. K. C.

The committee appointed by the A. K. C. on a standard for judging pointers, beg to report that so far as they have been able to learn the opinions and wishes of prominent breeders of pointers, there is no general desire to change, materially, the standard as laid down by "Stonehenge."

In the opinion of your committee, the description of the pointer as given by Mr. Welsh is satisfactory, but they think that in the division of points, too much has been accredited to the head—the division as given by "Stonehenge" being: Skull, 10; nose, 10; ears, eyes and lips, 4; in short, an allowance of one-fourth the full number of points for head alone.

We recommend that five points be taken from the number heretofore allowed for head, and transferred to those parts to which it is thought not a sufficient number of points have been allowed by "Stonehenge."

We recommend that the points of the pointer should be as follows:

Skull.....	8
Nose.....	8
Ears, eyes and lips.....	3
Neck.....	6
Shoulders and chest.....	18
Back, quarters and stifles.....	17
Legs, elbows and hocks.....	12
Feet.....	8
Stern.....	5
Symmetry and quality.....	7
Texture of coat.....	3
Color.....	5

100
ROBERT C. CORNELL,
E. F. STODDARD.

THE MEMBERS' STAKE RULES.

THE adoption by the Eastern Field Trials Club of the rule allowing a dog entered in the Members' Stake to be handled by a member not his owner is certainly a step in the wrong direction. The spirit of this rule is unquestionably opposed to the principal object had in view when this stake was inaugurated. As its title implies, it is exclusively for the members of the club, and its main object is to foster a spirit of generous rivalry among them, while contesting for its honors, for the purpose of improving their skill in handling their dogs in the field. The winning of this stake should carry far more honor than the mere ownership of a winning dog implies. Any one with plenty of money can own a good dog; but hard cash, although a very desirable adjunct, can never of itself constitute the sportsman.

It should be the aim of the club to enhance instead of depreciate the value of honors won at their field trials. The Eastern Field Trials Club was not established for the sole purpose of improving the pointer and setter. There was still another object in view, and that was to increase the interest in legitimate sport with dog and gun. The best manner in which to accomplish these objects is a question that should be carefully considered by the club before deciding upon any matter that may come before it. With earnest, well-directed effort to accomplish these objects the club has grown from year to year to its present high estate, and no record of backward steps should mar the pages of its history.

EXCESSIVE TAXATION.—Cohocton, N. Y.—*Editor Forest and Stream:* I write to ask, if, in your opinion, there is any honorable and legitimate way for any one wishing to establish a breeding kennel to avoid paying the excessive taxes that the laws in most counties of this State impose. The law in this town, for instance, levies a tax of fifty cents on a dog, and three dollars on a bitch; for each additional dog or bitch the amount is doubled, one dollar for the second dog, two dollars for the third and so on; six dollars for the second bitch, twelve for the third, etc. At this rate a kennel containing, for example, six dogs and six bitches, would have to pay an annual tax of \$220.50. Now this is manifestly an unjust law, and I would like to know if you or any of your readers who have been obliged to grapple with the question can suggest any means by which it may be honorably avoided.—STUBBEN. [We should labor with the county supervisors to change the law, which is manifestly harsh and unjust.]

THE NEWARK DOG SHOW.—New York, Feb. 12.—*Editor Forest and Stream:* The following gentlemen have kindly consented to judge at Newark: Mr. John Davidson, Monro, Mich., pointers and setters; Mr. James Mortimer, Babylon, L. I., fox-terriers, Yorkshire terriers, pugs and toy dogs; Mr. J. A. Stovell, Philadelphia, Pa., beagles, judged by the American English Beagle Club standard. The Philadelphia & Reading Express Company has issued an order to carry dogs boxed from all P. and R. points to the Newark show at regular rates, and will return them to points of shipment free of charge.—A. P. VREDENBURGH, Secretary.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large number of blanks. In ordering be careful to state what particular series of blanks is desired, i. e., whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be retained for future reference.

THE AMERICAN-ENGLISH BEAGLE CLUB.—The beagle club have sent the following circular to members:—Dear Sir: To more fully carry out the objects for which we are organized, it seems only proper we should work together to accomplish them. It is advised that all our members give their support only to those bench show managers (by exhibiting their dogs) who will or have granted our requests by giving the classes named in our constitution, accepting our standard, and allowing our club to appoint (through the president) a judge of beagles. That our requests are not unreasonable is found in the fact that the Hartford K. C., New Haven K. C., New England K. C., New Jersey Kennel and Field Trial Club have given us the classes asked for, accepted our standard and have allowed our club to name the judge for beagles (from among our members) at their coming shows. By their doing so we have met with success, and what they have done others can do also. In order to secure our just claims we should withhold our support from all bench show managers who will not do the same. We cannot accomplish our object in any other way and we being the ones most directly interested in having proper classes and awards made according to our standard, and by those who are members of the club, we hope you will give us your full support by not entering your dogs at those shows whose managers will not grant our request. In conclusion we advise the club to donate special prizes at all shows whose management are in accord with us, and set forth in this circular. We remain, very truly yours, Dr. C. E. Nichols, Chairman, W. H. Ashburner, F. W. Streeter, A. Winsor, Herman F. Schellhass, Executive Committee.

THE ST. LOUIS DOG SHOW.—St. Louis, Mo., Feb. 13.—*Editor Forest and Stream:* The St. Louis Gun Club's third annual bench show of dogs will be held in Exposition Hall, May 18, 19, 20 and 21. This will give a rest of nearly two weeks after the New York show. The entrance fee this year will be two dollars, the admission at the door twenty-five cents, and the price of the catalogue ten cents. These are three important changes from last year. The premiums will probably be the same as at the New York show. We are waiting to see the prize lists from all the shows before we arrange ours. It is too early to promise anything definite about specials. We are promised valuable assistance in this line, however, and we believe our list this year will be attractive. No details whatever have been arranged as yet. We only decided yesterday to hold the show. As soon as we have any information to impart we will send it to you. We shall try to procure able judges for all the classes, and we hope owners of dogs will help us out with entries. St. Louis ought to be able to secure a very large number of Western dogs alone, and we expect some Eastern entries—if prizes worth winning will bring them. May is a very pleasant month to visit St. Louis, and Exposition Hall is one of the best in America for a dog show.—Geo. Munson, Manager.

THE PITTSBURGH DOG SHOW.—The twelfth annual dog show of the Western Pennsylvania Agricultural Society, to be held at Pittsburgh next month, promises to be a successful one. In addition to the liberal premium list a large number of special prizes will be given; among them are two of \$50 each for the best kennel of mastiffs and the best kennel of St. Bernards, each to consist of three or more. Mr. B. F. Wilson and Major J. M. Taylor will judge all setters, Major Taylor the pointers, foxhounds and beagles, Mr. James Mortimer taking the remaining classes. The entries close March 8. Mr. L. F. Whitman will superintend the show. The secretary's address is Mr. C. B. Elben, Lock box 303, Pittsburgh, Pa.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Judy B. By Fred Bollett, Brooklyn, N. Y., for blue and tan Skye terrier bitch, whelped Jan. 1, 1885, pedigree unknown. This bitch was brought from England to me by a friend.—F. B.

Bang Shot. By A. S. Hoffman, Morrisville, Pa., for black and white English setter bitch, whelped Nov. 30, 1885, by Antie (Prince)—Pebble out of Polly (Duck Laverack)—Clio.

Doris. By E. C. Alden, Dedham, Mass., for black pointer bitch, whelped Nov. 15, 1885, by Pete, Jr. (Strong's Pete)—J. L. Woodbridge's Nellie out of imported Kate.

Tam O'Shanter. By J. O. Fellows, Hornellsville, N. Y., for white, orange ticks, English setter dog, whelped April 20, 1885, by Wagner (A. K. R. 229) out of Iena (A. K. R. 230).

Niagara Falls. By P. M. Buckle, Niagara Falls, Ont., for black cocker spaniel dog, whelped Sept. 1, 1885, by Silk (A. K. R. 1397) out of Black Daisy (Bonanza, A. K. R. 64)—Pansy.

Dot S. By T. P. Lyman, Goshen, Mass., for white, black and tan beagle bitch, whelped Sept. 13, 1885, by imported Kink out of Bessie (Racket)—Fly (A. K. R. 1012).

Fairy. By Jesse D. Welch, New Haven, Conn., for white, black and tan fox-terrier bitch, whelped Feb. 15, 1885, by Mixture (Spice)—Fairy III. out of Nellie (A. K. R. 1704).

Alora. By J. F. Butler, Waverly, Mass., for white, even marked head, fox-terrier bitch, whelped June 1, 1885, by imported Joy out of Young's Venus.

Yum Yum. By Ideal Kennels, New Haven, Conn., for liver and white cocker spaniel bitch, whelped June 20, 1885, by Ann (A. K. R. 1107) out of Floss (A. K. R. 1104).

Laura A. By Sarah H. Kennels, Bridgeport, Conn., for lemon and white English setter bitch, whelped Jan. 18, 1885, by Dash (Morford's Don)—Lily out of Dot (Prince)—Flora.

Dandy Jim. By Chas. F. Oat, Belmont Hunt, West Chester, Pa., for black and tan foxhound dog, whelped Nov. 26, 1885, by Dixey Jim (A. K. R. 2215) out of Fly (Hero)—Fanny.

Musie. By Chas. F. Oat, Belmont Hunt, West Chester, Pa., for tan and white foxhound bitch, whelped Nov. 26, 1885, by Dixey Jim (A. K. R. 2215) out of Fly (Hero)—Fanny.

Benny. By J. B. C. Lambert, Glastonbury, N. Y., for black cocker spaniel dog, whelped Nov. 19, 1885, by Kiddewink (A. K. R. 937) out of Gretchen (A. K. R. 996).

Virginia. By C. W. Littlejohn, Leesburg, Va., for lemon and white pointer dog, whelped Nov. 15, 1885, by Fritz (A. K. R. 1351) out of Virginia (A. K. R. 1357).

Eva. By N. Elmore, Granby, Conn., for white, black and tan beagle bitch, whelped Sept. 6, 1885, by Judge (Rattler)—Rena out of Dot II. (Ringwood, A. K. R. 2303)—Dime I.

Schneider. By W. J. Percival, Stanton, Mich., for liver and white pointer dog, whelped Oct. 5, 1885, by Tammany (Tory)—Moonstone out of Erie (Rake II)—Buff Browney.

Empire State Kennels. By Nelson V. Ketchum, Savannah, Ga., for his breeding kennels of bulldogs, Skye terriers and spaniels.

Woodbrook Kennels. By W. E. Stewart, Differdter, Baltimore, Md., for his kennels of English beagles.

BRED.

Notes must be sent on the Prepared Blanks.

Marquette Blanche—Silk. G. J. Northrop's (Marquette, Mich.) cocker spaniel bitch Marquette Blanche (Brug)—Lady Bath to Hornell Spaniel Club's Silk (A. K. R. 1397).

Bess—Fanny. Dr. E. J. Bealington's (New York) smooth-coated St. Bernard bitch Bess (A. K. R. 1808) to Mill Brook Kennels' Venne (A. K. R. 418), Feb. 10.

Bessie—Jock. F. Morris's (Hornellsville, N. Y.) cocker spaniel bitch Bessie (Jack)—Penwell's Joie to Hornell spaniel Club's Jock (A. K. R. 1877), Jan. 16.

Judy—Silk. C. Clark's (Hornellsville, N. Y.) cocker spaniel bitch Judy (Silk, A. K. R. 1397)—Dinah (A. K. R. 66) to Hornell spaniel Club's Silk (A. K. R. 1397).

Fairy—Baby Tyrant. Jesse D. Welch's (New Haven, Conn.) fox-terrier bitch Fairy (Mixture)—Nettie (A. K. R. 1704) to John H. Thayer's Baby Tyrant (Baillif II.—Peach), Dec. 16.

Peg—Toots. C. F. Lambert's (Glastonbury, Mass.) pointer bitch Peg (Haskell's Ransom—Shaw's Julie) to Julius E. Wilson's Toots (A. K. R. 21), Feb. 1.

Nellie D.—William Tell. J. H. Jewett's (Worcester, Mass.) pointer

bitch Nellie D. (Vandevort's Don—Beckworth's Daisy B.) to C. A. Parker's William Tell (A. K. R. 2610), Feb. 1.

Lady Antrim—Mack B. J. B. Farnsworth's (Pawtucket, R. I.) English set ter bitch Lady Antrim (Lindo—Belle) to Blackstone Kennels' Mack B. (Duck Laverack)—Twilight, Feb. 1.

Rhea—King Coal. F. M. Caldwell's (Philadelphia, Pa.) black cocker spaniel bitch Rhea (McBells's Doctor—Tuppence) to Wm. West's King Coal (A. K. R. 2585), Feb. 11.

Musie—Ringwood. A. E. Bowler's (Boston, Mass.) beagle bitch Musie (Racer)—Beulah to N. Elmore's Ringwood (A. K. R. 2302), Jan. 15.

Mollie Laverack—Prince Napoleon. Henry Sturtevant's (Medina, N. Y.) English setter bitch Mollie Laverack (Perfection)—Lit Laverack to T. H. Adams's Prince Napoleon (A. K. R. 2371), Jan. 30.

Judy B.—Bob. Fred Bollett's (Brooklyn, N. Y.) imported Skye terrier bitch Judy B. to Senator Pierce's imported Bob, Nov. 5.

Fannette—Dashing Monarch. Rancocas Kennels' (Jobstown, N. J.) English setter bitch Fannette (A. K. R. 2333) to their Dashing Monarch (A. K. R. 2348), Feb. 10.

Comassie—Stormy Petrel. Rancocas Kennels' (Jobstown, N. J.) English setter bitch Comassie (A. K. R. 949) to their Stormy Petrel (A. K. R. 2427), Jan. 10.

Twig—Fred. Coughour Medicine Co.'s (Eau Claire, Wis.) pug bitch Twig (A. K. R. 3306) to Miss Lizzie Plankinton's Fred, Jan. 14.

Clara Belle—Glencho. E. F. Weiss's (Cincinnati, O.) Irish setter bitch Clara Belle (A. K. R. 1839) to W. H. Pierce's Glencho (Elcho—Noreen), Jan. 6.

Lucretia Gladstone—King Noble. E. F. Weiss's (Cincinnati, O.) English setter bitch Lucretia Gladstone (A. K. R. 1372) to J. I. Case, Jr.'s, King Noble (Count Noble—Hosatid), Jan. 23.

WHELPS.

Notes must be sent on the Prepared Blanks.

Midget. J. C. Vail's (Warwick, N. Y.) pointer bitch Midget (A. K. R. 703), Feb. 5, eleven (six dogs), by A. E. Godeffroy's Croxeth; all liver and white.

Blossom. Wm. B. James's (Philadelphia, Pa.) fox-terrier bitch Blossom (Crisp—Vic), Jan. 28, three dogs, by Wallace's Cyp (Tun—Nagel).

Doris. E. C. Alden's (Dedham, Mass.) black pointer bitch Doris (Pete, Jr.—Kate), Jan. 28, fifteen (ten dogs), by his Crostone (Joe Pape)—Nellie Pape.

Edith. Chas. E. Taylor's (Bath, Me.) cocker spaniel bitch Edith (Brush II.—Olivia), Jan. 30, seven (five dogs), by W. H. Beede's Beau (Ralf)—Belle.

Lucy. Coughour Medicine Co.'s (Eau Claire, Wis.) St. Bernard bitch Lucia (A. K. R. 2491), Feb. 1, four (one dog), by their Otto II. (A. K. R. 2489).

SALES.

Melrose Ilford. Fawn mastiff dog, whelped Dec. 19, 1885, by Ilford Caution (A. K. R. 2930) out of Brenda II. (A. K. R. 2219), by Pine Hill Kennels, Melrose, Mass., to Chas. M. Gilman, Southport, Conn.

Ilford Samson. Fawn mastiff dog, whelped Dec. 19, 1885, by Ilford Caution (A. K. R. 2930) out of Brenda II. (A. K. R. 2219), by Pine Hill Kennels, Melrose, Mass., to W. F. Kral, Houston, Tex.

Folley. Lemon and white English setter bitch, whelped April 6, 1885, by Antie out of Princess Mix, by estate of Prof. H. J. Rice to A. S. Hoffman, Morrisville, Pa.

Thoroughbred. Liver and white English setter bitch, whelped May 23, 1885, by Dash III. out of Aloe, by estate of Prof. H. J. Rice to A. S. Hoffman, Morrisville, Pa.

Lightfoot and Princess Mix II. Black and blue belton English setter bitches, whelped April 6, 1885, by Antie out of Princess Mix, by estate of Prof. H. J. Rice to A. S. Hoffman, Morrisville, Pa.

Polly. Black and blue belton English setter bitch, 4 yrs. old, by Dick Laverack out of Clio, by estate of Prof. H. J. Rice to A. S. Hoffman, Morrisville, Pa.

Casina. Black and white English setter bitch, 3 yrs. old, by Jester out of Kathleen, by estate of Prof. H. J. Rice to A. S. Hoffman, Morrisville, Pa.

Pebble. Blue belton English setter bitch, whelped Sept. 14, 1881 (A. K. R. 49), by estate of Prof. H. J. Rice to A. S. Hoffman, Morrisville, Pa., and resold by him to Geo. F. Clark, St. George's, Del.

Snowflake and Rainbow. Stone fawn pug bitches, whelped Jan. 4, 1886, by Bessie (A. K. R. 473) out of Patsy (A. K. R. 2348), by Kentucky Pug Kennels, Newport, Ky., to Chas. E. Tutbill, Walnut Hills, Cincinnati, O.

Kino—Bessie whelp. White, black and tan beagle bitch, whelped Sept. 18, 1885, by J. Scatterthwaite, Jenkintown, Pa., to T. P. Lyman, Goshen, Mass.

Dutch. Jr. (A. K. R. 1887)—Little Nell (A. K. R. 2905) whelps Bull-terrier dogs, whelped July 12, 1885, by T. R. Varick, Manchester, N. H., one to H. W. Holden, New York; one to Percy Weeks, Haverhill, Mass.; and one to Dr. C. B. Hammond, Nashua, N. H.

Frank. Red Irish setter dog, age and pedigree unknown, by W. G. Smith, Maryland, to Associated Fanciers, Philadelphia, Pa.

Zero. Red Irish setter dog, whelped Jan. 14, 1883, by Grafton out of Megs, by W. G. Smith, Maryland, to Associated Fanciers, Philadelphia, Pa.

Dawntress. Black and tan beagle dog, whelped Aug. 18, 1885, by Grand Duke out of Gipsy, by A. C. Krueger, Wrightsville, Pa., to Associated Fanciers, Philadelphia, Pa.

Basso. Black and tan beagle dog, whelped Aug. 18, 1885, by Grand Duke out of Gipsy, by A. C. Krueger, Wrightsville, Pa., to Associated Fanciers, Philadelphia, Pa.

Bonanza. Black field spaniel dog, whelped January, 1881, by Watermark out of Nellie, by Geo. W. Schenk, Burlington, Ia., to Associated Fanciers, Philadelphia, Pa.

Leoni. Black, white and tan beagle bitch, whelped September, 1885, by Bross's Prince out of I. O. Lutha, by W. J. Percival, Stanton, Mich., to Ingram Bros., Wahpeton, Dak.

Don. Black, white and tan beagle dog, whelped Aug. 3, 1885, by Dandy out of B-a-u-t-y, by W. J. Percival, Stanton, Mich., to Ingram Bros., Wahpeton, Dak.

Toot. Black, white and tan beagle bitch, whelped April 28, 1885, by imported Ringwood out of Collette, by W. J. Percival, Stanton, Mich., to M. Hovers out of Gipsy, by A. C. Krueger, Wrightsville, Pa.

Schneider. Liver and white pointer dog, whelped Oct. 5, 1885, by Tammany out of Erie, by T. F. Kivers, Bridgeport, Conn., to W. J. Percival, Stanton, Mich.

Bo Peep. Black, with white trim, cocker spaniel bitch, whelped Nov. 19, 1885, by Kiddewink (A. K. R. 996) out of Gretchen (A. K. R. 997), by Mignon Kennels, Cortland, N. Y., to J. V. M. Gilchrist, Johnsons, N. Y.

Bolton—Lacy whelp. Black and white Great Dane dog, whelped Nov. 28, 1885, by Associated Fanciers, Philadelphia, Pa., to F. W. Fonda, St. Augustine, Fla.

Fritz (A. K. R. 1351)—Virginia (A. K. R. 1357) whelps. Lemon and white pointer dogs, whelped Nov. 15, 1885, by C. W. Littlejohn, Leesburg, Va., one to E. J. Marsh and one to J. B. Wickery, Chicago, Ill.

DEATHS.

Pete, Jr. Black pointer dog, whelped June 21, 1877 (Strong's Pete)—J. L. Woodbridge's Nellie, owned by E. C. Alden, Dedham, Mass., on Jan. 18.

Musie. Black, white and tan beagle bitch (A. K. R. 1411), owned by H. F. Schellhass, Brooklyn, N. Y., Feb. 14; killed by the cars.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

J. H. B. Belmont, N. Y.—We think the outlook for recovery in your dog is bad. Probably the spinal cord is permanently injured from the accident when he was so young. You may try, however, the following applications of electricity to the undeveloped leg and daily applications of calomel to the injured limb.

J. H. B. Belmont, N. Y.—I have a setter dog troubled with mange disease of the perspiring glands. I should judge from symptoms. The skin on back is greatly thickened and the hair keeps coming out. The dog is constantly scratching himself and rolling. Have been treating with arsenic (Kowler's solution), twenty-four drops a day, maximum dose twelve drops morning and night, it has helped him greatly but not cured him yet. As you are giving too much arsenic. Give five drops night and morning in the food. A good wash for the skin is composed of sulphur two drams, camphor two drams, glycerine a half ounce, rose water to make eight ounces. Apply locally with soft sponge night and morning and keep the parts soft with vaseline rubbed gently into the skin. Shake the sulphur mixture before using.

J. H. B. Belmont, N. Y.—Pug dog, two years old, weighs 21 lbs. Do not know how long he has been sick. Does not shiver. Great difficulty in breathing. Bad cough and wheeze. Constipated. Appetite good. Persists in lying on his belly. Does not have flus. Matter runs from eyes very thick. Scratches himself a great deal. Breath smells very offensive. Nose cold and clammy. Skin dry. Ans. Give a dose of castor oil or buckthorn, a dessert spoonful to a tablespoonful, according to effect produced, the object being to secure thorough evacuation of the bowels. The whole trouble seems to be due to his constipation. After purging, give 5 drops of Fowler's solution of arsenic twice daily in the food. The latter should consist of boiled corn meal with a few bits of lean meat mixed in. The food should be served cold and may be moistened with milk if convenient. Do not feed much meat. The rest of the diet be fluid, milk, soups, gruel, etc. Give plenty of exercise.

Rifle and Trap Shooting.

RANGE AND GALLERY.

JAMESTOWN, N. Y., Feb. 13.—At the regular medal match of our rifle club yesterday, a match was shot with Elgin, Ill., 30yds, off-hand, Hinman target, possible 100:

THE TRAP.

NATIONAL GUN ASSOCIATION.

Editor Forest and Stream:

A meeting of the stockholders of the National Gun Association was held at Covington, Ky., Jan. 12, 1886, at 8 P. M., in pursuance of published notice, and sent to individual stockholders. There were present in person or by proxy, the following: J. E. Bloom, Cincinnati, O.; F. C. Etheridge, T. B. Blackshear, J. A. Onlerdonk, J. C. Johnson, R. F. Lawton, N. B. Wheeler, J. C. Jones, M. R. Freeman and J. P. O'Connell, Springfield, O.; The Ligowski Clay Pigeon Company, Cincinnati, O.; G. E. Reading, Flemington, N. J.; Julian H. Gates, Hartford, Conn.; J. N. Frye, Boston, Mass.; H. W. Eager, Worcester, Mass.; E. A. Crawford, Tallahassee, Fla.; F. W. Barrow, Philadelphia, Pa.; C. E. Verges, Lowell, O.; B. R. Putham, Texas; Wm. G. Cooper, Savannah, Ga. These represented a total of 133 shares, which, being more than the quorum required by the constitution, the meeting then proceeded to the election of directors for the ensuing year. The following were unanimously elected: Judge Matt R. Freeman, W. W. Parker and F. C. Etheridge, Macon, Ga.; E. A. Crawford, Tallahassee, Fla.; Wm. G. Cooper, Savannah, Ga.; L. E. Russell, Springfield, O.; C. M. Stark, Winchester, Mass.; J. Von Lengerke, New York City; W. A. Coster, Flatbush, L. I. After the reading of an interesting report from General Manager and Treasurer, Judge Matt R. Freeman, the meeting adjourned until the 15th inst.

A meeting of the Board of Directors of the National Gun Association was held at Macon, Ga., Feb. 1, 1886. Present in person or by proxy: Matt R. Freeman, F. C. Etheridge, W. W. Parker, E. A. Crawford, Wm. G. Cooper, S. E. Russell and W. A. Coster. Upon motion it was unanimously resolved that the office of Secretary and Treasurer be made one and the same in place of General Manager and Treasurer as heretofore. The election of officers resulted as follows: President, Dr. S. E. Russell, Springfield, O.; General Manager, Matt R. Freeman, Macon, Ga.; Secretary and Treasurer, F. C. Etheridge, Macon, Ga.; Executive Committee, Matt R. Freeman, F. C. Etheridge, W. W. Parker, Wm. G. Cooper, S. E. Russell and W. A. Coster. Upon motion it was unanimously resolved that the office of Secretary and Treasurer be made one and the same in place of General Manager and Treasurer as heretofore. The election of officers resulted as follows: President, Dr. S. E. Russell, Springfield, O.; General Manager, Matt R. Freeman, Macon, Ga.; Secretary and Treasurer, F. C. Etheridge, Macon, Ga.; Executive Committee, Matt R. Freeman, F. C. Etheridge, W. W. Parker, Wm. G. Cooper, S. E. Russell and W. A. Coster. Upon motion it was unanimously resolved that the office of Secretary and Treasurer be made one and the same in place of General Manager and Treasurer as heretofore. The election of officers resulted as follows: President, Dr. S. E. Russell, Springfield, O.; General Manager, Matt R. Freeman, Macon, Ga.; Secretary and Treasurer, F. C. Etheridge, Macon, Ga.; Executive Committee, Matt R. Freeman, F. C. Etheridge, W. W. Parker, Wm. G. Cooper, S. E. Russell and W. A. Coster. Upon motion it was unanimously resolved that the office of Secretary and Treasurer be made one and the same in place of General Manager and Treasurer as heretofore. The election of officers resulted as follows: President, Dr. S. E. Russell, Springfield, O.; General Manager, Matt R. Freeman, Macon, Ga.; Secretary and Treasurer, F. C. Etheridge, Macon, Ga.; Executive Committee, Matt R. Freeman, F. C. Etheridge, W. W. Parker, Wm. G. Cooper, S. E. Russell and W. A. Coster. Upon motion it was unanimously resolved that the office of Secretary and Treasurer be made one and the same in place of General Manager and Treasurer as heretofore. The election of officers resulted as follows: President, Dr. S. E. Russell, Springfield, O.; General Manager, Matt R. Freeman, Macon, Ga.; Secretary and Treasurer, F. C. Etheridge, Macon, Ga.; Executive Committee, Matt R. Freeman, F. C. Etheridge, W. W. Parker, Wm. G. Cooper, S. E. Russell and W. A. Coster. THE STEAM YACHT CARMEN.

STEAM yacht designing is a study that has as yet received comparatively little attention in America, but which is becoming each year of increasing importance, as more and more money is invested in steam yachting. Of our already extensive fleet there are few that are not open to criticism as to design in all its details of hull, engines, boilers, living room, etc., and too great a number by far show very plainly how they were built, and the lack of any proper planning or competent superintendence in the design. Thus far steam yacht designing has not been made a specialty at it should be, but when a boat is built it is put together in a haphazard sort of way that is only too visible on a casual inspection. One man is called on to design or whittle, as the case may be, a hull so long; another is called on for an engine, about so many horse power; still a third furnishes a boiler; perhaps the rig is looked after by the man who will command her, and the interior is furnished in about the same style. Each person concerned may be fairly competent, but he does his work with little regard to any other part, and though in itself it may be well done, the result is an utterly incongruous whole, generally an excellent starting point for future alterations of an expensive nature. The problem involved in the design of a modern steam yacht is a very complicated one, owing to the many diverse ends and conflicting requirements. Speed is always a most important requisite, good sea-going powers are absolutely indispensable, accommodation for owner and crew is a most important point on a long voyage, yet at the same time an easy model must be preserved.

The engine and bunker space must be as small as possible, and in them must be condensed a powerful engine, little liable to break down under long and heavy strain; boilers that shall furnish steam freely with sea water and whose coal consumption shall be as low as possible.

Besides this, the model must be such that a fair speed may be attained under sail alone; and the rig must be a good and efficient one, not only for economy on long runs when no steam is used, but in case of accident to the engines in bad weather. As the vessel is a yacht, a certain amount of beauty is also demanded in the model and rig. To insure a fair average of all of these essentials, the design must be the work of one controlling mind, which shall harmonize all these features into a symmetrical whole, in which no part unduly predominates and none is neglected; and to do this is the province of the trained naval architect. Only too frequently we see a hull in which model and speed have been entirely sacrificed to a large saloon and elegant staterooms, or cases where engine and boiler have no relation to each other, resulting in a minimum of speed and a maximum of coal bill. The most important point in all naval design is harmony of details, whether in a sailing or steam vessel, and this can only be attained by the action of one competent mind. With small yachts and launches of comparatively little cost errors are of minor importance; but when we come to the design of large yachts, and aspire to lead the world in size and speed, the question of design, as involving not merely the first but the future outlay and the value and efficiency of the yacht, is one of prime importance.

As yet our steam fleet is but poorly represented in one very useful class of yacht, the auxiliary cruiser, capable of long voyages and giving good accommodation with a small fuel consumption. This class, to which the yacht here illustrated belongs, is already a large one in England, and many long cruises have been made by these vessels. The Carmen was designed by Mr. J. Beavor Webb to the order of Sir Thomas Freke, the order being for the most powerful and seaworthy yacht that could be built of 200 tons, a voyage from England to the China seas being contemplated. Besides some 20 tons of stores, furniture and baggage she was to carry a sufficient amount of coal for a long voyage. Carmen was built of iron by Messrs. J. Reid & Co., of Glasgow, her engines being built by Walker, Henderson & Co., of the same place. She is 144ft. over all, 110ft. waterline, 20ft. beam and 11ft. draft. Her displacement is 208 tons, indicated horsepower 193 and working pressure 80 lbs. The engines are compounded 14 and 28 by 31in. The hull is fitted with three iron bulkheads, one at each end of the engine space and one aft.

The interior arrangements are excellent, both for her owners, guests and crew of fifteen. The latter are berthed in hammock beds in the bow, standing in a large fore-cabin, forward of which they have a washroom and w. c., while at its after end is the captain's room, neatly fitted, the space under the bed, both here and in all other parts of the ship having large drawers. Aft the captain's room is a dresser, the galley being above in the deck house. The forward saloon, in which is a dining table, opens into four large staterooms, each fitted with bed, drawers, toilet table, wardrobe and washstand. The boilers and engine occupy no more than their fair share of space, abreast of them being the engine room and fireman's rooms and bunkers for forty-two tons of coal, sufficient for about 2,700 knots steaming. The main saloon aft of the engines is 11ft. x 19, handsomely furnished with a fireplace and mantle, sofas, tables, sideboards and closets, making a pleasant resort in any weather. The owner's cabin is a good-sized room, with bed, toilet table, etc., and with a bathtub below the flooring. The pantry and passage take up the opposite side of the yacht, and further aft is a roomy ladies' cabin, with two berths, two sofas, toilet, etc. Aft of this are closets, store-rooms, and a room for the maids. The deck room is large, and affords a fine promenade in good weather. The Carmen carries four boats, a gig 24ft. x 4ft. 3in., a dinghy 14ft. x 4ft. 6in., a cutter 18ft. 6in. x 5ft. 6in., and a steam launch 24ft. x 5ft. 6in. The galley and coal box on deck are shown in the upper plan.

Carmen was sold by her owner to Sir Richard Bulkeley, who made a long voyage in her last winter. She ran from Plymouth to Gibraltar in 4 days 13h., thence proceeded to Madeira and Santa Cruz, and from the latter place to Barbadoes, making the last run in 18 days 4h. After a cruise in the West Indies she returned home, running from Bermuda to Holyhead in 16 days. On the trip she proved herself a perfect sea boat. The cost of such a yacht in England would be £3,000 or \$10,000. With triple expansion engines, her coal consumption would be reduced, and the 42 tons which she carries would serve for about 3,400 knots steaming.

This class of yacht, combining good accommodations with moderate cost both of building, maintenance and fuel, must become very popular here in time. Each year there are more cruises to the West Indies both by sail and steam, and the latter must always have the choice in these busy days. A comparatively short vacation may be utilized to its fullest extent, and even a coming cold wave like that of last week may be quickly dodged for a fortnight in a pleasant climate.

EASTERN Y. C.—The Eastern Y. C. held its annual meeting on Feb. 9, at which the following officers were elected: Commodore, Henry S. Hovey; Vice-Commodore, J. Malcolm Forbes; Rear-Commodore, Wm. F. Weld; Secretary, Edward Burgess; Treasurer, Patrick T. Jackson, Jr.; Measurer, E. Burgess; Regatta Committee, D. Appleton, E. B. Haven, George A. Goddard, Henry B. Jackson, Frank E. Peabody; Members of the Council at Large, C. O. Foster, George P. Cushman, Jr.; Committee on Admissions, J. Malcolm Forbes, F. Cunningham, O. W. Peabody, W. G. Salomon, B. W. Crowninshield, Percival L. Everett, Alan Tucker, F. L. Hargrison, R. S. Russell, E. V. R. Thayer, H. D. Burnham; House Committee, B. W. Crowninshield, P. L. Everett, Francis V. Parker, J. Henry Sleeper, Edward Burgess. The classification of sloops was so altered as to make the first class 75ft. and over and the second class under 75ft.

STEAM YACHT CARMEN, DESIGNED BY J. BEAVOR WEBB, A. I. N. A.

CRUISE OF THE COOT.

XIII.

FOR the following two days no progress could be made. The wind was light and ahead and the tides did not move. It will have been useless to beat down the narrow and winding channel of the river against both, so the time was put in tinkering on various little jobs and a visit to Bordentown for papers and mail. Toward the evening of the second day it fell a flat calm and the temperature went down rapidly, so that two wicks in the stove had to be lit. A threatened cold wave made itself felt during the night. Next morning the river was covered with thin ice. A tow coming up from Philadelphia and the steamer Major Keyhole making landings while plying her regular trips, seemed to keep open a channel broad enough for the Coot to escape had there been a favorable breeze. But not a breath disturbed the scene all day and with misgivings I saw the sun sink in a clear frosty sky, reddening the horizon with a fiery glow of great intensity. The thermometer fell rapidly into the twenties and ice made so fast that an attempt to reach shore in the Orange Blossom for water and oil was frustrated. Although the channel was nearly clear when I shoved off from the yacht, the fresh water of the river solidified with such rapidity that while looking for a suitable spot to land the skiff was surrounded by newly made ice in all directions and pulling through it became a hazardous matter in the light boat. Realizing the impossibility of returning to the yacht after further delay, the expedition had to be abandoned and only after some trouble breaking through the ice, was it possible to force the skiff once more afloat. At the time I did not dream that a severe trial was about to begin, but thought that the morrow might bring a change, as it was still so early in the season.

But the cold wave was in dead earnest and I had no warning of its intensity, having been unable to get late city papers containing the weather forecast. Upon the following morning, the air was frigid, the thermometer showing 21°. The river was closed up entirely and the Coot lay fast in the winter's cold and dismal embrace. This was the fourth day lost and disappointment increased accordingly. In the afternoon the mercury had gone down to 18. All life on the river had long ago ceased. In all the glassy expanse there was not one little black speck, a tortoise looking object with a list of protruding out against the gray background of leafless trees and bushes fringing the low western shore. The tides were very low, and at every ebb the Coot would take the bottom and ease over on her bilge. This was not of any consequence, however, as it did not interfere with life on board. The ice soon became a source of danger. As the water left it there was violent cracking and grinding, great cakes breaking loose from the rest of the ice, and falling with a sound like the surf of the surf, water flowing away under the ice. With the return of the flood these loose cakes would come sailing up the river at top speed, often five and six deep, as they were piled one above the other during their travels back and forth. Locally these piles are known as "shove ice" and this shove ice was the worst enemy I had to encounter. It was impossible to break through these small icebergs, for they rapidly massed till some of them attained a thickness of four or five feet. On the ebb they were not to be dreaded, for most of them stranded.

As the water fell others were content to mass themselves about the Coot's quarters, slowly prying her up by the stern as piece after piece was wedged into the ever growing piles through the enormous pressure of great fields in the rear. This pressure was irresistible, representing tons upon tons, and no vessel can withstand the nip if fast and subjected to the squeeze, least of all such a mite of a thing as the Coot. Fortunately for her, the weather became intensely cold, 8° above zero, and the ice broke up into small pieces, and the ground around the boat for three-fourths of the time. The ice also froze fast beyond the control of the tides wherever it happened to be. This brought peace again while the cold lasted. In the meantime oil and water had given out entirely aboard the yacht. While the ice drove up and down the river and that inside was too much cracked to offer support, all communication with the outer world was cut off. If a thaw set in, matters would remain in *statu quo* for several days. This made my imprisonment anything but reassuring. For ice could not be driven, but there was not a drop of water for the stove. One day and night were passed in misery. Cold provender in cold weather is not calculated to keep up one's courage. Add to this the absence of drink of any kind, no light for the long evening and 18° in the cabin, and the measure is about full. Upon awakening after the coldest night I ever passed between blankets, I was stiff and numb with chill and suffering for warm food and drink. Everything in the cabin was frozen. The sides and top were covered with frost, the interior having the semblance of a vault in the Arctic.

Something had to be done, and that quickly. Anxiously the tide was watched. On the last of the ebb the ice nearly grounded. With rubber boots and clad in all the clothing at command, the skiff was launched off the after deck and headed in shore, with the two-gallon oil can under the thwart. Cautiously at first, and then with more confidence the boat was pushed out ahead and I followed with both hands on the stern, the distorting curves of the ice and the way at the ebb, and off and on I stumbled into holes as the packed ice settled beneath the feet. But without serious mishap the shore was reached by man and sled. Then, almost as a icicle, I trudged across fields hard as rock, clambered clumsily over fences, got torn by wire bars, slipped up on creeks and tripped up by wry vines, until the door of a little hut was approached. It was the dwelling of a ferryman, whose boats were hauled high and dry, and who himself had decamped for more congenial weather, leaving his house in iron clasp and red lock to mock the poor wayfarer for his trouble. With numb feet, very red nose and very blue in mind we tramped along, the can and I, to another building, scarcely discernible through a thick clump of trees. It proved to be a dilapidated shanty, property of a farm hand, with little green bottle-glass panes to the tired looking windows, except where old paper and rags had made up for the absence of glass. Time had evidently been rough on the glass, for the rags and paper stoppers had gone and the shanty was in a sorry state of decay. The front yard—a considerable ditch, prevented the possibility of any yard in the rear—was a ragged, unkempt patch, strewn with bones, ashes, bottles, feathers, and littered with household remnants in general. As I turned into this the prospects for oil vanished at a bound. Such people could not wish to let light in upon the scene any more than compelled to by the diurnal revolution of mother earth. An apology for steps led up to a door, also lined with ice as it hung away from the wall, and I entered. The man at the door, a miserably old fellow, with two or three greasy, sickly, unclean, staring out of inflamed saucer eyes from the middle of the single room which served all the duties of a family establishment. In a whining drawl this dilapidated Venus of the hearth imparted that she had no oil of no kind. "Where was the store?" "Store! Well, let me see." She scratched her head. I backed off a step. "There was a store, she thought, 'hadn't been there in so long couldn't say exactly where; but you went up this road, and then you turned she didn't know where or how far it was."

With these lucid directions and four miles to a hot stove, it looked like freezing stiff, but for the welcome rays of the sun, now passing its zenith. On a slow trot, more dead than alive, I wandered across wide fields, through clumps of trees, from barn and outhouse to barn and outhouse, which stood out like islands all round. Finally I struck a well kept path and signs of civilization which led me up to a small farm house, where the innkeeper, a man of about 40, with a face as red as the doors did, and a red coat, the worthy owner of the soil proceeded to give voluminous directions as to the whereabouts of the store. "Stranger here?" he asked in the middle of a sentence. Yes. Then we entered a great tobacco barn from the cross spalls of which hung the material for thousands of pure Havana cigars, "imported direct by our own house." This barn was in Pennsylvania, but that circumstance could not be expected to affect the flavor of the cigars. From a barrel my rustic filled my can, handing me a tin of "Store" and "always like to oblige a stranger." Of course, we talked tobacco, nothing like "craps" with the farmers, so we parted excellent friends. Now that I had oil, the weather, of course, relented. That same evening there was a sudden change, the wind jumping round to the southeast, and the trouble began. As the ice broke up, each side swept a constantly increasing mass of rubbish up and down stream. The thaw was only partial and the drift ice retained its hardness and sharp edges. For two days it came down upon the Coot four times a day, striking and shattering the ice. The big does twisted round and seemed to be backed right back to the boat, running her a second time midships and then scraping along the sides with such pressure that the Coot rose bodily out of water. One floe, held momentarily in check by the boat or her cables, would cause the following cakes to pile above and beneath, the tide carrying those below swiftly on. Till they punched and scratched and cut the boat in a terrible way. With oar and boathook I was posted on the bow, forward of the mast and sought to part, break up the ice, but I could not.

In such a contest one man's labor went for just naught, and after spending a sleepless night fighting the relentless foe, exhausted and disgusted, I gave up to conditions beyond control. Twenty-five fathoms of cable were veered to each anchor in four feet of water and good holding ground. Yet the Coot was carried half a mile up and half a mile down stream at each tide, the strain on the cables being something enormous. To pass forty-eight hours in momentary expectation of finding the boat on the ice, and the agony of mind intensely aggravated by the knowledge of being powerless to interfere. Canal boats moored to wharves had been cut through and sunk in my sight, then how could the Coot outlive the infliction? She did; but how she did on this and another occasion is a mystery to this day. Perhaps the shape of her body was a protection against

a regular squeeze. She was terribly punished, and in some places the plank was almost chafed through from the constant rubbing of the flinty ice driving by packed several feet deep. Not a vestige of paint was left on the boat's bottom. About the headline she suffered most. In spots she was punched nearly through the plank. A six-inch band of splinters decorated the entrance from the stem to the greatest beam like a bristling beard. My own position was critical. The water was icy. Escape would have been impossible by the skiff or by swimming, and no one on shore could have rendered practical assistance in time. Looking back upon the scene it has lost some of its terrors, though I remember very clearly that at the time the chances for boat and man were so hopeless that I thought nothing short of a miracle could preserve either one or the other. Sicep in the cabin was impossible. The ice sweeping round the bottom made a roar below which was disagreeably suggestive, and every blow the yacht received was like a stab to the soul.

The safest plan when caught in drift ice is to lift or cut the anchors and drive about in the floe. It secures immunity from being cut. But such a proceeding could not be entertained in a narrow river full of bars and projecting points. The boat would have been stranded upon one of these, and the "shove ice" would have become a source of even greater danger, as any one who has seen an ice gorge can well understand. The Coot would have been beached, but the ice, which had been piled up in a fringe and upon which the pack had been heaped, left no loophole for escape. So there was nothing for her to do but to ride it out and abide by the consequences. When finally the river partially cleared, the yacht was at once got out into open water. This the third day after the break up was passed. The worst night of all was the last. The increasing warmth had thawed the ice loose in the Upper Delaware and all this came down stream in a ceaseless procession. It was eight inches thick and very hard. The Coot suffered severely. It looked as though this must prove the last day of the camel's back, and I looked upon the possibility of my fouling the cables, and, owing to its shape and a ridge of fast-frozen shore ice along the upper edge, served for a long time as a fend off to the other ice descending. The rest of the drive was parted by this cake, and most of it sped harmlessly by, several feet clear of the Coot's side. This good fortune probably saved the yacht from destruction.

Four days had been lost. The eighth brought no wind, but tolerably clear water and the ebb at early dawn. A chance to escape down river was at hand at last. Before the lights on shore had flickered their last, sail was made on the boat and her anchors got after much hard pulling and breaking. As the blackness of night faded into gray, the ebb floated the Coot down river for a short distance before the dawn sufficiently revealed a heavy bank of fog rapidly advancing from the southeast. The air suddenly grew damp and disagreeable. In ten minutes more a heavy rain set in, and the mist met from sight. Everything was shrouded in an impenetrable gloom. The fog lay heavy upon the river. As the navigation around and below Newbold's Island is not easy, even to one familiar with the river, it would have been unwise to drift on more or less helplessly through the fog, with the chance of colliding with the tows and steamers about due. So with the long sweep the Coot was sculled close to the island and anchored. Another disappointment, but not the last yet. In an hour the fog lifted, a strong wind from the north-west sending it flying out to sea, whence it originally came. The sun shone out brightly and added his smiling beams to the scene now so propitious for progress down the river. The anchor was quickly got aboard and the boat paid out to the new wind.

There was still plenty of ice knocking about the river. With the ebb more had come down and the old enemy began to show his head once more. For a while everything went well. Then sailing into a private harbor, two large floes, the yacht had to turn and across channel to get through. When ready to come round again there was a slight shock felt through the tiller in my hand. It required only a glance astern to see that the rudder had unshipped, most likely by striking some sunken ice. It could not be turned either way. With a bonnet I was on the counter and sought to ship the pinle in its proper place, but without success. Then into the cockpit again, ease away sheet, spring forward to the halliards and lower away all, and the yacht, in ten minutes more, afloat and under way. I remained in spite of all efforts to drive her from the fine day and a fine breeze lost through an accident which ought never to have happened with a little more foresight from those who were responsible for the Coot as I found her. It was difficult to keep an even temper chafing at such needless delay, heaped upon the days already lost, while the season was advancing and the risk of being frozen up for the winter increasing.

C. P. K.

THE CRUISE OF THE PILGRIM.—VIII.

BY DR. W. H. WINSLOW.

IT was blowing a gale from the north when we turned out and was clear and very cold. We closed reefed the mainsail and jib after breakfast and got underway without trying to land, as there was quite a heavy sea running. It did not take long to get out of the private harbor, to cross the bar, and to get into the open water. We sailed on to recognize Hope Island east of us where my chart left a gap. I had made a rough sketch of islands, ledges, bays, and compass course from Hope Island to Hog Island from the printed sailing directions, which I intended to follow and trust to luck to get to Portland. Luck favored us. Off Sand Island a smart fishing sloop with all sail set passed us bound in. We shook out our reefs and chased her, and she led us through the intricate winding by Great Cheng, or Hope Island, etc. All the way into Portland, where we anchored in our place about 1 o'clock P. M. The afternoon was spent ashore and we went to bed early to be ready for an early start in the morning.

It was very provoking to find that the wind was very light from the southwest when we awoke, but we made sail, towed around the point and got fairly outside by 8 o'clock. The sea was comfortable and the wind variable all the morning. I enjoyed a survey of the shores which had been passed on our outward voyage in storm and darkness. Penikese and Bang's Islands and the shores of the main land were covered with pretty cottages, villas and hotels, for the most part, deserted by their summer occupants. I counted twenty houses along the rough rocky bluffs between Portland Head and Cape Elizabeth. We passed through quite a fleet of dories, each containing one or two weatherbeaten fishermen, dressed in oil-skins, and busy with their lines. We ran close enough to talk to them and they said the fish were running much better than I saw. I counted 100 small, rather round cobbles, than full and sail, I saw many of them in all weathers and seas, though a dory is said to be a fine sea-boat.

We had light and fitful breezes all day and had the spinnaker set most of the time. While we went loafing along rather close in, we had an excellent opportunity of studying the shore and the distinctive land marks at the entrances of harbors, so that I made up my mind to push the fish boat to the right of the point, and to anchor in the harbor if there should ever be any necessity for it. When darkness fell, the red light of Cape Neddick was upon the starboard beam and Boon Island upon the port, and we gave up all hope of spending the night at Portsmouth. The compass and small lantern were brought upon deck, and a course laid out that would take us outside the Sisters and inside York Ledge and the Triangles. This was southwest by south. We were off Portsmouth at 11 o'clock, and decided it would be well to veer for a while, and run in for the night. We had hauler around northeast and freshened and we were just flying to the southwest. The course was changed to S. S. W. till we had passed Isles of Shoals light, then we hauled to south by east for Thatcher's Island.

For two hours I kept the helm and enjoyed the sport. The yacht had the wind free and it was just as much as she could stagger under; the sky was overcast and the northeast full of black ragged clouds; the sea was making a fast, cutting, jerky roll, and the wind was blowing a phosphorescent foam to leeward. We rejoiced at the favoring wind, thought it a little rude, took in the gafftopsail, and looked at the light upon the lee bow in hopes of soon rounding it and heading for Boston. We would see occasionally a lead colored sail, a reckless schooner carrying no lights, would come between us and the near horizon and then disappear. We showed our light many times hastily to prevent them running us down. There ought to be a more stringent law against such reckless sailing, and Williams said he would like to have some of the carpenters at cutters out there to show them what real yachting was. We knew we had passed to windward of the Salvages, but the two lights upon Thatcher's Island were so bright and apparently so near, we feared the Londoner. It is so difficult at night either by view of land or light to determine one's distance from the shore. It seemed as if we were half a mile away, when we were really five miles, as we found later to our cost.

It was now heavy weather for a little craft. The sea was so heavy off the cape that we did not dare to stop and reef, but the whole mainsail was too much for her; she rolled and plunged and jumped about rapidly, turning everything below topsy-turvy and making us hold on for our lives, but she did not ship more than two or three buckets of water at a time the whole night. We rounded the point at last—five miles off shore—and the rain and the tremor of a gale and rather enjoyed it at first. Now it dawned upon us that we were in a bad scrape and in imminent danger.

We could carry the mainsail no longer, and the jib threatened every moment to go out of the boltropes. We lowered the mainsail and passed a gasket around it, came to on the starboard tack, paid off the jib sheet and headed to go up under the land to lessen the

wind and the seas that threatened to engulf us. They came upon the starboard quarter, lifted the cutter high up, rolled her down until the port rail was buried a foot, went under her and she would right and roll to windward, only to go through the same movement again. But scudding under the jib kept the craft ahead of the combers and not a sea boarded us, though a little water would slop up over the quarter, and our little tender would occasionally bang against the stern or shoot the length of her painter as far as the waist.

Mack was shrouded in an enormous pilot coat and held on to the cockpit seat and tiller, keeping a sharp lookout upon the seas, the jib and the distant lights. Williams stood in the gangway devoting his whole attention to the vessels that were all around us, and showing our lights occasionally when it seemed as if some craft with a red and a green eye was sweeping right down upon us. Dozens of fishing vessels were scudding for port to get in out of the gale, and we were certainly in great danger of being run down several times during that dreadful night. I was below watching the chart, the compass and the lanterns, and occasionally passing up the large lanterns to show to some vessel that seemed bearing down upon us. There was nothing for me to do upon deck, and my functions were as important as any. However, I was head and shoulders up the gangway a great many times looking after things and estimating the danger of collisions. Once a schooner swept down upon us, perhaps not seeing our light, and we thought of jumping for her rigging if she struck us, as we knew our little iron loaded craft would be crushed like an egg-shell and go to the bottom instantaneously. We held our breath for a moment, as the great black body and jibboom hung over us, but a little sheer, probably a turn of one spoke in his wheel, sent her across our stern and flashed the great red light in our faces. We braced up with a good drink of whiskey after that. Mack and Williams seemed very comfortable, but I confess that the long day's work, the excitement and the cold, and wet, and the lessened human constitution, had exhausted me, and during the night I threw myself face downward upon the pile of clothing and cushions to leeward and slept with one eye open about ten minutes. I was awakened by Williams asking down the gangway, "Is the light upon Eastern Point red and fixed?"

I was up in a moment and by reference to the Coast Pilot, and a chart, it was bright and cheerful, bearing north, and we had scudded under the jib and under the sea all the way from Thatcher's. The gray daylight was faintly illuminating the land, the sea was a little diminished, and the Bangor steamer was just coming in from the eastward. It had been a terrible night for a little craft and we felt proud of her. She had brought us safely through a heavy gale and fully demonstrated the merit of cutters. All agreed that a light draft, pumpkin seed sloop under the same circumstances would have been fished.

The mainsail was close reefed and hoisted, we kept off for Baker's Island lights, ran rapidly along shore past the Miseries and anchored at 6 o'clock safe in Salem harbor, alongside of a large cutter that had arrived the day before from Portland.

We started under close reefed again after breakfast, passed Marblehead rock, and were soon riding upon the long, heavy seas toward Boston. The seas rolled after us rapidly and the cutter plunged down one slope and up another just fast enough to keep the combers from catching her, but we closed up the gangway for precaution and kept a firm grip upon the cockpit seat. It was a lively run, and we were the only little craft outside. Off Deer Island a handsome schooner yacht swept into the channel, but when she met the heavy sea rolling inward, she turned back to the anchorage. When we had reached Long Island, we shook out the reefs, cleared up the deck, hoisted the ensign, the club and private signals, and headed for City Point. There were hundreds of yachts anchored in the harbor, but the shore seemed deserted. All the merry makers, the yachtsmen, the bands and the scenes of warm weather had vanished by the mandates of King Frost. I thought we would have an ovation of welcome, as we threaded our way along shore, but it was not till we came abreast of Mr. Williams's yard that a little group of our friends swung their hats and cheered us. Then we jibed over, sailed gracefully out to deep water, and hauled down the jib and finished our long voyage.

The daily papers reported that a heavy gale prevailed off the coast and that the harbors of Provincetown, Gloucester and Salem were filled with vessels that had been obliged to seek shelter. This was the same night the Genesta sailed from New York and caught the full force of the blow—the memorable 9th of October.

The little Pilgrim rests upon her cradle in Williams's yard at South Boston, waiting for the next sailing season. Her mast and rigging and parts of a new baby and she and her dog are the topics of conversation among the boys very often this bleak and wintry weather.

BOSTON TO FALL RIVER, SAILING DIRECTIONS.

Editor Forest and Stream:

"W." caught me the correct information by obtaining the coast survey chart of the route mentioned, together with the "Coast Pilot," by Geo. W. Eldridge, and the tide tables, also by him. They are to be found at Negus's navigation depot, New York.

One should not attempt to go through Wood's Hall without some one who knows the way, as the current is very rapid, except at slack tide, and the channel narrow. He should stop at a little harbor just to the westward of the light, if he wishes to go through that way. But if he should continue on up the Sound to the westward some eight miles, he then could enter Buzzard's Bay by way of Quick's Hall, which is a passage-way for the largest vessels. All the other parts of the route are perfectly feasible, if he studies the charts, the Coast Pilot and tide tables, and is, as a matter of course, a good boatman. Any other information that I can give him, or questions he may wish to ask, will command my attention. JOHN HOLMES. VINEYARD HAVEN, MASS.

Editor Forest and Stream:

I made the passage from Boston to Fall River two years ago, starting on the 10th of April in a keel sloop 24ft. long, draft 4ft. 9in. I do not think the extra 8in. would bother you.

We started on a pleasant day and got as far as Boston Light with a southeaster blowing and rain falling. Decided to put into Hull. Started from there at 12 A. M., good moon, ran out to Boston Light and then laid our course for Provincetown.

I started from there at 8:30 P. M., worked off Race Point about a mile, and from there to Monomoy. I do not think we wanted it. I should have continued on to the rocks. When we were off Chatham Lights we struck some pretty rough water on account of its being shoal, I suppose, but we had plenty of water. The inside passage between the point (Monomoy) and the shoal looks pretty small on the chart, but there is plenty of water and room, and by going through that way I should think it saved very nearly twenty miles. After getting through the passage we laid a straight course for the next lightship and on to the light on the Sound. If the Sound for the near part of the light should not advise any one who is not acquainted to try to go through Wood's Hall, for it is a very bad place to get through for a stranger even with a fair wind and tide, but keep on up the Sound and go through Quick's Hall, which is a good wide passage with only three rocks in it which are well marked.

If you are going to New Bedford or Newport it is not very much further and a great deal safer.

If I should have been ready to do what I did in the month of April, I should have had a keel boat with a big iron shoe on her. I should not be writing this letter now. The one thing that made me tremble was that there is not a harbor after you leave Provincetown until you reach Chatham on the inside of the cape, and it is about as bad to try to get there as it is to run to Vineyard Haven. H. B. C. TAUNTON, MASS.

SOME HINTS ON TOWPATH SEAMANSHIP.

Editor Forest and Stream:

Mr. Kunhardt's mishaps in the Raritan Canal lead me to give a few points on canal work which I believe will be useful to other yachtsmen who may venture upon these troublesome waters. I made and placed the following hints on the ground of the great importance of this the safety of the yacht mainly depends. If, as is usual, the line is made fast to the bits, it will be found that the vessel's head is constantly drawn toward the bank, and also, the power being applied so near the bow, that the influence of the rudder is seriously interfered with. Another objection to securing the line in this position is that it cannot be cast off quickly in case of danger, and especially in a single-hand craft like the Coot, when it is out of the owner's control, as was the case with the Coot, as pointed out by Mr. Kunhardt's experience.

A plan which I have seen used overcomes these difficulties, and is well worth the attention of all canaling yachtsmen. Enough line is paid out to the driver to allow the craft to be veered freely in the canal, and the inboard part is passed aft, inside of the rigging, and made fast in any way within reach of the helmsman, a few fathoms surplus being retained for emergencies. The throat halliards are then hooked from the mast, and a loose strap is put around the mast and hooked from the lower block of the halliards; the block is now hooked fast to the lower block of the line, and it is hoisted up clear of the deck. The advantages of this arrangement are: 1st, the side pull, or turning force of the line acts at the mast, much nearer the center of lateral resistance than the bits, and the power of the helm is consequently much more effective and quicker of action. 2d, the line can be cast off instantly by the helmsman in cases of necessity, and sliding through the hook of the halliards, it leaves the bows free to follow the shore end of the line if cast off it sinks under the bows and

often seriously interferes with the steering of the craft, and in some instances is liable to get entangled with some passing craft, to the serious injury of our vessel. 3d, the line can be raised high enough to pass over instead of under a passing canal boat or other considerable obstruction, a great convenience which in many cases allows one his choice of waters.

Some arrangements of this kind is indispensable in a single-hander, and even with larger crews is almost essential, as the man at the helm is sure to be on the alert whatever the other hands may be doing, and it gives him full control of the yacht at all times.

In pulling out of locks, Mr. Kuhnardt experienced the usual difficulty on account of the bow of the Coot being drawn in against the bank before the boat acquired steerage way. To obviate this I would suggest an addition to the above plan as follows: Make a light spring fast to the tow line near the bow, and lead it aft outside of the rigging. While the boat lies in the lock haul this spring in sufficiently to take the strain of the line when the team starts. The power now being applied at the stern, the bow can be shot well away from the wall into clear water, when the spring is eased off and the towing goes on as usual.

Mr. Kuhnardt's suggestion of a running fender of boards is most valuable, for ordinary fenders are of little avail, and if there is an unprotected spot it is sure to be found out in a canal. Another good plan is to get an old sealer of the junkman and sling two turns around the yacht and the boat will be between planks and water. This will be found very effective, and at the end of the voyage the rope can be sold again for nearly its cost.

Trusting that my long yarn will prove useful to some of our enterprising cruisers, I will close by hoping that the Coot, whose adventures inspired these lines, will survive her long voyage and turn up smiling in the spring. As for her wide awake skipper, I think we need have no fears for him.

LARCHMONT Y. C.—The annual meeting of the Larchmont Y. C. was held at Delmonico's on Feb. 10, with Com. Munroe in the chair. Eleven new members were elected, Messrs. Harry Flager, DeLaney D. Kane, Henry Adams, Jr., Harold Ford, Cyrus W. Field, Jr., E. K. Biddall, Charles Sweet, W. S. Badger, Henry L. Backus, Franklin Bowker and Geo. D. Leech. The officers elected for 1886 were: Commodore, W. S. Alley, Scherer; Vice-Commodore, Charles Stevenson, Yollande; Rear Commodore, Gerard M. Barrette, Norm; Secretary, W. Harris Rourke; Treasurer, Eugene L. Bushe; Measurer, Frank E. Towle; Trustees, Augustin Monroe, Francis M. Scott, William Murphree. After the reading of the articles relating to the club house and grounds the following amendments to the sailing rules were also passed: To introductory sentence, prefix "From the time of giving the preparatory signal." Under heading Classification Class II, strike out "30" and substitute "33," and in Class III strike out "30" and substitute "33." After Class VII, insert, "Mixed Rigs.—In mixed rig races schooners shall be rated at 85 per cent. and yawls at 93 per cent. of their respective sailing measurements." Under heading Sails, seventh paragraph, insert word "racing" after word "as a." Under heading, Courses, Course No. 2, strike out "the black buoy off Constable's Point," and substitute "the home stakeboat." Second paragraph, after word "Island" insert "nor between the buoys on Hen and Chickens Reef." In Rule VIII, omit the words "may luff as she pleases, to prevent another yacht passing to windward, but," Under heading, Measurement, after "shall be" strike out and substitute "the length of the yacht's hull 2 per cent. of her actual load water line above and parallel to said water line." Under heading Prizes, strike out and substitute "prizes shall be awarded as provided in the By-Laws." To strike out the table of time allowances as it now is and to substitute the table in use by the Seawanhaka Corinthian Y. C. It will be seen that the club have dropped their old measurement of length plus 1/4 overhang, in favor of the more equitable rule of the Atlantic Y. C. The treasurer's report showed a balance of \$2,225 cash, besides \$1,798 uncollected, the net assets of the club being \$7,015 88. The membership is now 330, the limit being 400, and the fleet numbers 15 yachts.

YACHTING NOTES.—The 5-tonner Molly, of Hamilton, Ont., will have 3,000 lbs. of lead transferred from inside to the keel. Mr. St. Clare J. Byrne, N. Y., of Liverpool, arrived in New York last week on business connected with Mr. Vanderbilt's new steam yacht. Atlanta arrived at St. Kitts from St. Thomas on Jan. 24 and sailed three days later for Guadalupe. Nokomis was spoken on Feb. 12 in lat. 31° 42', long. 75° west by the steamer Santiago. On Feb. 9 the Carliotta sailed from Brooklyn for the Windward Islands, touching at St. Kitts. Cora has sailed from Key West for Havana. Montauk made the run from New York to Nassau in 7 1/2 days, arriving on Jan. 21.

ANOTHER CRUISER.—Mr. Rushton has partially finished a new model of cruiser, the sleekbutter, carrying on the boat's bow, the sides also being raised several inches. The dimensions are 15x37, and there are two centerboards, the larger forward and the smaller in the deadwood aft. The model affords large space for dry storage with bulkheads and small shelves around the side decks to add the room. The sleeping space, owing to the board being well forward, is quite large.

CLUB FESTIVITIES.—The ball of the Royal Canadian Y. C. at Toronto, was a great success. We have received invitations to the concert of the New Haven Y. C., and the annual ball of the Yorkville Y. C.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

A WINTER EVENING'S REVERIE.

(Concluded.)

PERHAPS we do dream that we are canoeing or that the anchor has dropped and that some other calamity has happened. So strong is the illusion that it is almost impossible to put his head out of the tent. All right; it is only the morning tide which has lifted the boat and runs merrily by with a sort of articulate morning greeting as it ripples along the side of the boat and plays with the tightening cable.

Another hour may safely be devoted to Morpheus, and this time it is the mate who wakes, aud, sitting up, exclaims, "Hello, tide's up!" Then, severely, his superior officer, "Get up, or we shall be neaped; tide's going down." "I'm up," says the mate, "I'm up." "Get up," says the superior officer, "I'll make a cup of coffee for you." "Thanks! Make me a cup of coffee and I'll get up." "No. Get up and I'll make one."

It ends by the mate tripping up the tent and letting the cool winds of heaven blow upon the recumbent skipper. It would never do to be shut up in the wretched little creek for a whole summer's day, so we make ready for sea with all convenient speed.

We are not seen at our best, perhaps. Early rising agrees neither with our tempers nor our appearance. Perhaps the mate does use broad Saxon when the skipper drops the muddy anchor on his toes, and if the skipper retaliates in words of similar breadth and antiquity when the mate, in his effort to let go the stern line, trips the skipper up and causes him to sit down with violence upon the belying pin rack, what matters it. We know each other too well to take heed of such trifling displays of early morning temper.

The important thing is to get out of that creek before the tide leaves us high and dry, and so with bed clothes, anchors and gear pretty well mixed up we push off with the sculls, and once in the tide sail is made and order is evoked from chaos.

Tents, blankets, bags and extra coats disappear into their respective bags. Ropes are coiled away, decks swabbed down, some sort of a toilet is made, and in a considerably improved frame of mind the crew are piped to breakfast.

The day promises to be a glorious one. Grimsby Tower is right before us but sheer off toward the Yorkshire coast, past the lighthouse marking the extremity of Sunk Island, once in reality an island but now reclaimed and annexed to the mainland, and so out on to Trinity Bay. At low water it is a waste of sand banks, but now a wide expanse of water, over which we sail merrily toward Spurn Point which forms a natural breakwater to the entrance of the Humber.

How pleasant to sail over the rippling waves of the bay with the warm sun melting the wailets spring again.

The mate, ever active, has set the splasher, an operation involving an acrobatic performance on the "giddy footing of the hatch" or rather on the fore deck, and comes aft to take his turn at the helm while the skipper, making to himself a nest forward with pea jackets and rugs, whiles away the time with pipe and book or lets his memory wander back to other days and other cruises.

He recalls the trip that way in his first canoe, now ten years ago, when he found himself tossing about the broad entrance to the Humber during several weary hours of darkness, trying to make the Spurn. In those days he would set off on such adventures in a sub-line state of ignorance as to local tides and currents. Nowadays we have grown more scientific. We draw pencil lines on the chart, make cross bearings of prominent landmarks, excite ourselves about the whereabouts of this or that buoy, and pride ourselves generally on adhering strictly to ship tracks.

Before approaching Spurn we come to anchor for a bath and dinner, when luxuries of various sorts grace the board (N. B. Tinned curried chicken, most excellent). Then with a view to calm the old friends at the Point, some little fish is made to our toilet in the way

of collars and cuffs. The mate, even on one occasion, produced from his tidy bag a white waistcoat, a set off, no doubt, to the skipper's blue serge coat and bronze buttons, the uniform of the Danish Yacht Club.

By this time we are running under the Spurn Point and can hear the rollers of the North Sea breaking outside.

The anchor is let go with a tripping line attached, which is taken ashore and the launch canoes to swing to her anchor, the stream keeping her off the shore.

We have time before the tide turns to pay a visit to all old friends, for ten years of Humber canoeing has made us intimate with Spurn society, and a warm-hearted, kindly set of people too. They are but a handful. The lifeboat crew, the lighthouse keeper and the landlord of the little inn. The memory of many a happy hour comes across the skipper as he pays his round of visits. Over a pipe enjoyed with the captain of the life boat in his snug little house, he recalls that never-to-be forgotten night when the wrecks were ashore, and the lifeboat, after battling all night with the wild North Sea, brought in the two crews safe and sound.

Then we have time to mount the lighthouse, Smeaton's time-worn old tower, and look down over the far stretching ocean, with many a gallant ship with sunlit sails making for the Humber, and the smart mail steamers with their decks crowded with Swedish emigrants. From this point of observation we note the peculiar conformation of the long, gently curving spit of sand forming Spurn Point, with the sea breaking on the one side and Humber on the other, rolling its saucy waves over the site of the buried city of Ravenspurn.

Afternoon tea with the head light keeper and his amiable family, pleasant reunions, which on one occasion kept us so pleasantly engaged that the tide had turned and covered the shore line, compelling the skipper to swim off—clothes and all, for the eyes of Spurn and its wife were upon him—to the anchored canoe.

Needless to describe the home journey. Perhaps a long thrash to windward showing to perfection what the little 22-lb. rig with her center-board and well balanced sails can do under such circumstances.

We find ourselves once more in the Hull Roads, this time in darkness. But the ordinary perils of the deep are increased by the maze of lights, riding lights, town lights, dock-gate lights, and side lights, looking like some constellation gone wrong, but the "sweet little cherub" extends his protection to us as well as poor Jack, and brings us at length to our desired haven refreshed and invigorated and ready for the week's work.

But my pipe has gone out during this long reverie and as I sit in my arm chair, I pass in review many a pleasant memory, such as has been described, perhaps too discursively, but given a pet subject, restraint is difficult.

Alas! many a month must elapse before the Ezir plunges the waves again, and in the meantime she lies in dark seclusion, shrouded in her cover, a very chrysalis, to burst out, if all goes well, into a brilliant creature as soon as she feels next summer's balmy breath. The long, cold winter, being done up and carried down to rest, perhaps, lie afloat, and her owner, muffled in all his jerseys as all his coats, may be seen buffeting the wintry waves of Humber while the rest of the world is skating.

Verily the boating spirit is not quite dead and our American brothers may rest assured that their canoeing aspirations find an echo in the good wishes of the boating men of old Humber, where, though shorn of the brightness and picturesqueness which characterizes the American canoe, the boating spirit still lives and where its votaries feel that they have some sense sheltered by the old traditions, like the Vikings of old to these very shores to plant their names and memories in the quiet villages of Humberside.

THE BARNEGAT CRUISER IN FLORIDA.

Editor Forest and Stream:

I have just returned from a trial cruise to Fernandina (36 miles by water) and also up St. Mary's River. I am now able to give an opinion of my Petrel. I left J. in half a gale of wind (fair) with a pouring cloudburst from Dr. Neid's and a wave of the handkerchief from three ladies. I had over 400 lbs. of mail and carried down the sail. Wind freshened at Dunne's Point where I made a running jibe to the things. She went down with half her lee rowlock under, and when she flew. Kept all canvas on her, however, until I reached Brown's Creek where I turned in a single reef and hastened on. The river was white as a sheet by this time, and I went to Sister's Creek, 22 miles from J., in a trifle less than 8 hours, part of the way under a single reef. Pitched my tent and cooked a square meal. Wrote up my log and several letters and turned in. Woke up at dawn, raining, hastened on after a cup of coffee and a pan of omelette.

That night at 5 o'clock came to an anchor in the light of the railroad dock at F., and had all I could do to hold her; had to back her big anchor with my Chester, and passed a comfortable but sleepless night. Wind hauled north and blew the biggest kind of guns for two days. Soon saw how it would turn, and clapped her tackle on to the painter and at high tide hauled her high and dry. Lay this gale out snug as a bug in a rug and went on board. After the clear up took a run up Amelia River to Lancelotti Creek; shot a few shore birds and caught some fish. Remained in F. ten days. Aurora spent Sunday with me; good time. Left Fernandina Friday at 11 A. M., last of the flood. Crossed Nassau Sound at 2 P. M., and was lost three hours in Sawpit Creek. Stopped for the night still out of my reckoning. While eating snapper a darky hailed me in plain tones, asking, "Boss, dis chile am lost." Mighty glad of the sight of a canoeing, that linesman swamp. I hastened to invite him aboard. And didn't we have a supper! Better than that which I had had for many a day. Menu: Bacon, fried salt-water trout, scrambled eggs, coffee, pilot bread, good Ohio butter, and a wind-up on canned peaches. Found the darky a fine looking, intelligent negro.

The next morning I took my bearings, and after three hours work in a gale of wind (ahead) and a strong head tide I pulled across Ft. George Inlet, and after mending the darky's mast step so he could use his sail, left the darky and flew on her course, soon leaving my mable but not uncourteous acquaintance. Still pouring and blowing N. E., passed out Sister's Creek at 11:30 A. M., and kept off for St. John's Bluff. Chilled through and wet as a drowned rat. No water in the cruiser though. At 2 P. M. Dr. Neid's hailed me off Wisner's boat house and helped me ashore with a warm grasp of the hand. My boat house friends and companions, Mr. W. H. Wisner and friend who are engaged in boat building and renting boats, soon had me a steaming hot pot of coffee, and Petrel's skipper was himself again. Thus ended the maiden cruise of the Petrel, a fair test of a boat's capacity, being made in a gale of wind and all the while a driving N. E. rain storm. She came through it nobly and I am proud of her.

A CANOE EXPOSITION.

THE coming season promises to be a notable one in the canoe world, with our foreign visitors and two cups to be raced for, and we may expect that canoeing will receive more notice and more favorable consideration than ever before. As a part of the season's attractions the Knickerbocker C. C. propose to hold an exhibition of canoes and all pertaining to canoeing, and have sent out the following invitation:

"Your presence is cordially invited at a preliminary camp fire at Harvard Rooms, 729 Sixth avenue (corner Forty-second street) at 8 P. M., Thursday, Feb. 25. The object of the meeting is to make arrangements for a public canoe exposition, to be held in the near future. A number of prominent canoeists belonging to different clubs are expected to exhibit models, rigs, camp outfits, cooking kits, tents, bags, badges, trophies, photographic cameras and views, etc., and a supply of canoe literature, fittings and material are anticipated from different manufacturers and business houses. It is confidently believed that this exposition will be a source of much pleasure and instruction, not only to canoeists and their friends, but also to the general public. In conjunction with the coming International Challenge Cup races, it will exercise a powerful influence in popularizing the sport and directing to it the attention of many desirable future brethren who at present have very vague or totally mistaken ideas as to its nature. This project will need the concerted action of all interested in canoeing, and the sub-division of different departments and details of preparation under a large number of individuals. We confidently rely upon your encouragement and help in making this success, and trust you will be present to give us the benefit of your personal support and assistance. We remain sincerely and fraternally yours, Edwin Fowler, Com., Henry Stanton, Lafayette W. Seavey, Committee."

Though the prejudice against canoes that at one time existed generally among the yachting men has largely disappeared, there is still prevalent a feeling that the only kind of sail and not to be compared with other varieties of sailing. Nothing could be more correct false impressions and to disseminate correct ideas of canoeing than such a public exhibition as is proposed, and it may be made of sufficient interest to attract all classes of boating men and pleasure sailors. There need be no difficulty in finding material for a very large display that no canoe man need be ashamed to acknowledge, and even in the presence of the Knickerbocker C. C., it is every sense a national affair, and deserves the aid of every canoeist in America. We shall give the full particulars of the meeting.

RONDOUT C. C.—This club now has twenty-seven members and a large fleet of canoes, to which several new boats will be added this season. The club is about to build a new and handsome house, 50x32. They are now looking forward to receiving their neighbors from both ends of the Hudson at Jaspous Island on Decoration Day.

RUSHTON'S ANNUAL CATALOGUE.—No better index can be had of the growth and present standing of canoeing in America than the new catalogue for the current year, issued by Mr. J. H. Rushton, of Canton, N. Y. Half a dozen years since a small folded circular contained all the needed information about the builder's boats and canoes, while now the same information fills a large pamphlet of sixty pages, a third being devoted to canoes and their fittings. Of rowboats, Mr. Rushton is still building the same large variety, with the steady improvement in build and model which has made his widely-spreading reputation. The canoe list this year is a great improvement in every way on the preceding ones, as the boats are better, the sails of greater variety, and the list of fittings has been largely lengthened by special devices and novelties. Perhaps the greatest advance over former years is the discarding of a number of obsolete models and the corresponding simplification of the list to an extent that makes it easily comprehensible to the novice. The great number of various models has in the past been very confusing to beginners, owing to the small points of difference. In the present arrangement, the Springfield, Shadow, St. Lawrence and 14ft. Princess models have been omitted, the list now comprises, he lists the Nessmuk canoes, the Stella Maris, Grayling, Elford, 15x31 1/2 Princess, Tandem Princess and four Mohican canoes. The latter are the most interesting, and promise to become the most popular models. In all four the lines of the famous Snake have been used as the basis for the design, the hollow lines of that boat having been filled out somewhat. The dimensions are: No. 1, 14x30; No. 2, 15x31 1/2; No. 3, 15x32; No. 4, 15x30. The series thus include the original Snake size, a canoe for general cruising, a larger boat built to the full limits, for sailing, and two "average" boats, Class B and Class A, making a quartette from which a good canoe for almost any purpose may be selected. A special feature of the book is the long list of fittings of all kinds and especially brasswork. Mr. Rushton has lately made a specialty of the latter, manufacturing it himself, and he has devised a number of very convenient fittings. At present he has a force of seven men employed in the building of canoes, and at this date is not up to his orders.

BUFFALO C. C.—The annual meeting of the Buffalo C. C. was held on the evening of Jan. 25, at the home of Mr. W. L. French, the purser of the club. A large number of the members were present, and considering the inclement condition of the canoeists' native element, considerable enthusiasm was manifested on all sides. The question of classifying larger canoes in the A. C. A. was discussed pretty thoroughly, the members being about evenly divided in their opinions, with a doubtful balance against the proposed new class. The action taken by the A. C. A., in increasing its annual dues, was criticized very unfavorably, and in view of advice received from other clubs, it is feared that it will not have a tendency to increase the membership of that body. The purser reported the club's financial affairs in a flourishing condition, and several new craft will be added to the fleet in the spring. A new club signal was proposed and adopted, disposing of a subject which the members have been wrestling with all the previous summer. The following officers were elected for the year 1886: Captain, William Lansing; Mate, Edwin L. French; Purser, Henry L. Campbell. The club then adjourned to meet at the home of Mr. Lansing on the last Wednesday in February.—H. L. C.

AN ONTARIO CANOE ABROAD.—"Two in a Tub" is the title of a clever and humorous canoe trip down the Danube, Moldau and Elbe, made by two English canoeists in 1884. The canoe was an open Ontario, 13x37, 6in., fitted with one sail and propelled by single paddles. The cruise lay through a novel country, and the rivers were obstructed with weirs, dams and rapids, giving plenty of variety to the work. The authors, "Bow" and "Stersman," are close observers, and their little book is not only very interesting, but is so exact in details as to make a valuable guide to others in the same waters.

SPRING REPAIRS.—A short time now will bring warm weather, and the haste to get afloat that always comes with it. Is your canoe ready, or is she still stored away to be hauled out and rigged in a hurry? If not, get her ready now, refit, varnish and rig her, and when the time does come be ready to enjoy the actual sailing instead of staying ashore to vanish.

THE A. C. A. TROPHY.—Editor Forest and Stream: I beg to acknowledge this week for the A. C. A. International Cup Fleet as follows: Dr. H. T. Groesbeck, \$1; Dr. A. E. Highway, Jr., \$1; Mr. J. O. Shuras, \$1; all of the Miami C. C., Cincinnati, O. Previously acknowledged, \$109. Total to date, \$112.—WM. WHITLOCK (New York, Feb. 15).

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

W. S. W., Mass. Institution of Technology.—Your question is too indefinite, we do not understand it.

J. N. G., Everett, Mass.—Snail-a-Mor is owned by Mr. Joseph Hays. His address is Box 1800, Boston, Mass.

W. S. L., Niagara.—We cannot furnish the working plans. You can build from the published designs.

J. W. H., Pittsburgh, Pa.—The small engine was built by an amateur in Wales; we know of none for sale.

W. R. M.—We do not know the builders of the boat, but have forwarded your letter to our correspondent.

A. S. COLLINGWOOD.—Use cotton for caulking. Paint the seam well as soon as the caulking is driven home, and putty over it.

A. A. R.—The best place to purchase an old boat would be about Boston. We could not give cost of rigging without more definite information to estimate on.

W. T. H., Long Island City.—A 15x30 canoe will easily carry two persons. If a long cruise is intended 16x30 will be better or 16x31 for a heavy crew with much baggage.

F. W. T., Portland, Me. You will find full description of a sinkboat in the FOREST AND STREAM of Oct. 27, 1881. Several designs of ducking boats are published in "Canoe and Boat Building."

A. H. H., Woodstock, Va.—I send you by mail the head and leg of a bird and in the snow, a long way from the water, although it must, I think, be some kind of a diver. I hope you will tell me what it is through your paper. Ans. The bird is a red-necked grebe (*Podiceps grisegena hollati*).

B. G. S. B., Passaic, N. J.—You will find places about the bay where the boat can be left in charge of a caretaker. She would be safe outside in fair weather. The centerboard is 3ft. long and fits the trunk shown in the drawing. Some sandbags would be useful in heavy winds, but are not needed in cruising.

R. H., Brooklyn, N. Y.—We have never published the drawings you wish. One inch is thick enough, the plank turning in the wharves, with square joint caulked, not tongued and grooved. The after end of the board should come near the middle of the boat. The board should be about 5ft. long, with bolt at fore end. See "Small Yachts" for lines of other sharpies.

H. H., Greenville, Ala.—1. What book can I get that will teach an amateur about fly-fishing? 2. What kind of tackle and bait are best for fishing for bass, bluegills, crabs and crabs? 3. Describe an outfit suitable for such fishing? 4. Refer me to a book that will teach me of the habits and how to hunt wild turkeys? Ans. There is no such book. Some information on the subject is contained in the works of Norris, Scott, Wells, and others; but the art of fly-casting, to say nothing of fly-fishing, cannot be learned entirely from books. 2. Unless you name the species of fish to be angled for, we cannot answer this. 3. Answered above. 4. Hallock's "Gazetteer;" we can furnish it.

PUBLISHER'S DEPARTMENT.

SALE OF SPORTSMAN'S GOODS.—Mr. Benjamin Starks offers this week, at an assignee's sale, a large assortment of guns, rifles, fishing tackle and other sportsman's equipments. An inspection of the catalogue of this sale shows a large number of weapons, many of them by well-known makers, at prices which appear to be low. It is never safe to buy an article without seeing it, but the list of goods described in this catalogue would certainly seem to include some decided bargains.—Adv.

TAKE CARE OF THE DIMES, AND THE DOLLARS WILL CARE FOR THEMSELVES.—An older and wiser saying can rarely be found. It has made the fortune of more people than can well be numbered. Not that the dollars do not need care, but the habit formed in saving the dimes extends to the dollars, and they are saved without care. The man who makes himself into a habit, the formation of the habitual thought, and manner of the man. Some men become rich by accident, but the real rich are made so by habit. For me the dimes of life are in a thousand things. The waste in cents and dimes extends to smoking, drink, food, clothing and amusement, time and opportunity, health and life itself. The saving in the little is the making of the much, and in the sum of life is the difference between wealth and poverty. Who wastes the little must spend the much to balance it, and so is poor. He who constantly keeps well has no doctors' big bills to pay, and no sickness from sickness to eat him up. This he may do as thousands are doing by using dimes wisely. Homoeopathic Specifics promptly and habitually in the little diseases of life. The bad colds that lead to consumption, the chill that brings pneumonia or pleurisy or rheumatism, the biliousness that brings dyspepsia, and so all through, you cure the little illnesses, and the big ones are cured before they are hatched.—Adv.

NEW MAPS FOR SALE.

New maps of BREVARD COUNTY, FLA., just
published by J. Francis LeBaron, C. E., Deputy
U. S. Surveyor for the District of Florida. They
include the entire INDIAN RIVER country and the
Kisimmee Valley, showing the drainage operations
of the Okeechobee Drainage Co. and the Disston
Company. These maps are complete and accurate,
and are made from actual surveys by the author,
supplemented by the official surveys of the U. S.
Deputy Surveyors, the U. S. Coast and Geodetic
Survey, and the U. S. Engineers, U. S. Army. They
show all the new towns, post offices and settlements,
projected and constructed canals, railroads, wagon
roads, etc. They show the depth of water in the
ocean, river and lagoons, and are invaluable to the
land hunter, settler, sportsman or tourist. They
are mounted in three styles as follows:

CRATEFUL—COMFORTING. EPPE'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws
which govern the operations of digestion and nutri-
tion, and by a careful application of the fine prop-
erties of well-selected Cocoa, Mr. Epps has provided
our breakfast tables with a delicately flavored
beverage which may save us many heavy doctors'
bills. It is by the judicious use of such articles of
diet that a constitution may be gradually built up
until strong enough to resist every tendency to
disease. Hundreds of subtle maladies are floating
around us ready to attack wherever there is a weak
point. We may escape many a fatal shaft by keep-
ing ourselves well fortified with pure blood and a
properly nourished frame."—Civil Service Gazette.

NEW RIFLE SIGHTS.

The Kind They Have Been Looking For.

Front and Rear Sights are patented to F. W. Freund.

A production of years of patient and thorough study in the field and shop. This sight has met with great success East and West. It shows what perfection has been attained in open sights for hunting, sporting and target rifles. They give excellent satisfaction when used under unfavorable conditions of light or defective sight, and are, on account of their fine workmanship, an ornament to any rifle. Send stamp for illustrated circular; write your name plainly. Address

912 Bergen avenue (Jersey City P. O.)

What the Champions of the World Say:

ELKHART, Ill., Feb. 13, 1884.

J. C. Petmecky:
DEAR SIR—I have used your cleaner and find it one of the best I have ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

GAINESVILLE, Ark., May 5, 1884.

Mr. J. C. Petmecky:
DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced.

Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky, Austin, Tex.:
DEAR SIR—At my recent shoot in your city it afforded me pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,

Champion Shot of the World.

FILE BINDERS,

Size to suit FOREST AND STREAM,

FOR SALE AT THIS OFFICE

Price, \$1.50.

CANOE

THE third edition of "Canoe and Boat Building" is now ready. The additional matter in this description and working drawings and sail plans of the Barnegat Cruiser, Sunbeam and Lassie canoes, and sail and rigging plan of canoe yawl. This makes the book comprehensive up to date. The author is W. P. Stephens, canoeing editor of FOREST AND STREAM.

For writing such a book Mr. Stephens is peculiarly fitted, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy.

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his purpose.

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and canvas, and all the details of length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-nine large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20 ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 192, with 29 plates of working drawings Price \$1.50. Address,

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, FEBRUARY 25, 1886.

VOL. XXVI.—No. 5.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications.

RAILROADS AND GAME.

THE rapidity which large game is disappearing in the West is so startling as to be almost beyond belief. Old timers, who have been in the East for two or three years, go back to their former hunting grounds, and find that the place of the deer and elk and antelope have been taken by cows, horses and sheep. Nowadays one does not know where to look for large game.

The hunting grounds which have been the least frequented are along the line of the Northern Pacific Railroad, and to this region the sportsman must turn if he hopes to succeed in securing a fair share of the great game which in the old days was so plenty, and is now so scarce in the Rocky Mountain region. But the sportsman after all has little chance of success as compared with those men who make a business of hunting for the meat or the hide market. His outing is at best but a short one, and so bitter and relentless is the pursuit of the game that its feeding grounds change from year to year and the man who starts out from the East to hunt, must seek each season fresh fields in which to look for the objects of his search.

A blindly foolish and short-sighted policy has been pursued by many of the railroads leading into the game countries of the West. They have sought eagerly for the transportation of meat and hides from the regions where they were killed by hunters, forgetting that by thus encouraging the slaughter of this game, they were cutting off one of the greatest attractions to passenger traffic over their lines. Thus for the few present dollars received for freight they have thrown away the certainty of receiving vastly greater sums for the transportation of passengers.

In sharp and striking contrast to this mistaken policy is the far broader one adopted by the Northern Pacific Railroad. For a long time parties in the neighborhood of Lake Pend d'Oreille have been making application to the freight department of this corporation for special rates on wild meat by the car load from the lake to the East. These applications have been turned over to Mr. Chas. S. Fee, the General Passenger Agent of the road, who has given directions that all such applications for special rates shall be denied. In giving his reasons for this course, he recites that to a very considerable portion of the travelling public, the game and

fish of the region traversed by the Northern Pacific constitute its chief attraction. This large and ever increasing class of travelers are well-to-do people, who have money to spend, and are thus desirable patrons of the road. Any course which will decrease the supply of the game which they seek, will tend to reduce the travel over the road by this class, who will go where they believe game to be most abundant. For this reason, if for no other, the Northern Pacific Railroad desires to preserve, by every means in its power, the game which is so great an attraction to a large class of travelers. It will not give special rates on wild meat by the car load, nor by the hundred pounds. It will discourage, so far as it can, the shipping of such wild meat at all. It will, so far as lies in its power, preserve the game.

Looked at simply from a business standpoint, this is a wise course; and yet how few communities, corporations, or individuals have the foresight to recognize this, to see that in no way can the game be made to pay so large a return as by preserving it, so that outsiders, who will pay liberally for the privilege of pursuing it, shall be attracted from afar and pay their dollars to the people who live where the game does. Usually it is a headlong race to see who shall get the most game in the shortest time, and very often the railroads are not far behind in the general scramble for a share in the spoils. It is encouraging, then, to see a great corporation like the Northern Pacific Railroad taking a firm and determined stand for game protection in a region where game protectors are most needed. Its example should not be without its effect on others.

THE DEER HOUNDING BILL.

THE bills for the repeal of the present wise anti-hounding law have been consolidated into one bill which repeals the present law prohibiting the hounding of deer; provides that the hunting season shall open Aug. 15, and permits the hounding of deer from Sept. 1 until Oct. 15. The transportation of venison is prohibited except from Aug. 15 until Nov. 15, during which time two carcasses of venison may be transported, provided, however, the venison is accompanied by the owner of it. Violation of the provisions of the bill is punishable by a fine of \$100. The bill will be voted on to-day.

The purpose of such a law as that contemplated by the bill is to license the outrageous slaughter of deer in the Adirondacks by rich city sportsmen, whose taste for butchery is developed to an abnormal degree. The effect of such a law will be the speedy extermination of Adirondack deer.

The bill provides for hounding in the nursing season, and will legalize the atrocities inseparable from the dogging of does and fawns in summer.

The hounders have given up the clause forbidding jacking. They do not want more protection. They ask only for greater license to destroy. Months ago we foretold that their course in regard to jacking would be just what it is now.

The prohibition of marketing game is a good one, but it can work no possible benefit to compare with the bad results of hounding. Market-hunting has not depleted Adirondack deer; hounding has done it, and if legalized will do it.

To check market-hunting make it unlawful. But to do that it is not necessary at the same time to make hounding lawful.

That to right one wrong it is necessary to sanction another and a greater one, is not the logic on which sensible legislation is founded.

The members of the Legislature have been grossly misled and deceived by false reports of a great slaughter of deer by still-hunters last fall. They are actually asked to sanction hounding on the plea that if the deer are not made shy by hounding the poor things will fall an easy prey to the market still-hunters. The hounders resent any imputation of questionable motive, but it is difficult to contemplate their "shy" argument without a feeling of impatience that they can successfully impose such stuff on the gentlemen whose votes will decide this question. It is a disgrace that the merits of a subject of such grave moment as the perpetuity of the Adirondack deer supply can be covered up and hidden by the misstatements and fallacious reasoning of selfish and greedy deer killers.

In the use of these tactics and the employment of manufactured statistics to carry their case to-day, the advocates of deer hounding studiously ignore the consideration that the effect of game laws is not limited to one single year. The results of present legislation, good or bad, will concern the citizens of the State in future years. Those who come after us will hold responsible the Legislatures of the present. They cannot shirk that responsibility. A law to sanction

the extermination of Adirondack deer by hounding and water-killing may not be fully understood by the public to-day, but in a few years its effect will be patent beyond the possibility of concealment by misleading "shy" arguments. Then, too, the wisdom and motives of the men who to-day are working for or against the present bill will be clearly exposed by the irresistible logic of facts. To that final judgment the supporters of the present anti-hounding law may, with all confidence, appeal.

NEEDS OF THE YELLOWSTONE PARK.

IN another column we print an important letter on this subject from Mr. Arnold Hague, of the U. S. Geological Survey, to Senator Manderson.

The letter is important because it is written by a gentleman thoroughly familiar with the National Park and with that region to the south and east of the present boundaries which it is proposed to add to the reservation. He has also traveled long and extensively in the West and is familiar with the various industries of that great and growing country. Understanding mining, acquainted with the needs of the stock grower and the agriculturist, his opinion on the possibilities of the region to be added to the Park is the highest authority we can have on the subject, and should be convincing to every intelligent man.

Mr. Hague points out, as we have done, that the preservation of the forests about the headwaters of Yellowstone, and of Snake River, and the tributaries of both, must be carefully looked after if the arid regions, away from the mountains, which are watered by these streams, are to be of any value to their inhabitants. He gives facts and figures bearing on the rapid destruction of these forests and recites the evils which must follow any extensive timber cutting in the region in question.

The subject is one which will interest every practical man and which has an especial and particular meaning for all those who live on the plains, to the east or to the west of the Continental Divide.

It is to be hoped that the suggestions contained in Mr. Hague's letter may be regarded in the final reporting of the bill, and that this clear exposition of the requirements of the Yellowstone Park may be read and comprehended by every Senator and Congressman.

HE WRITES FEELINGLY.—The subjoined extract is from the Boston *New England Farmer* of Jan. 23. We have heard it hinted that the editor, himself an accomplished sportsman, missed a bevy of quail which he had fondly imagined no "other fellow" knew of; *hinc ille lacrima*:

The Massachusetts Fish and Game Protective Association had its annual dinner in this city a few days ago. After the dinner was over, addresses were made by several gentlemen, lamenting the weakness of the game laws of the Commonwealth. As far as that goes, we entirely agree with the speakers, that more stringent laws for the preservation of birds, their nests and eggs, are imperatively demanded; but we do not by any means agree with the speaker who said opposition to such laws "comes largely from the farmers who own the soil and who argue, not logically, that because they own the land they own the game." We do not consider this a fair statement of the argument of the farmers; they are, so far as we know anything about it, as well convinced of the necessity of protecting the birds as any sportsman can be, but they do want the right to keep outside sportsmen from wandering over their fields and through their woods, and shooting off the game which they themselves, the owners of the soil, have been watching and protecting during the close season. It is precious poor satisfaction for a farmer who has known of the existence of a bunch of quail within half a dozen rods of his door all summer, to find that on the first day of the season, before he has had a chance to shoot the birds, even if he has wanted to; some lazy fellow from the city, with nothing better to do, has turned up with a dog and gun and cleaned out the whole bunch. The sporting gentlemen may rest assured that the farmer is not going to be "educated up" to the point of protecting game birds on his own land for them to have the fun of shooting.

A CONVICTION FOR TRESPASS.—Recently at Patchogue, Long Island, Howell D. Smith, of Sayville, was convicted for the purpose of shooting on the lands of Mr. A. A. Frazer, of the same place. The case was tried before Judge John R. Smith and a jury, and District Attorney Wilmot S. Smith was the prosecutor. The conviction cost the defendant \$20. This is an advance on any previous attempts at game protection by means of the trespass law on Long Island. Usually the jury give the plaintiff six cents; sometimes when very liberal they raise the sum to a quarter of a dollar. The conviction in the present case was largely due to the energy of District Attorney W. S. Smith, who is very much in earnest in his efforts to see the law enforced.

THE FOREST AND STREAM'S GRIZZLIES were "at home" to thousands of visitors on Washington's Birthday. They are the favorite quadrupeds of the entire Central Park collection.

TO THE WALLED-IN LAKES.

XII.—GOAT HUNTING AND GRUMBLING.

THERE was little to be done about the camp next morning. There was nothing to eat, and the preparations for breakfast consisted in whittling up a pipeful of tobacco apiece. While smoking, we changed the horses to fresh grass, and then shouldering our rifles started off for Yellowfish's hunting ground of the day before. It was but a short walk to the rocks. At the foot of the talus slope, beneath the vertical cliff north of camp, we saw by the fresh tracks and other sign of goats that these animals had been down into the valley to feed during the night, and we at once began to scramble up over the rough and steep ascent. We had got about half way up the talus, when I heard Yellowfish call out, *Amo! Amo!* (there, there) and looking in the direction in which he pointed, I saw a goat and her kid walk out from behind some brush on a ledge far above us. As fast as I could, I ran up the slope for fifty or a hundred yards, and at length paused, entirely out of breath, and as the animals stopped to look at us, tried to shoot. I was so breathless that I could not hold my gun steady, and the slope was so steep that I could not kneel and rest my rifle on my knee. I threw my sights up to 300 yards, and tried to take sight at the game, but I could not steady the rifle, and when I fired my ball struck a foot or two to the left of the animal at which I had aimed, the female. The distance was well enough estimated, but I failed to hold on. At the sound of the report the two goats disappeared behind the rocks, and began the ascent of the cliff, clambering up an almost vertical and extremely narrow ravine, in which they were always hidden by the rocks and brush. Once or twice we caught a glimpse of them for a moment, but they immediately disappeared again. At length they showed themselves for the last time about seven or eight hundred yards above us, but it was useless to shoot at them at that distance.

We kept on our course, and, half a mile further on, entered a short cañon which led into a basin somewhat similar to that seen the day before, but less regular, being crossed near its head by several very high ridges of red rock covered with snow, and on which grew a little low pine timber. Through the midst of the basin flowed a considerable stream, tumbling down in a series of falls over the successive walls of rock which crossed the valley at right angles to its course. These vertical walls soon barred our progress, and we had to climb them—a task of no little difficulty. Appekunny, who had set out with rubber boots on, was obliged to give it up and turn back. Yellowfish and I kept on and did some of the most difficult mountain climbing that I have ever undertaken. Often one man would stay below on a narrow ledge holding both guns, while the other would climb up six or eight feet, take the guns and hold them until his companion had passed him and got up to a point where he could take the guns and wait for the other to gain a few feet. Often we would have to ascend a vertical rock-face fifteen or twenty feet high, on which the only foot or handhold would be little inequalities in the rock about as large as a hen's egg, barely wide enough to support one side of the foot or one joint of the finger. In some of these places, which were so nearly vertical that it seemed impossible for any four-footed creature without claws to ascend without falling over backward, the little knobs of rock to which we clung were worn round and smooth by the hoofs of the goats.

After we had clambered with the greatest difficulty up the first of these walls, we passed along over a steep half frozen slope of shale where the walking was very laborious, and then followed the stream for some little distance. Pretty soon we came to another wall of rock over which the water tumbled in a forty-foot fall. Then we had to clamber up the shale slope, and again to look for a place to pass up the wall. This time a crevice was found in the rock, just wide enough for a man to work himself up by means of his hands and knees, much as I should fancy a man would climb up a narrow chimney. Now and then there were little steps or projections of rock on which we would rest; the one below passing up the guns to him in front, for here there was no room to pass. The top gained, we went on to the next wall. This was repeated a number of times, so that to recount the sorrows which we underwent would be wearisome. The climbing was exceedingly difficult, and either from this cause or else because I had had nothing to eat that morning, I became very tired.

At length we found ourselves on a little bench, half a mile deep and twice as wide, on which was a beautiful little Alpine lake, surrounded by a great field of snow, dotted here and there with stunted pines. From here we could see that, after surmounting two or three more steps of the series of cliffs, we would be at the foot of a steep, high ridge, which gave a gradual ascent to a high saddle, not much below the summit of the mountain. Yellowfish, who is indefatigable and seems never to tire, pointed this out and suggested that it was a good road, and that we should go home that way. I was about done up, but determined that I would follow where he might lead, as long as I could put one foot before the other, and so, after sitting down and smoking a pipe, I told him to go on. He trotted off and I followed at my best pace, which was, after all, a pretty slow one.

By the time we had reached the level, snow-covered flat, which led up to the foot of the high ridge, I was fairly tired out. It was not—as is usually the case with me when exhausted by climbing—that I could not get my breath, but my legs from the waist down seemed almost incapable of

motion. Even when walking on comparatively level ground I could advance only a few steps at a time without stopping and resting. I began to think that I should not reach the top of the mountain, and seriously to wonder how they would manage to get me down to camp if I should entirely give out. Curiously enough the locomotion which was least difficult for me was the clambering over the rocks, the stepping from one to the next one above it. The gradual ascent was much more difficult than the rougher, more broken part.

Here, on this highest bench of all, we passed over another lake, this one frozen and its clear surface swept bare of snow by the bitter wind which was blowing. Before we had made half the ascent to our present altitude it had begun to snow hard, with a furious wind, and it was bitter cold. My shoes, much dilapidated by contact with the rocks, had gone to pieces during the morning, and when my weight broke through the crust of the snow field over which we were passing the ice cut my feet.

Very slowly and painfully I made the ascent of the last ridge, creeping, not very carefully, over the steeply sloping ice-covered rocks, but as we neared the crest of the mountain I made better progress, for the fact that the top was so near put strength into me.

At last it was accomplished, and we stood on the very crest of the mountains and looked directly down on the valley and the lakes and the stream. We could see none of the lakes below the fourth, but every one above that was in view. Down in the valley the sun was bright and clear, and the stream gleamed and shone like a broad band of polished metal. The descent was so sharp that it seemed almost as if one could pitch a stone from where I stood down into the lakes. For a few moments we sat and rested, while the wind whistled about us, and the hard pellets of sleet and snow rattled on our coats as against a window pane. A great flock of gray-crowned finches were feeding along the ridge, cheery and comfortable looking as they always are, and fluttered and hopped about us in the most confiding way. What they could find to feed on I could not tell, for there was nothing on the ground but snow and ice, with here and there a red rock projecting above the white covering. But the little finches seemed to like it.

The descent was over a steep slope of snow-covered sliding shale, here and there interrupted by vertical ledges, down which the climbing, though sometimes slow and difficult was not dangerous. Going down hill seemed easy work and though my legs were not under very good control, the falls that I got were not serious. On the way down after we had got below the snow, we walked up a couple of blue grouse, one of which flew a few yards and alighted on the bare rocks, and the other went into a little clump of pines. The former Yellowfish killed, the latter we could not discover. The bird was carried down to camp, and long before it was cold, was roasting over the hot fire, and was soon devoured. There being nothing more to eat in camp we packed up our possessions and started for the St. Mary's Lakes. As we rode down the valley in the bright sunlight I turned back for a last view of the stupendous mountains, which we were leaving, but the dark snow clouds hung heavy over them and their rugged magnificence could not be seen. Again, as I crossed the last ridge going down the valley, I looked back, but saw only the black clouds and the whirling snow.

We reached camp about 5 o'clock, and found three or four Blood Indians from Fort McLeod making themselves very much at home there. Villainous looking rascals they were, and the one with the most forbidding countenance of all had been engaged, as I afterward learned, with a half-breed in the murder of a white man, whom they had killed for his money. The half-breed had been duly hung, but this Indian had in some way escaped punishment.

The following day was occupied in fishing for lake trout and lounging about camp. We had a pleasant visit from old Keh-Ko-witz-Keyuela and half a dozen of our Kootenay friends, who appeared, by comparison with the Bloods, like polished gentlemen.

That night, as we sat about the fire in the lodge and talked over our bad luck, Yellowfish said: "My medicine is bad, and we shall have no luck this time. The last time I was here it was not so. Then, plenty of meat was in the lodge. Then, every day we climbed the mountains, plenty of Eh-mah-kee-kinny we found and killed. In one place where we first climbed the mountains, I killed that time seven sheep. Beyond, on the big square [Goat] mountain, we killed Ap-mah-kee-kinny, may be five or six, not more. This time not good. Plenty rain and snow and fog. Can't see good. To-morrow I go back to the Agency. Bad luck is coming."

"What Yellowfish says is true," said Appekunny. "I was here then and we had plenty of meat. A fat sheep was always hanging in the camp. All over the mountains about these lakes, where we have found nothing and no fresh sign, the tracks were very plenty and the place smelt like a sheep corral. Where is the game now? There has been no hunting done here except by these Kootenays, and there has been nothing here on the North Mountains this summer."

"What time of the year was it that you were here?" I asked.

"Summer," said Yellowfish.

"No it wasn't," said Appekunny. "He means only that it was before snow had come. We were here all through November, but the weather was as warm as it is now, and there were only two or three days in the whole month when

we could not go about in our shirt sleeves with comfort. We had no bad weather, only one little storm when an inch or two of snow fell. Mild pleasant days were the rule, but it almost always froze during the night."

"Well," said I, "it seems very clear to me what our trouble has been. The sheep are back in the mountains, and there they will remain until some heavy snowfalls take place to drive them down toward the lakes. Then when the snow becomes deep on that portion of the range where they are now feeding they will draw down toward the valleys and on to the steeply sloping southern hillsides like those of Singleshoot and Goat mountains, where Yellowfish got so many last autumn. If this were November instead of September, we might have done as well as he did then. But we have not come properly prepared for the conditions which we find. To get back to where the game is now we ought to have at least a couple of good pack animals with suitable riggings. Then we could pile on them enough stuff to last us a week or two, and could get back to a hunting ground. If we come back here again, we will know how to go to work to make a successful hunt. The country is a good one for sheep, and we have seen with our own eyes that there are goats here. As for the other game I do not believe it is present in any very great quantities, though there are bears enough to satisfy any one. You can see from the hides in the Kootenay camp that they depend altogether for their meat on sheep, and that a moose or an elk is killed only by accident."

"And to get sheep," said Dick King, "you ought to go and camp right with 'em. Pack your blankets right up to the rocks and sleep there, so as to get at the game early in the morning."

"Right you are," said I, and then turning to the Indian, added, "Before we go to bed, Yellowfish, tell us a story."

"Well," he replied, "one," and sitting up and putting aside his pipe, he said: "That Old Man. Walked around that Old Man. Came to where still dancing those ground squirrels. Dancing about fire all those ground squirrels. Behind sit that ground squirrel big with young. Old Man cry [wept]. Say, 'Let me by that fire, too.' Ground squirrel say: 'Come on, Old Man, sit here, too.' 'When come there, Old Man,' he say, 'Me first by fire sit.' Old Man take ground squirrels, hold back by [close to] fire. When ground squirrel say *sk, sk*, then Old Man take another squirrel, hold by fire. Old Man make same noise, *sk, sk* [mocking them]. Old Man tired, say, 'All be in fire, too many you.' Throw all in fire. That one, big with young, go in hole. Old Man say, 'Let be that way. Make ground squirrels more you.'"

"Rest in fire, went away Old Man [to] make willow basket [to] cook those ground squirrels. Eat some, rest not cooked. Say to nose, 'Sleepy me. [If while] I sleep, there is traveling about something, holla out.' Now sleep, Old Man. Nose holla. Wake Old Man. Many times. Some above bird cry. Old Man say, 'Above bird nothing,' sleep again."

"Come bobcat. Nose snore many times. Make Old Man jump, so high, many times. Not wake up, Old Man. Bobcat eat all ground squirrels. Nose snore. Old Man high jump, fall. Wake up, him mad. Take fire, burn nose. Say, 'You fool, not wake me up.' Look for bobcat. Find tracks. All grease, tracks. See bobcat [on] rock. He sleep. Walk softly Old Man, catch him bobcat. Old Man pound head [nose] on rock, make short face, pull [body] out long, fix hair on face, pull off tail. That's why bobcat, short face, long hair [on it], long body, short tail."

"Now, Old Man nose burn like fire. Think wind good. Hold nose wind. Wind blow [him] far off, pretty near blow in creek. Catch hold blackthroat [birch tree]. Wind blow here there, still hang on Old Man. That's the way survive Old Man. Wind over, mad Old Man. Hit birch many times. That's why birch [bark] now looks like much cut. *Ok!*"

The story told and duly applauded, we turned into our blankets and were soon asleep. Yo.

A FAMOUS FISHING POND.

THE well-known fishing pond of the late Royal Phelps at Babylon has been purchased by Mr. Whitehead, the counsel for the Society for the Protection of Game, and a club has been formed to hold it. The terms of the new corporation as filed in the office of the Secretary of State are given below. We trust it may long maintain the hospitable fame for which "The Reel" has been so celebrated:

"We, Percy R. Pyne, William E. Dodge, Jr., Charles E. Whitehead, Cleveland H. Dodge and Percy R. Pyne, Jr., being all of full age worthy citizens of the State of New York, and of the United States of America, do hereby intending thereby to form a corporation under the name of the Rod and Reel Society.

That the objects of the corporation shall be simple, social, country life, and improvement in the gentle art of fysshynge as practised by the goodly Izak Walton and Dame Juliana Berners, and also maintaining a fysshynge lodge and waters.

The number of the Trustees shall be five, and those for the first year are to be the above named corporations, and the chief place of business (if idleness can be a business) shall be the Fysshynge House in the town of Huntington and County of Suffolk heretofore known as "The Reel."

The shares of this corporation shall be twenty-five, which shares shall be unassignable either by voluntary sale, or process of law, except by the written consent of all the other shareholders, and at the death of any shareholder, his share shall belong to the survivors upon such terms and conditions as may hereafter be provided by the by-laws saving only his widow, if any, may enjoy the same for her life.

The Trustees shall have the power to purchase real estate, woods and waters, fishing and fowling rights, or to lease the same, and to make such bye-laws and rules as shall be meet for the peaceful and quiet enjoyment of a happy fysshynge house.

In witness whereof we have hereunto set our hands, this 18th day of February, 1886. Percy R. Pyne, Percy R. Pyne, Jr., W. E. Dodge, Jr., Charles E. Whitehead, Cleveland H. Dodge.

CAMP FLOTSAM.

XXV.—THE AFTERMATH.

FOR a few days of the last fortnight of the camp, Garden Island was converted into a bower of beauty. An additional tent was set up, and two young daughters of the Colonel with a school girl friend, made glad the lonely camp of the veterans. When at last the light went out with their departure, the Colonel and the Captain lagged superfluous on the stage for a day or two, and then, one rainy morning, struck their tents and were gone.

The remaining days were cold and cheerless, and most of the time a heavy coat was needed while on the water, even at noonday. The Canadian autumn was upon us, and tracings of scarlet and yellow on the wall of forest around, recorded the flight of the summer days. Day and night the camp stove did duty in the tent, making a desirable retreat when the thermometer stood at 50 degrees. But, notwithstanding the chill without and the sharp winds from the northwest, a fair amount of fishing was done. It was almost useless to try the fly so late in the season, and the best of the fishing was with bait. On one of the cold, cheerless mornings which marked these latter days, we took the fly-rod, and with but a single cast, went over the old course, through the narrows at Burnt Point and into the bay beyond Porcupine Island. The distance was something over two miles, and we cast the whole way without the sight of a fin. In sheer desperation we ordered George to turn the boat into the cove at the foot of the bay where, on ground celebrated for pike, we hoped that we might get one strike at least and perhaps save our fish, though the chances were that we would lose our flies. No pike greeted us on our course around the cove, but as we turned the point of a ledge of rocks, a little goggle-eye frisked out with mate and made fast to the tail fly while the other took the dropper. We extracted all the sport possible out of the adventure, gravely landed the fish and returned to the water, and then tried to repeat the performance. We succeeded, and with every cast brought up another *A. rupestris* to the front, until we had passed through a narrow opening between two small islands into the main lake. Here, casting close in to the shore in not more than eighteen inches of water, we had a world of sport with the rock bass. The shore was thickly strewn with fallen small timber, the branches of which formed a network in the water with an occasional small opening between, from which a response came to every cast. Suddenly a strike, fiercer and stronger than the last dozen combined, took the stretcher and turned for a treetop. We snubbed it close, and soon landed a pound and a quarter small-mouth. A half dozen more rock bass followed, and then another small-mouth, which fastened us by the time we had hooked it most securely in one of the ever present treetops. We could not dislodge it until we had dropped the anchor among the branches and raised them above the surface, when we succeeded in recovering the flies without the fish.

Along a single island of less than a quarter of a mile in length, we took eight small-mouths and a countless number of rock bass. With nearly every strike from the former we were fouled in the submerged branches, from which we could free ourselves only by casting the anchor overboard and lifting the mass of treetops. With every strike we expected to lose the cast, but escaped by luck more than by good management. At the end of the island we crossed to the north shore to cast among the sunken branches and logs where one day last summer we lost gang after gang in quick succession. Here we found the rock bass, if possible, thicker than ever and soon had thrown away a dozen before we landed a single small-mouth. We had taken two or three of the latter when we laid the line alongside the trunk of a tree, which, with the butt on shore, extended a dozen feet into the water. Waiting for the flies to sink beneath the surface two or three inches, we drew them toward the boat, then came a strike which threw all the others into the shade. We promptly put the butt of the rod in the fish's face, while George, in two seconds' time, had put the boat where we thought a safe distance from all possible entanglements, when we felt justified in easing up the strain on the rod. With the first let up on the line there was a downward dash for three or four feet, and despite all the precautions we had taken we were stalled. We soon discovered the cause of the embarrassment. The tree extended thirty or forty feet into the lake and we were directly over the topmost branches, and in these the fish had taken refuge. No amount of straight pulls was sufficient to dislodge it, and as a last resort we dropped the little fluke anchor in among the branches with the hope that we might be able to lift some of them and to save the leaders and flies at least. The attempt to raise the tree was a failure, and when we tried to lift the anchor that too was fast. The leader was forgotten in a moment, for the little anchor, forged by hand to our order, was more precious in our sight than all our tackle. After a series of tugs and pulls from every direction it was dislodged and came home, and we felt all the gratitude of the country preacher, who at the end of a barren collection, gave thanks that he had received back his hat from the congregation. Then a strong pull on the line set us free, but the flies, leader and ten feet of enameled taper line, were left behind, lodged somewhere in the treetop. It was the only tackle which we had brought with us, so we started homeward. The day, however, had not been without its sport, and we did not lament, but it was the inglorious end of our fly-fishing for the season.

Tired and disgusted, we determined to fish no more, but in the waning days of the camp the Madame entered, heart and soul, into bait-fishing, and there was no rest for the weary. With the Princess for oarsman and guide, she succeeded in bringing in daily strings of bass, their joint catch, which put us to the blush, and we were nightly taunted with our ill luck and indolence.

One afternoon, during the last week of the camp, while we were loafing, as usual, about the tents, the two set out on their daily quest. They had been gone for an hour when we started on a trip to the outlet. Midway on our course we heard a faint shout from far down to the right, and saw our camp signal hoisted from a boat. We suspected at once that some surprise was in store for us, and we turned the boat in the direction of the white flag. Ten small-mouths, not one of which was under two pounds, were lying in the boat. "See what we have got," cried the Madame, "and here's another," she shouted, as she landed a mate to the rest, "wait and see us catch them." We waited. In a moment each of

the feminine anglers had landed another. Then, as the Indian girl baited afresh and cast out, there was a mighty surge on her line, and she rose to her feet and lifted with main strength. A splendid bass leaped from the water alongside, the pole of the girl broke, but she grasped the line before the fish was fairly out of sight. Dropping the oars, George leaped into their skiff, caught the line from the girl's hands and brought in a small-mouth that weighed just four pounds and two ounces. The Madame hurrahed and clapped her hands, but the Princess neither spoke nor made a sign of exultation. We stayed alongside until they had taken four or five more, and then, after they had put their catch in our boat for distribution at the outlet, we left them. It was the best fishing that we had seen during our outing, and in it we had had no part. Yet it was with no little pride that we showed the string and related to the two or three to whom we gave them, the story of the long fight which we had with that four pounder.

The Madame and her guide never faltered in the fishing but kept it up to the end. We could not understand the reason why, but they brought in nightly scores such as we had never made, and we were soon satisfied that it was neither tackle, bait, skill, nor knowledge of the grounds that gave them the lead. It was all luck. We could understand now why it was that we used to sit the afternoon through, under the big tree by the mill pond, without a bite, while our companion truant from school would land fish after fish; it was pure, simple luck. We philosophized in vain, the Madame had the biggest and we were grasping after the unattained. But our fishing had been done almost entirely with the fly and in casting. In this our success had eclipsed everything in our experience, so far as small-mouths were concerned. As to the big-mouth, the time has come when we feel called upon to answer the demand of the author of the Bigosh papers, made both by letter and in the columns of FOREST AND STREAM, that we speak of its readiness to take the fly, as compared with the other variety. Truth compels us to write that we have never found it behind the small-mouth in this respect, and, as a rule, the catch, so far as weight went, has generally been in favor of the big-mouth. We will not dispute our friend's proposition that it excels the small-mouth in this respect, nor do we doubt it.

One day, during the last week in camp, was spent in a supreme effort to rival the Madame's score, and we struggled from Burnt Point to the Narrows, from the Narrows to Griffin Island—and got left. When we displayed our catch with a three-pounder at the head, the Madame had one which weighed close to four pounds to show against it and we surrendered.

Again we made the run to the bridge—this time for a farewell—for the day which we had so long seen like a nightmare hovering in front, was upon us, and August had drifted away. The summer had gone like a dream, the tide of its golden hours had ebbed and we were stranded, discontented and dissatisfied. Never did the lake seem more charming than on the afternoon when, after a cruise far above the bridge, we set out on our return. Every point and cove and bay had its host of glorious memories, and each smiled and waved its farewells as we passed. We rounded headland after headland, until we came to the last where we swept into the bay before the camp. There, before us, was the spot which for four months of the past two years had been our home. Within those white walls, nearly two years of the last ten had been spent, weeks and months of peace and joy. The rain and sun had beaten upon them, from the open door we had looked out upon the storm and wind whirling the waters, and the moonbeams silvering the waves of many a lake. Clustering around them were the memories of royal nights, when the woods rang with the sound of revelry and the midnight air was startled by lofty declamation and soul-stirring song. About them lingered the halo of dear friendships, reaching with their golden chains almost athwart the world, from the golden gate of the Pacific to the long wash of Australasian seas, from regions illumined by the glory of the midnight sun to lands haunted by memories of the Incas; friendships of brave, warm hearts which throbbed with ours beneath that canvas and whose thoughts still go forth and cluster around the lone camper and will so cluster until they die. Two grand volumes are those tents, written over with chapters from many lives. All that the wilderness and lake and stream inspire, are traced on the weather-stained walls, but its meaning can be read by no vulgar eyes, the unhallowed gaze can see but the mildew, or the stains from long lying leaves upon the roof.

And now, the volume of another outing was ready for its "Finis." It was written that night by the wild glare of the camp-fire, which blazed high from the pine logs, lighting up the dark recesses of forest and streaming out in golden shafts on the water. It shone on the dark faces of our Indian friends as they sat in farewell council with us—their hereditary foes—who were bronzed by the long outing to a color which rivaled their own.

The night which followed, saw only a heap of gray ashes and the well worn trail mark the site of the American camp, and by noon of the day after we were in Kingston, with faces set toward the border. But we were not suffered to shake the dust of the Dominion from our feet without a greeting and farewell. The Colonel and Captain were in waiting to receive us and we were right royally entertained. First, we were led to the Tête du Pont Barracks, which were just filled with troops returned from the scene of the Northwest rebellion, where we passed a pleasant hour in the officers' quarters with Major Short of B Battery, the commandant of the Post, who is one of the heroes of the "late unpleasantness" in Manitoba. Upon the wall hung two large portrait engravings, one of Her Royal Highness, the Princess Louise, the other of the Marquis of Lorne, each with an autograph beneath, which were the gift of the former to the officers at the Post. Near by was another of General Middleton; and sketches of Canadian winter scenes and other pictures adorned the room, mingled with Egyptian blades, muskets, bayonets and sabres, mementoes and souvenirs of incidents and men in times when nations have betaken themselves to the last great argument. In the Battery stables stood two clean-limbed, supple-jointed horses, as trim as thoroughbreds, belonging to the Major, which were captured by him in the field; while in the yard, each chained to a gun carriage, was another of his prizes, a team of immense Indian dogs with wolf-like heads, trained to sledge work and capable of carrying over a hundred pounds of baggage apiece upon their backs. From the Barracks we were carried by the Colonel to his home, where the remnants of the camp fraternized through the afternoon and around the hospitable board viewed the memories of the jovial hours on Loughborough.

By 4 o'clock the spires of Kingston, the fort on the hill,

and the towers along the city front were drifting out of sight as we plowed down the river, and thoughts of the nether shore began to thicken about us. An hour and a half later and Uncle Sam's officials were engaged in examining with much admiration our assortment of well-worn camp truck.

And now we bring to a close the record of another outing. Begun with the Christmas days it has outlived the winter and closes as the spring tide is about to dawn upon the earth, and the heart warms and the pulse beats high in expectancy of a glorious to come. If its recital has brought a moment of relaxation to a brother whose longing for the camp, the lake and the wilderness has gone ungratified, to such an one we say that our pleasure is no less than his. For him we have written, and for him we wish in the coming season an outing which will compensate for all that he has been denied. And to "Jay," "Norman," our old friend of the Bigosh, and the other brothers of the angle, whose appreciation of our Camp Flotsam has been so generously expressed in FOREST AND STREAM, we extend our hands in greeting, to their encouragement is due all that has been written of the Anabasis of 1885.

WAWAYANDA.

Natural History.

Address all communications to the Forest and Stream Publishing Co.

THE AUDUBON SOCIETY.

THE encouraging letters which we receive in regard to the establishment of the AUDUBON SOCIETY are most gratifying, and are an earnest of the widespread interest taken in this movement to protect our birds. To make it general, and to enlist the aid of every individual who has a love of nature and admires the beautiful birds, is now our object. There is no one whose influence cannot do something to forward this good work. We desire the co-operation of every reader of the FOREST AND STREAM, and again invite all who are interested in the subject and willing to lend their influence to communicate with us. Circulars of information, with full details of the work contemplated, will be sent to any address, without charge. No expense whatever will attach to membership in the AUDUBON SOCIETY.

It would be impracticable to publish all the letters that we have received on this topic since the plan of the AUDUBON SOCIETY was first outlined in these columns. We may give three or four as indicating the ground occupied by some of the leaders of modern thought:

BROOKLYN, N. Y., Feb. 20, 1886.

Editor Forest and Stream:

I am heartily in sympathy with your purposes for the protection of birds, and should be glad to contribute any influence that I can to that end.

If there were no purchasers there would be no demand, and no reason for slaughtering these winged gems. But as only women create a demand, it rests upon them to stay this wanton destruction. I am sure that it is only necessary to bring before American women the cruelty of this "slaughter of the innocents" that fashion is carrying on to secure a renunciation of this ornament and the salvation of birds.

On this subject the kind feelings, the taste, and aesthetic sympathy of the whole community are on your side, and if you persevere you will assuredly win. Yours,

HENRY WARD BEECHER.

OAK KNOLL, DANVERS, MASS., 2nd mo., 20, 1886.

Editor Forest and Stream:

I heartily approve of the proposed Audubon Society. We are in a way to destroy both our forests and our birds. A society for the preservation of the latter has long been needed, and I hope it is not too late for the accomplishment of its objects.

I could almost wish that the shooters of the birds, the taxidermists who prepare their skins, and the fashionable wearers of their feathers might share the penalty which was visited upon the Ancient Mariner who shot the Albatross.

Thy friend, JOHN G. WHITTIER.

ANDOVER, MASS., Feb. 21, 1886.

Editor Forest and Stream:

I am in earnest and indignant sympathy with the motive of any society organized to prevent the murder of birds for decorative purposes. If you will put into my hands all the statistics you can command on this subject, I will try and write something about it—somewhere.

Very truly yours, E. S. PHELPS.

"MURDER MOST FOUL."

A few years since I was driving over a country road in early April. An exceptionally forward spring had stirred all nature from its sleep, and the grass and the leaves, as well as the birds and insects, had begun to make the earth bright and cheerful. In an orchard, hard by, my attention was called to a man who, with a gun in hand and two small boys "at heel," was skulking from tree to tree as if in quest of a goodly "quarry." I drew rein and became a keen on-looker to see what game he was stalking so earnestly, well knowing there was none to stalk. Ere long a few bluebirds and robins took wing and flew to a tree within the range of the would-be shooter. He leveled and discharged his piece, but with no visible result. I could not allow this outrage to go on, and was soon on the ground and over the fence with a challenge of "Hold hard, there!" I bridled my tongue and in quiet tone asked the man if he knew he was liable to a fine of \$10 for every bird he shot. He said no. I told him such was the law, and advised him to amuse his boys by shooting at a mark rather than at the innocent birds. He said he would fire at no more birds, so we parted and I resumed my drive. I cite this instance as one of thoughtless and ignorant transgression, of which there are doubtless many, but the cases of willful murder of the "innocents" are exceeding many.

The killing of birds is an outrage on nature, is reprehensible, is cruel and should be condemned and effectually stopped. The late papers in FOREST AND STREAM are timely and thoroughly commendable, and for one, I endorse them heartily. There are those who would strip this poor earth of every green and pleasant thing for gain, and what with the ruthless and indiscriminate destruction of forest trees and the slaughter of birds for millinery purposes, it is fast becoming a bare and wind-driven and soulless waste in many portions. I often wonder if women ever think of the needless pain that caused the wing or skin of a bird to be displayed in a shop for their approval and purchase? Women

are supposed to be of gentler and more refined natures than men and their sense of injustice and cruelty should be keener than their more brutal (I speak "by the card") brothers and "natural protectors."

The display (outrageous, flaunting and incongruous as it is, void of taste and of beauty as a warrant for its adoption) of heads and wings, and often of entire birds on hats; and of feathers, made up into dress and mantua trimming, would go far to make one doubt their superior and gentler natures. How can these, seemingly so dormant, be aroused? What honest and tender-hearted sportsman will write a pointed tract to convict them of the error of their ways, and make them eschew and forsake such gaudy and tasteless and barbarous adornment, and cease to be abettors of this "most foul, strange and unnatural" murder?

The AUDUBON SOCIETY has a chivalric field before it, and I hope that many will be interested in joining in a crusade against this cruel war upon the birds and the ghastly use of their beautiful skins and feathers. At any rate, let us who love the fields and woods and all that dwell therein, cease not to strive to arouse a public opinion that shall at once and forever damn and consign to utter desuetude a custom more honored in the breach than the observance. O. W. R.

Editor Forest and Stream:

The annual tinkering of the game laws comes up on March 3. One of the most important things to do is to suppress the slaughter of our birds, but we have to strike fairly or not at all.

Stop the bat bird business or rather stop the skin collector who goes for numbers, whether to sell as ornaments for millinery or for so-called science. It is not he who has the biggest collection of skins that is always the best ornithologist or the closest student of nature. We need our birds more as insect destroyers alive than as food for insects. Give the poor man a show too, perhaps he loves sport as well as his more wealthy neighbor. Love of these things is born in us, you know.

One thing more. It was said, I think, by speaker Brackett at the Massachusetts Fish and Game Association dinner that "taxidermists ought to be primarily" and I infer summarily dealt with. Again I say strike fairly or not at all. I mean discriminate fairly between a legitimate taxidermist and the skin collector. This latter class are like the unlicensed dogs, they bring good ones into bad repute. I refer particularly to the millinery skin hunter and bird destroyer. Deal with this class "primarily" and there will be birds enough for all. I might add and possibly with much force, let us enlist our "sisters, cousins and aunts" in the good work of refusing to wear birds as ornaments, and the battle would be ours. X. Y. Z.

BIRDS AND BONNETS.

Editor Forest and Stream:

In view of the fact that the destruction of birds for millinery purposes is at present attracting general attention, the appended list of native birds seen on hats worn by ladies in the streets of New York, may be of interest. It is chiefly the result of two late afternoon walks through the uptown shopping districts, and, while very incomplete, still gives an idea of the species destroyed and the relative numbers of each.

Robin, four.
Brown thrush, one.
Bluebird, three.
Blackburnian warbler, one.
Blackpoll warbler, three.
Wilson's black-capped flycatcher, three.
Scarlet tanager, three.
White-bellied swallow, one.
Bohemian waxwing, one.
Waxwing, twenty-three.
Great northern shrike, one.
Pine grosbeak, one.
Snow bunting, fifteen.
Tree sparrow, two.
White-throated sparrow, one.
Bobolink, one.
Meadow lark, two.
Baltimore oriole, nine.
Purple grackle, five.
Blue-jay, five.
Swallow-tailed flycatcher, one.
Kingbird, one.
Kingfisher, one.
Pileated woodpecker, one.
Red-headed woodpecker, two.
Golden-winged woodpecker, twenty-one.
Acadian owl, one.
Carolina dove, one.
Pinnated grouse, one.
Ruffed grouse, two.
Quail, sixteen.
Helmet quail, two.
Sanderling, five.
Big yellowlegs, one.
Green heron, one.
Virginia rail, one.
Laughing gull, one.
Common tern, twenty-one.
Black tern, one.
Grebe, seven.

It is evident that, in proportion to the number of hats seen, the list of birds given is very small; but in most cases mutilation rendered identification impossible.

Thus, while one afternoon 700 hats were counted and on them but 20 birds recognized, 542 were decorated (?) with feathers of some kind. Of the 158 remaining, 72 were worn by young or middle aged ladies and 86 by ladies in mourning or elderly ladies, or—
Percentage of hats with feathers.....77%
Without feathers.....10%
Without feathers, worn by ladies in mourning or elderly ladies.....13%

FRANK M. CHAPMAN.

A SENSIBLE GUNNER.

The following opinion of a professional gunner regarding shooting game birds in the vernal season, and other birds to supply the demands of fashion, is worthy of record as sound common sense.

Eugene A. Jackson, of Atlanticville, L. I., in a recent letter to the subscriber, expressed himself as follows: "There is now a law against spring snipe shooting; I think it is a good thing, as there are hundreds shot here every spring. I have shot as many as eighty-five large snipe in one day.

Those shot while on their way to the breeding grounds of the North, cannot reproduce and return in the summer or fall with their offspring. The result is that the snipe shooting is not as good as it was ten years since. I presume that the subject of bird protection that is now agitating the public will take effect in the shape of a new law. The ladies, poor things, will then have to try and find something else to wear on their hats. It is an astonishing thing how many birds' wings they can get on one hat. I think if it were the fashion they would wear an elephant on their heads. I, for one, like the idea of protecting the poor little birds, that are destroyed by the thousands, just because it is the fashion for women to wear them on their hats. I should think it no harm if they wore wings of game birds that are shot, and would be otherwise thrown away, or of birds that are a nuisance (English sparrows); but when they shoot every song bird or other kind of bird, that does no harm, it is simply wicked."

Regarding spring shooting and bird protection, Mr. Jackson now has sound views. Let us hope he will try to extend them among the fellows of his craft.

WILLIAM DUTCHER,
Of the A. O. U. Com. on Protection of N. A. Birds.

Half a dozen bonnet shooters who left some time ago for Florida to slaughter the birds there and to follow up the bloody work as the migrating army moved north, have returned disconsolate. The late bitter cold weather drove the birds from Florida to the islands and even to the South American coasts, so no butchery could be done.

A BILL FOR BIRD PROTECTION.

The Committee of the American Ornithologists' Union have prepared a pamphlet containing a great amount of information on this subject, which will soon be published. Among other things which this committee have done is the drafting of a general bill for the preservation of birds and their nests and eggs. This bill they recommend for adoption by every State. It is the result of a great deal of earnest thought and hard work by the committee, and certainly will commend itself to all. It is as follows:

AN ACT FOR THE PROTECTION OF BIRDS AND THEIR NESTS AND EGGS.
Sec. 1. Any person who shall, within the State of —, kill any wild bird, other than a game bird, or purchase, offer, or expose for sale any such bird, after it has been killed, shall for each offense be subject to a fine of five dollars or imprisonment for ten days, or both, at the discretion of the court. For the purposes of this Act the following only shall be considered game birds: The Anatidae, commonly known as swans, geese, brant, and river and sea ducks; the Gallidae, commonly known as rails, coots, mud hens and gallinules; the Limicolae, commonly known as shore birds, plovers, surf birds, snipe, woodcock, sandpipers, tattlers and curlews; the Gallinae, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and quails.

Sec. 2. Any person who shall, within the State of —, take or needlessly destroy the nest or the eggs of any wild bird, shall be subject for each offense to a fine of five dollars or imprisonment for ten days, or both, at the discretion of the court.

Sec. 3. Sections 1 and 2 of this Act shall not apply to any person holding a certificate giving the right to take birds, and their nests and eggs, for scientific purposes, as provided for in section 4 of this Act.

Sec. 4. Certificates may be granted by (here follow the names of the persons, if any, duly authorized by this Act to grant such certificates) or by any incorporated society of natural history in the State, through such persons or officers as said society may designate, to any properly accredited person of the age of eighteen years or upward, permitting the holder thereof to collect birds, their nests or eggs, for strictly scientific purposes only. In order to obtain such certificate the applicant for the same must present to the person, or persons, having the power to grant said certificate, written testimonials from two well known scientific men, certifying to the good character and fitness of said applicant to be entrusted with such privilege; and must pay to said persons or officers one dollar, to defray the necessary expenses attending the granting of such certificate; and must file with said persons or officers a properly executed bond in the sum of two hundred dollars, signed by two responsible citizens of the State as sureties. This bond shall be forfeited to the State, and the certificate become void, upon proof that the holder of such certificate has killed any bird or taken the nest or eggs of any bird for other than the purposes named in sections 3 and 4 of this Act; and shall be further subject for each such offense to the penalties provided therefor in sections 1 and 2 of this Act.

Sec. 5. The certificate authorized by this Act shall be in force for one year only, from the date of their issue, and shall not be transferable.

Sec. 6. The English or European house sparrow (*Passer domesticus*) is not included among the birds protected by this Act.

Sec. 7. All acts or parts of acts, heretofore passed inconsistent with or contrary to the provisions of this Act, are hereby repealed. This Act shall take effect upon its passage.

SPARE THE BIRDS.

[Inscribed to the Audubon Society, New York.]

Y^{ES}, spare the birds in springtime, when violets paint the ground,
When in the shady hollows the pink anemones abound,
For then they are in sweetest voice, their souls are full of song;
Their softest notes, their lofliest notes they all the day prolong.

Yes, spare the birds, the lovely birds, the birds of light and air,
The little feather'd minstrels, whose chants ring everywhere:
Yes spare as in life's journey thou would'st be spar'd from death,
When helmets are clove and plumes are shorn, and fails the gasping breath!

When new the morn salutes the air with all that's fresh and sweet,
Ah! let the wine that fills the air thy quicken'd senses greet;
Then full of joy the brown thrush sings upon the garden hedge,
The swallows twitter on the eaves of the old barn's mossy edge,
The speckled meadow lark upsprings upon its joyous wings,
And, sweeping the salt meadows, its endless praises sings!

The sweet-voic'd, gay-dress'd emblems of Innocence and love
Are surely sent to bless us by the Creative Hand above!
To charm us with their plumage, delight us with their airs,
And sing away our sorrows, anxieties and cares.

The apple trees are white with bloom, a wreath of rich bouquets,
The peach is pink with color, the lilac blue with sprays,
These are the honied haunts of redbreast and of oriole,
And now they strike their silver harps and pour the liquid soul.

I do not know a sweeter gush than blackbirds' mellow strain,
Whether they skim the daisies or sweep the yellow grain,
But ah! the richness of the notes, the blazon of the plumes,
May naught avail to rescue from the bird-butcher's dooms!

There is a little sprite, the tern, the white gull of the main,
That whistles by, that flitteth by, along the sandy plain.
And yet these little spectres, as spotless as the snow,
Are slaughter'd—to be toss'd in pride o'er snowy breast and brow!

Yet all this cruel slaughter of these children of the air,
Goes on, year after year, and few to say, forbear!
For long as youthful beauty will wear her bird-crown crest
The sordid gill will end the life in every downy breast.

GREENPORT, L. I., Feb. 15.

ISAAC McLELLAN.

MEADOW LARKS.—I noticed meadow larks between Hornellsville and Buffalo, N. Y., last week; no other migratory birds yet.—J. O. F. (Feb. 14).

A PET SQUIRREL.

ONE of the brightest and most interesting pets I have ever seen, is domesticated in the family of a friend in this county. It is a red squirrel which was found when an infant in arms, and unable to see its captors, who were present at the demolition of a woodpile where had been the little fellow's ancestral home. It nearly perished from want of the maternal fount, and until a man of genius hit upon the idea of feeding it with a "medicine-dropper," its case was considered hopeless. Then came to the family tabby an invoice of fresh-laid kittens, and the little squirrel was duly installed as one of the tribe. "Mew!" said the old cat, and the rodent was forthwith recognized as a *Felis domesticus*, with all the rights and privileges to such status appertaining.

The squirrel grew and thrived, and was and is as free from fear as the least timid among its foster brethren. When I saw it, it was several months old, and as it was then a little after 6 P. M. (at which time it always takes a siesta), it was taken from its little bed and laid in my hand, where it lay for some minutes without motion.

"He'll wake up, wont he?" said I. "Oh, yes" was the reply, and sure enough, in three minutes the little fellow had circumnavigated—if I may be permitted the word—the whole room, in all directions. He ran into pockets, and over pictures, and only stopped at a cedar pencil, which he at once proceeded to reduce to fragments, leaving the lead intact.

This squirrel has many playful ways, such as slyly entering the pocket of its master, and in default of nuts, taking therefrom his porte-monnaie. It usually has a store of apples etc., hidden behind some bric-a-brac on a corner bracket. It has endeared itself to its possessors, who would be sorry to lose it, and it has really done but little mischief, but alas! it did bite the baby; why I know not. At the last accounts, it was proposed to obtain for it a very tough cage, its incisors having proved quite equal to the demolition of any tender specimen of that article. What may be its future lot, who can tell? Did I relate that it jumps upon the back of its foster-mother, and merrily rideth thereon, to Tab's disgust? This it does, and many things besides, yet the old cat, is more patient with its antics than would be many a human mamma. Long may the little squirrel wave his tail, and wind his clock. KELPIE.

CENTRAL LAKE, Michigan.

MOOSE IN THE ADIRONDACKS.

A PROPOS of a correspondent's plan to stock a tract of land on Long Island with deer, I would like to suggest the idea of bringing back the almost mythical moose to the Adirondacks of New York. If we can keep the non-hounding law upon the books and enforce it, and then do away with jack-hunting, I see no reason why a few moose could not be set free in the more unfrequented portion of the woods, with a fair prospect of their being allowed to multiply. It would be, of course, necessary to enact a special law for their protection. Such a law could be easily brought to pass, and he would be a brute indeed who would violate such a law. I would go a long way even to see a moose. A score of this vanishing race would give an added charm to our grand forest. If such a plan is not feasible now, the plan to make the wilderness a State park is feasible and should be acted upon. With the forest under the control of the State, game now extinct in the region could be introduced with the certainty of its being preserved.

To bring the Adirondacks under State supervision as a great sanitarium and public pleasure resort, ought to be the desire of every lover of sport and of the beauty of the Empire State. NITRAM.

THE MAD DOG LUNACY.—Our well-known correspondent "S. C. C." writes from Marietta, Ga.: I agree with you wholly in your exposure of this senseless panic about mad dogs. There seems to be no proof that the Newark dog or dogs were mad, though it is evident that the people were, and until that is proved, of what worth are the French professor's experiments? I have bred and owned dogs all my life, say for seventy years, and cannot say that I ever saw a mad dog, though I have seen many put to death on that suspicion. There may be such a disease as rabies or hydrophobia, but if so it is extremely rare. Perhaps most of the so-called cases are really caused by fear or alcohol, and Goldsmith's lines are as true to-day as when written:

"The man recovered from the bite,
The dog it was that died."

NORTH CAROLINA.—Progress, Feb. 15.—Woodcock and snipe have begun to come on their way north. Bluejays and robins in great numbers have been here over a week, besides a great many little birds I do not know. The weather is fine. Peeping frogs are at work in all directions. Quail are quite plenty since the last blizzard, but it did look bad for them at one time, as everything was covered with ice and the mercury below zero, which is very severe for this country.—T. M. A.

EXHIBITION OF AMERICAN HUNTING TROPHIES.—*Editor Forest and Stream:* I regret to have to inform you that the American exhibition has been postponed until 1887, in deference to the opinion that it would interfere with the Colonial Exhibition. The proposed loan collection of hunting trophies must therefore be adjourned for the present, but we hope to make it still more complete at the time named.—GERALD BUXTON (Knighton, Buckhurst Hill, England).

Camp Fire Flickerings.

"That reminds me,"
183.

A BOUT twelve or fourteen years ago Colonel D. and Doctor T., both Cleveland gentlemen, were shooting ducks near each other in that "duck heaven" the Sandusky marsh. The blue-winged teal were flying pretty lively, and the Colonel, being a good shot and "to the manor born," was knocking them right and left; but the Doctor, being an expert with the scalpel but not with a gun, was banging away at a great rate without killing a bird, and very much excited of course. Finally he shot at a flying duck, and missing it as usual, to his horror he noticed he had shot almost directly toward the Colonel, about 100 yards distant. He immediately called out, "Halloo, Colonel, did I hit ye?" "Oh, no; no," the Colonel replied. "Well! I can't hit anything!" A true bill. LEVI SROQUEZ.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

HUNTING AT ARMY POSTS.

[Continued from Page 68.]

FROM other of the posts where portions of the army are stationed come additional reports on the prevalence of game, and how the officers and men in blue avail themselves of their surroundings. We quote from letters as follows:

Editor Forest and Stream:

Fort Bowie is situated in a saddle of the Chiricahua Mountains, fourteen miles south of the Southern Pacific Railroad and about twenty-six miles west of the New Mexican line. A few Messina quail are found in the hills about the post, while the foothills and arroyos running into the San Simon Plain abound with the blue scale quail and California. There were plenty of deer within a few miles of the post, but during the summer and fall of '85 so many Government Indian scouts have been camped near Bowie that large numbers have been killed. Within a day's easy ride, however, plenty of deer can be found; the small, whitetail deer being the most numerous, the mule or moose deer being scarcer. The Springfield shotgun does very good work and is much used by the men. E. B. BEAUMONT, U. S. Army.

Fort Bowie, Ariz., Jan. 20.

Editor Forest and Stream:

In reply to your note of the 9th, which has been delayed by the snow, I will give you as full an account of the game around Union as a year's experience goes. Of large game the antelope alone is plentiful enough to pay to hunt, and the nearest point some twelve miles from the post. They are yearly becoming scarcer, owing to the cowboys continually shooting at them; there is one small bunch within a mile of the post, but very wild. Blacktail deer can be found some thirty miles from the post, north, but, owing to the number of Mexicans living in the mountains, are scarce. Bear can also be found occasionally in the same locality. Of the small game the mountain grouse (blue) are run into while deer hunting, but not plentiful enough to make them a special object; the meat is very white and delicious; live in the deepest pine forests, feeding in the openings. A few coveys of Massena quail are within a mile of the post, and while they last afford good sport; and blue quail (scaled quail) are found south of post ten miles. They were, a few years ago, very plentiful, but two hard winters killed them off. Swans are very scarce; I killed one last fall. Geese rather plentiful; killed upward of twenty since I have been stationed here. Ducks are very plentiful, from the canvas-back and redhead to the teal. Of course the water being scarce they are obliged to concentrate, and good shooting is the result. With one man I have killed upward of seventy in the afternoon and morning shooting. This was at the Los Alimos Lakes (artificial), about twelve miles from post. Good ducking also at La Quaree Lake, some ten miles off; also geese. English snipe few; no suitable ground. From the 10th of August until the last of same month we have the best upland plover shooting I think in the country, barring Texas and the Indian Territory. During their flight last August I killed 315, only shooting early in the morning and occasionally in the evening. I shoot them by driving up as near as safe in a buckboard, jump out, and as they get up knock them over. It lasts but a short time, but is nice sport for poor shots while it lasts. This I think covers the game question. About the shotguns, two are issued to each company, and are used considerably, but being single loaders not much execution is done. The caliber is .20—too small for ducks but good for smaller game. They carry well, but I think scatter too much. Although there are no game laws enforced, the officers of the army always regard the close season, and do all in their power to preserve the game. R. C. VAN VLIET, Adjutant 10th Infantry.

Fort Union, N. M., Jan. 28.

Editor Forest and Stream:

In reply to your favor of the 9th inst I respectfully state that there is a fair supply of all kinds of ducks, and good pickerel and pike fishing, but neither make any particular impression on the "post larder." I give my command every facility and opportunity I can to hunt and fish. The Springfield shotgun issued is not a success. The men use them when they can't do better.

F. MEARS, Major 25th Infantry.
Fort Sisseton, D. T., Jan. 24.

Editor Forest and Stream:

Your letter of Jan. 9 to the commanding officer of this post, desiring information about the game, etc., in the vicinity of the post, has been referred to me for reply. As I understand you to want facts and not an elaborate article for publication, I shall devote myself to briefly answering the questions contained in your letter. The large game in this vicinity is such as is found in this entire Rocky Mountain region, and comprises elk, bighorn, mule deer (here called blacktail) and antelope. The first two are mostly found in the Uinta Mountains, forty miles distant, the elk come down in the foothills when the snowfall in the mountains is great. Deer are killed in considerable numbers twenty miles from the post, and in the fall they come down much nearer. A large number of deer are killed and brought here for sale by professionals or rather pot-hunters every season. I am happy to say I have never been reduced to the necessity of buying game. The enlisted men go out to the mountains in hunting parties and generally have fair success. Antelope are to be found in small bands on the prairies, but they are very wild and hard to get at. The principal small game is the sage hen, of which there are great numbers and they afford fine sport for about two months. They lie well to a dog when young, and as a table luxury are unsurpassed. We have a flight of ducks in September and October, but the streams are too cold and too rapid for good duck shooting. The principal varieties are mallard and teal. Now and then a wild goose is killed, but they fly this way rarely, the altitude is too much for them, about 2,000 feet. Occasionally a snipe is killed (so I have been told); I never saw one. There was a genuine woodcock that fed along the

stream that flows through the post all last fall. I saw him several times—always single—and I presume there was but one. He remained till the stream froze up. Jack rabbits are plentiful and there is a small cotton-tail under almost every sage brush, and it is upon these latter and the sage hens that the soldiers use the Springfield shotguns and often make good bags, but not having dogs (I mean good dogs) they hunt for meat alone and most of their birds are killed in their tracks. I have never shot one of these guns and I never will. I don't consider them safe enough for me, but I have heard those who have used them say that they are good strong shooters. There are two furnished to each company and during the shooting season are pretty generally in use. I succeeded in getting the post Council to subscribe for the FOREST AND STREAM, which is now received regularly, and from the manner in which its are worn I judge it is pretty well read.

L. W. CHAMPTON, Ass't Surg., U. S. A.
Fort Bridger, Wyo., Jan. 24.

Editor Forest and Stream:

Your letter of 9th ult. to commanding officer, Fort Custer, inquiring in regard to the hunting in this vicinity, and specially in regard to the Springfield shotgun, has been handed to me with a request that I answer it. The only game we have near the post is chickens, and for a short time in spring and fall ducks and a few geese. By going thirty-five or forty miles into the mountains we find deer, bear, etc. Game is an uncertain and almost inappreciable element in the post larder. Individual sportsmen get some game for their own use but none to supply post needs.

I probably go out after game oftener than any other officer here, but as I have never used the Springfield I can give no opinion as to its merits. One officer with whom I have hunted a good deal uses the Springfield, single-barreled, such as is issued to troops for hunting purposes. He complains a good deal of the gun, thinks its range is too short, and it is not a good shooter. As he is not a skilled wing-shot, but a new beginner, I tell him, and believe, the trouble is in the man and not in the gun. Some of the soldiers have used the Springfield to good advantage. A couple of men a few weeks ago got seventy-three chickens in an afternoon, which does not speak badly for the Springfield.

If an opinion on the merits of the Springfield is of importance to you, it might be got by referring a paper to the company commanders who could inquire of the men who use the Springfield. No officer at the post owns one, and they are used only by officers who have no guns of their own.

C. E. PRICE, Assistant Surgeon, U. S. A.
Fort Custer, Mont., Feb. 2.

Editor Forest and Stream:

In reply to yours of the 9th inst., received yesterday, requesting information concerning the supply of game about the post, I would remark that, so far as big game—such as antelope and deer—is concerned, that is very scarce. Last fall season some hunting parties were sent out, and, after having gone some 75 to 100 miles, they found but few deer. This being a large Indian reservation accounts for the scarcity of such game. In fact, the whole country out this way is filling up so fast with settlers that all game is being driven off in the confines of the mountains.

Prairie chickens, snipe, curlew, wild geese and ducks are found in great numbers in the proper season. Last fall our tables were abundantly supplied with chickens and ducks.

The Springfield shotgun, for a sporting arm, is very much liked and does good work with the proper ammunition. As it is, the ammunition furnished by the Ordnance Department does not give satisfaction only at very short range. The charge of powder is too light, the shot too small, and in no way suitable for good work. The gun itself, being only of one barrel, is somewhat of a drawback in being of much service for a sportsman.

Buffalo have left this entire country. None can be found short of the regions north of Montana over in the British line.

MAJOR JAS. S. CASEY, U. S. A.
Fort Yates, Dak., Jan. 23.

Editor Forest and Stream:

Referring to your letter of Jan. 9, asking as to the supply of game about this post, etc., I have the honor to state that quail are very abundant. Prairie chickens have made their appearance in considerable numbers during the winter, but may not have come to stay. Turkeys are very scarce. Deer are plentiful, but very shy. Only very skillful hunters get them, as a rule. Some hunt for bears, but not often with success. Hunting is a pastime, and is often very successful in securing game; but is not resorted to to any great extent as a means of furnishing the post larder.

The Springfield shotgun is not very much used and is not much in favor. Private shotguns are used mostly.

C. H. SMITH, Colonel 19th Infantry.
Fort Clark, Tex., Feb. 5.

Editor Forest and Stream:

Yours of the 9th came this evening, probably delayed by snow blockade. The Springfield shotgun furnished companies is in constant use by the soldier. There is much small game in this neighborhood. Officers use good double-barreled shotguns. Grouse are plenty. The spruce or Canada, pinated sage hen, ruffed grouse. The ptarmigan (willow grouse) furnishes best of this sport, as they lie to a dog when young in August and September, come out of the willow covers into stubble and grass, and are equally good shooting with the prairie chicken. Of ducks we have the teal (green-wing), spoonbill, wood duck, bluebill, buffhead, butter ball, spirit duck; possibly canvasback (a redhead mixed silvery and black), quite enough in the way of birds.

The Big Horn Mountains contain large game in abundance, though the frontier hunters consider it scarce and have given up hunting for a living. The Indians hunting in large parties have, they consider, killed it off. There is yet fine sport. The time to hunt is in October, last of September. The grizzly can readily be found, elk, deer and mountain sheep. Buffalo were killed three years ago; it is reported small bands are yet running in the mountains. Our people, however, have not seen any, though we arrived here the last of August, and were so occupied until November with military matters no one of the garrison had time to visit the mountains for hunting until November, when I organized a hunting party, taking four or five men from each troop. These men were not all hunters; some teamsters, packers, cooks, etc. The only really excellent hunter with me was Frank Gerrod, scout; at that time the snow had begun to fall heavily. I had one officer in the party, Lieut. Finley, 9th Cavalry, an excellent shot and ardent hunter. The heads

of the many tributaries of Powder River were first visited, when it was apparent the game had been driven out of the high ranges to lower ones. As the object was to supply the garrison with game it was necessary to follow it; continuing to follow it through what was known as the Pine Mountains, crossing the Platte River, we came upon excellent hunting grounds in the Caspar Mountains, stopping a few days to hunt antelope in the Bad Lands. By this time we were one hundred and fifty miles south of our post, meeting everywhere large bands of Crows, Arapahoes, Cheyennes, Sioux, Shoshone Indians in hunting parties. The game was, therefore, very wild. The entire month was taken up in hunting, half of it too stormy to leave camp. The result, however, shows conclusively that it is a wonderful game country. More game could have been killed; the wagons of the train had all that they could move. Loading six six-mule wagons, 72 elk, 102 deer, blacktail; 45 antelope, foots up the total.

Hunters who are willing to work hard, will find all the game they wish to kill. Gerrod, the scout, is the best hunter I have ever had. Not that he kills the most game, but his excellent judgment in directing parties and instructing men how to hunt is invaluable.

Should any of your friends be desirous of hunting grizzly—most amateurs are desirous of doing so—I recommend securing Gerrod. He is cool, quick and a dead shot, all necessary qualities for that kind of work. We are always happy to see parties who are fond of sport. The coming year the railroad will reach Fetterman, quite near an excellent hunting region.

Any one fond of hunting, willing to ride, walk and rough it, as the cavalry officer will upon our hunts, can have all the sport he desires. Should any of your people come out, shall be glad to see them.

EDWARD HATCH, Colonel 9th Cavalry.
Fort McKinney, Wyo., Jan. 25.

THE MICHIGAN ASSOCIATION.

Editor Forest and Stream:

The Michigan Sportsman's Association met in eleventh annual session at the Recorder's court rooms, Kalamazoo, Feb. 9. After the appointment of a Committee on Credentials and the election of a number of individual members, the meeting adjourned until the following morning.

The next morning the report of the Committee on Credentials showed delegates present from the Battle Creek, Grand Rapids, White Pigeon, Jackson, Kalamazoo and other clubs, and the presence of a considerable number of individual members, among them Dr. J. C. Parker, of the Fish Commission.

The president's annual address was a plea for the better enforcement of the game laws, and as a means to that end he advocated the appointment of a game warden, and urged upon the Association the necessity of directing all its efforts in that direction. Our laws are good enough until the means of enforcing them are provided.

Mr. Nichols, of Battle Creek, in discussing the address differed from the somewhat pessimistic views of the chair in regard to the progress of public opinion in the matter of the game laws, and cited the many good laws passed of late and the successful efforts of the Association in obtaining modifications of old and the passage of new laws embodying the latest and best knowledge upon their respective subjects.

The Committee on Law presented its report, giving a summary of the new laws passed at the session of 1885, and explaining their relation to the old laws. It also urged that the united efforts of all members of the Association be directed toward spreading the idea that a game warden was a necessity, and that that idea be specially impressed on all candidates for the Legislature who were to be voted for this fall.

The Committee on Enforcement made a report, giving, among other things, the following estimates of deer killed in Michigan during the past season, based on facts obtained by the chairman from personal visits to the regions mentioned:

Deer killed in Lower Peninsula.....	4,000
Deer killed in Upper Peninsula.....	4,000
	8,000

And estimating each at an average of 100 pounds, 800,000 pounds represented the venison killed in the State last year, which at 4 cents per pound would amount to \$32,000, 4 cents being the price in the woods. The committee believed its estimates to be much under the real truth. The committee also reported that it found practically no deer law observed by residents of the regions where deer are found, and that the animals are slaughtered at all seasons.

The following subjects were discussed and referred to the Committee on Law:

1. The Game Warden acts.
2. Laws prohibiting—
 - a. Netting fish in the harbors of the Great Lakes.
 - b. Netting wild pigeons.
 - c. Extending the close season for woodcock to Sept. 1.
 - d. Spring shooting.

The Committee on Publication made a report showing publication and circulation of the seventh annual book, 2,500 copies. It was ordered that the next book of the Association be published in the year 1887, after the session of the Legislature, so as to show the amendments to the laws expected to be then had.

Dr. Morris Gibbs then read an essay on August woodcock shooting, advocating close season till Sept. 1. Mr. Chas. F. Holt, a practical fishculturist, presented a very interesting paper on the Spawning of Black Bass, showing the benefit to be derived from the recent law prohibiting spearing of fish from March 1 to Oct. 1—the old law was March, April and May. This paper received high commendation from one of the Fish Commissioners present for the close observation evinced and the author was tendered the thanks of the Association for it.

The next annual meeting was ordered held at Lansing, on the third Tuesday of January, 1887. It was ordered that the president and secretary make application to the National Association for the Protection of Game Birds and Fish, for membership on behalf of this Association.

The following officers were elected:
President, Dr. E. S. Holmes, Grand Rapids, Mich.
Secretary, Mark Morris, Grand Rapids, Mich.
Treasurer, N. A. Osgood, Battle Creek, Mich.
Director for four years, W. C. Colborn, Detroit, Mich.
After thanking the city for the use of the hall for the meeting the Association adjourned to the banquet at the Burdick House. About fifty sat down at the tables and the convention adjourned *sine die* about 8 A. M., Thursday morning, after a very profitable and pleasant meeting, the success of which was very largely due to the Kalamazoo Gun Club, who had the matter in charge.

IN MICHIGAN WILDS.—I.

THE Hoosier Hunting Club consists of a small company of amateur sportsmen, who take annual excursions into the trackless forests of Northern Wisconsin or the peninsula of Michigan to find relief from the exactions of business, to incite new energy by quaffing the pure waters and yet purer air of that exhilarating climate. We hunt deer and cast lines for bass and trout also; but these are but a tithe of the game we take. The genuine sportsman returns from such a tour laden with a wealth that no guns or rod can bring to camp. The forests and streams invite him to the most royal of feasts; they bid him enter their secret halls, feast upon their richest viands and be thrilled by their most tender melodies; all their joyous birds will join the chorus, the winds will deftly touch reolean harps, and myriad leaves will clap their hands in happy welcome. He who is sick will here find a panacea for every ill, and the nervous will be given a tonic from Nature's faultless and exhaustless laboratory, more effective than all the nervines of all the medical schools.

The club of which mention is now made, have caught muscalonge in the lake region of the upper Wisconsin river; black bass from lake Gogebic in Michigan a little to the north; and captured spotted beauties from the silver ribbons of brooks singing their way to the icy bosom of Lake Superior; and meanwhile have still-hunted that varietal of wild animals—the red deer. This particular region is specially the paradise of all lovers of the rod and reel. It surpasses any yet visited in wild, picturesque scenery, and in exhaustless canoe routes. The Eagle River chain of lakes have a shore line too extended for any one season's sport, and their funny riches will not be diminished for a score of years. This country is reached by the Milwaukee, Lake Shore and Western Railway, and its officials excel in extending courtesies to tourists.

Members of the club have also hunted along a newer line—Mil. & N. & Wis. & Michigan—extending northwest from Green Bay, Wisconsin, to the Menominee River in Michigan, with good success. All the streams are filled with trout and the forests afford as many deer and black bear as can be found elsewhere. More of the latter are taken by resident hunters, judging by shipments, than elsewhere.

The route oftenest taken was via the Northwestern road. A glance at any map in a railway guide will show the reader one of their numerous lines extending from Chicago to Milwaukee and Green Bay to Michigan, where several fingers of this iron arm extend into the immense iron fields. Some of the most successful hunts have been along the numerous tributaries of Menominee River. The old and abandoned lumber camps—"old cuttings" they are called—afford choice pasturage and excellent retreats for deer. All this as a matter of information and in answer to the scores of inquiries that come to the writer from Eastern sportsmen. The FOREST AND STREAM is their medium and these items are given as an introduction to the notes that will follow. The roads mentioned have guides, etc., with full particulars, which will be sent on application.

One of the novel and interesting trips taken by our club was a canoe trip on the Michigan River. The party, five in number, were Maj. G., Lew G., Dolph W., S. and the writer. The mining town of Republic was reached about the middle of September. But the meagerest outfit had been provided, as we expected to make the distance of about a hundred miles in two small boats. One of these was a canvas—quite sufficient in lakes—but a delusion and snare in dangerous rapids. Lew G. and S. were assigned to the canvas and were the first to pull out. They waved their caps as they dashed off and out into a noisy rapid. Just as the wooden boat was about to swing out into the current, a shout from Lew attracted attention. A lively scene was being enacted as the frail boat popped around like a cork, while Lew was making frantic efforts to reach the shore. S. was vainly attempting to close up a hole with his old hat. Lew shouted words of peculiar emphasis, S. got red in the face and thrust his foot in the hole, while the remainder of the party looked on and shouted with laughter. After getting a good wetting the now useless craft was landed, its contents transferred to the other boat, and three of the party, hearing of a boat that could be purchased six miles below, started to walk by a road along the bank, while Lew, a trapper whom we had employed, and myself, commanded the remaining craft. The crisp September air was most refreshing; the dark, serpentine river, between its numerous rapids as smooth as a lake, and the somber evergreens spread their swaying branches toward us in welcome, making that first morning ride a luxury as rare as it was delicious. During this distance we passed a "narrows," where the river is shot through a "chute," which sent our boat along at the speed of a bird's flight. Phew! what a thrill tingled through the veins as that arrow-like flight was taken. Our boating had been upon quiet lakes, and this was a new revelation which, before sunset, was to be more than duplicated.

At the appointed place the "boys" met us, made a purchase of the second boat, and, after lunching under the sighing cedars, we resumed our journey.

The guide was employed to conduct us through the "Big Rapids." This was a succession of rocky cataracts two miles in length. To our eyes, unfamiliar with boating on raging streams, these setting, roaring rushes of maddened waters was anything but inviting. The river was swollen bankful by recent rains and its awful plunge over submerged rocks looked dangerous. A landing was made to steady our nerves and the trapper was placed in our boat, which was to take the advance. The old dolt, instead of taking the paddle in the rear, to steer our course, gave the paddles to two inexperienced men, Lew and myself, while he stood in the bow to yell in broken French, "To the left. No, to the right. O hell, there you're on the rock." And crash, the boat would strike some huge boulder. Then the boat would swing about and dash off beyond all control or threaten us with destruction by capsizing. Several times it seemed impossible to escape the complete destruction of the boat and the loss of all its cargo, and possibly its occupants. The trapper yelled right, when he meant left, and the only thing which he was absolutely sure to do was to cry out, "O hell, you're on the rock!" At one point where the plunging waters were seething with resistless power, an immense rock was struck and we only saved ourselves by leaping out on it and grasping the side of the boat nearest us. Here we would have been hopelessly imprisoned, but the other boat passed safely through, and, landing in an eddy below, by the aid of a rope and laborious poling, succeeded in rescuing us.

For two miles this most exciting and perilous boat ride continued. Its effect was not the least depressing upon our party. The excitement was exhilarating and only incited peals and shouts of laughter as each danger was safely passed. The memory of that day, therefore, is one of pleasure

though not many of the party would care to duplicate the experience. The picture of the terrific conflict of mad waters and resisting rocks as witnessed that day will remain with the actors through life.

While our blood was yet hot with the excitement, and before we had untied our guns from their fastenings—which we did to save them in case of capsizing—the boys called from the boat in front, "What is that?"

They were just rounding a sharp curve, and we in the rear boat could see our comrades frantically jerking at their guns, all too securely tied. "It's a bear!" we heard Major G. call out, and this sent us for our guns; but bruin was just entering the dense underbrush as the first guns gave him a parting welcome. We landed, rushed through the tangled underbrush for a mile or more on his trail, while one boatload went further down the stream, hoping to head him off. The old fox was too smart for us, however, and soon left us far behind.

If the reader has ever had a like experience he will remember what a fund of jokes such an event always provokes. Then, too, every fellow is sure to detail how nearly he came getting a bead on him. "If"—ah! that if saves hundreds of "the biggest bucks in the woods" or "an enormous bear." That bear was the cause of no little merriment after we were safely huddled in our small tent the first night on the Michigan.

The next morning the old trapper was dismissed, and after spending a few hours in prospecting without finding much sign of deer, we loaded boats and were again gliding down the tortuous but swift current. Here was enjoyment that will make glad the heart of every member of that little company while life endures. A soft haze filled the cope of the heavens above with that dreamy light so delicious to lovers of nature; the boats rocked and swayed in a motion as gentle and delicious as the airy flight of circling swallows in the summer sun; the river sang a ceaseless song, sweet as the dream of childhood, while the tall pines and denser cedars gave answer in a chant low and weird. We seemed to be in a land of enchantment or a pleasant dream. Mile after mile not an oar was struck. Only the man in the stern used an oar to guide our course.

We passed what is called by the lumbermen of that river "flood wood." At some time the entire river bed for a mile or more was completely blocked by the densest, most compact drift that could be imagined. With incredible labor this had been cut away by the numerous lumber companies owning pine lands above and along the river. At this point Major G., who is the hunter of the club, anchored his boat and went ashore to look for sign. Our boat passed on down some distance before stopping. The Major found abundant sign, and we attempted to row back, but the current was too swift for our awkward hands, and we were compelled to pass on.

Our camp for the second night was about a mile up a swift stream called Fence River. This stream is crowded with trout. Immense numbers of the largest size have been taken in proper season by the few bold sportsmen who have penetrated these wilds. Although we were not prepared for taking them, we caught some handsome strings.

As deer hunting was our special mission, the next morning found all out with the guns, except the writer, who improvised a line and pole and had some rare sport in having the trout leap at a red flannel lure.

The result of the day's hunt was a spike buck, brought down at full two hundred yards by Lew, and a fawn dropped by Major. Lew also had a splendid shot, at a dead rest, at a doe, with three shots while running, but scored clear misses. He is a crack shot and we twitted him over the blunder.

Venison tenderloin steaks, golden trout and fawn's heart for supper was a feast fit for a prince. What a jolly time was had that night in recounting the mishaps and jokes of the journey. But the editor and reader as well must not be imposed upon further at present, and the remaining experiences must be reserved for a future number. CASEY.

SHOOTING IN CUBA.

WHAT has become of the snipe and teal which have not come down to us in the usual quantities or numbers this winter? Heretofore the Siempre Fiel has been particularly favored by their winter migration, and the sudden suspension of these favors gives us great anxiety lest they have been receiving inspirations from the New York Chamber of Commerce. Oh, dear! oh, dear! has it come to this pass that even the game birds have been infected by the hated political ideas of the Yanks and turn away from us to more congenial feeding grounds in the Central American republics? Well, plenty of "lame ducks" are here strewn along the tracks of the tax gatherers.

But, though we have been slighted this winter by the game, every steamer is now bringing to us large and increasing flocks of the genus *homo*, though these are not quite homogeneous in all respects. The new route by the Florida Southern Railroad, connecting with steamers at Tampa, is open and brings us an inflowing tide twice a week, representing nearly every State east of the Rocky Mountains by individuals and families coming in to us out of the cold.

The population of the United States is the most mobile and docile in the world, and is catching ideas even from the feathered bipeds; that, among others, of when they are cold they go nearer to the source of all light and life, and imbibe the genial, health-giving influence of the sunbeams.

In looking over the hotel registers here is pictured to the eye the U. S. A. in the form of an immense funnel with Florida representing the narrow part to which the winter travel from all parts of the north, east and west is tending toward the attractive force above indicated, and whether it be that the *Herald* exposé has knocked the bottom out of the Florida peninsula or not (it may have been a false bottom), the fact remains that the winter travel is reaching us here in increasing proportions.

Here the sunbeams offer a still more cheering welcome to those seeking their kind protection, flowing in upon the mind and body through all the senses, both directly and indirectly through many of its charming elaborations of varied vegetable forms and verdure, and juicy, luscious fruits. Here, too may be studied by those philosophically inclined, the vestiges of a past civilization and a dawning new one. *Mais, recentons a nos montons.* All acknowledge this to be an incomparable winter climate. From November to March the thermometer ranges between 70 and 80 Fahrenheit, within which period are usually interspersed three to five terms of three days each when a cold wave from the north forces it down to 60. This winter has been the only exception to this rule which I have known in a twenty years' residence here. This winter we had the mercury down to 60 during fifteen

days in December, and during several of them down to 55; but we are always beyond the reach of frosts and snows.

For the information of those who are projecting trips to this island, and are including quail or deer shooting among their expectations, I will state that they will be required to take out a license to carry their gun, which costs \$11 gold, and if they should wish to shoot the quail or deer on sight, they will require a second license for that purpose, costing another \$11; total, \$22 per annum. Thus game protection here, being one of the devices of the tax gatherer, is likely to be persisted in. The shooter furthermore requires a written permit from the owner of the fields he desires to shoot over or to accompany some party who has such permit.

These, however, are trifling drawbacks, as a few greenbacks will rapidly smooth the road before the visitor. Havana, besides its wonderful climatic attractions, has many others usual to large cities, and great novelty to the Anglo-Saxon in almost everything. It is destined to soon become famous as a winter residence for North Americans of the mobile classes. It is perhaps not strange they should, in their mobility, be drawn toward the sources of the most seductive luxuries of their home breakfast tables—luxuries which have now permanently established themselves there as prime necessities.

Besides it is here that the noxious but seductive weed, the most persuasive solace alike of the man of leisure, the banker, the poet, the philosopher, the theologian, the physician and the proletarian is at home with open house to welcome its many worshippers. Well, let us enjoy its solace "while we may, old time is still a flying," and while human nature is what it is many will yield to consoling influences of different kinds, and when Boreas blows his wicked blasts many will also try to get in out of the cold. NEMO.

HAVANA, Feb. 4.

WITH THE QUAIL IN VIRGINIA.

DURING my visit to Virginia last fall I hunted quail in half a dozen of the best counties of that State, with about my usual measure of success. The birds were more plenty than I have seen them for twenty years, but very much harder to get. Every year it is becoming more difficult to make big bags. Not so much owing to scarcity of birds as to circumstances connected with hunting them.

In all localities in Virginia, as in previous years, I found the peculiar fashions of the season much the same among quail. That fashion holds sway among them, who will deny? When we find Bob White not ready to take his breakfast until the sun is an hour or two high; but quietly remains snoozing in his roost in some secure thicket, until all the morning trains are in, and sportsmen have hunted over the most inviting stubble. Or perhaps he devotes his time to reading the FOREST AND STREAM advertisements of sportsmen's resorts, where quail may be killed until March. Improved guns that shoot often enough, without reloading, to kill a whole covey. Men who break ninety-eight out of one hundred clay-pigeons. Englishmen who, with one hand only, propose to beat Dr. Carver and Capt. Bogardus. Field trial dogs, whose pedigree is traced to the pair that Noah took into the ark, with noses that never misfire. That they know all this, and how to meet it is evident. It used to be that a quail would crouch down and lie until flushed, then fly straight in the direction its head was pointed, depending on its rapid flight for safety. Now they run before the dogs and get up clear out of range, or if caught in close quarters, dart between your legs or around a tree or some other object that will shelter them. Cunning maneuver now seems to be the fashion with them.

To be successful in hunting quail in the South, after they are fully grown, one needs first of all to have good dogs, be a quick shot, and instead of looking for them in stubble or other feeding grounds, work every thicket, woods and broom straw; I might almost say turn over every stone and shake up every fence row. When you have found them don't think of marking them to a better place to shoot, but determine to kill while you have them. Don't be afraid of wasting ammunition; Chamberlin cartridges are cheap and easily obtained. Take all chances in brush and in open. If a bird gets up within gunshot and you see him, always fire; you will often kill when least expected. The man who kills every shot or nearly so will rarely ever make as good a bag as one who is a fair shot as to average, and takes all chances. It is not often that birds are found in the open; but should you be so fortunate as to find a covey in the middle of a ten-acre field, don't put faith in the old idea that quail cannot fly far, but be assured they are going to the woods if it is the next county, and when you get there do not get mad at your dogs if they fail to find. Another recent fashion is to take to trees, or to let you see them settle down, then run a little ways and take a second flight. Both of these tricks are very disappointing and discouraging to the dogs, and they should be encouraged instead of punished. Under such circumstances a man of limited experience in the field when he sees birds light, or thinks so, and takes his dogs to the spot, they either strike no scent, or make game, or point where birds have been, he becomes angry and blames the dogs for not finding what is not there. I have always found it a good rule never to use force or punishment until I was perfectly satisfied of a positive fault.

As an illustration of the closeness with which Virginia quail keep to cover: I spied one evening about sundown, from an elevation on which I stood, a piece of the most magnificent stubble I ever saw, extending about two miles and perhaps a quarter of a mile wide. This being in a section of country that I knew was never shot over except by one man, a true lover of such sport can imagine my feelings when I promised myself that my next day's hunt would be there. I took with me three dogs, all in fine hunting trim. When I got to the stubble I found it high and thick, an abundance of grain scattered all over the ground. We hunted every foot closely and all surrounding thickets and woods without finding a bird, and only saw one little foost. On our way home, while passing through a large body of woods, a noted resort of wild turkeys, we suddenly flushed a tremendous covey of quail. We found three coveys in this wood around the edge of a little clearing about a negro cabin, where there had been perhaps an acre of oats and two acres of wheat raised.

The best shooting I had during the season was in this body of woods, where I could start from ten to fifteen coveys in a day, finding them in the neighborhood of branches, where they fed on berries and wild grapes, or about old "plant beds" and negro cabins, where patches of rag weed had been allowed to grow. This, however, was no fit ground for dude sportsmen. None but stout, active legs and lungs with plenty of wind could stand the hills and ivy cliffs.

One word more before I stop. It is very unwise for sportsmen, non-residents, when they make big bags to carry

all their birds in view; it arouses the jealousies of local hunters and sends more sportsmen to the ground, which generally ends by closing it to all. A string of thirty quail is as much as any sportsman, after the fatigues of the day, should carry. Never strain yourself. I would rather be commiserated on having thirty birds in three days' shooting, with the invitation, "Come back, old fellow, and try it again," than to have every one in the place at the depot to see "those men who done killed all the partridges in the country." Don't string your birds so that fifty will look like 157 (that is the regulation lie) and hire two darky boys to carry them on a pole, or you will be sure some time to be obliged to come home on the owl train and sneak around town some back way without a feather.

BEDFORD.

BROOKLYN, N. Y.

ERRATIC BULLET FLIGHTS.

Editor Forest and Stream:

In my article published by you last week I refer to other cases in my own experience. One occurred a few months before that already published. There was a millpond in the neighborhood upon which I frequently shot wild ducks. There was a deep indentation on one side, bounded by a common zigzag rail fence. The "lay of the land" was such that I could creep into this indentation unperceived by ducks, muskrats and other game, some of which I almost invariably secured, as I was generally accompanied by a very small dog with considerable spaniel blood in his veins, and enough terrier to render him spunky. One day I stealthily crept into my favorite nook, which brought me within rifle range of most of the pond above and below. To my delight I found a few ducks scattered over the pond. A large one and much the nearest of any, happened to be in range of a tannery and dwelling house perhaps 200 yards distant, but was swimming slowly out of range, yet directly into the range of a herd of cattle about 300 yards away in a pasture.

This pond had been constructed but two or three years before, and scattered over the site were several large sycamore trees. I observed that the duck would soon pass just inside one of these, and resting my rifle on a low rail aimed in range of the tree, and as the duck came in range I fired, killing the duck, and at the same time observed the bark fly from the tree just above the water. A few seconds later there was an outcry at the buildings which were at an angle of about forty-five degrees to the line of my fire. My little dog soon retrieved the duck, and taking it I passed around to the buildings to learn the cause of the excitement there. My bullet in passing through the duck and glancing upon the water beyond became deflected to the right several inches, glancing from the side of the tree, passed on to the house, through the weather board of one inch just above the sill, and nearly through the washboard in the kitchen, splitting partly off a large sliver which struck with stinging force the foot of a woman who was standing at a washub with her foot nearly against the board. Hearing the crack of the rifle, the similar sharp crack of the cleaving sliver, which was as large as a man's finger, and feeling the stinging sensation upon her foot, she naturally thought the bullet had penetrated it. Sighting from the bullet hole outside back to the tree from which it had glanced, I found it had barely missed the head of a man in the tan-yard. He was sure it had touched his ear, but I could find no mark.

PHILADELPHIA, Feb. 6.

MILTON P. PEIRCE.

THE UTICA ASSOCIATION.

At a meeting of the Association Feb. 19, Secretary John D. Collins presented the report of the committee appointed at the meeting held last month to consider needed amendments to the game laws. The report is as follows:

To the Board of Trustees of the Utica Game and Fish Protective Association:

The undersigned committee, appointed at the meeting of said trustees January 21, 1886, to consider and report what, if any amendments, are important and necessary for the better protection of game in the State of New York, hereby respectfully report after much consideration and careful investigation, as follows:

DEER PROTECTION.

With reference to deer: Your committee report that during the past three years there has been a large increase of killing, greatly surpassing the number of deer killed and shipped in former years, the extent of which, if continued, will, in the best judgment of your committee, result in the complete extermination of wild deer in the Adirondack wilderness in the course of a very few years; that moose have become already totally extinct within the period of our own recollection, and deer will probably follow the same fate in the course of the next five years unless more protection is afforded by law.

That this increase of extermination during said last three years has been the result of a great change taking place within that time.

1. There has been an increase of the number of hunters, also a great perfection of the weapons and devices used, with an increase of the market demand for venison, all growing out of fashionable popularity.

These causes are unavoidable, and all contribute to a greater destruction of deer.

2. Other deer-producing states around us are waking up to this danger of extermination; and are taking more active measures for better protection and preservation.

Pennsylvania has very recently found it necessary to pass laws prohibiting all killing for five years.

Maine, which has a wild tract equal to our Adirondack wilderness, has equally found it necessary to put greater restrictions upon the killing and shipping of deer, both as to season and the number to be killed by each person.

Our State having less stringent laws, amounting to loose liberality, has within said time now become the rendezvous and hunting ground of all the market hunters from these other States, who gather here in increasing numbers with the most perfect skill and appliances ready to kill the last doe for the vast market demand. These professionals start at the first opening of the season; penetrate to and overrun the deepest recesses of the wilderness and the most secluded haunts and hiding places of deer, keeping up the extermination till the close of the season; sending their game in most instances to foreign markets. The number of these professionals has greatly increased each year and in the judgment of your committee will continue to increase in numbers and perfection of their appliances with each succeeding year in the future, which, with the natural increase of our domestic sportsmen, must only bring one result: the early extermination of the last buck, doe and fawn, and the protection and preservation of nothing.

Your committee in this connection give due and com-

prehensive notice and consideration to the great diversity of opinion among citizens as to the utility of the law against hounding, now in force. They give all due weight to the arguments for its repeal. The result of their investigation is this, viz., that all the opposition to this law grows out of pure selfish desire on the part of individuals clamoring to accomplish their own personal ends and conveniences, and partakes not at all of any real or honest preservation or protection. No better evidence of this is needed than the very fact that in all their plans for proposed legislation on the subject, protection and preservation are asked for with special privileges, which are not protective, in the very fact of the conceded dangers of total extermination.

Your committee are also mindful of the fact that the greatest liberality of open season should be allowed consistent with due preservation, but the very idea of any game law is to prevent extermination, by limits upon the killing and the modes thereof, in which all interested citizens should unite, concur and observe for the general good. The way to protect is to limit and restrict the killing, and is quite inconsistent with too great destruction.

They further report that up to within the past past three years the laws which have been liberal have been practically ample, but that the recent change of conditions necessitates greater limits of both season and the number to be killed. They recommend the following law to be passed, which, after a reasonable trial, they think will obviate what will otherwise become necessary, viz., the necessity of a law which will prohibit for a term of years all killing in this State.

In respect to game birds: Your committee are of the opinion that the open season should be made uniform and limited to the autumn months of September, October and November, as being most consistent with due regard to protection. We think August woodcock killing quite out of season as well as destructive; of partridges and their broods, both should be killed at the same time.

The month of December killing is very destructive of partridges from the fact that then they mainly are trapped by experts. Under the present laws there will be few, if any left to protect in a very few years hence.

They recommend an amendment as now before the Legislature, introduced in Senate by Mr. Coggeshall, proposed by the secretary.

In respect to song birds of all kinds, your committee are of the opinion that all small birds, other than such as are injurious to husbandry, or such as prey upon or destroy the insectivorous species, such as butcher birds, crows, owls and hawks (other than night hawks), should not be allowed to be destroyed in any manner, or at any time, or for any purpose whatever, within this State and should be prohibited.

Your committee are informed that very large orders are being constantly sent out by jobbing houses for the skins of small birds of various kinds to supply the trade, and fashionable demands for ladies' bonnet trimmings, whereby they are being greatly depleted, to the detriment of husbandry and in derogation of public delight. Such practices should be discountenanced by all good citizens as abhorrent and repulsive in the extreme and totally without sense or palliation.

I. C. MCINTOSH,
JOHN D. COLLINS,
GUSTAVUS DEXTER.

PROPOSED AMENDMENTS.

The following bill is recommended by the association, as an amendment to the fish and game laws now in force. The wisdom of its provisions are evident at a glance:

Section 1. No person shall hunt or pursue any wild deer in this State with any dog or bitch. If any dog or bitch shall be found so hunting or pursuing in the State, it shall be *prima facie* evidence of the violation of the foregoing provision of this section by the owners of, or persons having or harboring such dog or bitch. Any person offending against any of the provisions of this section shall be guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each and every violation, to be sued for and recovered as provided by chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, as amended, for the recovery of the penalties thereby imposed, or as hereinafter provided.

Sec. 2. No person shall hunt, kill, chase, destroy or capture alive, any deer in this State except in lawful manner between the 15th day of August and the 15th day of October in each year. Whoever has in possession at any other time any fresh venison or fresh deer skin or deer carcass shall be deemed to have violated the provisions of this section. Whoever violates the provisions of this section shall forfeit \$50 for each deer killed or had in possession, to be recovered as hereinafter stated. Fresh venison may be had in possession and sold for thirty days after Oct. 15 aforesaid, provided the possessor proves that the same was lawfully killed within the lawful period aforesaid.

Sec. 3. The number of deer which any one person may kill or have in possession during the lawful period of each year as provided in the foregoing section is hereby limited to three deer in each year and no more. Whoever kills more than three as aforesaid shall forfeit \$50 for each deer killed or had in possession in excess of three. Whoever harbors or possesses for another any deer killed in excess of three aforesaid for the purpose of evading the provisions hereof, shall be deemed to have violated this section. Market men who keep a regular market for supplying venison to customers at retail only may have in possession during the lawful season fresh venison carcasses in excess of three in November, provided they do not in any way directly or indirectly aid or employ the killing of deer within this state or countenance the violation of the provisions of this section, and provided also that such carcasses have not been killed in violation of the provisions of this section.

Sec. 4. Whoever kills or captures any deer at any natural or artificial salt licks within this state shall forfeit \$50 for each deer so killed or captured. The placing of any artificial salt lick for capturing deer within this state is hereby forbidden, under a penalty of \$50.

Sec. 5. All penalties imposed by this act may be recovered by action for penalties or by indictment and fine, and all the provisions of chapter 534 of the laws of 1879, in respect thereto and the disposition thereof, shall apply hereto.

Sec. 6. The provisions of sections 1 and 36 of chapter 534 of the laws of 1879 and the acts amendatory thereof, so far as they are in conflict with the provisions of this act, are hereby abrogated. In other respects said act is to be construed in aid hereof.

I. C. McIntosh said that the limitation of three deer to each person was copied from the Maine law.

The report was adopted and a committee of two, D. Collins and I. C. McIntosh, named by the chair to go to Albany and attend to the introduction of the bill and endeavor to secure its passage.

Mr. McIntosh reported that he had ordered for Jock's and South lakes 50,000 salmon trout from Caledonia. Mr. Green writes that he wanted them to be taken Feb. 28. The fish were to be taken from Prospect or possibly Remsen. A. D. Barber, Jr., had been written to, but, though he expressed interest, he said he would be unable to take the fish to Jock's Lake.

Mr. Collins moved that Mr. McIntosh's committee be continued and instructed to attend to getting the fish and getting them into the lake.

There was some informal discussion as to the best method of getting the fish to Jock's Lake at this time of year.

Mr. McIntosh said he thought 75,000 could be secured.

The members present all signed the petition issued by the FOREST AND STREAM, protesting against the repeal of the anti-deer hounding law and the Association adjourned, subject to the call of the president.

THE MAINE DEER LAW.

THE large game of Maine is recognized as one of the valuable natural resources of that State. The laws have been most carefully framed for the proper preservation of the deer supply; and—so great is the importance attached to these laws—special officials are intrusted with the duty of supervising the enforcement of the statute by the game wardens.

The Maine game law forbids absolutely and at all times the use of dogs for hunting deer. The working of this anti-deer law—whether it be for good or evil—is full of instruction for the other States which are now considering the same subject. It is worthy of remark that the enactment of the Maine law was bitterly opposed, as was the law itself at first, on the identical grounds now urged by the opponents of the New York anti-hounding law.

The following official reports of the effect of the law, and the testimony of well known Maine sportsmen are submitted:

[From Commissioner H. O. Stanley.]

COMMISSIONERS. STATE OF MAINE,
E. M. STILWELL, Bangor. COMMISSION OF FISHERIES & GAME,
HENRY O. STANLEY, Bangor. DIXFIELD, Feb. 14, 1886.

Editor Forest and Stream:

You ask for my opinion as to the working of the anti-deer hounding law in Maine. I can give it in a very few words. That law in my opinion, is the *very best* one we have on our statute books for the protection of our deer in the Maine forests. If hounding were to be allowed, it is my belief, that in five years from now few deer would be left in our State. To the enforcement of this law I attribute the increase of the game, that has filled our forests with deer as they are to-day. Repeal this law and the track of the deer would disappear from Maine.

H. O. STANLEY, Commissioner.

[From Commissioner E. M. Stilwell.]

COMMISSIONERS. STATE OF MAINE,
E. M. STILWELL, Bangor. COMMISSION OF FISHERIES & GAME,
HENRY O. STANLEY, Bangor. BANGOR, Feb. 16, 1886.

Editor Forest and Stream:

You ask me the question of our success with the Maine anti-hounding deer law. My reply is that we could have achieved nothing without it. There is no such thing as deer protection, there is no such thing as deer propagation without that law. The only question is between deer and dogs. You cannot have the one without stringently enforcing the law against the other. There is no such thing as a compromise between the two. Since the passage of the amended dog law in 1883, the deer of our State have more than doubled.

To claim that still-hunting is more destructive than hounding is utter nonsense. Hounding permits no sanctuary, no respite for the deer. They are driven even from their newborn and suckling young into the lakes to be shot. The still-hunter can practice his craft only after the leaves have fallen, after the fawns are weaned, the venison fat and in condition, and fit as food for man.

E. M. STILWELL, Commissioner.

P. S.—I send you also letters from Mr. John Shaw, the well-known shipbuilder; Dr. Samuel B. Hunter and C. B. Donworth, Esq., all of Machias, and Manly Hardy, of Brewer. Messrs. Shaw, Hunter and Donworth are sportsmen of large experience, who have been for many years practically familiar with the Maine game question and interested in the due protection of the great resource of our State. Mr. Hardy is a dealer in furs, has an almost universal acquaintance with the hunters of the State—whites and Indians—is a keen observer, accomplished sportsman and naturalist, from whose opinion on this question there is no appeal. You are at liberty to publish the letters if you see fit.—E. M. S.

[ENCLOSURES.]

MACHIAS, Me., Feb. 15, 1886.

E. M. Stilwell, Com. Fisheries and Game:

DEAR SIR—You ask my opinion about the anti-dogging deer law of this State in relation to its saving the deer. I will say that I think it is the greatest protection to the deer that we have. Yours truly,

JOHN SHAW.

BREWER, Me., Feb. 15, 1886.

Hon. E. M. Stilwell:

DEAR SIR—In answer to your question as to my opinion of deer increasing where hounding is allowed, I have to say that my belief, backed by a long experience, is that they will be exterminated in less than half the time where hounding is allowed that they will where only still-hunting is done. People hound because they can get more deer in that way than by still-hunting. If this were not so no one would care to keep hounds. In the months of September, October and November, when there is no snow, the best still-hunters can kill but few, so those who wish some easier way ask for hounding. I believe deer can be killed fast enough by fair still-hunting without being murdered by hunting with hounds. Very respectfully,

M. HARDY.

MACHIAS, Feb. 13, 1886.

Hon. E. M. Stilwell, Com. Fisheries and Game:

SIR—In answer to your letter of inquiry as to the result of the law prohibiting the use of dogs in hunting deer, I will say from personal knowledge, the increase is perfectly astonishing, especially when the law is well enforced as in Washington county. It has been proved here that the use of hounds by sportsmen cannot be allowed at any season, not only because of its destructiveness, but it so frightens the game that it leaves the hunting grounds. When hounds are used the residents provide themselves with that nondescript class of curs known as deer dogs, and allow them to hunt as they please, take them into their camps, hunt on the crust in the spring while the does are weak and the fawns are young, and in summer while the fawns are yet too young to care for themselves. In order that the law shall be effective it must include all kinds of dogs, for we often find the common cur the equal of the wolf.

Since the close of the war I have lived in this town and have been greatly interested in the protection and in the increase of game. My business keeps me upon the roads the greater part of the time, besides I annually take my fall hunt. I find that since the enforcement of the anti-dog law so apparent is the increase of the deer, that the citizens now watch for the deer dog, which is hated as the farmer hates the sheep-killing cur. The wardens find no difficulty in getting information when any one undertakes to violate this most beneficial law for the preservation of game. For three

years the increase has been more marked in this country, for the law has been quite well enforced.

At the time this law was enacted there were but few deer remaining in the State, the dogs and crust-hunters had nearly exterminated them, but the efforts of our Commissioners of Game, aided by the local protectionists, have restocked our forests so that we now can boast of one of the finest deer parks in the United States.

As a sportsman I do feel thankful that we have this most humane law prohibiting the use of dogs in the hunting of deer. If we kill the deer, let us do it decently, not torture, mangle and frighten to death.

The law prohibiting the use of dogs is now one of the factors of game protection, without it we should be discouraged and feel our foundation was gone. Game in Maine cannot be preserved without it. Yours,

SAM. B. HUNTER.

Office of
C. B. DONWORTH,
ATTORNEY AND COUNSELLOR AT LAW.

MACHIAS, Me., Feb. 15, 1886.

Hon. E. M. Stilwell:

MY DEAR SIR—As Commissioner of Fisheries and Game you ask my opinion of the results of the anti-deer hounding law in this section; and you are good enough to suggest that my anxiety for the preservation of what I consider to be one of the great sources of wealth of our people, and my experience and observation as a lawyer, fit me to make such a report. Washington county, as you know, affords peculiar opportunities to measure the wisdom and efficacy of the several provisions of the protective system. The time is within vivid remembrance when all the larger species of game had almost wholly disappeared from our forests, owing to the lack of a statutory restraint upon the improvident hunter, but as soon as a wise policy of protection was introduced a marked increase was immediately apparent. The law, however, in its earlier stages was found to be painfully lacking in some of its present most essential features. It was seen that an open season of three months was quite sufficient to greatly retard the desired increase of moose, deer and caribou, if the use of dogs was to be allowed on the chase. The lawmaking power soon became cognizant of the desideratum, and quickly engrafted on the law the provision prohibiting the use of dogs for such purposes. From the passage of that act moose, deer, caribou and all the larger game began to increase with astonishing rapidity, until now our forests are teeming with animal life.

This you may well contemplate with satisfaction, and still more the fact that owing to its great abundance dogs are no longer necessary, nor even desirable, for the capture of this kind of game in reasonable quantities. You may thus readily understand why the opposition to the anti-dog law has been so completely and so effectually silenced.

Yours respectfully,

C. B. DONWORTH.

THE ECONOMIC VIEW OF DEER HOUNDING.

GAME LAWS are not based on sentimentality. They are economic. Their purpose is to maintain the game supply. To accomplish this they must forbid all modes of killing which are destructive to game beyond its natural increase. If experience shows that by the practice of any one mode of capture the number of deer annually killed is greater than the number of deer annually born, that method must be forbidden. Otherwise the stock will diminish and the end will be extermination. On this principle the law forbids crusting and trapping. On the same principle and for the same purpose—because by hounding the annual destruction of deer has been proved by experience to exceed the annual increase—the use of hounds for the pursuit of deer in the Adirondacks is forbidden. On the same economic ground the law against hounds should remain as it is. The conditions have not changed. They remain the same. The law should stand. To repeal it, under any pretext, or with the substitution of any other protective measures, will be to sanction the extermination of the deer from the Adirondack woods.

Without basing any argument upon the unsportsmanship and evident brutality of the practice of deer hounding, we submit the subjoined statement of facts, as bearing on the economic view of the question.

As conducted in the North Woods, hounding consists in driving the deer into a lake, pond or stream, and killing the game while it is helpless in the water. A hunt is usually participated in by several individuals.

One man takes the dogs away from the lake and puts them on a deer track. The rest of the men remain at the lake, two in each boat, at points where, with the aid of a field-glass, the whole lake can be watched. When a deer enters the water to escape from the dogs, it is allowed to swim out, and then the nearest boat is rowed so as to cut the deer off from shore, and as it swims for some landing, the boat is sometimes run so as to force the deer's head under water, and when it comes to the surface, half strangled, a charge of buckshot, bullets from a repeating rifle, or blows from an oar or club, soon finish the work.

Sometimes the pursued deer is killed on land as it runs by a hunter posted on a "runway," but in the North Woods this style of killing is the rare exception. The rule is that the game is killed in the water. That is the kind of deer killing the advocates of the present bill desire. They want it because it is a more successful method than any other and requires less skill and exertion.

HOUNDING IS THE SUREST WAY TO KILL DEER.

1. Because the dog penetrates to the deepest cover and routs out deer which could not be approached by a man. Dense spruce and balsam swamps, fallen timber, dry brush, rocky defiles, thickets or "trip-shin," it is all one to the dog. Where no still-hunter could penetrate he goes with ease, and drives out the game to the water.

2. Because the dog can be successfully used at all times and in all weathers. No matter what the season, no matter where the locality, no matter what the day, whether hot or cold, wet or dry, when the hound is put out the deer must go, and go it will for the nearest body of water, where the sportsman is waiting for his victim.

3. Hounding is the surest method because it is based on the instinct of the game. When a deer is pursued instinct tells her to rush into the water to baffle the hounds. Obedience to instinct brings escape from the dogs on shore, but death at the hand of the man in the boat.

4. To water-kill deer requires absolutely no skill nor experience. The only requisite is money enough to hire a "guide," a boat and the hounds. Most deer are killed at very short range with guns loaded with buckshot, or with magazine rifles. It is a common thing for the "guide" to

hold the struggling creature by the tail while the "sportsman" shoots it or clubs it with oar or bludgeon.

The ease and certainty of hounding invite to indulgence in it numbers of summer tourists, who have no special taste for hunting, are absolutely without any hunting skill, and could kill a deer in no other way. With dog, guide (i. e., oarsman), boat, and rifle, shotgun or club, they are sure of a deer if a deer is in the neighborhood. They kill principally because it is quite the correct thing to tell of having "shot that buck when I was in the Adirondacks." No question of their perfect right to this privilege would be raised, provided they could all kill deer and a proper supply of the game still be left. But they cannot.

HOUNDING EASIER THAN STILL HUNTING.

Any one can kill the poor, tired creature in the water. If he can't shoot well enough, his guide can row him up near enough so he can beat his brains out with an oar. The victim stands no chance whatever for its life. In still-hunting the hunter may break a twig with his foot; a quick motion of the hand or a puff of wind may give the deer its life at the last moment. It is only a few days at most between Nov. 1 and Dec. 1 that the still-hunter can follow a deer with any degree of success, and those days are when the ground is covered with wet leaves, or when the ground is covered with light snow and upon leaves not frozen, and those are the exceptional days. Still-hunters do not kill a large number per man, but from one, two or three, and, in rare instances, five or more deer to each gun or sportsman in camp, during the fall. But, on the other hand, the hounders—say three in a party, with as many dogs—kill two or three deer each day, not being confined to particular days. The hounds will drive a deer on frozen leaves, in dry or hot or wet weather, all the same.

HOUNDING IS EVEN MORE DESTRUCTIVE THAN CRUSTING.

The law forbids crusting. On the same principle it should forbid hounding. Hounding and crusting are very similar. Crusting means killing deer when there is a crust on the snow, through which the deer breaks, but which sustains the man. The crusted deer is killed when, floundering perfectly helpless in the snow, it is easily approached by the man on the snow and clubbed or its throat cut. The hounded deer is killed when, floundering perfectly helpless in the water, it is easily approached by the man in the boat and clubbed or its throat cut. Crusting is destructive, water-killing is more destructive. One is just as bad as the other in principle; in actual practice water-killing would destroy more deer than crusting.

HOUNDING DESTROYS THE DOES.

The proportion of does to bucks killed by hounding is fully 3 to 2. The reason of this is not at all difficult to explain. The doe is weaker than the buck and when hounded will sooner take to the water. Through the season when the voice of the hound is heard in the woods, the does linger in the vicinity of streams, ponds and lakes to be near their water refuge. The guides know this; they put out the dogs in the same vicinity, and the natural result is that more does than bucks are driven into the water. Some hounders profess to discriminate and not to kill does; but the doe that is permitted to go free is the exception. The common practice is that when a deer—male or female—takes to the water it is considered legitimate game. Wet does, heated by a long run, are killed by the sudden chill to their lactal glands, before the sportsmen in the boats reach them; if others are permitted to escape their subsequent agony perhaps renders that escape less merciful than death itself. The bill now before the Legislature provides for the hounding of does in the nursing season.

When it is remembered that the killing of one doe is equal in effect on the future supply to the killing of four bucks*, it will be seen that in this respect hounding is especially ruinous of the game supply.

The proportion of does to bucks killed by hounding is greater than the proportion killed by still-hunting. A record of deer killed by a party of four still-hunters for six seasons (1879-85) shows a total of 55 deer, of which 9 were does, a proportion of does to bucks killed by still-hunting of 1 to 6. (FOREST AND STREAM, Jan. 8, 1885.)

Moreover, to the aggregate actually killed must be added the number of does rendered barren by the practice of hounding. In this respect hounding is peculiarly atrocious in its effect upon the natural increase of the game, by preventing conception. Guides and old visitors to the North Woods say that the proportion of barren does to those with fawns is constantly increasing. To-day the relative number is very greatly in excess of what it was ten years ago. This is due to hounding. Hounding is practiced in the breeding season. The does are in a state of constant excitement from fear of the hounds. Under such conditions, according to a principle well-known to all physiologists, and familiar to all stockmen, the does will not conceive. There is no speculation about this. The facts are well established, and are recognized by breeders of horses and cattle. It is beyond cavil that the barren does are increasing, and equally beyond question that the practice of hounding is responsible for it.

HOUNDING DESTROYS THE FAWNS.

To the sportsman in the boat on the lake "the enchanting music of the hounds" is just as pleasing whether the dogs be chasing an "antlered monarch of the glen," a nursing doe or a fawn. Because weaker than the old deer and less able to care for themselves, many fawns are caught by the dogs and killed (often without the knowledge of the hunter). Some are driven into the water and killed by the sportsmen. Some die of exhaustion. Others perish of starvation when the mother does have been hounded to death. [Others may be poisoned by the milk of hounded does which have escaped. This is pure conjecture. We can only base it on the fact that hounded does have been tracked by the bloody milk dripping from their dugs and leaving a trail on the lichens of the rocks over which the creatures staggered.]

Without any allusion to the ethics of "the historic and most sportsmanlike method" of hunting deer, is it not pertinent to inquire, if the does and fawns are to be hounded to death, what is to become of the deer supply?

DOGS KILL DEER IN THE WOODS ALL THE YEAR AROUND.

The fawns killed by the hounds and not recovered by the doggers are only a small proportion of the total number of deer killed in the woods by the dogs without the doggers. Hounds kill deer at all seasons in every county in the Adirondacks. The statements by Mr. Bainbridge Bishop, of New Russia, recently published, described what is going on to-day in Essex county.

In winter it is a common expedient to turn the hounds out to hunt on their own account. Under certain conditions of

the snow dogs can easily catch and kill the deer, which at that time are often weak. The destruction of deer by dogs goes on through the twelve months of the year. If hounding be permitted at all—no matter how short the prescribed season—that will furnish an excuse for keeping packs of hounds. If hounds are kept, they will be used to destroy deer the year around. No legislation will be effective to preserve which does not absolutely prohibit the use of the dogs at all times.

WHAT ARE THE ACTUAL RESULTS OF ANTI-DOGGING LAWS.

New York is not a pioneer in prohibiting the use of dogs in deer hunting. The same law has been successfully enforced elsewhere. Some years ago, when the deer supply of Maine had been depleted by the doggers, that State passed an anti-hounding law, and this was made more stringent in 1883. The results are told elsewhere by the State Game Commissioners.

A similar law obtains in Pennsylvania. In Potter, McKean and Cameron counties deer had in 1878 become practically extinct. The act of June 3, 1878, contained the following provision: "No person shall pursue any elk or wild deer with dogs in any part of this State, or shall kill in the water any elk, wild deer or fawn which has been driven thereto by dogs. Any person offending against any of the provisions of this section shall be deemed guilty of a misdemeanor, and shall be liable to a fine of \$50 for each elk, wild deer or fawn so killed, or pursued, or trapped."

Any dogs pursuing elk, wild deer or fawns may be killed by any person; and any constable or other town official may kill any dog that habitually pursues elk, wild deer or fawns." The result has been a great increase in the game. Deer are still-hunted there two and one-half months, and the supply is reported by old hunters to be as abundant to-day as it was in 1860.

In many portions of the Adirondacks the New York law was not stringently enforced last season. Some of the city sportsmen who are now asking for the law's repeal violated it last fall. But where it was enforced the result was beneficial beyond all question.

PETER B. LEONARD, State Game Protector for St. Lawrence and Franklin counties, says: "In its working there can be no question but the law prohibiting dogging has saved large numbers of deer. Instead of the open and declared preparations and practices, we have now the secret and covert methods pursued by the doggers. With such efforts as the game protectors and game protectionists are able to make, the practice has been much abated. With continued efforts it will be suppressed, except as isolated cases shall occur beyond the reach of vigilance to prevent, and to be classed with other crimes that, to an extent, always have and always will baffle the best police."

JOHN LIBERTY, State Game Protector for Essex and Clinton counties, says there have been many undetected violations in his district, and adds: "Notwithstanding, I think the law has saved a great many deer in my district, and wherever I go the indications are that deer are very plenty. What hounding has been done was away from the settlements, and then very slyly."

JOHN L. BRINKERHOFF, State Game Protector for parts of Lewis and Hamilton counties (himself an advocate of hounding), reported adversely to the working of the law because he could not enforce it. But the Beaver River country, in Brinkerhoff's district, was watched by a special constable paid by the hotel keepers, guides and visitors. Here is a report of the result, written by Mr. Chas. Fenton, of Number Four:

"In the Beaver river country not less than 260 deer were killed in the season of 1884; 200 were killed by driving into the water with hounds and about 60 by still-hunting. Last fall less than 60 were killed on the same territory. Why was this? Simply because the law against hounding was strictly enforced. In other sections where the law has not been enforced many deer have been killed by hounding and credited to still-hunting. A year ago last fall a party from Jefferson county camped on Beaver River and killed about 30 deer; last fall they went on the same ground and killed 4. Another party who the previous fall killed 23, last fall did not kill any. Altogether the deer hounding law has been a success if we take into account the preservation of deer. It is safe to say that at least 1,000 have been saved through the instrumentality of this law. No wanton slaughter has been committed, as pot-hunters dare not market venison killed in this way. The sentiment against hounding deer will doubtless be stronger the next year, and the law be more generally observed during the close season, as almost every one came out of the woods the 1st and 2d of December."

That was in the western part of the woods. The same happy results were seen elsewhere, wherever the law was enforced. Mr. R. M. Shuts reports from the Chateaugay Lake district, in the northeastern part of the woods:

"The majority of the people living in this section of the country are satisfied with the non-hounding law. The hotel owners, club house owners and guides are pleased with the law."

"The men who are not pleased are the ones who have rented a hotel for the year and want to kill the last deer before the year is up; also the outsiders who have to go into the woods in the fall and camp out for a couple of weeks, and with the aid of a dozen hounds kill or drive every deer off the range."

"None of the old-time hounders have indulged in the pastime here this season. I don't think a dozen races were made at this lake the past fall, and we have seen the good effect of it. The deer come to the water late as well as early, and are now yarding within a mile of where I write this at my office desk."

"This season has been the best one for still hunting we have known for a score of years, and yet very few deer were killed—only twenty at Chateaugay Lake, and these by five different hunters; three were killed from this house, two from the Merrill House and fifteen from a hunting camp four miles south of here."

"If there is any legislation this winter in regard to the game of our State, let them provide a game protector for each town where needed, appoint good men and true and pay them for their services. If they serve the State, keep them; if not, discharge them and appoint others. Keep a good man at each game center and game will increase.—R. M. SHUTTS."

*THE UNION LEAGUE CLUB, New York, Feb. 15, 1886.—Editor Forest and Stream: In reply to yours of the 13th inst., desiring my opinion of Richard M. Shuts, of Upper Chateaugay Lake, I would say that after many years of experience hunting in the North Woods, and knowing many of the guides in that region, I know of none more efficient and conscientious. He knows the country for miles around. His testimony as to the present law regulating the killing of deer I consider invaluable. If all the guides were as honest as "Dick Shuts," there would be more sport in the North Woods. Very truly yours, SAMUEL C. REED.

*See letter of Dr. Samuel B. Ward, in FOREST AND STREAM Feb. 18, 1886.

The following statistics are also given on Mr. Shutt's authority:

"To get at the exact number killed by those who dog is next to impossible, for they are got through a longer time and by many from a distance, who carry them away, and there is nothing known about them. Not so with market still-hunters; the time is generally short in which they hunt, the weather cool, and they keep the deer they kill until they get through, and then take them to market. There has been as close an estimate made by guides as could be of the number killed by doggers in the vicinity of Meacham Lake, Plumador and Duck ponds, Deer River and that section in 1884, and they make out 169; in the same section in 1885 by still-hunting, with a little dogging, 69. In the section around Wolf Pond and State Dam in 1884, by dogs, 40; in the same section in 1885, still-hunting, 17. It is worthy of note that there has not been so good weather for still-hunters in thirty years as the last fall has been. These are facts that can be proved beyond doubt."

THOSE "MARKET STILL HUNTERS" LAST FALL.

Reports of an excessive slaughter of Adirondack deer by market still-hunters last fall have been industriously circulated. The FOREST AND STREAM has taken pains to investigate these stories and finds them totally without foundation. They are put forward by the advocates of bounding purely for the purpose of misleading and deceiving the Legislature with respect to the results of the anti-bounding law.

Much stress has been laid on the market glut of venison last season. To reason that the Adirondack still-hunters caused that glut is all nonsense, as may be shown by the statements of the bounders themselves in the pamphlet recently sent to the Legislature. The introduction to that pamphlet says, and very truly:

"To prevent the sending of venison to market from this region is a hardship to those only who do not live in the Woods; and it will be very little injury to them since it is estimated that in the large cities of this State not less than ninety per cent. of the venison comes from outside the State."

This leaves one-tenth to come from the Adirondacks. When they allege that the Adirondack venison glutted the market they tax our credulity to the extent of asking us to believe that the markets of this State were glutted by the magnitude of this one-tenth of all the venison in market. They make no account of the other nine-tenths. They ignore the fact that venison from the West is always cheaper than Adirondack venison. They leave out of consideration the 8,000 carcasses of venison shipped in 1885 from the one State of Michigan alone. Another reason why the market could not have been glutted by Adirondack venison last season is that only a small quantity of venison was shipped to market from the North Woods.

To stop market-hunting, forbid marketing game. But to forbid marketing game, and at the same time to permit bounding, would not be a protective measure. The deer killed by hounds would exceed ten times over the number now killed for market.

[From the New York Times, Feb. 21.]

The bill introduced at Albany for the protection of deer is a good bill in so far as it restricts the transportation of venison from the Adirondacks to two carcasses for each sportsman, to be accompanied by the sportsman. It is a bad bill inasmuch as it permits six weeks of bounding deer, and those the six in which more deer are likely to be bounded than in the other ten months and a half. For a considerable term of years, at least, bounding should be prohibited absolutely if the game is to be protected. The protection of the game is the prime consideration, since the Adirondack venison would under any circumstances be but a small portion of the venison that comes to the New York market every winter.

THE UTICA REPORT ON HOUNDING.—The Utica Association's report on the deer hounding law is another evidence of public sentiment on the subject. A member of the Association tells us that the report was made after "a long observation and collection of facts by our Association, which have been carefully and impartially weighed and considered. From all I can hear, it speaks the honest sentiment of people in this section who feel the necessity of restrictive measures, and that personal ends must give way to the public advantage, selfish people to the contrary notwithstanding." The entire report is given elsewhere.

CHOICE OF HUNTING RIFLE.—*Editor Forest and Stream:* I am done with repeaters, and give my reasons. They won't always repeat. Last winter one cold December day I was close on a large flock of caribou, yet went to camp without meat, as the magazine was frozen solid. Practically I had no gun. This season it was one day reduced to a single shooter in consequence of an obstruction, a small spruce spill, in the magazine. No repeater balances as well as a single-shooter. Given the same weight of gun, length of barrel and caliber, and a single-shooter will have a larger per cent. of metal in the barrel, where it will tell in accuracy of holding and power of execution. I have used a rifle over fifty years, having owned a great variety of make, and purchased a late model repeater, mainly to show my brother hunters that I was not "set in my way" in preferring a single-shooter. It is a first-class gun, good as new, of a make that was in the front rank at the trajectory trial, and can be bought low. I go back to my first love. With a single-shooter I can bag as much large game here in the Maine woods as the law allows or a fair-minded hunter desires.—OPEN SIGHT (Camp Cosy, Maine, Feb. 6).

NORTH CAROLINA.—Belvidere, N. C., Feb. 15.—Although the weather has been extremely cold and we have had heavy sleet, still I find the birds have wintered well and are coming out into the fields now in force. In fact I find more birds now than at any time during the season; coveys of from fifteen to twenty-five and even more are now feeding where there were none during December and January. They have learned to protect themselves by retreating to the depths of the thick woods while hunting is at its height, and come up smiling and fat in the latter part of the season and early spring. During a two hours' tramp, a few days since, I found eight large full coveys, numbering in the aggregate not less than 150 birds. One would have thought a month since had he hunted our fields that Bob White had played out, so scarce were the birds. It certainly seems a pity to shoot them so late in the season, but our best shooting after November is in March. The birds are then fat and finely flavored, and strong enough to test the marksmanship of the shooter, as they can then fly at a lightning-like speed. As a rule they do not commence pairing off before the last of April or 1st of May.—A. F. R.

FLORIDA GAME.—Enterprise, Fla., Feb. 15.—The hunting around here is unusually good this year. Mr. Couzens, of New York city, brought forty-three quail in last Friday, and reports large numbers of snipe and turkeys in the Lake Harney region, a few miles from here. Ducks are scarce on Lake Monroe, but a few can be found on the small ponds near here. Mr. Benson, of Brooklyn, N. Y., who spends his winters here, is a great fisherman and has splendid success with the rod and line. He seldom comes in at night with less than fifty pounds of fish, and often up to 200 pounds. The weather is delightful, and all sportsmen able to be out are reaping a harvest.—G. G. J.

COLORADO.—Silverton, Col., Feb. 2.—In our immediate vicinity there is little or no game, and although almost every man you meet is armed, there is no shooting done except when some ambitious individual undertakes to paint the town "red." There is then the liveliest kind of shooting. Within seventy-five miles of us, however, almost in any direction large game can be found in abundance. A number of parties have been out from here, going over the range to the headwaters of the Rio Grande River, and all of them have had very fine sport with elk, blacktails and bears, both silver tips and black.—S.

AN UNSAVORY SUBJECT.—Brooklyn, L. I.—In FOREST AND STREAM of Feb. 4 is an article signed by "Cocker," who says the "odors from Barren Island were not perceptible by him." The reason was the wind was from the west, and in consequence blowing in opposite direction from the point he was on. If he had been to the east of Barren Island, where I was on the same day, he might have had his full benefit for the balance of the winter.—AMERICAN.

KALAMAZOO, Mich.—At the annual meeting of the Kalamazoo County Game and Fish Protective Association, the following officers were elected: President, Hon. T. S. Cobb; Vice-President, J. F. Cowgill; Secretary and Treasurer, Dr. J. A. Partridge; Executive Committee, George Winans, H. F. Badger, Dr. W. T. Stilwell.

PENNSYLVANIA.—In answer to "R. J. D.," I would advise him to write to some hotel in Hawley, Pike county, Pa., where he will find all he asks for. It is one of the best places for large game so near New Jersey. It is recommended by some of our very best sportsmen.—E. F. K.

GREAT SOUTH BAY OPEN.—The ice has disappeared from the Great South Bay and the ducks are beginning to arrive in considerable numbers. Quite good shooting has been had at a number of points, and a large bag was made a few days since near Sayville.

NEW JERSEY.—Smithburg, Feb. 13.—Game in this section was more plentiful the past season than for several years back, and a great many quail and pheasants were left over. We do not think that the game has suffered much.—W. L. B.

MR. HAGUE ON THE PARK.

THE following letter, recently written to Senator Mander-son, of the Committee on Territories, deserves the careful attention of all who are interested in the Yellowstone National Park. No such clear and convincing statement of the injury which will be done to a vast tract of our country by the destruction of the Rocky Mountain forests has ever been printed:

UNITED STATES GEOLOGICAL SURVEY.
YELLOWSTONE NATIONAL PARK SURVEY.
WASHINGTON, D. C., Feb. 4, 1886.

Hon. Charles F. Manderson, U. S. Senate:

SIR:—A bill for the protection and better regulation of the Yellowstone National Park has recently been introduced by Senator Vest into the U. S. Senate. Knowing your keen appreciation of the value of the Park, I desire to call your attention to one or two points which seem to me of the utmost consequence in carrying out the purposes for which the Park was originally set apart and has since been maintained.

In order to accomplish these purposes the most essential features in the new bill are those which relate to the enlargement of the Park and the sharper definition of its boundaries. In the original bill creating the Park the boundaries are loosely stated. A better acquaintance with the country enables us to say more intelligently where the boundaries should be drawn, while experience shows that, to avoid encroachments on the reservations, they should be more sharply defined by law, and the lines accurately run.

In this respect the present bill meets all the requirements of the Park. For the purposes for which the Park was set aside the present area is far too small.

In my opinion the object of first importance in maintaining the Yellowstone Park is the preservation of the forests. The question of timber preservation is one which is gradually attracting more and attention in all the more settled parts of the country. The necessity for some proper restrictions, rigidly enforced, is now very generally admitted. In the far west, where such immense tracts of country are treeless areas, it is all the more necessary that some carefully considered restrictions should be placed upon the indiscriminate cutting of timber from the public domain. It seems equally necessary that certain areas, favorably situated for the growth of trees, should be set aside forever as forest reservations. In the settled parts of the country, owing to the many conflicting interests, proper protection by legislation is a matter of great difficulty. It is sufficient to call your attention to the struggle going on in New York State in the attempt to preserve, by legislative enactment, the forests of the Adirondacks. There should be some additional restrictions in the cutting of timber has been very generally admitted, but to control the matter with due regard to the rights of all, is no means easy to accomplish. The Yellowstone National Park is most admirably adapted for a forest reservation. It is a broad, undulating plateau, varying in altitude from 7,000 to 8,000 feet above sea level; surrounded on nearly all sides by mountains rising from 2,000 to 4,000 feet above the general level of the country. Across this plateau the continental water shed runs with a very winding course from the southeast to the northwest. Two great rivers, the Yellowstone and the Snake, which ultimately drain into the Missouri and Columbia, have their sources here on the plateau, the former in Yellowstone Lake, and the latter in Shoshone Lake.

Yellowstone Lake covers nearly 125 miles of surface, while Shoshone, with very irregular outlines, measures more than six miles in length. Hundreds of smaller lakes lie scattered over the plateau and mountains, and innumerable springs feed these lakes and rivers. Over 8,000 thermal springs are known within the Park. No region in the world is better favored in its supply of water, the great snowfall being unsurpassed in any area of equal extent. Nearly all precipitation between the middle of September and the first of May falls in the form of snow which lies upon the ground well into the summer. This broad, elevated mountain mass is so situated as to gather the storms which center in the northern Rocky Mountains, and the topographical structure of the region enables it to retain the waters. For the storing up of this water and regulating its flow, the forests of immense value.

It is unnecessary here to enter at length into a discussion of the influence of the forests upon the supply of water. In a few words this great body of snow is largely protected from the direct rays of the sun and sheltered from the dry winds blowing from the westward. In consequence the snow melts gradually and the water percolates through the soil and vegetation, slowly finding its way to the springs and large reservoirs. Remove the forests and the snows would rapidly disappear. Damaging freshets would carry off the water in the early spring, leaving the country arid and parched. Dry westerly

winds would take up the snow, precipitating the moisture further to the eastward or our country already supplied. Without the trees the soil would soon be washed away, leaving the country unfit for occupation. The report of the recent Forestry Commission of the State of New York says "that the summer flow of the Adirondack rivers has decreased within the memory of men now living from thirty to fifty per cent. Many of the small streams, which a quarter of a century ago were abundantly supplied with water during the entire summer, are now dry during many months." In my opinion, owing to the destruction of the atmosphere, the dissipation of the country around the sources of the Missouri and Columbia would cause, relatively, a far greater diminution in the flow of water than that observed near the sources of the Hudson. Every precaution, then, should be taken to preserve the natural reservoirs of these great rivers sending their waters to the Atlantic and Pacific. If in the future the lower Yellowstone Valley is ever settled with any considerable population, they will require all the water stored up in this favorable region. It is not only necessary, then, that the forests within the limits of the Park should be preserved, but that the area of the Park should be enlarged so as to include the immediate country along the sources of all streams draining into Yellowstone Lake, the East Fork of Yellowstone River, and the headwaters of the numerous southern branches of Clark's Fork and the Stinking Water.

The country to the eastward of the present boundary of the Park, which, by the bill now before Congress, it is intended to add to the reservation, is one of the most alpine and rugged regions of the West. It consists mainly of a single mountain range with peaks rising from 11,000 to 12,000 feet above sea level. It is one of the principal ranges of the Rocky Mountain system. Snow lies on the higher summits all the year. It is a country of great natural beauty, but useless for agricultural purposes. Although the east-rail foothills were among the frequented resorts of the earliest trappers and fur hunters, the mountains, owing to their inaccessible nature, remain to-day one of the least visited regions of the Northwest. So far as known the mountains carry no minerals of economic importance, and, judging from the volcanic character of the country, the indications are against any discovery of valuable ore bodies. These mountains are useless for settlement and should be withdrawn from the public lands.

On the other hand, the slopes are densely covered with timber and forest vegetation on the west side, and large volumes of water pour into the Yellowstone through Soda Butte, Caine, Calfee and Miller Creeks and the East Fork. On the east side, Crandall, Sunlight and Dead Indian creeks contribute to Clark's Fork, while the Stinking Water drains a large area of country for the Big Horn, the water ultimately reaching the Lower Yellowstone River. Eucalyptus acorns upon these forests will soon be made if not immediately protected by Congressional legislation.

According to the report of the special agent of the last census upon the forests of the country, nearly 80,000,000 railway ties are annually consumed by the old and new lines of railway. In the far west they are usually dependent upon young trees from ten to twelve inches in diameter. It is estimated that each tree furnishes, on an average, only two ties. In Montana and Wyoming the demand for railway ties is largely supplied by the tamarack or black pine (*Pinus nigra*), the variety most abundant in the country immediately adjoining the Yellowstone Park. In a year of active railway building in the West the destruction of vigorous young trees must be counted by millions. By the same authority it is estimated that the injury to woodlands destroyed by fire during the past century in the Montana amounted to \$1,128,000, and in Wyoming to \$3,355,000. In this connection it is not easy to calculate the permanent injury to the country.

Another source of injury to the forest near mining centers in the West is the enormous consumption of charcoal in smelting furnaces. A country devastated by the charcoal burner is a dreary waste. The number of large smelting furnaces, however, are so scattered over the country that permanent injury, except in a few cases, may not be considered as serious. Cooke City, a small undeveloped mining camp just outside the northeast corner of the Park, is amply supplied with a furnace. If the place should ever develop into a prosperous mining district, the demand for charcoal may become an important industry. The need of forest conservation is so urgent in the Yellowstone Park that every precaution should be taken at once to restrict the cutting of timber within the area proposed to be added to the Park. As there are large tracts of timber to the north and east of Cooke City, this could be done without the slightest detriment to mining development.

Another important object to be gained by the enlargement of the Yellowstone Park is the preservation of wild game. Any one familiar with the disappearance of the game of the Rocky Mountains during the last twenty years must be fully impressed with the necessity of rigidly enforcing the game laws in the Park if we wish to preserve, in a state of nature, those animals which are rapidly becoming extinct. What we want is not an artificial zoological garden, but a natural zoological reservation, sufficiently large to allow all wild animals to run free without molestation. For this purpose the present area is too small. The country around the Hot Springs, the geyser basins, and the plateau between the geyser basins and the Yellowstone Lake affords insufficient grazing ground for any large number of game. This country never was an attractive haunt for game. On the other hand, such grand mountains as Mount Sheridan and Mount Washburn, rising out of the plateau, and the high country surrounding the Park, afford one of the finest game regions in the West. The Abasoka or Shoshone range, just to the east of the present Park boundary, is a favorite resort for deer, elk, beaver and mountain sheep. The latter are rarely seen on the Park plateau, but are abundant upon the high peaks and crags to the eastward. A great deal of shooting has been done here within the last two or three years. Its protection is certainly very desirable.

The country immediately to the south of the present southern boundary abounds in sheep and elk. This past season a thousand or fifteen hundred dogs and sheep were fed there throughout the summer. Buffalo are rapidly disappearing from the northwest country. All trustworthy accounts agree that there still remain a few small straggling herds. There are at present, and have been for several years, two or three herds of buffalo of not more than sixty each, roaming in the Park. They are probably remnants of much larger herds, driven from the plains and valleys below, seeking protection in less frequented resorts. They frequently cross the border, traveling short distances for grazing purposes, always returning to the Park for protection. To protect them the country where they roam should be included within the Park area. A few small bands of moose, although rarely seen, inhabit the marshes on the headwaters of Fall River in the southwest corner of the Park. They can easily be protected if the Park is extended to the forty-fourth parallel of latitude, as contemplated by the new bill. By rigidly enforcing the game laws the Park will, in a few years, become so densely stocked that the surplus hunting will make it necessary to withdraw the limits for its own protection. In this way ample sport will be afforded the hunter shooting under territorial game laws.

One of the objects in creating the Yellowstone Park is stated in the original law in these words: "Dedicated and set apart as a public park and pleasure ground for the benefit and enjoyment of the people." To accomplish these purposes in their fullest extent it is necessary that the Park should be enlarged to include the high mountain country to the south of the present Park area, while including some very grand scenery, and containing all the principal objects of interest to be found in this region, lacks that Alpine character which is so desirable in a mountain country visited by tourists and lovers of nature seeking rest and recreation.

For these reasons it seems to me important that the bill now before the Senate, amending the original act setting apart the National Park, should receive the favorable action of Congress at an early date. Very respectfully, your obedient servant,

ARNOLD HAGUE, Geologist.

CHICAGO, Ill., Feb. 13, 1886.

Mr. Freund:

DEAR SIR:—The hunting sights came all right. I tried them the other day and find they work all right, and I think I have the best hunting sights that are made. I find the adjustable slide on rear sight a very good one, as you can change it from a light to a dark sight without taking the rifle from the shoulder, and the open space below gives you a splendid opportunity to see game. Your front hunting sight is superior to others for the reason you have a good round bead, with a fine, yet strong support. As you have nearly an inch of metal in length, your island piece of metal is put in much stronger. I think, than other sights. It works to perfection on light objects, and also dark ones, which all hunters will find to be good, especially on a dark day in the woods. The advantages of your sights are too numerous to mention on paper, and I cannot spare them on their rifle to see their many uses. The target bead is very good, and have made some good scores with it on our range. Its contrasting color shows beautifully on a black bullseye, especially toward evening, when a fine black pin head is hardly distinguishable; the sight being a funnel shape, give a fine black center with a circle of white, which shows good on black bullseye. One can hold his head on the bullseye and see it there, where a black bead would be on the bullseye, but you would not know whether the center or on the side. I would not be without your sights for three times the money you ask for them. I showed them to many riflemen and they say they are a first-class sight both in principle and workmanship, and I do not think any one who wants a good hunting sight will regret the money paid for a set of yours. I will try them more at the range and will write you how they like. I am yours truly P. C. BRADLEY, Sec'y and Treas. Lake View Rifle Club.

Sea and River Fishing.

FLORIDA BASS.

SINCE the *Herald* has vented its wrath against Florida I have been almost afraid to write about the sporting there, but an article in your last issue nerved me up to it. I spent the month of December, 1884, in the Lake Region of Florida shooting and fishing. Being a great lover of the fly rod I carried a rig and my fly-book, but in talking it over with the local fishermen I came to the conclusion they would be of no use and gave myself up to bait-fishing. Bait is very scarce and difficult to obtain, but the bass are not particular and will take anything that has fins. One evening we decided to make the first attempt and the darky cut some pine knots and I made a minnow net about eight inches in diameter and we started for bait. Arriving at the lake the knots soon showed me the dim outlines of a minnow and I made a lunge for him, but he was out of reach before my net touched the water, and I tried one after another until I was almost discouraged, but resolved to try once more, and succeeded in throwing the net squarely over the minnow, which was about five inches long and almost transparent. At the end of two hours I gave it up, having caught only eight, but my back ached as badly as if I had paddled a canoe all day. Livelier pieces of fish flesh I never saw.

We went home and before I retired I took down my flies and looked them over and was more thoroughly disgusted with bait-fishing than ever and longed to try the feathers. The next morning we started out and walked two miles to a clear water lake and, having found a punt, pushed off. I was then a novice in Florida fishing and open for instructions, and as per orders I produced a hook large enough for a striped bass and bent it on. I was amused but said nothing until the darky wanted me to use his old pole, and then my sportsman dignity asserted itself and I drew the line at trees for poles. I joined my fly-rod and used a braided oiled silk which had done service in Mooseshed waters. I hooked on a bait and was about to cast when Sam said, "Look at dat fellah!" (I looked over the side of the boat and at the bottom lay a large bass fanning the sand with his fins.) "Does you spec to ketch dat fellah wid dat whip?" I told him to back the boat a little and I dropped the bait over the fish, and although the water was at least ten feet deep it was so clear I could see his motions when he darted forward and closed on it.

The reel buzzed and my rod bent double, but at last I succeeded in stopping him, and then with a splash he cleared the water, making a clear leap. My nerves were all on edge and I settled to work, but he was not very gamy and soon gave up. He tipped the scales a trifle under six pounds. I was satisfied to let Sam use up the balance of the bait, which he did and caught a fish with every one. While he was fishing a shower came up and the surface of the lake fairly boiled with the splashes of the bass. I quietly put on a leader and a fly made of the breast feathers of the wood duck and commenced casting and caught two or three small ones but was not satisfied. I made Sam row the boat slowly while I trailed the fly about twenty-five yards behind and we had not gone far when I hooked into something and commenced reeling in as Sam backed the boat, but suddenly the line tautened up and the reel commenced to click pretty fast. I thought I had hooked into a gator but the next lunge was too quick for anything but a fish and I knew he was a big one.

Visions of fifteen and twenty pounders, which the natives tell about, flitted across my mind and then I thought of my eleven-ounce rod, light line and small fly and knew I had work before me if I saved him. He made another lunge and broke clean out of the water, shaking his immense gills and dropping with a splash. I gave him the butt, but it was of no use, off he started, and when he had hardly left me a rod of line, I turned him and he came in like a turtle until within twenty feet of the boat and off he started with a tremendous rush. Twice he served me the same trick and he seemed less exhausted than I, but the third time he apparently gave up and I brought him to the boat, only to have Sam miss him with the gaff, and off he started, ran off twenty yards or more and stopped, and no pulling or jerking would make him start; so keeping a steady strain on him, he at last started again as lively as ever and I was obliged to repeat the operations of the previous ten minutes before he gave up and I succeeded in gaffing him. I was tired out but had caught my fish, and only my reader, who has hooked a ten-pound fish on tackle that is only intended for a two-pounder at the outside, can imagine my excitement and pleasure. An hour after, when we reached home, the fish weighed eleven pounds and three ounces, which can be proved by five persons and one of them a notary public. I have caught a great many bass since but never will forget that one. I have caught from twenty to eighty in an afternoon and my fly never failed me, but never caught a big fish by casting. The May fly, or as near like it as possible, about the size of lake trout flies on a double leader, killed more bass for me than anything else, phantom minnow included.

My experience has been gathered during the past four winters, in which time I have spent at least thirteen months among the clear water lakes situated south and east of Lake Eustis, Orange county.

One has to be very careful of Florida stories since the *Herald* crusade, and I suppress a great many adventures which would undoubtedly be set down as "yarns." It is unnecessary for me to tell fishermen who go there that where one person (inexperienced) gets good sport, twenty fail to find it because they do not know how. The following incident will be a good example.

Last winter I started out one Saturday afternoon for some fun with my rod and rifle strapped to my saddle. I had not gone far when I met two gentlemen similarly equipped and hoping for a kindred spirit I spoke to them and in course of the conversation found they were keen anglers and had been fishing two weeks without success. The darky who accompanied them that day had met them at the depot and promised to give them some good fishing, and consequently was hired at \$1.50 a day. They gave him seven dollars to repair an old scow, and at the end of two weeks they had no boat or fish, had paid out \$25, and were thoroughly resolved never to come to Florida fishing again and were making their last attempt at fishing that day. I promised them some sport on the condition that they would send that darky away, for I recognized him as the one who had paid me a similar although not so expensive a trick. At my suggestion they went back and got their fly-rods and book and we started off for a lake I had lately found to be full of fish.

It was stormy and warm and just my favorite time and I boasted a little that I would show them all the fish they wished to catch, and I did. I never saw the fish bite as they did for the next three hours, and they were large ones. One person rowed while two fished and when we counted up at five o'clock we had sixty-five bass that would average two pounds apiece, ranging from one to seven pounds, and this can be proved also. At Sam's request I gave him a fly, and the next day I found him diligently fishing with a float on his line and the fly on for bait; he gave it back to me that night saying he could not catch anything with "dem feders."

I do not like to see a man struck when he is down, and Florida has received a severe blow in the last cold wave, but all its enemies cannot hurt it one iota or keep it from being the delightful winter resort that it is for sportsmen. I speak as a sportsman and not a land speculator.

It is true, one cannot sit on the hotel steps and catch fish as in Bermuda, or kill wild turkey out of the window, but good fishing and shooting can be had even in Florida. And a better place for a cruise in a canoe a canoeist could not wish for than is found in Charlotte Harbor or any other inlet or river south of Tampa, on the Gulf Coast. Ask Nessmuk. F. P. S.

WIND.

MANY books on angling contain explicit directions concerning the proper weather for fishing, and especially which way the wind should blow to secure success. These have been copied one from another, and have become so impressed upon the literature of fishing as to have become part and parcel of the creed of many who seek recreation by lake and stream. These maxims are, almost without exception, taken from old English books, and no doubt had a very remote origin. These older books have been made accessible to the modern angler by the most excellent reprints of Mr. Thomas Satchell, without whose researches and enthusiasm few of us would ever have had the pleasure of beholding their pages; the originals in many cases being confined to two or three copies, which are treasured in public or private libraries and are without price. In days when these weather-wise sayings were recorded, the English angler was, owing to the difficulties that attended travel, mainly confined to the waters of his district which could be reached in a day, either by coach or on foot; and therefore a saying regarding the wind, in which he found some truth, may have been applicable to the eastern coast where the west wind blew down the stream, and therefore must have been somewhat at fault on the opposite side of the island where the same wind blew up the stream.

This subject has been brought to notice by a correspondent in a Western State, who writes, asking if there be any truth in the old legend, which says:

"When the wind is in the north,
The skillful fisher goes not forth;
When the wind is in the east,
It is good for neither man nor beast;
When the wind is in the west,
Then it is at its very best;
When the wind is in the south,
It blows the bait in the fish's mouth."

I answered him that the last couplet probably contained as much truth as the remainder of the stanza. His query set me to looking up what some of those old authors have said on the subject, and while there has much been written on the weather in general, I will quote only a few things which relate more particularly to the wind. In an old notebook of mine the following occurs, copied years ago from some source now forgotten:

"Whanne ye west wynde it schall blowe
Fort ye fischer he schall goe;
Yet if to eastward it schall change,
Furder ye fischer schall not range;
Whanne from ye nort ye wynde schall come,
Ye wisest fischer stayeth home.
But if to southward it schall veere,
It bryngeth to ye fischer cheer."

The Germans say:

"Bei Ostwind und glühendem Sonnenschein
Beissen die Fische nicht, das präge dir ein;
Doch fragst du, welch' Wind dem Angler am besten.
So sage ich, der von Süden oder Südwesten."

This may be translated:

"When the wind is east and the sun shines bright
Bear this in mind, the fish won't bite.
But if you ask, 'What wind suits best?'
I'll answer, 'From either south or southwest.'"

Dame Juliana Berners [1450] says: "And if it be a cold, westeling wynde and a darke, lowrnyng day, then will the fysche commonly bite all day. * * * Ye shall angle, as I said be for, in dark, lowrnyng wedur when the wynde bloweth softly, and in somer seasen when it is breannyng hot. It is from September unto April and in a fayr sonne day is good to angle in, and if the wynde that seasen leave any part of the oriente northe, the wetur then is good, and wen it is a grate wynde, it snowyt, reynet or haylyth, thonderyt or lightneth or also mynynge [sweltering] hoyt that is not to angle."

Note now how Master Leonard Mascall [1590] bodily steals from the Dame, not troubling himself to change her phraseology, rightly thinking that in those days a book one hundred and forty years old was out of print and unknown to his generation. Collectors of angling books were rare in his day, and Mascall might have thought that he was alone in the desire to preserve such as he could find. Certainly he did gather and unblushingly appropriate their contents and pass them off as original, not dreaming or caring that a Thomas Satchell was to arise who would not only ransack the libraries of the world for old fishing books, but would actually reprint them *verbatim* for anglers nearly three hundred years later, and that the literary angler of that remote period would be able to judge how much of a work was original, or what portion the author had seen fit to—

*Since the above was written I have come across the following in Salter's "Angler's Guide":

"When east wind blows or sun shines bright,
Then don't expect the fish will bite.
If ask'd, 'What wind suits angling best?'
I answer, 'The south, or southwest.'"

Whether Salter took this from some old German saying, or whether some German translated it from him, is beyond my knowledge. In the language of the showman when asked, "Which figures in the painting represented Daniel and which the lions?" I can only say: "Which ever you please my little dears, you pays your money and you takes your choice."

"convey, the wise call it." What he borrows from Dame Juliana on this subject is (note the almost identical language):

"Here ye shall understand in what wether ye shall best angle as aforesaid in the darke loursing day, when the winde bloweth southly from the south or west; in the summer sease when the sunne is very hote, it is then naught to angle, but from September vnto April, it is then good in a faire sunny day, the winde being then good; if it have any part of the Orient or east, it is then naught to angle, for they will not byte, or when it is a great winde, snow, raine, or haile, or in a great tempest of thunder, or lightning, for it feareth them, or els in a swooly hote wether, all these times are not good to angle for to take fish."

Dr. Edward Hamilton tells us: "Recollections of Fly Fishing for Salmon, Trout and Grayling," 1885; in commenting on Walton's "Dark Day and a Right Wind." "A dark day and a right wind no doubt is every fly-fisher's wish when he goes a fishing—but which is a right wind?"

"When the wind is in the south

It blows the bait in the fish's mouth."

"Others are loud in the praises of a westerly wind, but to quote from the 'Compleat Angler' again, Walton hits the mark in the following passage: 'And yet, as Solomon observes, that "he that considers the winds, shall never sow," so he that busies his head too much about them, if the weather be not made extreme cold by an east wind, shall be a little superstitious, for as it is observed by some, there is no good horse of a bad color, so I have observed, that if it be a cloudy day and not extremely cold, let the wind set in what corner it will, and do its worst, I heed it not.'"

John Dennys [1613], who in rhyme tell us the "Secrets of Angling," gives such directions that if one relies upon his minute instructions, he need only consult "Old Probabilities" twenty-four hours in advance, in order to foretell what sized creel he need carry. He warbles:

"But if the weather stedfast be and cleare,
Or overcast with clouds, so it be dry,
And that no signe nor token there appeare,
Of threatening storm through all the empty skie.
But that the ayre is clame and void of feare
Of ruffling windes or raging tempest bie,
Or that with milde and gentle gale they blow.
Then it is good unto the brooke to goe.
* * * * *

When faire Aurora rising early shewes,
Her blushing face beyond the Eastern hills,
And dyes the heavenly vault with purple rewes,
That far abroad the world with brightnes flis,
The meadowes greene are hoare with silver dewes,
That on the earth the sable night distills,
And chanting birds with merry notes bewray,
The neere approaching of the cheerfull day.

Then let him goe to river, brooke or lake,
That loues the sport, where store of fish abound,
And through the pleasant fields his journey make,
Amidst sweet pastures, meadows fresh and sound,
Where he may be best his choice of pastime take
While swift Hyperion runnes his circle round;
And as the place shall to his liking proue,
There still remaine or further else remove.

And finally boils it down to this:

All windes are hurtful if too hard they blow,
The worst of all is that out of the East,
Whose nature makes the Fish to biting slow.
And lets the pastime most of all the rest;
The next that comes from countries clad with Snow,
And Artique pole is not offensive least,
The Southern winde is counted best of all,
Then, that which riseth where the sunne doth fall.

In my own experience and from that of gentlemen with whom I have fished, I incline to relegate all this weather wisdom to the books of nursery rhymes and fairy tales. If it were true that such formulas could be laid down, they would apply only to particular streams. The youthful angler who burdens his mind with these quaint old sayings and allows them to control his judgment in the selection of a day when he may sally forth, "armed and equipped as the law directs," will forego many a good day's fishing.

I remember in particular one morning in the Adirondack region before the month of May had advanced into its teens, when a young friend who had camped with me over night and was filled with the knowledge that comes from such sources as I have mentioned, rose and looked out of the tent and said, "There is a raw east wind and it is not worth while to go on the lake to-day." I decided to go, after arguing the question with him a little while, but he staid in the camp and read during the morning. I had three hours of most excellent fishing; The fish rose to the fly freely and on my return to camp I brought him thirteen as fine trout as the lake produced, averaging nearly a pound each. I have fished with him many times since and to-day it is amusing to hear him scoff at the precepts which he had formerly regarded as being part of the fundamental rules to be observed by an angler.

Without doubt a strong wind blowing directly up or down the stream may at times affect the fishing; it is probable, however, that the temperature of the water in hastening or retarding the development of the insect larva and causing them to rise speedily and take the winged state or to remain at the bottom, has more effect on the appetite of trout than the direction of the wind. Sir Humphrey Davy says: "We cannot judge of the senses of animals that breathe water—that separate air from water by their gills; but it seems probable that, as the quantity of the water is connected with their life and health, they must be exquisitely sensible to changes in water, and must have similar relations to it that an animal with the most delicate nasal organs has to air."

There seems to be more good sense summed up in that sentence than all I have quoted before. I have spoken mainly of trout, and if any of our fishes are affected by slight changes of temperature which affect the motions of their delicate insect food, the trout would seem to be the most susceptible of these influences. I very much doubt whether pike are influenced by the wind at all. It is possible that they, like the trout, are inclined to take the lure more or less freely as the sky may be overcast or clear. But I doubt if many other atmospheric changes have any influence upon them.

My own rule is to fish when I feel like it and to take the weather as it comes; and I have never been able to forecast my catch by a glance at the sky or by the movement of the treetops. I have made good catches on most unlikely days;

I have gone forth on the most promising of mornings and come home empty-handed, and the sum total of my knowledge of the influence of the wind upon a day's catch is that we can't tell anything about it. FRED MATHER.

FISH LAWS OF NEW YORK.

THE bill which was introduced by Speaker Husted for the preservation of fish and game, passed both Houses and has been signed by the Governor. The law provides that no black bass shall be taken from Lake Mahopae, Columbia county; Schroon Lake or Paradox Lake, in Essex and Warren counties, or in Friends Lake, Warren county, between Jan. 1 and July 1, or in Lake George or Brant Lake between Jan. 1 and July 13. The killing of black bass, Oswego bass or muscalonge in any of the waters of the State is prohibited between Jan. 1 and June 1, alive for artificial propagation, or the stocking of other waters; except that bass and muscalonge may be caught in the St. Lawrence, Clyde, Seneca and Oswego rivers, Lake Erie, Lake Ontario, Lake Conesus and Niagara River above Niagara Falls, between May 13 and Jan. 1. It is prohibited to have or sell any black, salt or striped bass of less than one-half pound or less than eight inches in length. No person shall catch or kill any blueheads or other fish in Lake George or any of its inlets between April 1 and July 1. Fishing with set lines in the lake is prohibited. Pickerel shall not be caught in Lake George from Feb. 15 to June 15. No Lake George blueheads shall be exposed for sale between April 1 and July 18, or any pickerel from Lake George between Feb. 15 and June 15. The above violations are deemed misdemeanors. No person is allowed to have upon any of the waters containing salmon, salmon trout, lake trout, black bass, Oswego bass, freshwater striped bass or muscalonge, and they shall not be taken without the permission of the Commissioners of Fisheries, any snares, nets, stake poles, etc.

We think it would have been wise to either make the law for black bass read July 1 all over the State, so as to cover the spawning season, or to open the fishing on May 31, so as to allow fishing on the holiday.

MY FIRST BASS.

Editor Forest and Stream:

The accounts of the first catches of a number of your contributors have been read with great interest, and they took me back to the time when I hooked my first black bass. I was but a youngster then, out with three companions for our first camp, which was on the farm of a friend with whom I had spent the summer previous. O, what delightful days those were! I have since then been upon a great many hunting and camping trips, but I believe those days were the happiest. I remember so well the first two or three nights before we got "the hang o' the thing," our blankets seemed to be no protection against the cold from which we suffered considerably. Well, to come back to the black bass.

One of the farmer boys had told us of a large pond six or eight miles from the house, in which there were great quantities of black bass, and if we wished he would convey us over Friday night and we could spend Saturday in fishing. This plan met with our approval very readily, as we, who had never caught anything more gamy than a pike or perch, were very anxious to see some bass.

At 4 o'clock Friday afternoon we had all our paraphernalia packed and were ready for the start. It was a happy quartet of boys that clambered into the spacious wagon two hours later, and we had a glorious ride. Arriving at the pond at about 9, we immediately began to pitch our tent.

It had begun to sprinkle a little, and we were so desirous of getting our tent up before the ground should become wet, that we had scarcely noticed a large tent which was pitched near us. The racket which we made had undoubtedly disturbed the slumbers of the inmates thereof, for they began to jeer and taunt us about being out in the wet, etc.; but finally one of them sung out "Who are you? Come in and see us; we are all in bed, but don't let that keep you back."

Upon this invitation I dropped my hatchet and started for the tent, and I had no sooner thrust my head within the flap than I was greeted with shouts of surprise and welcome. We had accidentally stumbled upon the camp of ten of our most intimate boy friends from the city.

They immediately turned out in undress costume and assisted us in making our preparations for the night; but after all the news had been exchanged they returned to their cots and we were left to ourselves.

Two of the boys thought it would be fun to sleep in the hay in the wagon, but the rest of us preferred our blankets in the tent. By 12 o'clock the two in the wagon came to the conclusion that their quarters were more romantic than comfortable, and were very glad to accept the hospitality of the tent.

Upon unrolling from my blankets next morning I was surprised to see several other tents which had sprung up like mushrooms in the night. These also belonged to fishing parties who had come to spend a day or so at the pond. After a meagre breakfast we easily obtained boats and tackle, but it took a considerable bargaining before we could buy even a few minnows for the party, but while this bargaining was going on one of the boys, unseen by the owner, had succeeded in emptying part of the contents of the pail into a tin can which was then secreted beneath a seat.

We finally pushed off and by the time we had reached one of the spots to which our friends at "Camp Do-Little," (a very appropriate name, by the way) had directed us, all lines were overboard. Then came suspense. Who was to catch the first fish. I had arranged my bait with particular care and had strong hopes of being the first, but alas for my hopes, Grib was the fortunate one. His line was the last one out and the first one in, but we had little reason to envy his conquest, for it was an exceedingly small one, but—hold on, what have I got on my line? Whew! I never knew a pike or a perch to pull that way. I knew nothing at that time about striking or playing a fish but I did know enough not to yank him right in.

When I felt sure that the hook was secure, I pulled gently, to remind him that I had an engagement with him, but he needed no such reminder, as he was soon tearing around at a fearful rate of speed, while I was so excited that I could scarcely move. Once or twice he leaped clear of the water. My heart ran and fell with his movements. Now he would dart under the boat greatly endangering my line, then the line would fall slack and my heart would sink; I was sure he was gone, and again, as the line would be drawn taut, my heart would rise to the highest pitch of expectation; but there is an end to all things and there was a disastrous one to my struggle with that bass. The other boys had been as interested in the performance as I, but suddenly Ed. was brought to his senses by feeling a strong tug at his line. In

his surprise and excitement he leaped to his feet rocking the boat fearfully. I who was standing up in an inclined position at that moment, lost my balance and pitched headlong into the lake. When I came up I seized one end of my rod and Milt the other and without much trouble I was dragged on board.

Notwithstanding my sudden bath I felt no less anxious to land that fish. I picked up the pole and found that he was still hooked to the other end but was completely exhausted and made no further resistance.

Oh! wasn't he a beauty as he lay there upon a bed of water lilies which had been gathered on the way out? How his dusky scales glistened in the sun. I was so intent upon watching this, my first bass, that I completely forgot my wet garments. He weighed over a pound; not a very large catfish perhaps, but was the first one whose size would warrant any boasting.

Thus ended my first experience with black bass, but that day is one of the never to be forgotten days of my life.

Our luck varied somewhat through the remainder of the day, but nevertheless we had a fine string to carry home with us that night. WATT.

CLEVELAND, O.

BLACK BASS IN LAKE ERIE.

Editor Forest and Stream:

The laws of Ohio which were passed to protect the black bass are practically obsolete. They say:

"Whoever shall, at any time of the year, in Lake Erie, in the vicinity of the islands thereof and in the bays tributary thereto, upon the shoals and reefs therein, by means of any device whatever, fish for or catch any fish, shall be guilty of a misdemeanor, and on conviction shall be punished, etc. * * * And, provided further, it is hereby made the duty of the Fish Commissioner, on complaint of any person or otherwise, to prosecute all violations of this section."

Last October I saw from fifteen to twenty pound-nets set near the islands, with their fences or leaders extending over the above mentioned shoals and reefs, and one day while fishing near one of the pounds, saw it lifted and over two hundred pounds of black bass, and other fish taken from it. Some of these fish were quite small, not over five inches long, and should have been returned to the water, but they all went to market. That this kind of fishing is illegal everybody knows but no one attempts to stop it, as far as I can learn. A fisherman told me that the small bass were shipped to distant points south and west, and were not sold in Sandusky and Toledo. I went up to the lake for a week's fishing on the old grounds which I used to visit twenty years ago, and with visions of such sport as we formerly had, but returned disappointed. If the people living about the lake do not see that the bass are going because the small meshed nets do not allow them to mature, then they must be blind. It seems criminal to allow a few men to spoil the fishing about the islands, where the bass congregate on the shoals, in order that they may make a few dollars out of the business.

It was hinted to me that the Fish Commissioners authorized, or at least allowed, these nets to be set during a great part of the year because the Commissioners could get the spawn of the whitefish from the nets in the fall, but where their authority comes from for such a bargain I do not see. As they pay the fishermen for the privilege of handling the fish and taking the eggs it would seem to be a stroke of policy for the Commissioners to own nets and set them at such times as the whitefish are spawning and release all other fish. We should have laws to prevent the extermination of our fishes and they should be strictly enforced.

AKRON, O., Feb. 15.

S. R.

A BASS FISHING REMINISCENCE.

WHILE the mercury plays hide and seek in its little glass home and the earth is covered with two feet of the "beautiful," I love to think over the past season and recall some of the many pleasant hours spent with my rod and flies. I have not disturbed my tackle since I laid it away last fall, for I feel it deserves the rest it's having. How many times has that rod flashed backward and forward over our lovely river, and how many times it showed its metal by standing the hard strain until the fish was safely landed.

One eve, in the latter part of July, my companion and I pushed our boat into the stream at a little village fifty miles above our home, for a few days' sport. We carried with us a coffee pot and a few articles of food in addition to our muslin tent and blanket. On the second day out, just after dinner, and while pushing forward for some splendid spots ahead, I suddenly felt a jerk on the line (for we trolled with a 15ft. 18oz. white bamboo rod) as if the spoon had struck a log. As I turned to look back a noble bass sprung from the water fully seventy-five feet behind our boat. In an instant our anchor was overboard and we settled down to business. So did the fish, but at the end of twenty-five minutes we had the pleasure of handling a five-pound small-mouth bass.

The place we had looked forward to as the best on our route brought poor returns for the steady whipping we gave its waters, and as the sun sank below the horizon we stepped for the day almost disgusted. After trading some fine fish for groceries and cigars, we pulled away for pastures new. Darkness overhauled us before we reached a spot we felt would furnish good sport. The next morning we started out in good spirits. After carrying around the first dam, we passed through a busy city whose lovely streets and business houses touched the noble river, and on by old Father Time as he stood guard on his tower over the busy fingers beneath him. After eating our dinner ten miles below where we took breakfast we stretched ourselves on the grass. A little after two we inspected our tackle and started out. We were now on familiar ground and felt we knew just where to go, but we whipped and whipped to the right and to the left for hours with poor success. Fly after fly was exchanged, and still no large fish were taken; finally Pard said he had a big one on out in deep water. Then we change our base. Still no success. I was disgusted, and while he goes down the east side, I get the boat and go down to wait for him.

As I sit in the boat weary and provoked, feelings of shame come over me and I decide not to play the baby act while he is working so faithfully. I jump out and go at it once more. But what is that on the water below me? Is it the fin of a bass feeding on top? Cautiously I wade toward the spot, and as I draw near I give the flies a toss and draw them back for a cast. They light just right. In an instant there is a strike, and as the line takes a header for below I know it's no infant. Pard comes up, and in the gathering darkness we have our sport. Sport fit for a king. Sport that pays for all the hard work. Sport that fills. And as we start back for the boat we carry nearly forty pounds of tiger bass. None under one and a half, some three and a half

pounds, saying nothing of those that took flies and leaders, and I think we lost ten of the former. It's no easy job to handle two large bass at once when they are of different minds. Well do I remember one big fellow who was so surprised to see my companion just ahead of him that he "hit out," and as he passed between my legs and the second fly caught on my pants it gave him the best excuse in the world for going on, and he did, too.

The next week I started for Gogebic, but the memory of that trip was too fresh in my mind to fish for the noble bass with a spoon, and I did not. During the two weeks there I took but one. But the trout. Suffice to say I got there. NIMROD.

THE MUSKRAT AS A GAME FISH.—*Editor Forest and Stream:* Having fished a number of years through the ice for pickerel, and in a number of ponds in New England, both large and small, I wish to be advised relative to a very singular affair that happened to a party of gentlemen on Jan. 16, 1886. We fished upon a pond in Plymouth county, of this State (Massachusetts). The lines were left in over night, and upon visiting them next morning, on one of them that was set in sixteen feet of water and at least twenty rods from the shore, we found a live muskrat. He had taken the bait and was securely hooked through the upper lip. When pulled out upon the ice he was as lively as a cricket, and had to be killed before being unhooked. Will you please inform me if this is not a very unusual occurrence? I have not been able to find a person who ever heard of such a thing. Should like to hear from some of the winter fishermen, who are readers of your valuable paper, if this kind of fishing has ever been duplicated, and if so under what circumstances. This pond is quite a large one, some fourteen miles in circumference, and in it the eels are very plenty, and bite at our bait just the same as in the summer, and I have caught them at midday, and lines left in over night are sure to have some on in the morning. Is this not an unusual matter? Hoping to hear from the fishermen, I remain, CHARLES W. DYER.

NEW JERSEY SEASONS.—Secretary's Office, The New Jersey Game and Fish Protective Society, Plainfield, N. J., Feb. 17, 1886.—*Editor Forest and Stream:* The trout law for New Jersey has not been changed by the Legislature, nor is there any bill before it at present to do so. The law remains as it has for years—open season from March 1 to Oct. 1 inclusive. The black bass law has been amended so that the open season commences on May 30 (Decoration Day). The Governor has signed the bill. An effort is being made to extend the season to Dec. 1, instead of closing it, as at present, Nov. 1. The law would then conform with New York and Pennsylvania. A number of bills are before the Legislature to alter and amend the game laws, but I don't think they will amount to anything. The laws are good enough as they now stand.—W. F. FORCE.

SOUTH SIDE CLUB.—Election of officers of the South Side Sportsman Club, of Long Island, Feb. 15, 1886: President, Roland Redmond; Vice-President, Charles Banks; Treasurer, John Benjamin; Secretary, Francis O. de Luze; Counsel, John E. Develin; Executive Committee, H. H. Hollister, H. B. Hollins, Francis O. de Luze, J. H. Purdy, Wm. B. Kendall. For honorary membership, James Benard.

TROUTING IN CANADA.—Mr. John G. Manning writes that he knows of a route for cruisers where he has taken trout that averaged 2½ to 3 pounds, and even as high as 5 pounds, and estimates a willingness to impart his knowledge to approved parties.

ANOTHER WAY STILL TO CARRY A LANDING NET.—Hang it on your hat or cap, and let the handle hang down behind you. Bother your "hooks to hang it on, say I.—LEVI STROQUES.

Fishculture.

BREEDING OF BLACK BASS.

[Read before the Michigan Sportsmen's Ass'n. by Mr. Chas. F. Hots.]

DURING the past summer I have had excellent opportunities of studying the habits of the small-mouthed black bass, well-known to all sportsmen as taking a front rank among our Michigan game fish. My house is on the bank of Thornapple River in plain sight of a fine spawning ground of theirs. The first beds made were during the last week in April, and the last during the second week in June.

They commenced operations by working together (a male and a female) to clear off a space of ground about eighteen inches in diameter, removing the sediment and leaving a bed of clean gravel. The female then commenced moving slowly over the bed depositing her eggs, and the male following impregnated them as fast as laid. This occupied from one to two days' time. The female was then left in charge of the bed, which she carefully guarded, driving away all other fish, as well as lizards, crawfish and all other natural enemies. In between three and five days the eggs were all hatched, very few, if any, unimpregnated eggs remaining in the bed, as the impregnation seemed almost perfect. The young fry, when hatched, had the umbilical sac, and in proportion to the size of the body, the sac was larger than that of the brook trout. They were unable to swim or even crawl out of the bed. They remained in this helpless state from six weeks to two months, the time depending on the temperature of the water. I saw numbers of them which at six weeks old could not swim enough to get out of a clam shell when lifted in that from the bottom. But usually at the end of two months all were able to swim, when they were led by the mother fish to shallow water near the shore and left to care for themselves. The mother fish during all this time had guarded her young brood in the same way that she before had guarded her eggs. The number in each bed, as near as I could judge, was from 3,000 to 5,000. I do not believe that anything could be gained by artificial impregnation or hatching as in the case of the brook trout, whitefish, etc., for nature has done for the black bass all that I think could be done.

Sportsmen can thus readily see the great good attained by the extension of the anti-spear law from March, April and May as to cover the months of June, July, August and September, as was done by the Legislature of 1885. To kill the mother fish while she is guarding her eggs or young fry before they can swim would be to destroy the whole brood. And under the old law they were the very ones likely to be taken by persons spearing in June, July and August, as they will not leave their beds unless compelled to do so.

Among the natural enemies of the black bass, the most destructive is, I think, the kingfisher. I hope no member of your association will miss the opportunity of shooting him on sight. I believe that more brook trout, black bass and other valuable fishes are annually killed by the kingfishers than are taken by the hook and line in this State. I have given this subject considerable study, having been engaged in fishculture for the past twelve years and naturally feel more or less interest in everything pertaining to fish.

FIXTURES.

FIELD TRIALS.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 16, 17, 18 and 19.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elbee, Secretary.

March 23, 24 and 25.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club, S. K. Hemingway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club, Edward A. Mosley, Secretary, Boston, Mass.

April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3333.

A FOUR-FOOTED ACCOUNT OF IT.

PRESUMING upon your well-known interest in the canine race, of which I am a humble member, I ask the privilege of a modest space in your columns to relate what has been to me a notable experience.

I am a Connecticut dog, at present in North Carolina. I may state in order that what I say may have due weight with my readers, that I have had considerable practice for my three years of life on such game as we find at the North. The experience alluded to began with a tedious journey on the cars. In the baggage car, where I was forced to ride, trunks were piled up to the roof, and as they rocked with the motion of the train, I felt in imminent danger of being crushed to a patent dog cake. I wanted to go to my master, but was left in the charge of ignorant people to whom my master seemed to be constantly giving silver. You will bear me out in calling them ignorant, for one of each new relay of train men would be sure to ask if I was a bird dog. As if the fact was not apparent in every hair of my flat coat. I wanted to tell them that my family had been distinguished in this profession for many years. Was not the litter brother of my grandsire a field trial winner? Was not another ancestor the subject of a bitter controversy in the papers?

After transfers to boats with slippery gang planks and more trains, and a wretched time generally, in constant fear of my life, we arrived at last at our destination and put up at a very comfortable sort of a house. I find it very much to my taste of days, when we are not hunting, lying before the fire in my master's room. There are a number of black fellows around with whisk brooms under their arms. Gordons I should call them, if they were dogs. They all try to make friends with me, but I take no notice of them. The man of the white pasteboard cap and apron, who presides in the kitchen, is, however, a fine fellow. I very quickly followed my nose to his domain shortly after our arrival, and poking my head into his lap to attract his attention, looked up at him in a way that usually brings something. It has brought me steaks and chops three times a day ever since, and I smile to myself when my master complains that I do not come down in flesh quite enough to suit him.

All this is, however, only preparatory to what I wished to tell my Northern friends. What we came for was, of course, the quail shooting—or partridge shooting, as we have to call it here—of North Carolina. We take the cars from the city, just as we do at the North, and then there seems to be at the station expecting us some lank fellow, with a one-eyed dog and a gun, who "reckons that a covey of partridges used on the branch yonder." We walked, myself at heel, through about a mile of pine woods, and then struck out into some broad fields. To my surprise the other dogs, Southerners all of them, ranged off almost out of sight. I would like well enough to do the same thing, but I never can get off any distance without hearing my master call to me in a way that I have learned to respect. However, I will say this for my new dog acquaintances, they are very cautious when approaching a covey and very staunch on birds. Although it is not professional for us to notice other than game birds, I will pause here to say to Northern dogs that I have discovered where all the blackbirds were going that we have so often seen leaving our country in the late fall. They rise from the fields here in clouds that darken the sky. The negroes kill great numbers of them with their old Confederate muskets and serve them up in a pie.

The Virginia redbird is ever darting through the brush, and I always stop to look at him, he is such a beauty. I never tire of hearing his joyous song, "I'm a free nigger," the darkeys call it.

Ah, what's this? Have we found the scent of birds already and not five minutes in the field? As sure as you live, it is the scent I love so well. Here the tracks cross and recross. By the shades of my red Irish ancestors, how many birds do they have in a covey down here? If only I can point the birds first, for I know that my master's eye is upon me, and know that he will be well pleased if I "lay out" these natives. The other dogs have struck the scent, too, and I must get in ahead of them. Now for a stroke of head work. Yonder little clump is such a likely place for birds that I will just run up to it. If they are not there I can get back and steal from some dog the hottest trail. Hurrah, I've nailed them, but if those brutes backing me take a step nearer, I shall have to rush in. Up go the birds, and bang go four barrels behind me, and I see at least two birds falling. What's that, all the dogs rushing in, and to think of their getting the birds before me. Perhaps, too, some bird may be but wingbroke, and may need the little squeeze that I know so well how to administer. I can't stand it, good-bye. I got the bird, but I got besides a sound rating from my master. Well, it is not in the dog nature to be steady when every dog is rushing in. In this same performance, I may add, was repeated every time a gun was discharged, and I add with stinging regret that I as often "broke shot."

Off again, ranging over the fields, but much to my surprise, the birds were not followed into a pine wood. I could have found, no doubt, and I know that at home, when fortunate enough to find a covey early in the day, we do not soon forsake them for the uncertain prospect of finding more birds. What's this trail my nose is on? Zip! Off goes one of those little brown rabbits. Away go the dogs in full chase after him, notwithstanding the yells of their masters, accompanied by stronger expressions than were current in the New England hamlet where I was reared. Soon they give up their chase for fur and go to work again. I will not weary you with a repetition of this experience. We found no stubble fields such as I am used to at the North, but the resorts of the birds appeared to be in large fields where the partridge, pea or rag weed had followed the crop, or in the brown straw or cane brake. One has constantly to be leaping the ditches which cross the fields, and often we find the birds on their edges. What strikes the setter family as a drawback to the shooting here is the pesky sand burrs. How can a dog give his mind to hunting with a burr under each shoulder, and a half dozen at the root of his tail? After nearly biting off said appendage, I gave it up and approached my master to let him try his hand. I will remark, *en passant*, that men are intelligent in comprehending our wishes, if we are only reasonably patient with them. It took my master a half an hour at the end of the day's shooting to rid me of the burrs.

At the close of the day we found that we had started twelve coveys of birds. Our bag to four guns was—but I forbear, lest I cause my Northern brethren to view with dissatisfaction their own achievements in the field. Another reason for my forbearance is that at my time of life it has become apparent to me that such reports are strangely inaccurate. I have been out with parties shooting when, at the end of the day, the bag would grow larger at every inquiry as we drew nearer home. The first time that this occurred I thought that I had made a miscount, but later the sad truth of man's mendacity came home to me. I am, therefore, convinced that my simple statement would seem incredible, and that it would be believed that this human weakness had been initiated by your obedient servant.

WILMINGTON, N. C., Feb. 6.

THE UNPAID SPECIAL AT CHICAGO.

Editor Forest and Stream:

It has only been within a few days that the full enormity of the above case has been known to me. In common with all your readers, I knew that the Illinois Kennel Club had failed to pay all the premiums won at their recent show, and heard in a general way that a special had followed the fate of regular premiums. I knew also that some exhibitors, men of wealth and influence—one a director in the Pittsburgh club—had promptly received their premiums, while certain needy ones were left in the lurch. All this was very disagreeable, but it is nothing to the full facts of the case. It appears that a gentleman of Chicago (or near by) gave a special of \$15, which money was paid into the treasury of the club. The prize was won by a particular friend of the donor, but was never paid him. If this does not surpass in—well, plain English serves the purpose best, and I will say dishonestly, anything that has ever transpired in connection with dog shows in this country. I challenge the production of its equal.

The non-payment of regular premiums to be paid out of the revenues of the club is bad enough, but after all, I would have sympathy with the directors of a show, who after weeks of hard work and neglect of their own private business, find themselves brought face to face with the disagreeable necessity of putting their hands in their pockets and making up a loss, no fault of theirs, and I think the proper thing for the exhibitor to do in such a case, is to scale down his winnings in proportion to the club's losses. Although I am fully aware that such clubs as New England, New Haven, Westminster, New Jersey, Philadelphia and Pittsburgh, would scout such a proposal, preferring to meet their losses like men. You know that Pittsburgh is already famous as the "100 cents on the dollar" show. To take money given them for a special definite purpose and divert it from the plain purpose of the donor, whose trustee the club is, my lawyer friends tell me is "trover and conversion," and to the lay mind it is simple embezzlement, not to call it by the harsher name of robbery.

Gentlemen of the American Kennel Club, you cannot afford to let this matter pass by in silence. The offender is your fellow member, and until you investigate this matter, and—if you find the facts as I have stated—expel the offender, you are partners in this shame and disgrace. From this there is no escape. If the A. K. C. is on its last legs, if even its legs have shriveled to airy nothings, as long as you even call yourselves members of the Association, you are recreant to the first principles of honor and justice if you do not clear yourselves of any connection with such offenders; and if you let them slip by on some such soft-soaped plank as non-payment of an assessment, you are simply whitewashing a burning disgrace.

Will you, gentlemen, tolerate "trovers and conversionists"? W. WADE.

HULTON, Pa., Feb. 13, 1886.

THE NEW YORK DOG SHOW.

THE premium list of the tenth annual dog show of the Westminster Kennel Club. Champion prizes of \$25 for dogs and the same for bitches, and in the open class, \$20, \$10 and silver medal for dogs, the same for bitches; and \$10 and medal for dog puppies and the same for bitches, are offered in the following classes: Mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, pointers over 55 pounds, pointers under 55 pounds, English setters, black and tan setters and Irish setters. Pointers and English setter dogs over 12 and under 18 months, \$10 and medal, bitches the same; Newfoundland, \$10 and medal; bloodhounds, \$20 and \$10; champion greyhounds, \$20; open dogs, \$10 and \$5; bitches the same; puppies, \$10 and medal. Champion deerhounds, \$20; open dogs, \$10 and \$5; bitches the same. Irish water spaniels, \$10 and medal.

Champion clumber spaniels \$10, open dogs, \$10 and \$5, bitches the same. Champion field spaniels \$10, open \$10 and \$5. Champion cocker spaniels \$10, open, liver or black dogs, \$10 and \$5, bitches the same; any other color \$10 and \$5, puppies, dogs \$10 and medal, bitches the same. Foxhounds \$10 and \$5. Champion beagles \$10, open dogs \$10, \$5 and medal bitches the same, puppies, medal. Basset hounds \$10 and medal. Dachshunds the same. Champion fox-terrier dog \$20, bitch the same, open dogs \$15, \$10 and medal, bitches the same, puppies, dogs \$10 and medal, bitches the same. Wire-haired fox-terriers \$10, \$5 and medal. Collies same as fox-terriers. Champion bulldog \$15, bitch the same, open dogs \$10, \$5 and medal, bitches the same, puppies \$10. Champion bull-terrier dog over 25lbs. \$15, bitch the same, open dogs \$10 and \$5, bitches the same, under 25lbs., \$10, \$5 and medal; puppies, medal. Black and tan terriers, over 7lbs. \$10 and medal. Scotch and hard-haired terriers the same; Dandie Dinmonts the same; Irish terriers the same; Bedlington terriers, dogs, the same; bitches the same. Champion Skye terriers, \$10; open, \$10 and medal. Champion pugs, \$15; open dogs, \$10, \$5 and medal; bitches the same; puppies, medal. Yorkshires, dogs, \$10, \$5 and medal; bitches the same. Toy terriers, \$10 and medal; King Charles spaniels the same; Blenheims the same; Japanese the same; toys, rubys and Prince Charles the same; Italian greyhounds

the same. Poodles, black, dogs, the same; bitches the same; other than black, the same. Miscellaneous, over 25lbs., \$10, \$5 and medal; under 25lbs., the same. There are also a large number of special prizes offered.

THE NEW HAVEN DOG SHOW.

THE dog show to be held at New Haven next month by the New Haven Kennel Club, will undoubtedly prove to be the best one that the club has yet held. The well known liberality of the club in providing for the wants of the exhibitors, is sure to meet its reward in an increased entry list, and we shall expect to see the armory crowded with the best representatives of the different breeds. Many valuable special prizes will be given, among them is one of \$25, from Mr. W. Wade of Pittsburg, for the best mastiff. The kennel prizes to be competed for by not less than four dogs from each kennel are \$25 for mastiffs, \$20 for St. Bernards, \$10 for greyhounds, \$25 for pointers, \$25 for English setters, \$15 for Irish setters, \$15 for spaniels, \$15 for beagles, \$15 for fox-terriers, \$15 for collies and \$10 for pugs. The trick dog special always a feature at New Haven, will this year be \$30, with \$20 to first and \$10 to second; other specials are promised and it is expected that every class will receive at least one. We have received several letters of inquiry relative to the classes respectively assigned to the judges. The list was published in FOREST AND STREAM Jan. 21 and is as follows:

English, Irish and black and tan setters and pointers, Mr. John Davidson, Monroe, Mich. Mastiffs, spaniels, greyhounds, deerhounds, Newfoundland, bull-terriers, pugs, Yorkshire and toy terriers, toy spaniels, Italian greyhounds and Mexican hairless, Mr. Chas. H. Mason, Bay Ridge, L. I. Beagles and foxhounds, Mr. L. D. Sloan, Philadelphia, Pa. St. Bernards, collies, bulldogs, poodles, fox-terriers, basset hounds, dachshund, black and tan, Bedlington, Irish, Skye and mixed terriers, Mr. Ronald H. Barlow, Philadelphia, Pa. Miscellaneous, Messrs. Mason and Barlow. The entries close March 13. The Secretary's address is S. R. Hemingway, Box 1235, New Haven, Conn.

THE ALEXANDRIA FIELD TRIALS.

[From a Special Correspondent.]

ON Tuesday, Feb. 16, the first trials for amateurs of the Alexandria Rod and Gun Club began with the Derby. A very fair attendance of spectators were present at the trials and the utmost goodfellowship prevailed. In consequence of the probability of several sportsmen arriving after Monday, the day on which entries closed, the time of closing the entries was postponed until 9 o'clock on Tuesday. The Derby was the first stakes run, and had only three entries, Knight Gladstone, Capt. Craig and Reveille, first, second and third respectively. The winner, Knight Gladstone, is a medium size, compactly built dog of approved field trial type, and showed himself to be a puppy of merit. Capt. Craig is also a fine puppy about the same size and type as Knight Gladstone, both showing a great deal of their sire, old Gladstone's style. Reveille is a large dog, but appeared to be off in his work. The country is finely adapted to a field trial, and a heartier welcome and greater hospitality is not shown anywhere. A very fair degree of skill was shown in the management and handling, considering that trials are a new institution in this section of the country. The judges were Mr. Amory R. Starr of Marshall, Texas; Judge J. M. Thompson, of Covington, La., and Judge John Clegg, LaFayette, La. Mr. Starr had an entry in the stakes, and when he was handling, Mr. J. W. Prescott acted in his place. A start was made at 10:30 to a plantation about one mile from town, where the trials were begun.

THE DERBY.

There were only three entries for the Derby, which were drawn and run as follows:

KNIGHT GLADSTONE AND CAPT. CRAIG.

At 10:30 Mr. John Robinson's (Livingston, Miss.) black and white English setter dog Knight Gladstone, whelped March 17, 1885 (Gladstone—Flossie), handled by owner, and Mr. A. R. Starr's (Marshall, Tex.) black, white and tan English setter dog Captain Craig, whelped Jan. 2, 1885 (Gladstone—Lady May), were cast off in a cotton field and worked down a ravine. They both started off rather slow, but soon warmed up and went at a rattling good pace for such youngsters. Knight Gladstone had some advantage in speed and range. They were very stylish on point and equal in quartering. Drawing a cotton and cornfield blank, we moved to a large weedfield. Knight pointed and Captain backed beautifully. Knight discovered his error and moved on. Going a short distance in the weedfield the spectators flushed a bird. The handlers were ordered to work their dogs back, which they did, the dogs not finding any of the remaining birds. The handlers flushed the bevy within a few feet of where the dogs had both been, and they should have pointed them. The birds were marked down in a dense thicket of bushes and briars, with water in a large portion of it. They were followed, but nothing done except that a few birds were flushed by the spectators. The judges soon saw that it was impossible to see the dogs work in such a thicket, and ordered the dogs up and out to the open cotton field. Working to the hedge row, Knight pointed and was held by his handler until Craig could be brought up to back. Craig refused to back, went around him, and also pointed in the same direction, but both dogs soon moved on. We do not think that Craig should be penalized for not backing, as the judges, reporters, spectators and handlers were so close to him that he apparently did not think the dog was pointing. Going on into a large weedfield, Knight soon made a beautiful point down wind. Craig also pointed only a short distance from him on the back track of birds and then commenced roading. Knight's handler to order flushed, but did not shoot. Knight broke in, but dropped promptly to order. Craig dropped to wing. Following the birds into heavy weeds, Craig flushed one bird and dropped to wing. Moving on, the handlers flushed several. Craig then pinned a bird in good shape. Knight coming up facing him, backed him in fine style. To order, Mr. Starr flushed, shot and killed. Craig dropped to shot and Knight broke in but dropped to order. Craig retrieved beautifully, but as there is nothing given in the rules for retrieving in the Derby, it did not help him in his score, but such a nice piece of work deserved a great deal of credit for such a youngster. Going on up a thicket in the weeds to where the spectators had marked a bevy down, Knight pointed in the path, Craig came up, refused to back, went in and also pointed; birds ran, and both dogs roaded beautifully. Knight establishing a point, but the birds flushed wild. He was steady to wing. Meantime Craig roaded to a bad flush. Moving on Knight soon pointed again in good style. Then both dogs did some beautiful roading, and Knight established his point, the other dog still roading and pointing until Mr. Robinson, to order, flushed Knight's birds, shot and killed. Knight broke shot, but as it was in heavy cover and the judge's attention was called for by the other handler to see his dog on a point, Knight escaped a penalty. Craig dropped to shot. Craig was then allowed to move on to see if he could establish his point. Failing to do so, they were ordered up at 11:35, and Knight was awarded the heat. Down one hour and five minutes.

KNIGHT GLADSTONE AND REVEILLE.

A rest of twenty minutes was allowed. At 12 o'clock Knight Gladstone and Mr. John H. Renaud's (New Orleans, La.) black and white English setter dog Reveille, whelped March 17, 1885 (Gladstone—Flossie), handled by Mr. Henry Fontaine, were cast off in the heavy weedfield where the last brace was taken up, and worked down wind to birds that had been marked down. Reveille started off very slow, and in

fact he hardly left his handler for some time; but after getting to the open cornfield he got some faster and showed a little more merit. Knight was much the fastest, widest ranger, and showed better style in heavy weeds. Reveille flushed single birds and was steady to wing. Moving on to ditch, Knight pointed; moved on, pointed again, then moved across the ditch and located his bird in good style, holding his point several minutes, while his handler was waiting for a horse to cross the ditch. The bird finally flushed wild, and Knight was steady to wing. He deserves a great deal of credit for a good nose on this point, as he certainly smelt it some distance across the water in thick heavy cane. Going on up the thicket in edge of weeds, Knight pointed and Reveille backed. Knight discovered his error and rooded on some distance, not finding anything. Turning back, the dogs were worked in a cornfield, where several birds had been marked down. Reveille made a good staunch point and Knight backed well. Fontaine, to order, flushed a single bird, shot and killed. Both dogs broke in and dropped to order. Crossing the ditch the dogs were worked up the thicket again where Knight pointed a small bird. Going on some distance, drawing cotton, weeds and cornfields blank, Knight made a wide cast across the cornfield to a little ditch, and made a beautiful point with head and tail very high; he held it for some time, until we had time enough to go over one hundred yards to him. His handler, thinking that he was pointing small birds, ordered him on, which order he obeyed very reluctantly, pointing every few yards, finally he drew past the bevy, losing the wind of them, made a short cast and was returning when his handler flushed the bevy directly in front of him where he was first pointing. We think the judges did not give him a point but he was certainly entitled to it, as he was forced away by his handler. Following a single bird that was marked down in a weedfield near by, Knight soon pointed it. Robinson, to order, flushed, shot and killed. Both dogs broke shot, and Reveille made a slow retrieve, and then the dogs were ordered up at 1:50. The heat and first prize given to Knight. Down in all fifty minutes.

REVEILLE AND CAPT. CRAIG.

At 1:40 this brace was cast off in a cornfield and worked on some scattered birds marked during the last heat. Reveille made game on a ditch and Fontaine pressing too closely, the birds flushed on the edge of the ditch down wind. The dogs then worked in a cornfield that was drawn blank, then in some sedge Rey flushed some scattered birds and was steady to wing. Birds being very hard to find not much more work was done. The dogs were ordered up at 2:20 and the heat and second place was awarded to Capt. Craig and Reveille was declared winner of third. Following is the summary:

First Series.

Knight Gladstone beat Capt. Craig.
Reveille a bye.

Second Series.

Knight Gladstone beat Reveille and won first.

Tie for Second Place.

Capt. Craig beat Reveille and won second place, Reveille winning third.

At 3:04 Mr. Arvent, at the request of several prominent sportsmen, gave the celebrated field trial winners, Roderigo and Paul Gladstone, an exhibition run to show their qualities. Paul Gladstone and Mr. Amory R. Starr's black pointer Watt were cast off together. Paul took a great cast and displayed his great pace, range and style. Watt dashed out and behaved magnificently, ranging wide and well, but was eclipsed by the range of Paul. Watt soon found a bevy in a thick growth of weeds. Paul was lost, but had pointed some running birds of the same bevy further ahead and was found on a point. He made several points and displayed his eminent qualities in the best manner. Then Roderigo and Tangipahoa were put down. Roderigo started at his tremendous pace, and covered the largest fields in a few minutes. For fire and dash, wide and fast ranging, it was conceded by all that it surpassed anything in their experience. Tangipahoa showed herself a very fast field performer and would have shown up a formidable competitor in any other company. After Roderigo had made several points on bevy, and scattered birds in his quick, resolute and precise manner, the dogs were taken up and the party started for town to draw the order of running the All-Aged Stake for the next day.

THE ALL-AGED STAKES.

[Special dispatch to Forest and Stream.]

There were twenty entries for the All-Aged Stakes, which were drawn and run as follows:

TRIGG (W. Flower, Alexandria, La.), orange pointer dog (pedigree unknown),

against

MACK (E. Pendleton, Alexandria, La.), black setter dog (—Maggie), withdrawn.

NELLIE B. (W. F. Gray, New Orleans, La.), black and white English setter bitch (Rake—Meg Merrilies),

beat

PATTIE (E. W. Condon, Houma, La.), black, white and tan English setter bitch (Duke Gladstone—Grace Darling).

MINGO (W. B. Wells, Chatham, Ont.), black and white English setter dog (Druid—Star),

beat

DOLPH (C. E. Bringham, Alexandria, La.), black, white and tan English setter dog (Cyrus—Belle Gladstone).

MARK TWAIN (Judge J. M. Thompson, Covington, La.), black, white and tan English setter dog (Coleman's London—Tom Laverack),

beat

BARON BLUE (C. A. Schnack, Alexandria, La.), black and white English setter dog (Belton—Bramble).

CRISP (L. W. Murdock, Alexandria, La.) black and tan Gordon setter dog (Nix—Daisy),

beat

LUFRA (J. W. Prescott, Alexandria, La.) black, white and tan English setter bitch (Cyrus—Belle Gladstone).

TANGIPAHOA (Henry Fontaine, New Orleans, La.), black, white and tan English setter bitch (Gladstone—Flossie),

beat

JACK (M. F. Smith, Houma, La.), liver and white pointer dog, pedigree unknown.

PRESCOTT (S. Cullen, Alexandria, La.), black, white and tan English setter dog (Cyrus—Belle Gladstone),

beat

HENRY (J. S. Fish, Alexandria, La.), black and white English setter dog, pedigree unknown.

KINK (W. B. Wells, Chatham, Ont.), lemon and white English setter dog (Druid—Star),

against

HURRICANE (H. L. Daigree, Alexandria, La.), orange pointer dog (Pious Jeems—Kate), withdrawn.

Mack and Hurricane were both withdrawn and Kink ran against and beat Trigg.

BOYD (J. K. Renaud, New Orleans, La.), black and white English setter dog (Brussels—Iowa Queen),

beat

RIP (E. F. Hunter, Houma, La.), black, white and tan English setter dog, pedigree unknown.

WATT (A. M. Starr, Marshall, Tex.), black pointer dog (Braucho—Fau II.),

beat

CUSTER (L. B. Reynaud, Alexandria, La.), blue belton English setter dog (Blue Dick—Buckeye Belle).

Second Series.

Nelly B. beat Mingo.
Mark Twain beat Crisp.
Prescott beat Tangipahoa.
Boyd beat Watt.
Kink a bye.

Third Series.

Kink beat Nelly B.
Mark Twain beat Prescott.
Boyd a bye.

Fourth Series.

Boyd beat Kink.

Mark Twain a bye.

Final Tie for First Prize.

Boyd beat Mark Twain and won first prize.

Tie for Second Prize.

Watt beat Mark Twain and won second prize.

Tie for Third Prize.

Mark Twain and Custer divide third prize.

IMPORTANT IMPORTATION OF ST. BERNARDS.—New York, Feb. 18.—*Editor Forest and Stream:* I have completed the purchase of Mr. Henry Schumacher's kennel of St. Bernard dogs, and I can honestly say I have acquired some of the purest strains of St. Bernard in existence. The president of the St. Bernard Club in London, Mr. Arthur Carter in Turin, also Vice-President Betterton in Woodville, and Mr. J. H. Murchison in London, who know Mr. Schumacher's dogs, consider them the purest and finest specimens of pure-bred St. Bernards in existence, and distinguished for their colossal heads and limbs. There are some eleven in all. Among them are the grand dogs (winners of many prizes in Switzerland) Apollo, 32½ inches at shoulder, a large dog for a smooth-coat, very symmetrical, elegant in carriage, rich in color and markings—the best dog in all Switzerland. Rigi, a young dog, sired by Apollo and out of Bernice, considered by Mr. Schumacher to be the most perfect specimen he has ever seen, except in size. He is 30 inches at shoulder, which I consider a good-sized dog, quality and character weighing much more with me than over-grown, clumsy animals without much of anything else but size. Mount Velan, Sultan and Barry are other fine specimens. In females, Bernice is a beautiful bitch, full of character, the dam of many noted Swiss prize winners. Gemme, Diana and Flora are all handsome ones. Each have their certificate of breeding, etc. Mr. Schumacher turns over the whole lot to me with medals and other prizes won, also his good will; and, in fact, gives up the breeding of St. Bernards, as far as selling to America is concerned. I shall try and exhibit most of the dogs at the prominent shows, and will be glad to correspond with any who are interested in this breed that may wish to learn particulars about them. Only a few of them are for sale, as I have purchased them to breed and to further the interest already shown in this beautiful race of dogs. I will send you photos of some of the most prominent specimens if you would like to see them. I presume my rough-coat friends will think I am too loud in my praise and claim too much for smooth-coated dogs; but I am sure they will all concede that the smooths or short-haired are the true type according to the very best authorities.—W. W. TUCKER.

WAR DOGS.—The German war office, ever ready to adopt any scientific or other device which may by any possibility be of advantage to the troops of the fatherland, is trying some experiments in training dogs to act as sentries. The idea seems to be that dogs would help sentinels by prowling round and seeing if any enemy were creeping up unobserved through the bushes or behind rocks. In course of time they might become so acute that they would guard a sleeping camp by themselves without requiring any human help. At first, however, they would only be assistant sentries, so to speak. In our own recent campaign in the Sudan an incident occurred proving how valuable canine intelligence might be in warning a camp of the approach of hostile spies; and it shows with what care and attention that eventful war was followed at Berlin that the present experiments of the German war office are directly attributed to our Sudan experience. If the German staff finds dogs capable of being trained systematically for sentry duty there can be little doubt, says a London paper, that the innovation will spread to all the armies of Europe. English soldiers would take with particular readiness to this plan of putting animals to real use, because they are well known to have a strong liking for dumb brutes as camp followers. A sentry's duty is exactly that which requires a quick ear and eye, and many good men and true have bit the dust because they happened to be inattentive just when a surprise party of the enemy were about to make a rush. The Arabs round Suakin gave our camp endless trouble in this way, crawling over the sand on their bellies until they got within striking distance of unsuspecting Thomas Atkins. There is every reason why dogs, if they can only be educated into perfect obedience to orders, should have protection duty given to them, seeing that they are much better able to perform it than men, and that their lives are considerably less valuable. It is a wonder that the plan now hit upon in Berlin has not been attempted long ago.—*English Exchange.*

JUDGES AT THE BOSTON DOG SHOW.—The following named gentlemen will judge at the dog show to be held in Boston in April: Mastiffs, St. Bernards and collies, Mr. Jas. Mortimer, Babylon, N. Y. Pointers, Irish and black and tan setters, Mr. John M. Tracy, Greenwich, Conn. English setters, Mr. J. Otto Donner, New York. Bulldogs, bull-terriers, fox-terriers, wire-haired and Irish terriers, Yorkshire terriers and pugs, Mr. Ronald H. Barlow, Philadelphia, Pa. Spaniels, Skye, Scotch, Bedlington, Dandie Dinmont and black and tan terriers, foxhounds, bassets and Newfoundlanders, Mr. J. F. Kirk, Toronto, Ont. Greyhounds, deerhounds, Italian greyhounds and poodles, Mr. J. R. Pierson, Brooklyn, N. Y. Beagles, Mr. N. Elmore, Granby, Conn. Dr. Geo. Walton, veterinary; John Read, superintendent.

HORNELL JOCK.—Hornellville, N. Y., Feb. 14.—*Editor Forest and Stream:* I wish to say through your columns that the dog Hornell Jock exhibited at the Fanciers' show was Jock, Jr. Our kennel man shipped Jock, Jr., and Nance at midnight Saturday, and I did not find out his mistake until Monday afternoon, when it was too late to telegraph. I knew it could do no harm, for Mr. Watson judges the dogs and not their owners, so Jock, Jr., was not noticed. I wish to say also that the Fanciers' is the only show that ever returned our dogs free, although they all have advertised that they would do so.—J. OTIS FELLOWS, Supt. Hornell Spaniel Club.

THE PITTSBURG DOG SHOW.—There is a special prize of a finely finished Winchester sporting rifle, valued at \$45, for the best setter, dog or bitch, in the open class. An entry fee of \$2.50 will be charged for this special, five entries to fill. There will also be prizes for the best kennel each of English, Gordon and Irish setters, pointers and dachshunds. The secretary writes that the entries are coming in finely, and that the prospect is good for the largest show ever held by the society. The committee have added classes for Great Danes, with prizes of gold and silver medals for dogs, bitches the same. A gold medal will be given to the best St. Bernard under one year old.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 50 cents) for the convenience of those who have occasion to use a large number of blanks. In ordering be careful to state what particular series of blanks is desired, i. e., whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be retained for future reference.

IMPORTANT SALE OF ENGLISH SETTERS.—Mr. C. Fred Crawford, of Pawtucket, R. I., has sold the well-known English setters Foreman, Plantagenet and Mack B. to Mr. Fred E. Lewis, of Tarrytown, N. Y., for a long price, we are not at liberty to state how much. The dogs will, as heretofore, remain in the Blackstone Kennel, under the care of Mr. Tallman.

GOOD FOOD FOR DOGS.—*Editor Forest and Stream:* I have recently learned, much to my surprise, that both my cat and my dog are extremely fond of squash, and as this information may be of service to some among your readers, I venture to send it you for publication, especially as this sort of food seems perfectly to agree with the animals.—KELPIE.

THE HARTFORD PLAN.—*Editor Forest and Stream:* Let us have the "Hartford plan" rather than the star chamber plan of a few club members getting together, selecting a judge, and then showing under him. Give the single dog exhibitor a fair chance. The most popular judge will always be the one who has made the fewest blunders.—V. M. H.

THE NEWARK DOG SHOW.—The prospect for a good show at Newark is brilliant, entries are coming in much better than is usual at so early a date. The managers assure us that the arrangements made for the transportation of dogs will be carried out. The senseless mad dog scare appears to have died out and probably will not affect the show.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Nat. By W. S. Cobb, Jackson, Mich., for liver and white ticked pointer dog, whelped Aug. 1, 1885, by Duke Royal (A.K.R. 2472) out of Lizzie Grace (Beaufort—Grace).

Lon. By Frank F. Dole, New Haven, Conn., for white, with lemon markings, bull-terrier dog, whelped Dec. 4, 1885, by The Earl (Marquis—Lady) out of Little Nellie (Paddy—).

Prince Rupert. By Frank F. Dole, New Haven, Conn., for white and lemon bull-terrier dog, whelped Dec. 4, 1885, by The Earl (Marquis—Lady) out of Little Nellie (Paddy—).

Intel. By Frank F. Dole, New Haven, Conn., for white and lemon bull-terrier bitch, whelped Dec. 4, 1885, by The Earl (Marquis—Lady) out of Little Nellie (Paddy—).

Doyle. By A. E. Shults, Cohocton, N. Y., for liver cocker spaniel dog, whelped Jan. 4, 1886, by Eustace's Mack (Hornell But—Bessie) out of E. A. Higgins's imported female.

Chester. By Wm. Hansen, Cohocton, N. Y., for liver cocker spaniel dog, whelped Jan. 4, 1886, by Eustace's Mack (Hornell But—Bessie) out of E. A. Higgins's imported female.

Gretchen. By E. A. Higgins, Cohocton, N. Y., for black cocker spaniel bitch, whelped Jan. 4, 1886, by Eustace's Mack (Hornell But—Bessie) out of his imported female.

Katrina. By E. A. Higgins, Cohocton, N. Y., for black cocker spaniel bitch, whelped Jan. 4, 1886, by Eustace's Mack (Hornell But—Bessie) out of his imported female.

Black Maria. By G. C. Thompson, Hamilton, Can., for black cocker spaniel bitch, whelped Jan. 7, 1886, by Young Obo (A.K.R. 861) out of Black Busy (Raven—Busy).

Devon Bob. By G. C. Thompson, Hamilton, Can., for liver and tan spaniel dog, whelped Dec. 12, 1885, by Lad o' Devon (Toronto Beau—Toronto Jet) out of Maud (Wildair—Josie).

Raven III. By G. C. Thompson, Hamilton, Can., for black cocker spaniel dog, whelped July 1, 1885, by Raven out of Charcoal (Raven—Busy).

Bramble. By G. C. Thompson, Hamilton, Can., for liver cocker spaniel dog, whelped June 30, 1885, by Black Graf (A.K.R. 646) out of Busy (Dawn—Daisy).

Lady Obo. By G. C. Thompson, Hamilton, Can., for black cocker spaniel bitch, whelped Sept. 1, 1885, by Obo II. (A.K.R. 432) out of Blackie III. (A.K.R. 428).

Little Fiddle. By G. F. Clark, St. George's, Del., for black, white and tan English setter bitch, whelped Dec. 21, 1885, by Roybel (Rush Gladstone—Countess C.) out of Little Fraud (Druid's boy, A.K.R. 2270—Victoria, A.K.R. 3232).

Lady Druid. By G. F. Clark, St. George's, Del., for lemon and white English setter bitch, whelped Dec. 21, 1885, by Roybel (Rush Gladstone—Countess C.) out of Little Fraud (Druid's boy, A.K.R. 2270—Victoria, A.K.R. 1838).

Roy Gladstone. By G. F. Clark, St. George's, Del., for lemon and white English setter dog, whelped Dec. 21, 1885, by Roybel (Rush Gladstone—Countess C.) out of Little Fraud (Druid's boy, A.K.R. 2270—Victoria, A.K.R. 1838).

Oliver Green. By T. R. Varick, Manchester, N. H., for white and black fox-terrier bitch, whelped Dec. 2, 1885, by Mixure (spice—Fairy III.) out of Hazel (Raby Tyrant—Fairy II.).

Hillsboro. By T. R. Varick, Manchester, N. H., for pure white bull-terrier dog, whelped Nov. 12, 1885, by Dutch, Jr. (A.K.R. 1887) out of Little Nell (Little Victor—Daisy).

Walnut Grove Kennels. By C. E. Bailey and R. E. Fenton for their kennels at Jamaica, N. Y.

Warwick Kennels. By J. E. Hair and W. A. Russell, Bridgeport, Conn., for their kennels of sporting and toy dogs.

Black Thorn Kennels. By E. W. Jester and J. V. Vail, St. George's, Del., for their kennels of mastiffs.

BRED.

Notes must be sent on the Prepared Blanks.

Young Baroness—Count. T. R. Varick's (Manchester, N. H.) bull terrier bitch Young Baroness (Baron—Lurline) to F. F. Dole's Count (Marquis—Kit), Feb. 11.

Young Fenom—Count. Edward Love's (Philadelphia, Pa.) bull-terrier bitch Young Fenom (A.K.R. 2703) to Frank F. Dole's Count (A.K.R. 3175), Feb. 2 and 4.

WHELPS.

Notes must be sent on the Prepared Blanks.

Pug Chas. Steinkamp's pug bitch Pug (Punch—Judy), Jan. 22, six (five dogs), by Kentucky Pug Kennels' Treasure (A.K.R. 472).

Black Busy. G. C. Thompson's (Hamilton, Can.) cocker spaniel bitch Black Busy (Raven—Busy), Jan. 7, six (three dogs), by J. P. Wiley's Young Obo (A.K.R. 861).

Bess. C. B. Ludekin's (Port Richmond, S. I.) collie bitch Bess (Rex—Lora), Jan. 10, seven (four dogs), by M. McKee's Eve; all black and tan.

Queen Alice. Howard Hartley's (Pittsburg, Pa.) English setter bitch Queen Alice (A.K.R. 2280), Feb. 17, ten, by his Royal Ranger (A.K.R. 2290).

SALES.

Notes must be sent on the Prepared Blanks.

Flippant. White, tan head, fox-terrier dog, whelped June 5, 1881 (A.K.R. 528), by Surrey Kennels, Ellicott City, Md., to W. B. Bruckner, Cincinnati, O.

Duke. Fawn, black markings, mastiff dog, whelped Jan. 9, 1885, by Max out of Juliette II., by W. C. Russell, Bridgeport, Conn., to E. W. Jester, St. George's, Del.

Diamond. White bull-terrier dog, whelped Nov. 12, 1885, by Dutch, Jr., out of Little Nell, by T. R. Varick, Manchester, N. H., to Dr. C. B. Hammond, Nashua, N. H.

Jacob Faithful. White bull-terrier dog, whelped Nov. 12, 1885, by Dutch, Jr., out of Little Nell, by T. R. Varick, Manchester, N. H., to Perley Weeks, Haverhill, Mass.

Campio. Fawn mastiff bitch (A.K.R. 1498), by Walter D. Peck, New Haven, Conn., to Clayton E. Bailey, Jamestown, N. Y., and resold by him to Walnut Grove Kennels, same place.

Blanche. White bull-terrier bitch, whelped Nov. 8, 1885, by The Earl out of White Rose, by Frank F. Dole, New Haven, Conn., to C. A. Stevens, Hoboken, N. J.

Prince Rupert. White, with lemon markings, bull terrier dog, whelped Dec. 4, 1885, by The Earl out of Little Nellie, by Frank F. Dole, New Haven, Conn., to W. R. Sands, New York.

Mabel, White, with lemon markings, bull terrier bitch, whelped Dec. 4, by The Earl out of Little Nellie, by Frank F. Dole, New Haven, Conn., to C. D. Arthur, Scarborough, N. Y.

Guillermo (A.K.R. 671)—Patti (A.K.R. 3528) whelp. Dark brindle, white streak on breast, bulldog, whelped Oct. 30, 1885, by Thomas W. Mills, Montreal, Can., to Nelson V. Ketchum, Savannah, Ga.

IMPORTATIONS.

Lady Athol. Rough-coated St. Bernard bitch, whelped May 13, 1885 (Cadwallader-Cara), by W. W. Tucker for John S. Sheppard, New York, from Messrs. Farmer & Dixon, Torquay, Eng.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

N. V. C. Savannah.—A cocker spaniel bitch is at times troubled with a spasmodic cough with efforts to throw off something, but without success. About a year ago (she is fifteen months old), she had a slight attack of distemper, and I thought this cough might proceed from that, but sometimes she is free from the cough while at others it is very troublesome. If you can suggest a remedy you will oblige me. Give your dog five drops of tincture of nuxvomica, with two drops of dilute hydrocyanic acid in tea-spoonful of sweetened water, two or three times daily. The trouble is a chronic bronchitis, probably the result of the distemper.

H. C. W. Brooklyn.—A pointer has mange. Have used Glover's mange cure with good effect, except upon hip, where there remains raw and inflamed spot about the size of a half dollar, which she continues to bite. Have used plentifully of above lotion without apparent improvement. Have also given two doses compound cathartic pills. What treatment would you advise? Ans. Dust the parts carefully with calomel powder every other morning. On the intervening days apply the balsam of Peru ointment to the raw spot. Keep this treatment up until the spot is healed. You may be obliged to muzzle the dog to keep him from biting himself.

C. P. Paterson, N. J.—Your dog seems to be suffering from some form of chronic myelitis or meningitis, or inflammation of the spinal cord which gradually induces paralysis of the limbs and parts below the seat of the trouble. Other symptoms would be, gradual wasting of the muscles, lack of sensation in the parts below, troubles with urination and the bowels. Has your dog these symptoms? Also upon pressing along the spinal column, do you find any spot where tenderness and pain are manifest? If you find such spot, shave the hair over it and apply a blister which your druggist will make up for you. For internal medicine we would advise bromide of potash in tea grain doses three or four times daily. Keep the dog quiet and in a dry warm place away from noise or excitement. Report in ten days again.

T. C. Williams, Germantown, Pa.—My setter pup, seven months old, had the distemper slightly in the beginning of the fall, but he seemed to have recovered entirely from it. About a month ago he had a slight attack of mange. He is constantly vomiting and has an intense thirst. His bowels are loose, but regular. He is very lively at times, but sometimes will stop in the middle of a romp and shake his head violently. At first I thought it might be canker and treated him with a solution of nitrate of silver and water as given by "Stonehenge." Ans. Be very careful of the diet. Give chiefly fluids, milk with lime-water, soups without fat, etc. Give a little finely chopped raw meat mixed with the white of a raw egg. For medicine give a two grain citrate of iron and strychnine pill three times daily. You can conceal the pill in a small morsel of meat. If the dog has canker drop the following into the ear twice daily: of bromo chloral and laudanum each a dram, of water six drams. Mix.

C. T. Mendon, Mass.—I have a pointer dog eight years old, weighing seventy pounds. Last fall he limped all the fall through. During the last of the season all four of his feet were quite sore, and he wore of the outside toes and then festered. I thought that after he stopped hunting they would get well. I took him out to-day to exercise him, and when he came in his feet looked as bad as ever, this is the third time he has been off the chain since Jan. 1, and then only for a short run. I think he must have a humor. I feed him on corn meal, oatmeal, potatoes and beef scraps. He has good quarters though kept in a barn, and has never been pampered in regard to food. Is now very fat, though during the hunting season runs on in fair working order. Can you tell me what to do for him? Ans. Wash your dog's feet in strong solution of salt water, or in weak ammonia water, night and morning. Do not do this if there are running sores but use balsam of Peru ointment until the sores are healed and then apply the above.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CORSICA, Pa., Feb. 9.—I was using a .38 Winchester and a .22 Winchester. In company with three others we tried the .22-cal. long Winchester at 160 yds., and found that with the Rocky Mountain sights elevated to the full limit (300 yds. elevation for large calibre) our balls carried up to the 8-inch bulleye, penetrating it (heavy cardboard) and heavy such pine boards, striking a snipe bank some 10 paces beyond. Shooting over the snow we found our balls near together at 425 paces from the point of shooting, and penetrating about 12 inches along in the snow crust. One of the balls had cut a briar stalk, yet reached the distance of the other balls. This we supposed to be caused by sighting less finely. Our marksmen here think them remarkable shots for so small a calibre. I deem them remarkable in point of regularity and extent of range.—A. S. SAKMAN.

BOSTON, Feb. 20.—There was a large number of riflemen present at the range at Walnut Hill to-day, but owing to the very bad weather conditions but few scores were completed. During the day a team match was shot between members of the Massachusetts Rifle association, sides being chosen, which resulted in a victory for Capt. Fellows's team. Appended are the records of the day:

Team Match.—Capt. Fellows's Team.									
J. B. Fellows.....	10	9	8	3	7	6	4	5	6
G. B. Yenatchi.....	9	6	6	5	8	5	6	5	10

JAMESTOWN, N. Y., Feb. 20.—At the practice shoot yesterday on the Creedmoor-Hinman target, 300 yds., wind heavy from S. E. C., the following scores were made:

	Hin.	Cr.		Hin.	Cr.
Hazeltine.....	74	45	Burns.....	68	45
Brown.....	70	44	Kapple.....	65	42
Moore.....	70	45	Watson.....	52	41
Warner.....	69	44	Fenner.....	50	41

HAVERHILL, MASS., RIFLE CLUB, Feb. 20.—At Riverside Range, 200 yds. off hand, standard target, Creedmoor count, wind very strong from S. E. C. quarter:

W. Worthen.....	5454545455—47	S. E. Johnson.....	44554444—42
C. B. Wright.....	545454544—44	R. Merrill.....	45444544—41
H. Tuck.....	445454544—43	F. Griffin.....	54344354—40
C. Bliss.....	454444445—42		

SPRINGFIELD, Mass., Feb. 16.—The weekly shoot of the Rod and Gun Rifle Club was not so well attended as those of the previous two weeks, and the shooting was not as good as usual, on account of the high wind. The American hedge was shot for and is held until the next meeting by T. T. Cartwright with a score of 69 out of a possible 100 points, Hinman standard target. The scores were:

J. Allen.....	8	10	8	9	6	7	6	7	9
G. Brown.....	6	9	7	9	9	7	8	6	7
S. K. Hindley.....	8	9	6	9	5	4	9	7	5
J. Sackett.....	9	6	5	4	8	7	8	6	4
L. H. Mayott.....	8	6	7	7	4	6	8	4	8
H. McDonald.....	7	4	7	8	7	4	10	5	4
C. W. Horr.....	4	3	4	7	7	3	4	7	5

WORCESTER, Mass., Feb. 17.—At the contest this week with the South End Gun Club Series for five prizes to be contested for at six consecutive meetings, the best score was 19 out of a possible 24, the weather as well as the light being unfavorable. It is the desire to have the exact standing of each man kept a secret as far as possible until the end, but it is generally understood that they stand in about the following order: E. T. Smith and Arber Houghton first, Perry and Wm. L. Davis second, M. O. Whittier and R. Jones third, J. B. Tougas and Cyrus Holden fourth, M. D. Gillman, B. Franklin, Cowen Deane fifth, W. R. Deane, Hudson and C. S. Day sixth, C. H. Parker seventh, McAleer eighth, Morse, Jewett, Goodell and Quinby ninth, H. W. Welch, E. S. Knowles, E. T. Swan tenth.

LEOMINSTER, Mass., Feb. 17.—Two scores have recently been made at the range of the Leominster Rifle Club which are said to be as good, if not better than any previous score on the standard American target. The first was by P. A. Whitney, a total of 93, the required number of witnesses not being present, a score could not be allowed, but E. M. Rockwell has made a score of 91, which can be claimed as a score.

QUEER PRIZES.—The Volunteer Service Gazette has been at pains to make up an account of the novel prizes frequently offered by the British tradesman anxious for the advertisement of the rifle range. Four Lancashire harpers offered as prizes for the winners in a recent military match a "champion for twelve months," while a fifth tonsorialist added, as an incentive to excellence in shooting, a year's haircutting. Another prize, from a farrier, was one service of horse shoeing. The local dentist, not to be outdone in generosity, contributed one half set of artificial teeth for the best marksman. Other instances of recent prizes for British sharpshooters, collected by the same authority, are "a fish supper," from a fishmonger, and a banquet of "tripe and cowheels." A member of another corps won a prize in the shape of a pint of ale daily, to be drunk on the premises. In one of the local volunteer companies of Worcester was a most curious conglomeration of articles—such as a pair of braces and a bed quilt; while potatoes, big loaves, shirts, coal, wall paper, plunk cake, etc., are presented, along with the usual supply of spirits and beer. But to crown all, a corporal in the corps becomes the winner of a frying-pan.

A RIFLE CLUB LEAGUE.—The Boston Herald says: "Riflemen throughout the country are considering a plan for forming a league of rifle clubs, with the object of shooting a series of matches throughout the spring, summer and autumn of the present year. The shooting is to be done upon long ranges, and sufficient number of matches to be shot to determine the amount of skill possessed by the several clubs. The general adoption of the standard target by most of the clubs of the country makes it possible, for the first time, to have comparisons of skill."

A WRONG CONCLUSION.—The riflemen of France and Belgium are indulging in a lively discussion as to the amount of practical knowledge to be gained by long-range military rifle contests. A majority seems to favor confining the matches to those in which the national military arm may be used, claiming that the skill obtained with the regular arm will prove of far more value to the soldier than a knowledge of how to procure fire work with a superior but less practical weapon.

BOSTON POLICE CLUB.—A number of officers of the police force of Boston are excellent rifle shots, and an effort is being made to interest sufficient number to organize an association similar to the one now in existence in San Francisco.

THE BRITISH RIFLEMAN is having a glorious time writing grumbling letters about the change of caliber in the army rifle.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

INDIVIDUAL CHAMPIONSHIP CONTEST.

THIS celebrated diamond badge, originally donated by the Ligovsky Clay-Pigeon Company, made by Tiffany & Co., of New York city, was first won at the first international clay-pigeon tournament, Chicago, Ill., May 1884, by C. M. Stark, of Exeter, N. H.; secondly, by Ben. Teipel, of Covington, Ky., at the second international clay-pigeon tournament, New Orleans, La., February, 1885; thirdly, by Mr. Brewer, Philadelphia, at the tournament of the National Gun Association, at Springfield, O., May, 1885. With the view of keeping

same as an annual trophy before the American sportsmen, the Ligovsky Clay-Pigeon Company, of Cincinnati, O., has consented to re-donate the diamond badge, April, 1887, for \$250; that said badge be donated annually as the U. S. championship at clay-pigeons, under such conditions as may be arranged by the general manager; that the badge may be redeemed annually at \$250; or if the badge be not presented for redemption, that a new badge be purchased with this amount, for a similar annual donation; that the management of the shoots be given to the National Gun Association executive committee, if they will accept the same; that a series of 12 telegraphic matches, 1 a month, shall be arranged, beginning May, 1888, according to the rules of the National Gun Association, including the amended rule adopted at the meeting of the Association at Springfield, O., May, 1885, viz.: that all contestants shall be divided into three classes, viz.: Class A, B and C, by the general manager National Gun Association. For this match Class A shall shoot at a handicap of 20 yds. rise for singles, Class B at 15 yds., Class C at 10 yds.; each class shooting at a handicap of 3 yds. less for doubles. Any contestant shooting before a handicap has been assigned to him, shall shoot at 15 for singles and 15 for "doubles." The General Manager may at any time change a contestant from one class to another. Any contestant may shoot in nine matches only if he sees fit, or if he shoots in twelve matches he may select his nine highest scores; that each contestant shoot at 30 singles and 10 pairs of Ligovsky clay-pigeons No. 1; that no entrance fee whatever be charged by the L. C. P. Co.; that the only charges allowed shall be fifty cents yearly, payable to the National Gun Association to cover expenses of printing, etc., to be paid by those who are not members of the Association; that "ties" shall be shot off annually at such dates and places as the National Gun Association may determine. Any contestant may use a nom de plume. That no scores be made public until the end of the contest, though the names of contestants

can be published monthly. That contestants can shoot their scores at any place on the day fixed therefor, monthly. The score must be forwarded by mail to Judge J. R. Freeman, Manager National Gun Association, Macon, Ga. The latter is authorized to change the day of the shoot in any section to such day as may more conveniently suit the shooters in said section, provided that a general tournament shall have been arranged for said place and date. All scores must be witnessed by at least two of the judges and referees present at the shooting, who must certify that the scores were made according to the rules of the National Gun Association. Should other prizes be offered for the contest the shooting shall be "class shooting"—ties to be determined at a general meeting to be held at such place and time as the General Manager of the Association may fix. The contest shall be open to any bona fide resident of the American continent.

Each contestant shall pay for his own clay pigeons; additional sweepstakes purses may be formed between contestants shooting together.

When any one desiring to contest has through lack of information or any other reason abstained from entering the various matches, he may, with the consent of the executive committee, still enter within three months of the close of the contest, when the executive committee shall fix nine distinct days upon which he may make his scores to be transmitted to them.

Every contestant should notify the general manager National Gun Association that he has entered the contest even though he only shoots once; this will enable him subsequently to challenge the winner during the ensuing year.

The executive committee of the National Gun Association shall be the final judge as to whom is the winner of the medal; if, in their estimation, there has been any fraud or unfair conduct, or breach of the rules on the part of the nominal winner, they reserve the right to award the medal to the next highest contestant, who in their estimation, shall be fairly entitled to the same.

When the medal is awarded to the winner, he shall give a bond to the National Gun Association, that he will hold same subject to challenge for one year (or until May 1, following), under the following conditions: That he will accept a challenge from any reputable American sportsman (not barred from the National Gun Association), at such time and place as he, the winner, may name, provided that he must name the time to be within 80 days of the date of the challenge, or within 80 days of his last acceptance; and that at said contest any other challenger shall be allowed to contest, though he need not admit more than ten, and shall not be bound to shoot oftener than once a month; when he fixes the date and place of the contest he must notify each person who has challenged him at once of the same, and also the date of the ensuing contest when fixed.

Each contestant must shoot at 50 singles and 25 pairs double Ligovsky clay pigeons, either Nos. 1 or 2, National Gun Association rules. The challenging contestants must pay for the clay pigeons and expenses incurred by the challenged party in bringing traps to grounds, trapping, etc.

The winner shall send the scores made to the general manager of the Association, as also to such sportsmen's papers (at least one) as he sees fit.

Only those who have entered the championship match can challenge the winner; another entrance fee of \$1.00 must be paid to the National Gun Association by all challengers, who are not members of the Association (though one entrance fee only need be paid for the entire year).

Whoever wins the greatest number of times during said year or less, shall win the medal is open to challenge, shall be entitled to the medal and the title of "American Amateur Champion Winner of the year (1887)"; the original winner need not surrender the medal until April 15, 1888, (and subsequent winners one year thereafter); at this date he must forward the medal for redemption C. O. D. per express, with the privilege of examination, to the Ligovsky Clay Pigeon Co., Cincinnati, Ohio, the original donors, who will redeem it for \$250, to be transmitted to the successful challenger or party who has fairly won it from the original winner, and who will be duly named by the National Gun Association Executive Committee. Should the ultimate winner prefer to keep the medal he can do so, when the Ligovsky Company will at once order a duplicate to be forwarded to the general manager National Gun Association, to be by him forwarded to the new winner of the previous year.

N. B.—Organizers of tournaments are advised to embody this match in their programs yearly, as this will doubtless prove a valuable feature to all shooters.

BERGEN POINT, N. J., Feb. 18.—A series of pigeon-shooting matches were decided this afternoon at the Carteret Gun Club grounds in Bergen Point. The contestants were Messrs. Gladwyn, James and Williams. The pigeons were fast flyers and hard to kill. The setter Ralph gave a fine exhibition of his skill at retrieving. The conditions of the matches were 10 birds each, handicap rise and 50 yds boundary. Gladwyn was successful in the first, fourth and seventh matches, James won the second and Williams the third, fifth, sixth and eighth. The scores follow:

Summerson.....	110111111111—18	Williams.....	110111111111—8

SAIL PLAN OF STEAM YACHT CARMEN, DESIGNED BY MR. J. BEAVOR WEBB.

THE NEW STEAM YACHTS.

THE present activity in building extends to steam as well as sailing craft, and a number of new boats will be added this season to the steam fleet, besides some like the Polynia and Nooya, that will be practically new. The largest of the new yachts will be built on the Delaware, for Mr. Wm. K. Vanderbilt, from designs by Mr. St. Clara J. Byrne, of Liverpool, designer of the Namouna, Amy, Sunbeam, Ino, Maritana, Lancashire, Withe, Jason, Gitana, Cuhona, Garland, Farnese, Gaviota, Dobhan and other steam yachts. Mr. Byrne arrived in New York lately, and has since visited the larger shipbuilding establishments on the Delaware. He has brought with him the plans of a steam yacht 260ft. long, about 30ft. beam, and 17ft. draft. The motive power will be a triple expansion engine, and she will be square rigged on the foremast like the Sunbeam. The details of construction and arrangement and the builders to whom the work will be entrusted, have not yet been fully decided on. The engines will be built here from English designs.

Another new steam yacht is now building at the foot of East Twelfth street, New York, by Theodore Durand, for Mr. E. M. Brown, N. Y. C., late owner of the old sloop Julia, now the schooner Nirvana. She will be of wood, 106ft. over all, 20ft. beam, and 7ft. draft, with engines 24 and 14x20in. and a tubular boiler. The working pressure will be 125 pounds, and the engines will make about 200 turns. The accommodation is the main object in view, as the boat will be used for summer cruising. The cabins will be aft of the engine space, a main saloon 14x12ft., and two staterooms 9x11ft. The stern, sternpost and rudderpost and keel, of white oak, are sided 7in., the latter moulded 12in. The frames, of hackmatack, are sided 4in., moulded 7 and 4in., and spaced 20in. double. The keelson is of yellow pine, sided 6in. and moulded 10in., the bilge streaks 6x3in., shelf 8x4in., and clamps 10x2in. are of the same material. The oak planksheer is 14x3in., sprung on in long lengths, the white pine deck beams are sided 6in. and moulded 4in., and the deck plank is 2in. square. Garboards and topsides will be of oak, and the rest of the bottom of yellow pine 2in. thick. All the fastenings below water are of copper. The yacht will be schooner-rigged, with only a pilot house on deck.

Still another steam yacht will be built by Marvel & Co., successors to Wood & Stanton, at Newburgh, N. Y. This yacht, for Mr. C. D. Miller, will be of steel, 100ft. over all, 35ft. waterline, 16ft. beam, 8ft. draft, and 934 tons displacement. The angle frames will be 8x24in. and the plating 14in. steel from Pennsylvania. There will be four transverse bulkheads and five compartments. The engine will be 38 and 10 1/2 x 18in., with a tubular boiler, working pressure 120 pounds, 200 turns of screw. The latter will be four-bladed, 6ft. 6in. diameter, 10ft. pitch. The owner's quarters will be aft and the crew's forward. The yacht will be schooner rigged, and will have only a chartroom and steering bridge above her flush deck.

The curious yacht building by Mr. Samuel H. Pine, at Greenpoint, for Mr. Pierre Lorillard, former owner of the Kadha, and launched this week, will soon depart for Florida, where her owner will join her. The boat has been designed with two ends in view, a light draft and the greatest possible room below, and to these all other considerations are subordinate. Looked at from forward as she lies on the ways, no peculiarity is noticeable except a full bluff bow above, which gives plenty of deck space; but from midship aft she differs greatly from the usual form, though the idea is by no means a new one. The extreme length is 111ft., beam 20ft., and draft 4ft. At a point about 40ft. from the bow the bottom is quite flat, with a 7in. keel and a round bilge. From this point aft the keel rises quite rapidly, and the whole bottom forms an arch, the span of which is equal to about one-half the beam. A streak of plank on each side is worked of a gradually increasing thickness until it grows into a bilge keel 7in. square, running horizontally fore and aft. The after body of the vessel is formed of two hulls below water, built on these two keels, and united by the central arch before mentioned, the hull above water being of the usual form with a rather ugly counter. The two screws are fitted one to each of the hulls.

The engines are each compound, 8 and 14 by 12in. and are expected to work up to 350 turns. The steel shaft is 3in. diameter, the four-bladed wheels have 5ft. 8in. pitch with a diameter of 4ft. The boiler is a vertical tubular, with a 9in. iron shell and will carry 150lbs. working pressure. The grate surface is 42ft. and the heating surface 1,230ft. The bunkers will carry 20 tons of coal and the displacement will be 88 tons. The engines and boiler were designed by Mr. W. W. Scott, M. E., of New York. The three keels and three keelsons are each of yellow pine, 7in. square, the frames are of hackmatack, double sided 3 1/2 and 4in. and moulded 5 and 3 1/2in. The bottom is planked with 2 1/2in. yellow pine and the topsides with 2 1/2in. oak. The four bilge streaks are of 8x6 yellow pine, and the shelf 3x14 and 4x9in., the deck beams 5x4in. and the deck of 2 1/2 x 2 1/2 white pine, blind fastened. On deck there will be a pilot house only. A lifeline run through brass stanchions with netting below, will take the place of a bulwark. Below there are three transverse bulkheads of 3-in. plate iron, each bolted fast to frames of oak with tarred cloth in the joint. One bulkhead cuts off the fore peak, another is just forward and the third just abaft the engine space. She will be schooner rigged with topmasts, foremast 55ft. 6in., deck to upper cap; mainmast 57ft. with gafts 30 and 27ft. 6in. long. Both sails will be cut as lugs on the foot with no booms. The total cost, exclusive of cabin furniture, will be about \$40,000.

A smaller yacht is now building by Samuel Ayers, of Corlears Hook and Peck Slip, at the former place, for Mr. Jacob Lorillard. She will be 97ft. overall, 15ft. beam, 8ft. draft, with a wooden hull, a frame of 4in. hackmatack, moulding 5 and 3 1/2in., with a double skin of cedar, the inner one 3/4in. thick and the outer 1 1/2in. with canvas between.

The inner skin runs diagonally and the outer fore and aft. All will be well fastened with copper. Both hull and engines will be as light as practicable.

CRUISE OF THE COOT.

XIV.

AFTER being huuz up on the mud for twenty-four hours, the morning's tide permitted us to haul off to an anchor previously taken out astern. The wind was stiff from the northwest and the river pretty clear of ice. Under whole sail we got away and at 9 A. M. were abreast the southern point of Newbolds Island. On the chart this is marked as mud, but I found it well covered with bushes. This flat stretches clear across the river, forming a bar with 7ft. at low water. Beyond it deepens suddenly to 17ft., with the exception of an 8ft. spot just outside the locks at Bordentown. You can carry 12ft. at low water to the bar at Newbolds Island; the river then takes a bend to the W. N. W. and navigation becomes intricate to a stranger. From the point on Newbolds, steer for a brick yard some distance ahead on the southern bank, at the foot of some high bluffs, give the yard a berth and gradually turn up under the bluffs, which the bank may be hugged quite close, the northern shore being a wide flat with some dry spots covered with light growth and grasses. Keep the Jersey shore past Florence Hotel, and nearly up to the pipe works on the point ahead. Nearing these you may take mid-river again and at the point, cross over to the northern or Pennsylvania bank. The next bend down to Burlington Island trends nearly south. The channel is two thirds the width away from the Jersey shore. When the island is approached, keep the Pennsylvania side close aboard, then mid channel past the island, which will bring you out with the city of Burlington over the port bow. From there the general course of the river is W. S. W. to Petty's Island off the upper limits of Philadelphia.

From Burlington to Ferry Point, a prominent point which is easily made out, the channel is wide and deep, averaging four fathoms. At Ferry Point it chokes up to a narrow gut. Clear the landing and slowly edge over to the northern bank which is quite bold and can be kept down to the first buoy met with since leaving Bordentown. It is a black spar, No. 37. Leaving it to starboard you will pass through a 7 to 10ft. channel. But if you hug the Jersey shore you can find 15ft. although a risky venture, because that channel runs along the White Sheet Flats at the mouth of Rancocas Creek, and not being buoyed you are liable to fetch up suddenly if not familiar with the place, as the channel has an elbow half way through it. You next steer for buoys 35 and 33, giving them a good berth. Gradually haul in to the Pennsylvania shore and pass close to Ten Mile Point, following the shore round to Bridesburg. Nearing the bend below the town, there are some flats which require keeping out more in the river. At the bend, called Point No Point, a bar makes across, with 10ft. at low water, after which you suddenly get into 4fms. Along Port Richmond the channel is regularly buoyed with red and black spars, pretty well bunched, but they are taken in the usual manner. Then keep the city side for deep water, or else pass over to Camden, giving the lower point of Petty's Island a berth, and anchor on the flats, keeping outside the pier line, as there is only 5 to 6ft., although 10ft. can be found opposite Windmill Island, which is also below all the ferries. From Bordentown to Burlington, the distance by channel is 11 miles. From Burlington to Bridesburg 13 miles. Thence to Windmill Island, abreast of Chestnut street, Philadelphia, 6 miles, total 30 miles.

The full sweep of the wind was not felt by the Coot till she hauled up for Florence. In this bend the northwester came in violent puffs, which required sharp watching. After several cuts in the boat encountered a blast more severe than the rest. This forced the boat clear over till the water poured into the cockpit, and a capsize was threatened. Luffing in time barely saved the Coot from playing the favorite prank of all shoal boats. There being no room to allow for drifting, the anchor was hove over while two reefs were hauled down. Before reaching Florence the wind moderated and nearly died away. Reefs were shaken out, and with the ebb we got over the ground fast enough, the wind backing to the westward and picking up by degrees. Around Burlington Island it drew out ahead so that the boat had to beat through past the town of Bristol. Seen from the car windows of the railroad train, Bristol had always impressed me as a wretched collection of hovels. From the river front the town presented a very different appearance. The bank rises boldly to a height of thirty feet. Along its crown a short distance back, a line of handsome villas bears evidence of wealth and fashion. Well kept lawns and gardens reach to the foot of the rolling bank, which is neatly faced with stone and cribbing. Boat houses and little pavilions in bright and tasty colors dot the grounds about. Several new dwellings were being erected. The city looked like a young cousin to Newport.

The banks of the Delaware from here to Philadelphia are in many places devoted entirely to dwelling purposes. Notably so in the long cove from Burlington to Ferry Point. Here the residences were even grand in their conception and massive in execution, rivaling anything to be found at Newport in beauty and pretension, while the surrounding grounds were park-like and noble. In summer the neighborhood must be delightful, shady and cool with the pure waters of a wide river coursing almost by the door. Sailing, shooting and fishing are sports with which all are familiar about Beverly, the opportunities for indulgence being of the best.

The Coot just managed to squeeze high enough to clear Ferry Point, after which it was a good full down to Bridesburg with stiffening wind. Off Rancocas Creek on the flats, one of the canal steamers and a barge in tow had grounded and been left dry by the tide. The Upper Delaware is probably the worst buoyed among the principal rivers. It has in fact received no attention at all, though quite recently surveyed. The stranger must trust to his interpretation of the chart altogether, where he is in doubt, it is best to hitch on to the tow leaving Bordentown. A fair wind is required to descend the river, otherwise the risk of grounding is great in the upper

nearly a year and a half have held rifle and glass-ball shoots monthly. The membership of the club steadily increased, and a headquarters was secured at 46 Bloomfield avenue, Newark, N. J., consisting of a large room (18x40), which has been appropriately furnished for a club room. A well-built rifle range, 70ft. long, has been put up, which is in constant use by the members of the club. It is intended very shortly to improve this range by various additions. The club has recently purchased two Ballard rifles, one for gallery and one for out door shooting. Our monthly dues are very small, and the initiation is only \$2. We believe that a club of this character is of great benefit to young men, as it affords them a place in which to spend their leisure time, as well as various kinds of amusements, thus doing away with all desire to resort to places of a compromising character in order to seek amusement. Believing that this organization will be for the best interest of all, we would therefore invite the aid and co-operation of all gentlemen interested in this movement to unite with us in making it a success. Any further information can be had of the secretary, Mr. Frederick Klein, 39 Warren place, or of any member of the club.

FOUNTAIN GUN CLUB, Feb. 17.—The regular shooting under Huntington rules of the Fountain Gun Club, of the Long Island Sportsmen's Association, took place this afternoon at the Prospect Park Fair Grounds, and was remarkable for the fine showing made by the members. Out of 84 pigeons shot at only 21 got away, and some of those were hard hit. In Class A, L. T. Duryea killed 6 out of 7 from the 23-yard mark. In Class B, from the 24-yard mark, C. Chappell killed 7 straight, and in Class C, from the 24-yard mark, T. Stewart killed 6 out of 7, and won the club prizes.

JOIN THE NATIONAL GUN ASSOCIATION.—Send 10 cents, for handbook giving all information, to the Secretary MATT R. FREEMAN, General Manager. F. C. ETHERIDGE, Secretary and Treasurer, Macon, Ga. Board of Directors: Dr. L. E. Russell, Springfield, O.; C. M. Stark Winchester, Mass.; J. Von Lengerke, New York city; Washington A. Coster, Flatbush, L. I.; Wm. G. Cooper, Savannah, Ga.; E. A. "THE YACHTSMAN'S GUIDE."—The New York Navigation School is so widely and favorably known among yachtsmen that they will be pleased to hear that its manager, Captain Howard Patterson, has lately prepared a new book for yachtsmen, covering the same subjects that are included in the course of study of the school. The book is what its title proclaims, a yachtsman's guide, treating clearly all principles of navigation, as well as the details of every day work, with which both owners and masters should be familiar. The first portion of the book deals with the principles of navigation, and the second portion with their application in practice. The third portion, on yacht discipline, contains much valuable information on signals, rules of the road, boat service and similar matters, and will prove of great value to amateurs and novices. A compendious dictionary of nautical terms is added. The book, a very neatly bound octavo volume, is published by the New York Navigation School, No. 26 Burling Slip, N. Y.

WE have received the following letter from Vice-Commodore Wilkin, A. C. A., concerning the prize to be offered next August on the occasion of the visit of the English canoeists to the meet at Grindstone. The wording of the first clause of the resolution was: "In view of the approaching visit of the English canoeists it be resolved that a trophy be offered for competition at the next A. C. A. meet, under A. C. A. rules, open to all A. C. A. men and members of any recognized foreign canoe club, the trophy to be the property of the winner."

Since the visit of the English canoeists has been drawn more closely to the meet, the idea has been expressed by many that a challenge cup would be more appropriate and would conduce more to the interests of canoeing than one prize to be given outright. The presentation of a prize valued at two or three hundred dollars is in direct opposition to the principles laid down and closely followed by the Association and though the special occasion which has led to the suggestion may justify it, there can be no good reason why a challenge cup should not be the answer the proposed end. It is highly probable that the senior class, as proposed by Mr. Gibson, will be created next year, in which case some of the leading sailors will be retired from the programme races of the meet, and as yet no prizes are provided for them. Doubtless some will be forthcoming, but an Association Challenge Cup will offer more sport and ensure a livelier competition among these experts than any minor prize. The same may be made a perpetual challenge trophy to be raced for at the meet each year, if held in this country, or to be raced for abroad if won by a foreigner.

esigner. While this may happen at times it is probable that the cup would be held in America the greater portion of the time, and would prove a valuable feature of the yearly racing. The matter may easily be amended now by the Executive Committee if it is proved desirable to do so, and we invite a full discussion by canoeists in the *FOREST AND STREAM*.

Editor Forest and Stream:

I would beg to call your attention [and that of the members of the A. C. A. to a resolution passed at the last meeting of the A. C. A. Executive Committee at Oswego, N. Y., regarding the trophy to be raced for at the August meet and which was adopted in view of the arrival in our country of the British gentlemen who are to compete with us. I don't know if any discussion was had over this matter before the committee met, but from observations then made, I judge there was not. The trophy decided upon by the committee was to be a presentation cup or a prize to be raced for once. I think that if the trophy is made to be a challenge prize it will better meet the desires of the visiting canoeists and also of A. C. A. men. I have talked with many of our members in New York and vicinity and from the above opinion from the views expressed by them as well as from several letters from other parts of the country. With the object of getting the matter in proper shape before the Executive Committee, so that the resolutions might be correct, in accordance with the views of what appeared to me to be the majority, I sent to the Commodore a few days since a resolution to amend the above by striking out the words "to become the property of the winner." This will leave the question whether the cup shall be challenge or presentation with the Cup Committee, whose members can safely be left to decide it in accordance with the best interests of the Association, as they, with the Commodore, represent four of the more prominent racing centres. The full vote on my resolution has not as yet been polled, however, and I would suggest that the subject might be discussed in your columns with advantage. Fraternally,

R. J. WILKIN, VICE COMMODORE.

FEB. 19, 1886.

SOME QUESTIONS FOR CANOEISTS.

LOOKING over the new canoes now building, one inquiry comes very forcibly to mind: why are we building double centerboard canoes? How many canoeists can answer the question? The double or rather the centerboard arrangement is no novelty here. It has been in common use in England for nearly a dozen years. It has been used in the United States since 1880, and in Canada a number of canoeists have used it for nearly the same length of time, while it has been frequently described in *FOREST AND STREAM*. American canoeists, however, have declined to have anything to do with it, or even to consider seriously its advantages and defects. Late last season a well known canoeist adopted the system in a new canoe which though she has been very successful, has been sailed only for a short time and has not had the opportunity to make a permanent reputation; and now nearly every important canoe building must have two boards. Will some of the many who have experienced this hasty conversion tell us why they have adopted the double-board system now; why, if it is good they have not adopted it before; whether they think as highly of it this year as they did of another centerboard last year; whether, if one of the leading canoeists was to put in three boards instead of two, all the rest would not at once follow suit; and finally, whether canoeists are not much like a flock of sheep? The moral of this string of questions is very plain, and every canoeist can lay it to heart. Think for yourself, study well your boat, its uses and requirements, and also the many ideas and devices, new and old, that are current among canoeists. When you adopt or discard any feature, do so not because the owner of the Spot has it, or because it was tried and abandoned on the lake, but because it does or does not suit your special purpose. If you are in doubt, wait until you have some data by which to decide, before wasting money in useless gimcracks; or the chances are that you will ultimately join voices with Spike, in complaint about canoe complications. A beautiful example of this was afforded last year in the case of the drop rudder, aggravated by a patent clutch tiller. There are many good points about both, and they are valuable additions to some boats, but canoeists one and all adopted them in a hurry and discarded them at a word of command. They have not applied to many other devices, and especially to the double boards. No man who cannot tell why he wants them should put them in, and if he does it without knowing why, he will in all probability be loud in his denunciations of them next year. When the first and second of the questions have been answered we may have more to say in regard to the merits and demerits of the two boards.

THE RULES OF BOAT RACING.

PADDLING and rowing are so nearly alike as regards racing that the rules of one answer equally well for the other. The A. C. A. paddling rules, in fact, being founded directly on the rules of rowing clubs. The following are the rules as amended by the National Association of Amateur Oarsmen in January last, and submitted to the clubs for approval, and cover the latest rulings. They would apply equally well to canoe racing and we give them in full that canoeists may compare them with the A. C. A. rules for paddling:

STARTING.—1. All boat races shall be started in the following manner: The starter, on being satisfied that the competitors are ready, shall give the start by blowing a whistle, or by any other means, and if he shall at once recall the boats to their stations; and if he shall refuse to start again, shall be disqualified. 3. Any boat not at its post at the time specified, shall be liable to be disqualified by the umpire. 5. Boats shall be started by their sterns, and shall have completed their course when the bows reach the finish. **WATER.**—(Old No. 7.) 6. A boat's own water is its straight course, paralleled with those of the other competing boats, from the station assigned to it at the start to the finish. (Old No. 6.) 7. Every boat shall keep its own water throughout the race, and any boat departing from its own water will do so at its own peril. 8. The umpire shall be sole judge of a boat's own water and proper course during the race. **FOULS.**—(Old No. 10.) 9. It shall be considered a foul when, after the race has commenced, any competitor by his oar, boat or person, comes in contact with the oar, boat or person of another competitor unless, in the opinion of the umpire, such contact is so slight as not to influence the race. (Old No. 9.) 10. No fouling whatever shall be allowed; the boat committing a foul shall be disqualified. The umpire may, during a race, caution any competitor when in danger of committing a foul. 12. The umpire [when appealed to] shall decide all questions as to a foul. 13. A claim of foul must be made to the judge or the umpire by the competitor himself, and, if possible, before getting out of his boat. 14. In case of a foul, the umpire shall have the power—(a) To place the boats, except the boat committing the foul, which is disqualified, in the order in which they come in. (b.) To order the boats engaged in the race, other than the boat committing the foul, to row over again on the same or another day. (c.) To restart the qualified boats from the place where the foul was committed. **ACCIDENTS.**—15. Every boat shall abide by its accidents, provided, that if, during a race, a boat while on its own water shall be interfered with by an outside boat, the umpire may order the race to be rowed over, if, in his opinion, such interference materially affected its chance of winning the race. **ASSISTANCE.**—17. No boat shall be allowed to accompany a competitor for the purpose of directing his course or affording him other assistance. The boat receiving such direction or assistance shall be disqualified at the discretion of the umpire. **UMPIRE.**—17. The jurisdiction of the umpire extends over the race and all matters connected with it, from the time the race is specified to start until its final termination, and his decision in all cases shall be final and without appeal. (A new rule.) 18. The judge at the finish shall report to the umpire the order in which the competing boats cross the finish line, but the decision of the race shall rest with and be declared by the umpire. (Old No. 18.) 19. Any competitor refusing to abide by the decision, or to follow the directions of the umpire, shall be disqualified. (Old No. 19.) 20. The umpire, if he thinks proper, may reserve his decision, provided that in every case such decision be given on the day of the race. (A new rule.) 21. Contestants rowing a dead heat shall compete again after such interval as may be appointed, and the contestant refusing to so row shall be deemed to have lost the race. **TURNING RACES.**—(Old No. 20.) 22. In turning races, each competitor shall have a separate turning stake, and shall turn from port to starboard. Any competitor may turn any stake other than his own, but does so at his peril.

THE NEW CANOES OF THE YEAR.

THE stimulus given to canoeing by the increasing competition of the yearly meets and this season in particular by the coming international races, is already visible in the number of canoes now building for prominent canoeists, and also in the care that has been taken in the designing of the new boats. The matter is no longer left to the builder with an indefinite order to build a canoe like some one else's, or merely so long and so wide; but every detail, lines, dimensions, material, construction, fittings and rig, is a subject of careful study and consideration by the owner, and the question of more or less deadrise, or an eighth of an inch more or less sheer is for the time of far more importance than such trivial matters as business, pleasure, dress or similar vanities. One noticeable point this year is the number of canoeists who have taken up the study of drafting and who have employed their leisure in a study of the lines of their old boats and the planning of new and improved craft. The origin of this new idea may be ascribed to "Canoe and Boat Building," where such elementary instruction as the novice requires is clearly given; and as proved, in a way to interest many. The results we may look for in the future in handsomer, better, and faster boats as each sailor learns to put to a practical use the results of his experience and observation.

First among the new canoes comes the flagship, 15ft. x30in., of Ruggles' build, the details of which are as yet a secret. Another boat from Canada that promises to be a dangerous one in Class B is Mr. Richard's new 15ft. 11in. x30in., built by Saurer, of Brockville, from a design by Mr. W. F. Stephens. With two boards and a good rig she should make a good showing with the 15ft. x30in. boats. Mr. Vaux's canoe, though built and sailed late last year, has never entered an A. C. A. race, and will be practically new this year. She is 15ft. x28in., with a depth of 14in. at gunwale, much deadrise, and two centerboards of sheet brass, about 19lbs. and 6lbs. Her rig, 85ft., will be of the same cut as last year's sails. The Snake will rest this season while her owner tries a new boat built from his own designs by Mr. Rushton, the details of which have not been made known, and Marion B. will be succeeded by a boat of which nearly the same may be said, designed by her owner, built by Rushton, and the dimensions yet unknown. Mr. Bailey has already a new Ruggles canoe, and Mr. Andrews another, while the builder has several more orders. Class A will be recruited by a duplicate of Lissle for Com. Munroe of the N. Y. C. C., while Mr. Burchard will have a sister boat, both by Everson, and from Newburgh will come Mr. Grant Edgar's new one, 15ft. x28in., two boards, hull by MacWhirter, from Mr. Stephens' designs, a deeper and longer Nirvana. The latter gentleman will have a new 15ft. x30in. canoe, also of his own design, and with some peculiar features of boards, hatches and other fittings, and another Class A canoe will be added to the N. Y. C. C. by spring.

Everson is busy with a lot of new work, for the Knickerbockers a new Ideal, 15x30 and 14x24, deep, for Com. Fowler, with a 12 and a 5 pound brass board. Mr. Stanton will have a large plate board of brass in the old Flit, also a new Ideal with two boards for racing, and another Ideal with a Radix board for cruising; a pretty good deal for a beginner.

Mr. Foster will have a new Sunbeam lengthened to 15ft. 6in. x30in., with a Radix board. The model has been altered since last year by a reduction in the quarters, lessening the displacement, especially aft, and fitting the lines of the run. Besides these three boats, now finished, Everson has a new Sunbeam with two boards for Com. Newman, Brooklyn C. C., boards 15 and 6 pounds, an Ideal for Mr. Bunting, boards 12 and 6 pounds, and will begin at once a 16x30 canoe with one large brass board and a 15x28 with two boards, both designed by Mr. John Hyslop, for Vice-Com. Whitlock, who will still keep the Guern. Mr. Carter, of Trenton, has a new Ideal with a Radix board in Everson's shop, and there are also two Sunbeams there in stock. All the builders are full of orders, and yet more are coming in every day as spring approaches.

SOUTH BOSTON C. C.—*Editor Forest and Stream:* A canoe club has been organized here under the name of the South Boston C. C. The club was organized at a meeting held on Jan. 1, and the following officers were elected: Commodore, Joseph A. Frizzell; Vice-Commodore, William J. Martin; Secretary and Treasurer, James Craddock. There are six members, all of whom have been canoeists for some time, but from various causes deferred organizing until this winter. Several short trips were made by members of the club, and the commodore and secretary made a week's cruise on the Charles River last summer. We have two boat houses, one of which is used

for the canoes, and the other is reserved for a club house. The club consists of six members, and we have four sailing and paddling canoes. A new sailing and paddling canoe for the secretary is now under construction, and six light paddling canoes are to be built this spring, in which the club propose to make a two weeks' cruise down the Charles River in July, shipping the canoes to headquarters and cruising down stream. The paddling canoes are to be flat-bottomed, 11½ft. x36in., ¼in. spruce planking for bottom and sides, with canvas decks. We favor this style of cruising canoe for river work, as it promises to be very light, strong and inexpensive, as the cost will not exceed \$5 for each canoe. We are bound to have them light at all events, as the rather trying experience of the commodore and the secretary during their week's cruise on the Charles last summer, in the commodore's double centerboard, lapstreak, Class B canoe, demonstrated to them at least, that a canoe of the weight and dimensions of a Class B is not just the thing for river work where dams are numerous. So it was proposed to build the light canoes for the coming summer, to be used on the Neponset and Charles, and our other canoes reserved for sailing in Boston harbor, which is most excellent for open water cruising. The club also intends to make a two days' trip on the Neponset May 30, and another on the 4th of July—JAMES CRADDOCK, Secretary S. B. C. C.

PRIZES FOR 1886.—The Regatta Committee have sent out the following circular, requesting flags for prizes: In arranging for the prize flags for the Regatta of 1886, the committee venture to hope that it may not be necessary to present any facts or made articles. They believe that many members and friends of the A. C. A. will gladly send flags which will be doubly prized as being at the same time Association trophies and personal favors. The committee, therefore, ask you to fill and return the accompanying blank, promising for yourself or for a friend a contribution to the list. The flags should be of silk, painted or embroidered, of any size from A. C. A. regulation upward. Contributors may of course designate a race for which the flag is offered, and the committee will arrange as far as possible upon such suggestions. The name of the individual maker or designer will add to the value of a flag. Flags not particularly designated will be marked for appropriate races by the committee. The high appreciation of the prizes heretofore given by friends (by ladies especially) lead the committee to expect a ready response to this appeal. The prizes should be sent to any of the committee mentioned below, before the 1st of July. The promise should be given as soon as possible.—J. B. McMURRICH, Oswego, N. Y., Lt. Col. S. G. Fairbrough, Kingston, Ont., Reade W. Bailey, 134 Water St., Pittsburg, Pa., Regatta Committee 1886.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. F. R., Southboro, Mass.—Write to D. Eggert, 76 Wall street, N. Y., for maps.

Jager.—Such a boat would be large enough if built with 2 to 3ft. depth below water, and 1ft. freeboard.

E. L. S., Cleveland, O.—Only one halyard is used on the Mohican sail, as shown in the cut. Bamboo is strong enough for yard and boom if all blocks are lashed on. The sail is no easier to reef than a properly fitted lug. A 2½ mast is used for a 75ft. sail.

S. The boat you mention would be well suited for the localities. If well, but plainly built, with sails, gear and iron ballast, she would cost from \$700 upward. Repairs and laying up would cost about \$75 per year. You will find addresses of builders among our advertisers. The Mamie appeared in the issue of Feb. 12, 1885.

S. D. E.—Umatilla, Oregon.—1. How can I distinguish young salmon up to 12 inches long from trout of the same size? 2. What book is good authority on such subjects? Ans. 1. The Chinook salmon, *O. choucha*, has 16 rays in the anal fin, the rainbow trout, *S. irideus*, has 10 rays in that fin. We presume that you refer to these species, as they are the most common. 2. "Synopsis of Fishes of North America," by Jordan and Gilbert. It is published by the U. S. National Museum, No. 16 and was published under direction of the Smithsonian Institution.

POT LUCK FROM EXCHANGES.

Two Japanese sailors died from cholera during the short journey from Kobe to Nagasaki. Their dead bodies were thrown overboard. The Japanese authorities immediately forbade fishing along the coast.

The birds and the flowers have always gone together as types of innocent loveliness, and partly on that account have always found congenial friends in women. But of late the birds have found this attachment fatal. The fashion of wearing feathers and whole birds as head-gear has led to such an enormous slaughter of the birds that nature cannot make good the waste. Why will the women be so impatient to assume their wings? As it is, the pretty birds are disappearing so rapidly that their scientific friends are becoming alarmed, and, in the true American way, have formed a committee and issued an address. It is to be hoped that "anti-bird-wearing leagues" will now extend and flourish in the land, and that the woods and meadows may have rest from the relentless emissaries of fashion. The simple and unassisted resources of nature gave out long ago in the attempt to keep pace with women's desire for flowers. And, perhaps, unless the fashions change, we shall have aviaries, as we have conservatories, where birds of striking plumage will be cultivated for market.—*Dubuque (Iowa) Times.*

DESTITUTE FAMILIES are sadly and plentifully; but they would be much fewer if the fathers while living had invested a few dollars in the life and accident policies of the Travelers, of Hartford, Conn.—*Adv.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be incomparably superior and guaranteed in the most liberal manner.

We have just finished and put on the market a new caliber round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the best balanced and most perfect rod in the market.

ABBEE & IMBRIE,

What the Champions of the World Say:

ELKHART, Ill., Feb. 13, 1884.

J. C. Petmecky:

DEAR SIR—I have used your cleaner and find it one of the best I ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

GAINSVILLE, Ark., May 5, 1884.

Mr. J. C. Petmecky:

DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced.

Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky, Austin, Tex.:

DEAR SIR—At my recent shoot in your city it afforded me pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,
Champion Shot of the World.

GOLD MEDAL, PARIS, 1878.

BAKER'S Breakfast Cocoa.

Warranted absolutely pure Cocoa, from which the excess of Oil has been removed. It has three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

PEIRCE'S

TELESCOPIC SIGHTS FOR RIFLES

Increase the effective aim 100 per cent, at any distance and even more at long distances. These unrivaled sights are constructed of Solid, Seamless and Jointless Cast Steel Tubes, Improved Lenses with fixed adjustment for any distance; with no sliding or other movable internal fixtures, but each individual Lens and other pieces being double screwed, effectually preventing any derangement of parts by concussion in firing the heaviest charges. Sole Manufacturers, Rural Manufacturing Co., 44 North Fourth Street, Philadelphia, Pa., U. S. A.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

NOTABLE AND SIGNIFICANT ITEMS

FROM THE
FORTY-FIRST ANNUAL REPORT
OF THE

New York Life Insurance Co.

A total income of over sixteen million one hundred thousand dollars, and payments to policy holders of nearly eight million dollars.
Interest income, over three million dollars, being about 5 1/2 per cent. on average net assets, and nearly four hundred thousand dollars in excess of losses by death.
Market value of securities, over three million three hundred thousand dollars in excess of their cost.
Liabilities, both actual and contingent, provided for, and a Divisible Surplus by the Company's standard of over seven million dollars; Surplus by the State standard, over thirteen million dollars.

An increase of nearly two million dollars in income, over three millions in surplus, over seven millions in assets, and of over thirty millions of insurance in force, during 1885.

The Seven Advantages

OF THE

New York Life Insurance Co.'s

NONFORFEITING-TONTINE LIMITED-
ENDOWMENT POLICY.

- FIRST ADVANTAGE.—Insurance for a definite amount, or for an amount increasing with each premium paid, as desired.
- SECOND ADVANTAGE.—A Definite Cash Endowment, and a Tontine Dividend, to Policies in force at the end of Endowment and Tontine periods, which periods correspond, and may be either Ten, Fifteen or Twenty Years.
- THIRD ADVANTAGE.—Insurance for the full amount of the Policy, extended for as long a time as the value of the Policy will carry it, within the Endowment period, in case of discontinuance of payment of premiums after three years.
- FOURTH ADVANTAGE.—A Grace of one month in the payment of premiums, during which time the policy holder's security is unimpaired.
- FIFTH ADVANTAGE.—Three valuable options, including cash value, to policy-holders who survive their Tontine and Endowment periods and keep their policies in force.
- SIXTH ADVANTAGE.—Practical freedom of action with respect to occupation, residence and travel.
- SEVENTH ADVANTAGE.—The payment of death-claims immediately upon the approval of the required proofs of death.

Do not insure until you have seen full particulars of this Policy. Do not fail to write the nearest Agent, or the Home Office, for such particulars—**at once.** THE NEW YORK LIFE INSURANCE CO., 316 & 318 Broadway, New York City.

CANOE

THE third edition of "Canoe and Boat Building" is now ready. The additional matter includes description and working drawings and sail plans of the Barnegat Cruiser, Sunbeam and Lassie canoes, and sail and rigging plan of canoe yawl. This makes the book comprehensive up to date. The author is W. P. Stephens, canoeing editor of FOREST AND STREAM.

For writing such a book Mr. Stephens is peculiarly fitted, beginning as an amateur, and having after a long experience of the difficulties attending the building, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his purpose.

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstrake or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty large plates, printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 30 ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 192, with 29 plates of working drawings. Price \$1.50. Address,

CRATEFUL-COMFORTING. EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of a well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette*.

Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus: **JAMES EPPS & CO., Homeopathic Chemists, London, England.**

ANSWERS TO CORRESPONDENTS.

THE NEWARK PANIC.

THE scare is over. After having been nursed along for many weeks by ignorant medical men and fostered by newspapers eager for a sensation, the bottom has finally dropped out, and the senseless, inexcusable folly of the craze stands confessed. The seven dogs bitten by the original Newark mad dog, and since that time kept in confinement, have shown no signs of disease, and are at last to be released from their imprisonment. The veterinary on whose responsibility the original dog was pronounced rabid, and who gravely announced that one of the bitten animals would become mad within twenty-four hours because, forsooth, it would not drink water at his bidding—this veterinary has acknowledged that these dogs are healthy.

During the prevalence of the New Jersey insanity we declined to refer to it further than to deprecate it, and to state that it was merely a panic without any foundation whatever. Now that this panic is over, and that those who originated it have acknowledged it to be without foundation, we speak of it only to condemn those who are responsible for having created it.

The outrageous story of this mad dog scare is well known, but all the harm done by it can never be told. The accounts of streets filled with mad dogs, and of police practicing at them with revolvers, while the bullets were flying through the air were positively terrifying to women and children. The little ones dared not venture out of doors; they were afraid to go to school; their parents endured agonies of anxiety. Nervous women and girls suffered untold tortures from fright.

Of the brutalities enacted under the influence of this insane terror, set on foot by wickedly foolish men for their own base advantage it is needless to speak. The tales of horror that have come to us from Newark and Jersey City within the last two or three months have been enough to excite the indignation of the most cold-hearted of men.

The responsibility for originating this mad dog craze lies with two or three feather-brained medical men of New Jersey, and the New York *Herald* promptly took the matter up and worked the sensation as long as there was anything in it. On these men and on this journal must rest the onus of the great wrong done to the community at large and to the brute creation, a wrong which cannot be too severely condemned.

There is not, nor has there been, during the whole course of the craze, one particle of evidence published to show that any one of the New Jersey dogs was rabid, and yet these doctors and this newspaper, to advertise themselves, to increase their business, to bring to their pockets a few more dollars, to get themselves talked about, did not hesitate to frighten almost out of their wits—perhaps in some cases to frighten literally to death—human beings, and to cause hundreds of dogs to be put to a torture which was wholly without justification.

The Newark dog scare had its origin in the grossest ignorance and in a great journal's avidity for sensationalism, forgetful of its plain duty to the community. Such ignorance and such carelessness are wholly without excuse.

TROUT LAWS OF NEW YORK.

LAST April a law was suddenly passed by the Legislature of New York which closed the season after it had been legally opened on April first. The law for years had permitted trout fishing throughout the State on that day; and while many anglers were on the streams, suddenly and without warning, the new bill passed about April 15 and became a law, forbidding the capture of trout until May 1 in any portion of the State except the counties of Queens and Suffolk. We referred to this in our issues of April 23 and May 7, 1885, and showed the injustice of the measure. The argument that anglers who had gone forth in the belief that they could legally capture trout in April is not applicable now, but the other objections still remain.

The two counties which are excepted form the eastern end of Long Island, are, with the streams of Sullivan and Ulster counties, the favorite resorts of anglers from the city. The trout rise to the fly freely in these waters in April, and have entirely done with the work of depositing their eggs. The fish are ready for the opening season, and the anglers are anxious for it, and only the law keeps them from obeying their instincts and coming together. Yet the city anglers—and most of the men who fish Long Island streams are from the city—members of clubs or not, can go down and capture trout to the extent of their ability, but dare not take a fish across the East River to their homes. To the clause forbidding fishing for trout through the ice there can be no objection from men who capture them fairly in open water, nor should this class of anglers object to that part of the new law which forbids the capture or sale of trout which measure less than six inches in length; but the opening season, as now fixed, is at least one month too late for some parts of the State, especially the southeastern portion.

There is no doubt whatever that the first of May is soon enough to open the trout season in the Adirondack region, where the ice often remains on some of the lakes until the middle of that month; but under these very different conditions of climate it seems absurd to make a law which shall place the whole of the State under a restriction which is only proper to that elevated mountain region where winter reigns supreme until about the first of May or later. We have no doubt that the new law would have covered Long Island also but for the fact that Senator Otis was chairman of the Committee of Fish and Game last year, and tacked on a clause exempting Queens and Suffolk counties from the operations of all bills of a general nature. He did so when the bill forbidding the hounding of deer came up, and a law was passed forbidding the chase of deer by hounds in all parts of the State except on Long Island, where, of all places, the few deer that are left should be rigidly protected.

If the trout law could be amended so as to allow trout fishing on April 1 south of the Mohawk River from Utica east, and from thence south of the New York Central Railroad, or other near boundary, and prohibiting it until May 1 north of that line, it would no doubt cover what the framers of the last law desired, the prevention of all ice fishing and the protection of trout until nature opened the season in the Adirondacks. Or, if it should be thought that this line is too far north, let it be brought down to the forty-second parallel, which would leave the counties of Suffolk, Queens, Richmond, Kings, New York, Westchester, Putnam, Dutchess, Rockland, Orange, Sullivan, and parts of Delaware and Ulster below it, and in which fishing for trout could begin on the first of April. By a glance at the map it will be seen that this line forms the southern boundary of the State west of Delaware county and separates New York from Pennsylvania. Either of these lines would satisfy most of the anglers who live below the last one named, and would not interfere with trout protection in the northern part of the State.

GUIDES.

UNDER this general term may be found grouped a most heterogeneous lot of mankind from the simple boatman on Greenwood Lake, who aspires to the name, to the thorough woodsman who can take a tourist many days' journey through a dense wilderness and bring him safely to his destination. The perfect guide is one who to a perfect acquaintance with his region has a familiarity with all those forest signs, camping, cookery, and the generalities of all that varied knowledge which we sum up in the term "woodcraft." Added to this he is sober, truthful, active, strong and self-reliant. Possessed of these qualities he is naturally quiet, willing, respectful and companionable. Such men are by no means rare, but in the host who style themselves "guides" there are many who fall far short of many of these qualifications; yet they pass themselves off on strangers as first-class men, and demand wages as such. The Adirondack region has plenty of both classes; the first being, as a rule, the "independent" guides, as they call themselves, and the latter are more frequently found attached to some fashionable hotel, their knowledge being mainly confined to one lake and the management of a boat.

Some years ago one of these self-styled guides betrayed his trust and committed a crime which cost him his life, and when the newspapers spoke of him as an Adirondack guide the well-known and respectable guides about Long Lake denied that he had any claim to the title; that he was a saw-mill hand who had gone in and taken up the profession without any special knowledge of the woods, merely knowing how to row a boat and where a few of the carries in his immediate vicinity were to be found. The affair cast discredit on many good men whose reputation is their capital, and such men should protect themselves from the possible recurrence of such a thing in future by having some sort of an organization from which any who are proved to be guilty of dishonorable practices should be expelled. This would tend to their advantage in many ways. We personally know of Adirondack guides to whom a man might leave uncounted gold, his family and all that he values, and trust them to go through the woods for weeks without fear for their safety, and these men owe it to themselves to see that all "scalawags" are kept from classing themselves with them by assuming the name of "guide."

While it is true that the guides are as a rule trustworthy, they are not all expert, first-class woodsmen, and perhaps the average tourist or sportsman does not require this qualification. Nothing is more common than to hear some third-rate guide cracked up by one whom he has served once or twice but who knows nothing of the woods himself. To the green sportsman, the little knowledge of woodcraft which his guide has seems a perfect marvel of wood lore, because it happens to exceed his own stock of forest wisdom, and he not only marvels at it, but his "guide" becomes a hero whose praises he is disposed to sing on every possible occasion, little dreaming that if once off the carry, or the beaten track, his famous "Natty Bumpo" would be lost.

SHORT LOBSTERS.—Mr. F. R. Shattuck, who is the treasurer of the Massachusetts Fish and Game Protective Association, and also a deputy fish commissioner, has been giving his attention to the detecting and punishing of lobster fishermen who deal in "short" lobsters, that is those which are under the size prescribed by law, ten and a half inches exclusive of claws and feelers. Mr. Shattuck's vigilance and activity in the important public work are crowned with success, and he is doing much to correct this great abuse. It is a curious but not at all unusual commentary on the short-sighted spirit of the fishermen that they would, if not checked by the public-spirited intervention of gentlemen like Mr. Shattuck, actually bring to a speedy end their own occupation by marketing baby lobsters and once and for all destroying the stock.

THE DEER HOUNDING BILL.—The Assembly passed the Deer Hounding Bill by a vote of 93 to 23. We hope that for its own credit the Senate may refuse to concur in approving the bill. The Assembly plainly ignored the merits of the question. If the Senate follows suit, we have much mistaken the spirit of its members. Elsewhere we print Mr. Hadley's speech in the Assembly. His whole argument is based on statements which have absolutely no foundation in fact; they are, on the contrary, so absurd that the Assembly might justly have resented being called upon to listen to them at all.

TO THE WALLED-IN LAKES.

XIII.—"PLENTY HORSES STOLEN."

THERE were signs that the party's bad luck would cause its disruption. All the morning Yellowfish, Achilles-like, sulked in his tent, and a little after noon he saddled his horse, forded the river, and disappeared over the bluffs on his way to the agency.

We spent the morning on the water fishing for lake trout, of which we caught fifty or sixty pounds' weight. In the afternoon we rode out north across Swift Current to get a nearer view of Chief Mountain. It is a grand needle of rock, standing far out upon the prairie, away from its fellows. Its connection with the range is by a narrow, knife-edge mountain, which runs back from it to the main chain; but the crest of this ridge is so far below the mountain itself that, at a distance, it seems but little above the prairie. I made a rough sketch of its profile as seen from the southeast at a distance of about ten miles. The mountain at this distance is dwarfed by the extent of country seen to the east and west of it. No picture of Chief Mountain that I have seen shows this view of it, which is far more impressive than one from the north. This rough outline is seen below.

PROFILE SKETCH OF CHIEF MOUNTAIN.

SEEN FROM THE SOUTHEAST ABOUT TEN MILES DISTANT

1. Level of the prairie. 2. Crest of knife-edge mountain running back to the Range.

For an hour or two we sat on the hills admiring the majesty of this Western Matterhorn. Its sides seem vertical—sometimes even overhanging—and utterly impracticable from the south and east. If there be a way to its summit, as the Kootenays say there is, it must be on the northwest. At all events, to give the mountain a trial would require no little time and labor.

On returning to the camp we turned out the horses, and after dinner I did some fishing in the river for trout. I caught a few, and some very good ones, but nothing above two pounds and a half, although they are said to run up to five pounds and over. In dressing these fish later we found that their food consists very largely of meadow mice (*Arvicola*). From one fish we took five of these, and from a trout weighing three and one-half pounds, which became entangled in the whitefish net, we took no less than eight of these mice. The discovery of this diet greatly disgusted Appekunny, who foreswore trout from that time, and spoke of them thereafter in most indignant and contemptuous terms.

This was to be our last night on the lakes, and it was marked by an incident which, for a short time, caused us some little uneasiness. I had been ferried across the river and left there to fish, and before I had been at it very long, some one called across that two of the horses had disappeared and could not be found. I shouted back that they were no doubt feeding somewhere in the brush, and went on with my fishing without giving the matter much thought. As the sun set I went back to a point opposite camp and asked if the horses had been found. Appekunny replied that he and King had hunted everywhere but could not find them, and that they had probably been stolen. Here was a pretty mess. Jerry was in sight, and the missing animals were those of the men who had been looking for them. I called to Appekunny to set me across the river, and when he had done so, I jumped on Jerry and set out to look for the missing beasts myself. By this time it was quite dark, but the great full moon which had just climbed up over the eastern hills, cast over the plains a flood of white light which, while it made objects near at hand distinctly visible, threw over those more distant a curious veil of magic, which made them seem strange, unfamiliar and different from what they were. I first made a circuit of the open plain, where, however, I did not expect to find the animals, as, if they had been there, they would have been discovered by those who had looked for them before it had become dark. Several times, thinking I had found them, I rode up to little clumps of brush, which, in the mysterious moonlight, took strange shapes, and sometimes seemed even to move. Next I passed through the brush on the edge of the hills, and then turning back to camp made a systematic search among the willows where I knew the horses were accustomed to feed. It gives one a curious feeling to ride through the woods or the brush in the moonlight. In the open spots it is so bright, and in the thick places so utterly dark. The straggling moonbeams which penetrate the foliage and lie on the ground before you produce many curious effects, and you imagine that you see bogs and ditches and little streams of water, and all sorts of impediments to your further progress. In riding about, I depended much more on my horse's than on my own senses, and beyond keeping him in the general direction I wished to follow, interfered with him very little. I knew, too, that if we passed near the horses, he would discover them long before I could, and so I watched him for a sign that he saw something. I had got within a couple of hundred yards of camp when I saw Jerry's cars prick and his head turn to the

left, and by closely looking in the same direction, I made out two indistinct dark shapes, close under the shadow of the willows. As I rode toward them, a low whinny told me that I had found the missing horses, and after riding close enough to them to recognize them I left them quietly feeding and went on to camp. I had been gone just twenty minutes.

The next day we said farewell to the Walled-in-Lakes, and leaving Dick King, the sole white inhabitant of the beautiful valley, set out across the river and up the steep bluffs. Light though the wagon was, the pull up the long steep hill was a hard one, and it was afternoon before the last rise had been surmounted, and the team trotted on over the level prairie which forms the divide between the waters flowing into the Arctic Ocean and those which empty into the Gulf of Mexico. Soon after crossing the river, we met three half-breeds driving a pack pony, one of whom stopped to talk with me. He said that he and his comrades were hunting for some horses thought to have been stolen by the Piegiens, and inquired the way to the agency. He said they had avoided the wagon road from St. McLeod, because they were afraid that the police at the boundary might make them

trouble. I did not understand at the time what he meant, but when we reached the agency it was explained to me. It appears that these men were refugees from the half-breed rebellion, and as they did not know how the feeling was on this side of the line, they were traveling quietly and striving to avoid observation.

We jogged along briskly until nearly dark, I riding ahead to select a road and Appekunny following with the team. Twice we stopped, once to collect some wood for the campfire—it will be remembered that there is no wood on Milk River—and again to pull the wagon out of a ditch in which it had become fast, and just before dark made camp on a bluff on the river, about five miles above the red cliff under which we had camped on our outward journey. Late in the afternoon I had killed one of two sharp-tailed grouse that had shown themselves above the grass, and at dusk, while we were unharnessing, three mallards alighted in the pool at our feet, and Appekunny very cleverly brought one of them to bag, so our supper and breakfast were provided.

How the wind blew that night! It was a difficult matter to put the tent up in the face of the gale, and after it was up, I changed the position of one of the corner pins, so that the strain on the ropes might be more evenly distributed. Then came the work of cooking supper and the feeding of the horses. The team horses and Appekunny's riding animal were hobbled and turned loose, but I thought it better to picket Jerry out, for it is often a convenient thing to have at least one horse where you know you can put your hand on him if you want him in a hurry. We were on the road home, and it was quite possible that the animals might take it into their heads during the night to strike out for Cut Bank, or to wander back to the Lakes, or, if they did neither of these things, to stray off into the hills, or up or down the creek, and should any one of these things happen, we would want a horse to ride when looking for them. So, using the end of an old lodge pole for a picket pin, Jerry was staked out not far from the wagon, where the grass was thick and good, and then we went into the tent for supper.

During the night the wind blew furiously, and some time before day a loud crash aroused us from our slumbers. The tent had blown down, and the noise was made by the stove pipe rattling against the stove. Luckily the fire had gone out, and the stove was cold, so we did not bother to raise the tent, but slept under it until gray dawn.

When we turned out, the only horse in sight was old Jerry, who was gazing anxiously down the valley, as if looking after his companions which had gone that way. My heart misgave me a little, for I thought it quite possible that the stock had gone into Cut Bank, and if they had, this meant a long, solitary ride for me to get them and bring them back. Appekunny hinted at horse thieves, but I gave it as my opinion that no well regulated horse thieves would have driven off three horses and left the fourth. While my companion started his preparations for breakfast, I saddled Jerry and rode off to look for the horses. A ride of a mile or two down the valley revealed no fresh tracks, and I rode up to the top of a high hill, from which I could see ten miles down the stream. Nothing was to be seen. Then turning north, I rode through the hills back of camp, and at length, from the top of a bluff far higher than any of its fellows, I espied the truants in a little coulee less than a mile back of the tent. Going down to them I freed them from their hobbles and drove the horses to camp, where they were soon caught and tied up. We started about 7:30, and had a long, quiet, uneventful day. A few miles before reaching Cut Bank we came to a little creek, already mentioned, in which were a

great many ducks. Here Appekunny left his team in my charge, and had some very pretty shooting, killing in a short time a dozen or fifteen teal, shovellers and mallards. On the divide between this stream and Cut Bank I saw three antelope, almost, if not quite, the first that I had observed during the trip. They were very wild, and at once loped off out of sight.

When we reached Cut Bank, we found it for the time quite a busy place. Mr. Kipp, Major Allen, the Doctor, Mr. McGonigle, and two or three others had come out from the agency to have a day's fishing, and were just going back. The latest news from the States was given us, and pretty soon the teams drove off, while we made ourselves comfortable in John's cabin.

The next morning, after fruitlessly fishing for an hour or two, we started for the agency. While still some distance north of Two Medicine Lodge Creek, we noticed several single Indians, riding about over the prairie as if looking for a trail. At length one of them (Many Tail Feathers) rode near enough to us so that Appekunny made to him the sign of interrogation, what is it? or what is the matter? To this the Indian replied by partly extending his arms with the hands opened and the fingers spread and partly curved, then moving his hands and arms down bringing them near together at the end of the motion, and then suddenly raising them nearly to his breast, as if making the motion of scooping up a great deal of something in his hands. This signified "plenty" or "many." Then he held his left hand in front of him, the thumb upward, the outstretched but closed fingers pointing away from him, and placed the first and second finger of his right hand astride the forefinger of the left. This is the sign for "horse" or "horseman." Then he brought both closed hands together in front and a little to the left of his breast, and suddenly drew them apart with a quick motion, moving the left hand but little, but seeming to pull violently with the right. This sign meant "stolen." His reply therefore was "Many horses stolen."

Presently the Indian came up so that we could converse with him, and told us that during the night some Indians had run off 150 to 200 head of horses from the camp. Lone Person, who was a great friend of Appekunny's, and the richest Indian in the tribe, had lost 100 head. All the Piegiens who had any horses left were now out looking for the trail, so as to pursue the thieves. He asked for a piece of tobacco which I gave him, and then rode off. A little later as we were descending the bluffs into the bottom of Two Medicine, we saw about twenty-five Indians, riding in a body on the crest of the ridge on the other side of the valley, and inferred that they had found the trail. Just after crossing Two Medicine, we met Lone Man, who looked very unhappy, and much as if he wanted to cry, as indeed there is no reason to doubt he did, poor fellow. He tried to borrow a rifle for one of his party, but we had none that we could lend him, and he rode off again on his foaming horse.

On reaching the agency, we learned that the thieves had been very bold, coming up to the very gate of the stockade, and taking two horses tied there. Opinions were divided as to the tribe to which the robbers belonged. Some thought they were Assinaboines, and other Gros Ventres, but the majority believed that they were Crows. The opinion was freely expressed that they would not be overtaken. They had twelve hours start and had all the best horses in the camp and a never ending series of remounts. Besides, if the Piegiens should catch them, it was thought very doubtful that they could recapture their property, for the Crows are well armed, while the Blackfeet are not, many of the latter still being without guns. It was thought that the chase would be fruitless, and that if the Piegiens got their horses back at all, it would be by starting off quietly on foot, and stealing them again.

That night we spread our blanket's in the trader's store and enjoyed the kind hospitality of Mr. Joseph Kipp, while with Mr. McGonigle—a friend of many years' standing—I talked over the days and the men of early times. Yo.

SILVER FIELDS.

AFTER many downfalls of snow by night and day, some fluttering down and silently alighting like immense flocks of fairy birds; others as silently, like the continuous falling of a gray veil, shutting one in from all the world lying further away than his nearest outbuildings, and yet others blown by howling winds in long slants to the earth and whirled and tossed along the fields, blurring their surface in a frozen crust; everything of lesser height and sheer uprightness than buildings and trees is buried in the universal whiteness.

Then comes a day when the wind quills buffeting the snow from this side and that and stands still, debating which way it shall blow next, while the sun burns into the cold blue sky's eastern rim, runs its short course over the dazzling northern fields, and burns its way out behind the glorified western mountains. When the sun is highest the air bites cheeks and noses and fingers with a sharp chill, and one feels its teeth gnawing his toes through his boots if he does not bestir them. At nightfall the smoke of the chimneys leans toward the North Star and by the next morning the wind comes roaring up from the south, armed with swords and spears of cold that no armor of wool or fur can ward off, and from every vantage ground of ridge and drift stream the white banners of snow. Then clouds come drifting across the sky, first a few, then so many that they get into a jam against some star or mountain somewhere to the northward,

and in a few hours all the blue is clogged with a dull gray mass. As the later coming legions of the wind arrive, the temper of their weapons is softened and their keen edge blunted. The snow loses its crispness and takes the imprint of a foot like wax. We have a midwinter thaw, the traditional January thaw a little belated; and presently it begins to rain pellets of lead out of the leaden sky, rain that has none of the pleasant sounds of summer showers. There is no merry patter on the snow-covered roof, no lively clatter on intercepting green leaves nor splash of dimpled pools; only windows and weather-boards resound to its sullen beat. When, after some hours of rainfall, the snow has become softened down to the earth, so that when one walks in it its tracks show a gray, compacted slush at the bottom, the wind lulls and veers to the northward and patches of blue are opened in the world's low, opaque roof, windows through which the sun shines upon some fields and mountain peaks, making them whiter than the whiteness of snow. The air grows colder, coming out of the north; but if the advance of Boreas is slow and cautious, and he sends much before him his light-armed skirmishers, the snow is frozen so gradually that it turns to a crumbly, loose mass, with a thin, treacherous surface, where nothing much heavier than a fox, if not as broadly shod as with snowshoes, may go without vexatious and most tiresome labor. But if the change of temperature is sharp and sudden enough to freeze the water held in the snow before it has time to leech down to the earth, we are given a crust so firm that it is a delight to coasters and all walkers and runners on the snow.

It is now no toil but a pleasure to go across lots. "The longest way round" is not now "the shortest way home." The fields give better footing than the highways. The side of the highways is pleasanter to the feet than the two grooves the horses and sleighs have worn in its center in all their two months' going and coming. There is a silver stile along every rod of every fence, and you may walk anywhere over the buried gray wall or rail fence at your ordinary pace, and sit down to rest on the top of the stakes where last July, when the daisies were blowing, the bobolink sang, higher than you could reach. Can it be that summer ever blossomed here in these frozen fields? How long ago it seems; and yet we are not much older!

Now when the full moon comes pulsing up behind the evergreen-crested hill, with the black silhouette of a pine slowly sliding down its yellow disk, trunk, dry limb and bristling branch clear cut against it, and slowly drawing toward it the long blue shadows, it is no time to bide within doors. In every cold night of the year that gives many such to us Northern folk we may have fireside and lamplight at some price, but not for love nor money many times in a winter such a night as this, such warmth out of snow and frost, such celestial light shed on silver-paved fields. Let us set our faces toward the moon and trail our shadows behind us till we lose them among the shadows of the pines and hemlocks of the hill, the mountain of our neighborhood.

What solid and appetizing food is this firm crust for our feet! How they devour the way with crunching bites, reminding our teeth of the loaf sugar of youthful days when the snowy cones, swathed in the purple paper that our mothers used for the concoction of dyestuff, tempted us to theft. What better wine than this still, sharp air!

The even, smooth surface of the snow has been preserved; it is not pitted, nor in places cut into fleecy texture as the sun and wind of March carves it sometimes. The dark blue shadows of the tree trunks lie clear edged upon it, not jagged and toothed as when they fall on grass ground. Every branch's shadow lies blue-veined upon it, every mesh of twigs is netted more distinctly there than the substance is against the sky, the torn bird's nest and every wind-forgotten leaf are revealed on the white surface.

A winged phantom startles us gliding across the silver field just before us, as swift in its flight but not more noiseless than the great owl it attends. Owl and shadow dissolve in the distant blue and white, and presently, when this spirit of the night has regained his woodland haunt, his hollow, storm-foreboding hoot is heard resounding through the dark aisles of the forest.

All sounds are at one with the hour and season. The snow crust cracks in long but almost imperceptible fissures, the ice settles to the falling level of the brooks and ponds with a sudden resonant crash, the frozen trees snap like the ineffectual primers of an ambushed foe. All are winter's voices, as ancient as hoary winter's self, and that only emphasize the silence out of which they break. The jingle of the sleigh bells along a distant road, the crunching of our footsteps, and their sharp, short echoes, are the only sounds that betoken any human presence in all the wide glittering expanse, with its blotches of woodland and dots of sleeping farmsteads.

But we are not the first explorers here even this winter. A fox has left the record of his wanderings, exaggerated like many another traveler's accounts of himself writ on a more enduring page than this, for if you will believe this fellow's tracks made before the thaw, he was as big as a wolf, and formidable enough to raise a hue and cry in the township against him. The hare might be frightened to see the print of his own pads, now grown as big as the tracks of his enemy, the lynx. A skunk was warmed up into such activity as his short legs could compass and made his mark in the soft snow, unmistakable, though almost big enough for the track of the mephitic monster of the Wabunakee legend; the rows of four footmarks printed diagonally athwart his course when he cantered abroad from his burrow are none but his, whereto is added proof of his sometime presence in a spicy waft of the air. The regular parallel dots of the weasel's track make a great show where he came to the surface above his regular runway along the buried fence. He and the fox, though unseen, are as wide awake this cold night as ever, but they and all later travelers are modest now, and set down naught of their journeys.

Can it be that there were giants here so lately as a month ago when the woodchopper went this way to his work! Here are his monstrous footprints, albeit the stride is short, and there he set his huge axe, before which the trees should have gone down like mullein stalks, and there he set his cauldron of a dinner pail while he lighted his pipe. How could so small a blaze as that little burned out match afforded ever have fired his furnace of a pipe! Yet from these dropped fragments of home-grown tobacco, I conclude that our giant was only an ordinary little Frenchman whose feet caught the trick of his tongue.

The packed snow resisted the thaw more than that which lay as it fell, so that beaten paths that were sunk below the surface are raised causeways now, a narrow slippery footing that no one tries with all this wide pavement to choose from.

Now if we might have the luck to see a fox, how well his

furry form, clad for such weather, so agile, noiseless and wild, would fit the scene, and we ought to see one, for this little basin, rimmed with the rough hills on the east side and on the others with low ridges, is a favorite spot with foxes, a trysting place at this love-making season and a hunting ground in spring, summer and fall, when the tall wild grass harbors many field mice. Moreover, Reynard often gets a free lunch here, for hardly a year goes by that to save the trouble of burial, a dead horse or cow is not hauled to this out-of-the-way spot where foxes, skuks and crows find cheap and speedy sepulture for everything but the bones. It was undoubtedly the bed of a little pond two or three hundred years ago and the home of beavers or in some such way of account to the Indians, for on the southwest bank are to be found plenty of flint chips of the old arrow makers. Only a little brook trickles through it now, complaining with a faint muffled whisper under its concave glare of shell ice, of its diminished strength and babbling in a feeble voice of the days when it browsed bravely over the stones into the pond all the drouthiest summer through and tumbled down the rocks below it with incessant clatter.

But hush! Stand stock still, breathe softly and whisper no louder, for there, just out of the shadows of the hill, sits a fox bolt upright and alert. A stump? Nonsense! No wood nor stone untouched by the hand of the cunningest carver ever had such lifelike form, such expression of alertness. Why you can see, if your eyes are sharp enough, the slight motion of his ears as he pricks them toward us, as his nose points, for he has seen or heard, not smelled, us; for the light breeze sets from him to us, and, I fancy, touches our nostrils with a faint waft of his pungent odor. You can see the curve of his back, his fluffy brush lying along the snow—almost make out the white tip of it. The ruddiness of his coat almost shows, but moonlight is a poor revealer of color; the pines are not green, as we know they are, but black, and everything is black or blue, or gray or white. Now he moves his head a little. He is growing more and more suspicious and presently will vanish like a swift shadow in the shadow of the woods. Shall we send him off with a shout or try how near he will let us come? Then step carefully and slowly. How steadfast he stands, though we have lessened by half the distance that lay between us when we first saw him. He must have an appointment here with the most bewitching vixen in all fox society, and will not budge till he must. How does the wise scamp know that our guns are at home? Or has he not heard or seen us yet, all his looking and listening being for the coming of his mistress? Has love made him blind and deaf to all enemies but the maiden of his heart? Try with a mouse squeak if he cannot be moved by an appeal to his stomach. Stoek still yet! Confound his impudence or his unvolupine stupidity. Salute him with a yell that shall make the moonlit night more hideous to him than the glare of noon with a hundred hounds baying behind him. The shadowy hill and the black pines behind us toss back and forth the echoes of such an infernal uproar as has not stirred them since Indians and the "Indian devil" were here. Our fox is paralyzed with fright, actually frozen with fear. Let us rush upon him and secure him before the blood starts again in his veins. Well, it is a stump after all! But were ever mortals played a worse trick by a real fox?

It is something out of common experience to go into the woods in the night time without stumbling over roots, logs or bushes and groping in constant fear of bringing up against a tree. No danger now of bumping against trees that show as plainly as in a summer day. The undergrowth is bent down and snugly packed under the hard crust and brush heaps are bridged with it and trunks of fallen trees are faintly marked by slight ridges that one walks over almost without knowing it. The partridge could not find his drumming log now if he wanted it, as he will not for six weeks to come. Sad is his fate if he was caught napping under the snow when this crust made, but that, I think seldom happens to him, though often to the poor quail in this region of deep snows. Sixty years ago quail were not uncommon here where now a wild turkey would scarcely be a stranger sight. Such crusts as these have been their more relentless enemy than guns and snares or beasts and birds of prey and have exterminated them. The partridge does not harbor under the snow except in cold dry weather, though he allows himself to be covered by snow falls. One may often see the mold of his plump body where he has lain for hours in his snug bed of down, and rarely—two or three times in his life perhaps—one may have the luck to be startled by his sudden apparition, bursting from the unsuspected, even whiteness of the wood's soft carpet. In mild winter weather he is aloft where his food is or is embroidering the yielding snow with his pretty footprints. Here is some of his work done a week ago, now frayed out at the edges by the thaw, but it has the mark of his own pattern unmistakable, even in this moonlight, so different from the clumsy track of civilized poultry. It runs this way and that, sometimes doubling on itself and disappears in the pillid gloom of an evergreen thicket, where perhaps is his roosting place.

The floor of the woods is barred and netted with an intricate maze of blue shadows, here and there splashed with a great blot of shade where the branches of a hemlock intercept the moonlight.

How still it is; even the harps of the pines are silent, and our ears are hungry for some other sound than our own breathing and the crunch of our footsteps. Imagine them suddenly filled with the scream of a panther, stealthily creeping on our track unsuspected, unseen, unheard, till he splits the silence with his devilish yell. But they tell us now that the panther is voiceless, and the tales that thrilled our childhood with an ecstasy of delightful terror, of our grandfathers being led into the woods by the catamount's cry, like that of a woman in distress, were myths—our good old grandfathers were liars or they were fools, "brought up in the woods to be scared by owls." But the panther may be here, for there are panthers in Vermont yet, or at least there was one, two or three years ago, when on a Thanksgiving Day two little Green Mountain boys, partridge hunting in Barnard, came upon a monster crouching in a thicket of black growth, and a doughty grown-up Green Mountain boy killed him at short range with a well-delivered charge of BB shot. When I was a boy there was always a panther prowling about this mountain in huckleberry time, guarding the berries, I now suspect, for the two or three old women who used to tell us of hearing his fearful cries. He performed his duty well, as far as concerned us youngsters. When the berry season was over he departed and was heard of no more till next summer.

A sheer wall of rock bars our further way up the mountain in this direction. An ice cascade, silent as all its surroundings, not the trickle of the smallest rill of snow water to be heard in its core, veils a portion of the black steep with dull silver, burnished here and there with a moon-glint.

Let us sound a retreat and set our faces toward the gray steep of Split Rock Mount and the piled up blue and white Adirondacks, and get back on to the silver fields, brighter than ever now, as we march abreast of our northward slanting shadows, and the moon, now well up above the world, we fancy that one-half of this northern half of the earth outshines her.

Silver fields is not a good enough name to-night for these shining farms, the creek unmarked now but by the fringe of wooded banks, the broad lake quiet under ice and snow, but never when tossed by autumnal storms so white as now and scarcely brighter in the glare of the summer sun. If you have a newly-minted silver coin in your pocket, cast it before you and see how dull a dot it is on the surface. It would hearten a greenbacker to see how poor a show the precious metal makes to look at, hardly worth picking up out of acres of brighter riches that rust doth not corrupt and that shall be stolen by no meaner thief than the sun, the south wind and the rain. The roofs of gray old homesteads outshine the lights in the windows, and we wonder if any of the inmates are aware how royally their houses are tiled. Doubtless not one of them thinks of it, or if at all, only as protecting the many shingles from the sparks of the rousing winter fires, or as so much filling for the cistern when the next thaw comes; nor, as compared with it, do the interiors, the low, whitewashed ceilings, rag carpets, creaking splint bottomed chairs and deal furniture, seem mean to them or unfitting their fine, perishable covering. For ourselves, we begin to entertain most kindly thoughts of such in-door homeliness and desire the comforts of its harboring, and presently shut ourselves in from the blue sky and shining moonlit outer world, tired and content to smoke a restful pipe by the fire-side.

THE AUDUBON SOCIETY.

IN a supplement to *Science*, recently published, the American Ornithologists' Union's Committee for the Protection of North American Birds have published a great amount of interesting matter on the slaughter of our birds. Papers are contributed by Mr. J. A. Allen, President of the Union, on The Present Wholesale Destruction of Bird Life in the United States; by Mr. William Dutcher on the Destruction of Bird-Life in the Vicinity of New York, and by Mr. G. B. Sennett, chairman of the committee, on the Destruction of the Eggs of Birds for Food. Other articles, unsigned, though furnished by members of the committee, treat of the Destruction of Birds for Millinery Purposes, of The Relation of Birds to Agriculture, and of Bird Laws. There is also contained in this supplement An Appeal to the Women of the Country in Behalf of the Birds, and an account of the A. O. U. Committee on the subject. This paper will be issued separately as Bulletin No. 1 of the Committee, and will contain in its new form a brief account of the plans and purposes of the AUDUBON SOCIETY.

To review, however briefly, the subject matter of this admirable pamphlet is impossible, but it may be well to note one or two points made. It is frequently charged that much of the destruction of our birds is due to the collecting by ornithologists. As to this point Mr. Allen says:

The scientific collector, as already intimated, is charged, in some quarters, with the "lion's share" of the responsibility for the decrease of our song birds; with what justice, or rather injustice, may be easily shown, for the necessary statistics are not difficult to obtain. The catalogue of the Ornithological Department of the National Museum numbers rather less than 110,000 birdskins. The record covers nearly half a century, and the number of specimens is four times greater than that of any other museum in this country; while the aggregate number of all our other public museums would probably not greatly exceed this number. But to make a liberal estimate, with the chance for error on the side of exaggeration, we will allow 300,000 birds for the public museums of North America, one half of which, or nearly one-half, are of foreign origin, or not North American. To revert to the National Museum collection, it should be stated that, while only part of the specimens are North American—say about two thirds—they represent the work of many individuals, extending over a third of a century, and over the whole continent, from Alaska and Hudson Bay to Mexico and Florida, and from the Atlantic to the Pacific. Furthermore, this number—110,000, more or less—is not the number now in the national collection, which is far less than this, thousands and thousands of specimens having been distributed in past years to other museums in this country and abroad.

So far the public museums; now in relation to private cabinets of bird skins. Of these it is safe to say there are hundreds scattered throughout the country, containing from 300 to 500 or 600 specimens each, with a few easily counted on the fingers of the two hands, if not on a single hand, numbering 5 or 6,000 each, with possibly two approaching 10,000 each. Probably 150,000 would be a liberal estimate for the number of North American bird skins in private cabinets, but again to throw the error on the side of exaggeration, let us say 300,000, not however, taken in a single year, but the result of all the collecting up to the present time, and covering all parts of the continent. Add this number to the number of birds in our public museums, less those of foreign origin, and we have, allowing our exaggerated estimates to be true, less than 500,000 as the number of North American birds thus far sacrificed for science. The few thousand that have been sent to other countries in exchange for foreign birds can safely be included under the above estimate, which is at least a third above the actual number.

We have now passed briefly in review all the agencies and objects affecting the decrease of our birds, save one, and that the most important—many times exceeding all the others together—the most heartless and the least defensible, namely, the sacrifice of birds to fashion, for hat ornamentation and personal decoration. Startling as this assertion may seem, its demonstration is easy.

In this country of 50,000,000 inhabitants, half, or 25,000,000, may be said to belong to what some one has forcibly termed the "dead bird wearing gender," of whom at least 10,000,000 are not only of the bird-wearing age, but—judging from what we see on our streets, in public assemblies and public conveyances—also of bird-wearing proclivities. Different individuals of this class vary greatly in their ideas of style and quantity in the way of what constitutes a proper decoration for that part of the person the Indians delight to ornament with plumes of various kinds of wildfowl. Some are content with a single bird, if a large one, mounted nearly entire; others prefer several small ones—a group of three or four to half a dozen; or the heads and wings of even a greater number. Others still will content themselves with a few wings fancifully

dyed and bespangled, or a wreath of grebe "fur," usually dyed and not unfrequently set off with egret plumes. In the average, however, there must be an incongruous assemblage made up of parts of various birds or several entire birds, representing at least a number of individuals. But let us say that these 10,000,000 bird wearers have but a single bird each, that these birds made over so as to do service for more than a single season; and still what an annual sacrifice of bird life is entailed! Can it be placed at less than 5,000,000?—ten times more than the number of specimens extant in all our scientific collections, private and public together, and probably a thousand times greater than the annual destruction of birds (including also eggs) for scientific purposes.

Fortunately, perhaps, the supply of birdskins for decorative purposes is not all drawn from a single country, the whole world being laid under tribute. The ornithologist recognizes in the heterogeneous groups of birds on women's hats, met with on every hand, a great preponderance of North American species; but with them are many of the common birds of Europe and a far greater variety from South America, and many from Africa, Australia, New Guinea and India. But on the other hand it is well known that our own birds are exported in immense numbers to Europe; and, whether the exportation exceed the importation, it is impossible to determine from lack of proper statistics.

Some of Mr. Sennett's observations on the islands and shores of the Gulf of Mexico reveal a frightful story of destruction of bird life, not to be matched anywhere except perhaps on some of the islands of the North Atlantic coast, which have been despoiled by egg gatherers and by the fishermen, who use young birds for bait. Mr. Sennett says:

In 1877, and also in 1878, while studying the birds about Corpus Christi Bay, Texas, I examined a low grass flat called Pelican Island, so named on account of the numbers of brown pelicans that had for years taken it for their breeding place, to the exclusion of all other species. Here many thousands of these great birds were tending their eggs and young, breeding in such numbers that one could step or jump from nest to nest, over nearly, if not quite, every square yard of the island. Four years after I cruised over the same coast, and noticed that the pelicans had deserted this grassy island entirely, and were scattered, in diminished numbers, on other islands which were not occupied by them when I made my former trips. On inquiring into the cause of this change, I learned from prominent citizens, that two or three enterprising (men had conceived the idea of making their fortunes from pelican oil, and had erected "trying out" shanties on the mainland. They went to the island in question in large boats, and carried off cargoes of young pelicans in all stages of growth, and boiled them up for their oil. The only satisfaction I could get from the history of this experiment was, that the men could not sell the oil, and had nothing but their nefarious labor for their pains.

That a great interest is felt in this subject of bird preservation is shown by the cordially appreciative letters which we are receiving and the applications for membership in the AUDUBON SOCIETY. In several towns branches of the Society have been formed, and there is no doubt that this association is destined to do a great work.

The importance of the subject is appreciated by all thinking people, and pulpit and press will unite in urging it upon the public. Only last Sunday Mr. Beecher preached a sermon in which this subject was treated at length, and the papers of all sections seem at last to see the danger which threatens us. Of the many encouraging letters which we have received we have space only for a few.

140 W. 59th STREET, NEW YORK, Feb. 20, 1886.

Editor Forest and Stream:

No one who will take the trouble to give the matter a few moments' serious consideration can be in doubt, I think, as to the wisdom of organizing the AUDUBON SOCIETY, and I am thankful that such a step is contemplated. There is an element of savagery in the use of birds for personal decoration, which is in grotesque contrast with our boasts of civilization. But even the savage stops short, as a rule, with the feathers. It is only Christian people who think it worth while to butcher a whole bird to adorn their head gear. I am sure, however, that this is largely from that unreflecting habit which is a leading vice in people who follow the fashions. But it is a vice; as Hood sang, when he wrote:

For evil is wrought
By want of thought
As well as by want of heart.

If the AUDUBON SOCIETY can teach men, and especially women, to think on this subject, half of the battle will have been won.

Sincerely yours,

HENRY C. POTTER.

WEST PARK, N. Y., Feb. 28, 1886.

Editor Forest and Stream:

I scarcely need assure you that your undertaking to form a society for the protection of our wild birds against the ravages of the milliners and the sham scientific collectors has my warmest sympathy and approval. It is a barbarous taste which prompts our women and girls to appear upon the street with their head gear adorned with the scalps of our songsters; and it is mere vanity and affectation which prompts so many persons to make up cabinets of the nests and eggs of the same. The destruction of our birds from their natural enemies is immense, and this craze of the collectors, and folly of the milliners and their customers in addition, threatens their serious diminution.

I hope you may succeed in creating so strong a public sentiment upon the subject that the collectors of skins and eggs for the unworthy purposes of fashion or to indulge the vanity of pseudo-naturalists may suddenly find their occupation gone.

Please add my name to the list of the members of the AUDUBON SOCIETY. Very sincerely,

JOHN BURROUGHS.

CORNWALL-ON-HUDSON, N. Y., Feb. 22, 1886.

Editor Forest and Stream:

You have indeed my hearty sympathy in every effort to prevent the slaughter of my innocent little neighbors and friends, the birds. In the destruction of forests and birds the people of this land are inviting very great evils and inflicting wrongs on posterity which scarcely can be measured. The press should render it impossible for women to sin thoughtlessly and ignorantly in demanding little birds for their adornment. The evil should be brought home so fully to the knowledge of all, that the continued wearing of our useful little birds should become the badge and indication of a callous, vulgar nature. When birds and feathers have this significance, milliners will sell but few even in the Bowery. You are doing a humane and patriotic work in exciting

public aversion to one of the most cruel and stupid wrongs of the age. Respectfully yours,

EDWARD P. ROE.

OFFICE NEW YORK TIMES, Feb. 25, 1886.

Editor Forest and Stream:

While thanking you for your gracious communication in regard to the AUDUBON SOCIETY, I take the occasion to say on my own behalf how much needed is such an organization. The wholesale slaughter of the small birds of this country is one of the worst features of what is improperly called civilization. To go out and kill for food is a painful necessity of man, but to slaughter for the love of the deed is abhorrent to the well regulated mind.

The uses to which the small birds of the land are put is also, to my mind, doubly evil, the creatures being used largely for millinery decoration. Every time a woman's hat or bonnet is trimmed or decorated with birds or feathers, a working girl is wronged. The manufacture of artificial flowers and fruits being a business suitable for young girls and women, the use of birds depresses the other branch of decoration and decreases the scope of woman's work. Wishing you all possible success in your praiseworthy endeavors, I have the honor to be your obedient servant,

MIDY MORGAN.

THE AMERICAN HUMANE ASSOCIATION,
MILWAUKEE, WIS., Feb. 23, 1886.

Editor Forest and Stream:

I am rejoiced to see that your paper is moving for the making of public opinion on the present lamentable destruction of our birds. Fashion is so imperious that it leads the best hearts astray. If the women could only know what they are doing! They don't know, and hence they carry and flaunt, as a decoration, that which is destined before long to mark the commission of a crime against the Nature we all love.

There is such a thing as a crime against the Order of the World, and women are not often irreligious in this sense. Your AUDUBON SOCIETIES, for the protection of our birds, will enroll many thousands of women as ardent bird protectors, who are now, unconsciously, accessories in the wanton, wholesale and most disastrous destruction of the most beautiful denizens of our fields, orchards and woods.

What will the forest and stream be without the birds that carol and peep and nestle and dip and chatter there? So the FOREST AND STREAM must defend its own citizens against the murderous bands of bird butchers that have already decimated the fair country of both plumage and song. For when you rifle the feathers for the milliner, you strangle all that rush of happy song which has made glad the hearts of a thousand generations of men.

Enroll me in the parent AUDUBON SOCIETY.

G. E. GORDON, President A. H. A.

The plan of the AUDUBON SOCIETY is heartily approved by the A. O. U. Committee on Bird Protection, and they have recently appointed one of their number to supervise the formation of AUDUBON SOCIETIES wherever practicable.

BLUEBIRDS AND ROBINS.—Newfoundland, N. J., Feb. 23.—Bluebirds and robins have wintered here this winter. Saw bluebirds to-day and robins have been around the residence of Mr. L. Davenport all winter. This seems very strange, as the thermometer has been as low as 14° below zero.—S. S. W.

IN BURTON'S WOODS.

Editor Forest and Stream:

I have been much interested in the account of Burton's Woods, given in your current issue (Feb. 18). Possibly a little story of what has happened there in later years may be a fitting sequel.

It is no wonder that after being shunned for so many years Burton's Woods should have become the paradise for coon-hunters described in your last issue. The country round too was so abundantly supplied with game, and the bays and marshes with wildfowl and snipe, that a few years ago a party of Northern sportsmen bought up a large tract of land in the vicinity on which they erected a club-house. The members were all prominent and distinguished men in the cities in which they reside, and over the whole country for the matter of that. To see them in the Senate chamber at Washington, on the bench and in their offices in Wall street, and in other high and lofty positions, not one person out of a dozen could even imagine that those dignified and sedate-looking personages could even smile, much less unbend. The idea of their going coon hunting on a dark night, in a haunted forest, tumbling over logs and poking pine cones in their eyes, of course, would be too ridiculous for any sane person to suppose, but yet, the Senator, Judge, Mayor, merchants and bankers were known to go out cooning in old man Burton's Woods and have the jolliest time, and this is how it all came about.

An old gray coon, who was supposed to be the great-grandfather of all the coons in Virginia, was known to have his snugery in the haunted woods. Now the stately party I speak of did not care a rap for all the ghosts in the universe. The mighty Judge actually howled with delight when he heard about the old coon, and said it made him feel like a boy again to think of seeing one treed. The Senator said he used to know all about coons, but had lost track of the kind referred to of late. But whether they knew anything about coons or not, every one talked coon scientifically, just as if it was the most wonderful animal in the world. How the coon tribe would have snickered and felt complimented if they had heard them! At last it was all settled that on the first good coon night, when the stars were obscured and a thick sea fog made it impossible to see your hand before your face, the old grandfather coon should be routed from his lair.

The night came at last, and with it half a dozen neighbors, each of whom brought with him "the best coon dog in Virginia."

The start was made and no coon that ever lived was ever

honored with a visit from so many distinguished people. He was found snuntering about near his home and went up an old snag and made them a croaking speech. A big fire was lighted, and the darkies who were along, got to work to cut down the tree. There was a dog in the party; the very one that had treed the coon, that was given to the Judge to hold. He was an intelligent, quick as lightning sort of dog, with short legs, a drawn out body and long curly tail. Because he was jet black in color he was called "Nigger." He took in the proceedings with philosophical calmness, by sitting on his haunches and howling with all his might, while the Judge conversed with him.

Presently the tree began to crack and bend, and the merry party were warned to step back to the hut, where they would be out of harm's way. All the dogs were chained up, and it was agreed that Nigger should be the only one loosed after the snag fell. Half a dozen more powerful chops started the snag falling. Slowly as it began to topple, the venerable coon came walking, with stately scraunchings, down the huge trunk. In the glare of the fire the Judge looked to him like a stump, so with a mighty leap he bounced on his head on the way to the ground. The tree fell with a great crash among the brush-wood, but the sharp-eyed Nigger had watched the coon's discomfited treatment to the Judge. The moment the coon struck the ground he was off like a flash with Nigger after him. There was a scuffle off in the dark, for the old coon dog had overhauled his snarling lordship by the edge of a deep muddy branch with high banks. When the party came shouting up, it was seen by the light wood torches that the dog and coon were having a terrible fight and had fast hold of each other by the throats. Fearing the dog would be seriously hurt, the Judge caught the coon by the tail and began to pull with all his might, while the Senator took a double-grip hold on Nigger's tail. Then the Mayor caught hold of the Judge's coat-tails and a banker got the Senator around the waist; and in less than no time lawyers, merchants and farmers were all strung out in two lines behind the Judge and Senator, as if they were playing Chicken—Chicken—Crane-crow, or having a tug of war. Suddenly the coon let go of the dog and every one fell down like a row of bricks; and the coon and the Judge went rolling down the bank into the creek together, where the coon made his escape. When the Judge, all covered with mud and dripping with water, came scrambling back to join his friends, every one roared with laughter and vowed that never before had there been such a merry coon hunt in Old Virginia; and not one of the party had even thought about the ghosts with which it was said the woods were haunted.

GREENLEAF.

MAINE GROUSE.

THE winter has been an unusually severe one for the grouse in Maine. About the middle of January, there was a fall of light snow; and later, an icy east wind which must have crusted them under. On January 28 came the most severe storm of sleet ever known. It extended over the whole southern portion of the State, and into New Hampshire and portions of Massachusetts. The rain fell in the afternoon and evening, and froze to the limbs and twigs of trees in such quantities as to twist and break them off. The elms suffered the most; many branches of the toughest elms a foot through were snapped off like pipe stems. In passing through the woods, I noticed the limbs of hornbeams twisted and broken off. I weighed some pieces of ice two inches through or more, attached to twigs not over one quarter of an inch in diameter, which would weigh one pound to the linear foot. These trees had in addition to their own weight, tons of ice to hold up. Many fine trees in the cities are completely ruined. The birches bent their heads to the earth, and in places whole acres were laid flat, every twig and bud were covered with ice, and for about ten days it remained so.

The ground was covered deep with snow with an icy crust over it, and the trees were so covered with ice that the grouse could not get at the buds, their regular food in winter. Hundreds of these noble birds must have perished of starvation; I found signs of their presence only in the thickest swamps. One gentleman in Cumberland county found a flock of about twenty visiting his cattle yard, near the house, searching for food. The birds did not run from him until he approached within ten feet. He scattered grain about, and placed several bushels along the edge of the woods that they inhabited.

I notice last fall that grouse were reported scarce in other States, but in the southern portion of this State they were unusually plenty. They fed mostly on white oak acorns, and were found about the oak woods. The law prohibiting their transportation to market is doing well its work, and the birds are increasing. The birds are not molested in this vicinity during the close season, many instances coming to my knowledge where hunters for rabbits pass by grouse without shooting them when they could easily do so.

There is a good healthy sentiment in Sagadahoc county in favor of the laws for the protection of our game during close season, believing they are founded on just and sound principles.

LATH, Me., Feb. 15.

MOCKAMOCK.

A WEST VIRGINIA STEP AHEAD.

Editor Forest and Stream:

I inclose a slip from our local paper that explains itself. Sportsmen here will join Mr. Winchester in this work:

"NOTICE.—It is not lawful to kill, or pursue with intent to kill, any deer in this State between the 15th day of January and the 1st day of September; to kill quail or Virginia partridge between the 1st day of January and 15th day of October; or any wild turkey, ruffed grouse, pheasant, pin-tailed grouse, between the 1st day of February and 1st day of September, or any wild duck, wild goose or brant, between the 1st day of April and the 1st day of November. Notice is therefore given that any person violating the above or any other provision of chapter 89, Acts 1883, will be prosecuted.—C. H. SCOTT, Prosecuting Attorney. Reward.—I hereby authorize C. H. Scott and E. D. Talbot to pay a reward of \$50 for evidence or information leading to the conviction of any person for violations of the game law of this State within the bounds of any lands owned by me in Randolph or Pocahontas counties.—A. H. WINCHESTER."

This county and several of the counties adjoining, embrace a large area, the greater portion being primeval forest. Hitherto we have been destitute of any organized society or effort for the protection of game. The greed of the "market-hunter," the "pot hunter" and the "professional," reinforced by all other classes, have set all State game laws at defiance. Deer are becoming extinct, a thing of the past; every species of game is suffering from the unmerciful and unlawful depredations.

tion. The tributaries of Cheat, Elk and Greenbrier, which but a few years ago swarmed with trout, are now almost destitute of that game fish, (except a few meagre fingerlings. Potting, liming, snaring and shooting on the spawning beds have completed the cruel work. It is time to call a halt, or the healthful toil of the sportsman will cease to be a pleasure; a pursuit unrewarded, neglected and forgotten. But a few years and our children will point to it with about as much interest as we now take in "knight errantry." BACKWOODS.

THE DEER HOUNDING BILL.

THE bill to repeal the anti-hounding law was passed by the New York Assembly last Thursday by a vote of 93 to 23. This result was secured by a series of tradings and combinations readily understood by all persons familiar with the workings of legislative bodies. The game question is, unfortunately, one on which the average member of the Assembly has little personal information and in which he is wholly without interest. He considers the subject of no earthly importance; but he has a little bill of his own, and he is quite ready to trade his vote on any game bill that may happen to come up in return for a vote in support of his own bill. That is the way the result in this case came to be a vote of four to one in support of the proposed law to sanction extermination of Adirondack deer by water butchery.

Mr. Floyd J. Hadley, the chairman of the Game Committee, made the principal speech in support of the bill. We give it below in the fullest detail we have been able to secure. It would perhaps be too much of an imputation upon the intelligence and common sense of the Assembly to presume that they voted altogether on the strength of what Mr. Hadley told them in this ridiculous speech. We will do them the credit of believing that many of the members had bargained off their votes beforehand instead of assuming that they were deceived by Mr. Hadley's string of misstatements. Whether the speech had any effect or not, it is worth while printing here and commenting on it as being the ostensible reasons actually advanced by the chairman of the Game Committee of the Assembly of the State of New York for the passage of a bill before the House. The letters in parentheses have been inserted for convenience of reference. Mr. Hadley said:

"The law enacted by the last Legislature was no doubt intended by its friends and advocates to be the most salutary and protective measure for the preservation of deer in the Adirondack forest. When, after grave deliberation, the Governor friendly signed the bill, experienced sportsmen, thoroughly acquainted with the woods of that section of our State, men fully alive to the vital importance of protecting the game in that vast region known as the 'North Woods,' these men, I repeat, confidently predicted that the law would prove a failure, and that it would not accomplish the marvelous result claimed by its friends.

"The experience of a single hunting season has proved their predictions to have been well founded. (a) Never in the annals of Adirondack sporting, has there been such a slaughter of deer as during the past season. In Franklin county alone the number killed aggregate more than 800. During the six or eight years preceding the average number killed has been about 125 per annum. (b) From the single station of Canton, on the Rome & Watertown railroad, in St. Lawrence county, there have been shipped, from the opening of the season up to Nov. 15, 250 carcasses of venison, and 33 lay upon the platform in a single day awaiting transportation. Reports received from Essex, Clinton, Fulton, Hamilton and Lewis counties indicate about the same increased ratio of destruction. (c) Leading market men in New York city tell me that the number of deer received from the Adirondacks during the past season far exceeds the receipts of former years. In the markets of Albany, Troy and the cities of the interior venison has been most plentiful and cheap, while in our local markets north it has been a drug at eight to ten cents per pound, and on the borders of the forest could be bought in any quantity at four cents per pound. (d) A letter recently received from the Saranac region informs me that in the Bay Pond region, back of the Saranac lakes, there are hanging in the woods to-day the carcasses of nearly a hundred deer, serving as food for the birds and wolves, simply because venison was selling so low in the markets that it did not pay to transport it thither. (e) A letter received last week from a gentleman at Moha, Franklin county, tells me that a hunter recently came to Bush-ton with the skins of forty-eight deer, which he had killed during the past season by still-hunting. How long, I ask you, gentlemen, can such slaughter as this continue? and it is my firm conviction and belief that (f) if the present law continues in force for five years it will result in the practical extermination of the Adirondack deer.

"(g) Deer, as you know, are gregarious in their nature, and in certain portions of the Adirondacks it is no uncommon thing to see six, eight or even ten in a single herd. During the month of November the does are rutting and the male deer are then roaming the forest visiting the different herds. (h) The expert still-hunter, thoroughly versed in all the wiles of woodcraft, takes the track of the male deer, knowing that it will lead him directly to a herd of does, and he follows the track of that deer as unerringly and as persistently as the African bloodhound follows the trail of the fugitive negro convict. The result is he strikes and destroys the herd, killing does and fawns alike, takes the track of the buck again, follows it to another herd, repeats the process, and so continues until the deer are practically exterminated in that immediate locality. I am informed that an old hunter in Franklin county this last season, following these tactics, succeeded in killing five does out of a herd in less than three minutes. (i) Deer ordinarily are not alarmed at the discharge of a gun if they do not see the hunter, and will quietly stand while their mates are being shot down about them. Where hunting with hounds is practiced, such a slaughter as this is impossible. The deer are then watchful and alert to every indication of danger, and the cracking twig or the rustling leaf beneath the foot of the still-hunter is enough to send them flying in every direction, seeking some safe covert from the impending danger.

"(j) The Adirondack forest proper, covering several thousand square miles of wooded land, and embracing within its limits more than a thousand beautiful lakes and ponds, with innumerable rivers and streams crossing and inter-crossing it in every direction, is to-day and should be maintained for generations to come, a great health and pleasure resort for the people of the Empire State and nation. As legislators of the State of New York we should endeavor, by wise and judicious laws, to preserve this immense region in all its primeval beauty and with all its varied attractions. Destroy the game in its forests and we rob it of one of its greatest charms. The present law is showing this, not by a slow and gradual pro-

cess, but with mighty and consuming strides. (k) The inhabitants of the mountainous portions of the Adirondack counties are many of them guides, whose only means of livelihood is the income which they receive from the thousands of tourists who annually visit that delightful region for recreation and sport.

"(l) The present law, discriminating as it does, against true sportsmen, has driven many of them to other sections of the country, to Colorado and the Western Territories, or to Canada, where they are permitted to hunt in a sportsmanlike way, untrammelled by senseless and vicious laws. (m) As a direct result of this, hundreds of Adirondack guides, being deprived of their only and long accustomed means of support, have been compelled by the exigencies of the case to hunt and kill deer for the city markets, to keep their wives and children from starvation. This is the secret of the terrible slaughter of deer in the Adirondacks during the past season, and it will continue as long as there is a deer left in the northern forests, if the present law is permitted to go un-repealed. Any law which antagonizes the interests of a large portion of the inhabitants of the Adirondacks, as this law does, must necessarily and inevitably result disastrously to the game. I therefore denounce the present law as destructive to the deer which it is intended to protect, and I urge upon you the imperative necessity of its immediate repeal."

Mr. Hadley may quite possibly have believed the above statements. If so, he has been imposed upon, and will thank us for pointing out to him how absurdly erroneous and how silly his speech was.

(a) There was no unusually large slaughter of deer in the Adirondacks last season. On the contrary, the total number of deer killed was much less than the total number killed the year before. We have already published abundant proof of this; it is briefly alluded to here again. The Adirondacks are embraced in the following counties: Warren, Essex, Clinton, Franklin, St. Lawrence, Hamilton, Herkimer; and on the outskirts are Washington, Saratoga, Fulton and Lewis. From every one of these eleven counties we have printed the statements of reliable individuals (giving the names, as Mr. Hadley does not for his authorities), proving beyond cavil that wherever the anti-hounding law was enforced the total number of deer killed was less than the total of former seasons, viz.:

St. Lawrence and Franklin counties.—Peter B. Leonard, State Game Protector for St. Lawrence and Franklin counties, says: "In its working there can be no question but the law prohibiting dogging has saved large numbers of deer." The reports from Mr. R. M. Smith (U. per Chateaugay Lake), of the Chateaugay and Mechanic lakes, Plumbago and Duck ponds and Deer River section in Franklin county, show a like beneficial result; the total for Mechanic Lake, Plumbago and Duck ponds and Deer river in 1885 was 69, against 169 for the year before; in the Wolf Pond and State Dam section in 1885 by still-hunting 17 against 40 by dogging in 1884.

Essex and Clinton counties.—John Liberty, State Game Protector for Essex and Clinton counties, says there have been many undetected violations in his district and adds: "Notwithstanding, I think the law has saved a great many deer in my district, and wherever I go the indications are that deer are very plenty."

Warren, Washington, Saratoga and part of Hamilton.—Seymour C. Armstrong, State Game Protector for Warren, Washington and Saratoga counties and town of Indian Lake in Hamilton county, reports a less number of deer killed in 1885 than in 1884; see (b) below.

Lewis, Herkimer and part of Hamilton.—State Game Protector Brickerhoff and the Boquet guides report more deer killed in their section than formerly. In Brickerhoff's district, where the law was enforced, it worked well, the Beaver River district (Lewis and Herkimer counties) showing total of 60 killed in 1885 against 260 in 1884. This is on authority of Mr. Chas. Fenion.

Fulton County.—State Game Protector T. C. Bradley in his annual report urges that the anti-hounding law ought to be more stringent than it is.

Not only were the deer killed last season fewer than in the years before, but many of those killed were killed by hounding. For instance, much stress has been put upon the story that a still-hunter from Pennsylvania, one Williams, killed thirty odd deer at Joe's Lake. We have learned from one of Williams's party that they had three dogs in the woods with them. Moreover, most deer marketed by Williams were shot through the head or neck, which proves conclusively that they were killed by hounding and not by still-hunting.

(b) If the 250 carcasses really had been shipped from Canton, in St. Lawrence county, it would only prove (if anything) that under an anti-hounding law deer increase, for an anti-hounding law has been in force in St. Lawrence for more than six years. But according to the records of the express office at Canton, and they ought to show the truth, only 123 carcasses of venison were shipped from that station in 1885:

CANTON, N. Y., March 1, 1886.—*Editor Forest and Stream:* Your letter in regard to number of deer shipped from Canton in 1885 just received. I have interviewed the express agent (they only ship by express) and he says: "The whole number was 123, about the same as former years." He promised to look up '84 in a day or two, as soon as he could. As soon as he does I will write you.—J. H. RUSHTON.

Express office records at other stations in the Adirondacks will prove the same thing. For instance, the important office at North Creek, which shows a record of 176 in 1884 to 154 in 1885:

WEAVERSTOWN, N. Y., Feb. 23, 1886.—*Editor Forest and Stream:* It is claimed that there has been a greater slaughter of deer the past season than ever before. This is false. There were not as many deer killed in 1885 as there were in 1884, notwithstanding that there were only a very few days of good still-hunting in 1884 and a month or more in 1885. This is shown by the numbers of deer expressed from North Creek during the months of September, October and November 1884 and 1885. The former year there were 176 against 154 this year.—SEYMOUR C. ARMSTRONG, State Game Protector, 5th Dist.

(c) Leading market men in New York city tell us that their receipts of Adirondack venison in 1885 did not exceed those of former years. Here are statements from the three largest firms of game dealers in New York:

We did not receive Adirondack venison in large quantities last season. Very little came from there at all; none to affect the ruling price.—A. & M. ROBBINS (Fulton Market, N. Y., March 1, 1886).

Receipts of venison the past season were moderate, and prices varying from 14 to 25 cents for saddles and 10 to 12 cents for carcasses considered good.—FRENCH & CO. (180 Reade street, N. Y., March 1, 1886).

There was no New York State venison on the market this season to speak of.—KRAFF & VAN NOSTRAND (338 Wall-street, N. Y., March 1, 1886).

The same is true of other markets of the State, as for instance the Utica market:

UTICA, N. Y., March 1, 1886.—*Editor Forest and Stream:* There was very little venison sold in the market here.—JOHN D. COLLINS.

(d) Market still hunters do not kill and hang up venison for the fun of it. It would pay to market venison from the Bay Pond region even at four cents per pound. Nearly 100 carcasses would be nearly 10,000 pounds, which, at even four cents per pound, would bring the snug sum of nearly \$400.

(e) If Mr. Hadley knew anything whatever about still-hunting he would not accept the story of the killing of forty-eight deer by one hunter still-hunting last season. If the man killed forty-eight deer he must have killed most of them by hounding or crusting.

(f) An anti-deer hounding law has been in operation in St. Lawrence county for more than six years, and it has not exterminated the game there; witness the shipment of the 123 carcasses from Canton last season.

(g) The does are not rutting in November. They never rut. Nor are they then gathered in herds which the buck visits. On the contrary, the bucks (traveling at a rate beyond the power of any man to keep up with them) pursue the fleeing individual does. These facts are perfectly familiar to all deer hunters and to naturalists. John Dean Catton, LL.D., recognized as the highest authority on the subject, says:

The pursuit of the doe by the buck commences before her season has arrived, and hence for two or three weeks she remains secluded as possible. He follows her in a creak with his nose to the ground, and when started from her bed the race is very spirited. No attempt is made by a buck to herd the does, as is the custom of the elk, and but few of these deer are found associating together during the rutting season.—ANTELOPE AND DEER OF AMERICA, page 307.

(h) The expert still-hunter is not led to the herds, for there are at this time no herds for him to be led to. He does not strike and destroy the herd; there is no herd for him to strike and destroy.

(i) Deer ordinarily and always are alarmed at the discharge of a gun. Before they were exterminated, the elk of the Adirondacks would stand in bewilderment (as Mr. Hadley says the deer do) at the sound of the gun; but the deer—hounds or no hounds—never do so.

(j) It is just because of all these lakes and ponds and "innumerable streams crossing and inter-crossing it in every direction" that the Adirondack region is one where hounding is more sure and more destructive than any other method of deer killing. In these innumerable waters the game—obeying its instinct—takes refuge from the hounds and is killed by the man in the boat—to be made "shy" and "protected from the still-hunter."

(k) Hotel men and "guides" (i. e., boatmen) are not dependent wholly on hounding. Adirondack tourists are not all deer hunters. The thousands go, some for angling, some for health, some for simple out-door camp life, some because it is fashionable—in short for the same various reasons that these same thousands go to the White Mountains, the Catskills and Saratoga. Some of us can remember when deer used to be driven by hounds into Saratoga Lake and killed there, but though deer hounding has long since ceased in that region, we are not aware that Saratoga hotel interests have suffered. The fashionable throngs who every summer fill Mr. Paul Smith's parlors and verandahs will not desert that famous Adirondack house, even though water-butchery of deer cease forever, and no one knows this better than Mr. Smith himself.

(l) The "true sportsmen," driven to Colorado, did not hound deer there, for they don't do it in Colorado, nor in the "Western Territories."

(m) The guides did not achieve a "terrible slaughter of deer" by still-hunting, for (1) they have not the skill to do so, and (2) there was no terrible slaughter. If they were killing deer for their starving families they would not have left the carcasses of "nearly a hundred deer" to the birds and wolves. The starving wives and children belong to Adirondack mythology. Unless Mr. Hadley's statements respecting them are more reliable than his other statements in the speech, it is not worth while seriously to consider them in legislating about game.

HUNTING AT ARMY POSTS.

[Continued from Page 85.]

ANOTHER batch of letters received from the officers stationed at the outlying army posts makes interesting reading. We give several below. There would seem to be abundant game of various sorts in the different sections, and some of the criticisms go to show that it would be an excellent move if the Ordnance Department could be induced to issue something better than the petty .30 caliber Springfield now sent out.

Editor Forest and Stream:

In reply to your communication addressed to "The Commandant, Fort Selden, New Mexico," dated Jan. 9 ultimo, requesting information regarding supply of game about the post and as to the action of the Springfield shotgun issued for company use, I have the honor to state that such game as duck, quail and rabbit are abundant.

The Rio Grande River and adjacent ponds are covered with mallard and teal duck from early in the fall until late in the winter, and afford fine sport to the ambitious or hungry hunter. The Springfield shotgun is in constant demand and attains fine results, as I have known of six or eight teal to be killed at one discharge, and five fine, large mallards to be bagged at a single shot. For duck shooting we use No. 4 shot, and the army shotgun kills readily at from 25 to 30 yards.

Our quail are of two varieties—the California or topknot quail, which are found on the prairie and along the bottom lands, and the gray or mountain quail (by some called mountain grouse), which are found in great abundance in the hills and mountains. The mountain quail is much larger than the California variety and appear to travel in much greater numbers to the flock. They live almost entirely among the rocks, and, while they fly but short distances, they are swift runners and rapid climbers, and make tiresome work for the hunter.

The Springfield shotgun shows to good advantage in quail shooting, and has achieved great results in the hands of some of our sportsmen. In two days' hunting (using the army shotgun) two members of K Company, 13th Infantry, killed 135 mountain quail, firing only twenty shots. At a single shot from the army shotgun ten quail have been killed, and it is a common thing to kill from five to eight at one discharge. Quail are easily killed at from 30 to 35 yards, No. 8 shot being used.

The rabbits are the cotton-tail or bush rabbit, and the long-legged, long-eared, swift-running jack rabbit. The army shotgun readily brings them down; and so much interest is evinced in hunting by the men of this command that the table is constantly supplied with luscious and toothsome game.

The army shotgun is 20 gauge, and metallic reloading shells are used. In loading the shells we use from 85 to 90 grains of powder and fill up the vacancy with shot. The powder is rammed hard and closely packed, as this gives both more power and a greater space for shot.

The great objection, and about the only one, is the smallness of the bore and shortness of the barrel of the gun, for if the Springfield shotgun was made 10 or 12 gauge and a few inches longer I imagine that great results could be accomplished, and in a country like this, where game is abundant,

there is no telling the amount that could be daily added to the company larder. Without doubt a most useful and desirable article was given the companies when the Springfield shotgun was issued.

WM. B. LEWIS, Sergeant Major.

FORT SELDEN, N. M., Feb. 12.

Editor Forest and Stream:

In response to your inquiry respecting the game of this vicinity and the use of the Springfield shotguns at this post, I have the honor to make the following reply: The game birds are comprised in the sharp-tailed grouse, the western ruffed grouse, and the shallow-water ducks, such as mallard and teal. The sharp-tailed grouse is found everywhere, *i. e.*, in the Black Hills proper as well as on the prairies outside, while they are in reality in considerable numbers and can be found in packs of as high as fifty birds in the winter time; yet during the proper season for hunting them, they are scattered over such an immense territory that it is seldom that more than one brood can be found in a day's hunt. It has been the experience that these birds in Minnesota and Eastern Dakota disappear gradually before civilization, being replaced by the pinnated grouse of Illinois and Wisconsin.

It will be interesting to watch these birds here, as the country is fast settling up, and indeed, the valleys are about all taken up and farmed now, and the Black Hills are separated from the civilized and farming country of the east by the wide belt of country in the Sioux reservation; there is no evidence at present that they are disappearing. The western ruffed grouse, the fool hen of the old mountain men, is found only along the little streams bordered with hemlock and aspen at the bottom of the deep gulches in the hills proper. The meat is white like that of the ruffed grouse of the East, of which this is said to be a variety, and in my estimation is the most delicious meat found in the West, not excepting that of the mountain sheep or much vaunted beaver tail. When raised they seldom fly more than twenty yards at a time, and perch on a limb of a tree in plain view until passed by or shot; indeed, I have seen the neck of one cut off by a rifle ball when the bird was so close to the gun as to be burnt by the flash of the discharge, and I have also seen them killed with sticks. They are hunted but little, yet they don't seem to be very plenty, as I have not seen more than fifty of them in a residence here of over three years. A few scattering shallow-water ducks, such as mallard and teal, are found here early in the spring and late in the fall for a few days, and a very few breed here; but it is out of the line of their migration, and there is very little water suitable for them. I have never heard of a deep-water duck having been killed near here or even seen. English snipe are almost as scarce. Jack rabbits and cotton-tails are tracked to their forms in the snow and shot, but are seldom seen when snow is off the ground, although they are quite plentiful, though not so numerous as in the sage brush and cactus country further north. There are a number of mule deer and white-tails scattered through the hills, but the country in which they range is very densely timbered and extremely rough, and few care to hunt such a difficult country without dogs, and there are no deer or foxhounds in the Black Hills. Several bear have been seen by wood choppers six or eight miles from the post in the heavy timber, and I followed an old one and her cub for two days last December, but the snow disappeared and I lost their trail without getting sight of them, although I could hear them cracking the brush at one time within seventy-five or one hundred yards. There are no open parks in their country, and if they range abroad in the day time they are seen only when crossing the road by persons who don't care to have anything to do with them. Several hunting parties have left the post this winter and last fall, and hunted on the Sierr reservation and eighty or one hundred miles northwest of here, and have killed each all the way from two to thirty-four deer and antelope; and it is necessary to be away for at least twenty days at a time to enable one to get enough to pay one for the long journey to and from the hunting grounds. From a careful investigation, I find that there has been brought into the post since last summer about 79 deer and antelope, 1,500 ducks and chickens, and 150 rabbits, the troops and companies varying very much as to their proportion of this amount, some having very skillful hunters, and some having no hunters of note. Two troops claim over 300 birds (ducks and chickens) each to their credit, and some as low as fifty or even ten or a dozen. At some seasons the shotguns of one company will be out every day while those of another are out but once a week possibly. The hunting is done by but few men in each company, generally two or three, the rest not caring much for it. The Springfield shotguns themselves they say are good within a short range for other guns, but outside of thirty-five yards do not amount to very much; the shot furnished with them they usually exchange for a larger size or purchase themselves at the trader's store or at Sturgis City. I am of the opinion that a good deal of small game could be procured with these guns while on the march in the wilder portions of the country, and they are very useful as it now is in providing a congenial employment for the leisure hours of a great many men in the service who would possibly otherwise spend this time to a great deal worse advantage.

H. L. SCOTT, First Lieutenant 9th Cavalry.

FORT MEADE, D. T., Jan. 23.

Editor Forest and Stream:

Your letter of Jan. 9 mislaid. Please accept my regrets for not answering before.

The supply of small game is scarce in this locality, prairie chickens and ducks being the only birds hunted with shotguns.

Antelope and deer are reasonably abundant, and during the season we are well supplied with them.

The soldiers hunt with the Springfield shotgun considerably, and while they bring in a few birds each, often none. I should say that the use of it is not attended with great success. In fact, it is not an effective weapon, but seems to serve their purposes well enough.

CHAS. O. WORDEN, 1st Lieut. 7th Infantry.

FORT LARAMIE, W. T., Feb. 5.

Editor Forest and Stream:

I reply to your three inquiries. First—As to supply of game about this post. There is very little game in the immediate vicinity. A few sharp-tailed grouse breed here, and others in winter seek shelter in the brush on the small streams near the post. There is not enough water to attract many waterfowl, though a little very good duck shooting was had last fall on a couple of small ponds two or three miles from here. One must go a long distance to find large game.

Second—Extent to which game is laid under tribute to

uphold the standard of the post larder. To a very limited extent here.

Third—To what extent and with what success are the Springfield shotguns used? There is very little opportunity to use them here.

I shall give the result of my observations at a post where game was more abundant. While stationed for nearly four years in the Indian Territory I observed that the Springfield shotguns (two to each company) were in almost daily use during the game season, with the result that many chickens, ducks, quail and rabbits were brought to the table. The gun is strong and serviceable, and, when properly loaded, makes a good pattern and has good penetration. Some of the men made good wing-shooting with it. But I also observed that the men particularly fond of wing-shooting generally went to the expense of securing double-barreled guns of larger caliber.

J. C. BATES, Major 20th Infantry.

FORT ASSINIBOINE, M. T., Jan. 30.

Editor Forest and Stream:

It affords me pleasure to reply to your note of Jan. 9, which was delayed nearly a month on the road by snow blockades.

The Springfield double-barrel shotgun answers its purpose very well; it shoots strong and close. The soldiers use it hunting the jack rabbit and the cotton-tail, both varieties being numerous here. Grouse come down from the mountains late in the fall and disappear with deep snows; quite a number of them are shot here from day to day during the season, but they are not plentiful by any means.

Deer are more abundant, and soldiers generally prefer hunting with the Springfield rifle, with which arm they have become quite expert owing to the interest taken in target practice of late years. It has not been unusual the past season for small parties to bring in seven or eight deer at a time, keeping the messes well supplied with venison until the snow got so deep that all kinds of game disappeared. In several directions within fifty miles of the post different species of bears are found in sufficient numbers to satisfy the most venturesome of sportsmen, and wild turkeys breed within one or two days' march of us; but it is unlawful to kill turkeys in Colorado at present.

Beautiful clear running streams of cold water from the mountains carry trout, some silvery with black speckles, and others red speckled and gold or salmon-tinged, affording best of sport to the angler, and the rod and line are as much in requisition as the gun.

Fort Lewis is one of these streams which well deserves its name, La Plata, so extremely clear and brilliant as it courses along with a fall of one hundred feet to the mile, that one is struck with its silvery appearance. The aggregate of trout taken from this stream is large, though individual counts are nothing to brag of, owing to the fact that there are so many soldiers and settlers who daily whip the stream during the fishing season.

Better sport can be obtained by driving to camps on other rivers, such as the Dolores, Mancos, Los Pinos, Piedra, etc. The writer, with four others, drove forty miles last August to the junction of the Via Cita with Los Pinos; arriving in camp at 6 P. M., we fished until supper was ready and all next day. Owing to heavy rains in the mountains some of the channels were muddy the first night and following morning, nevertheless the party caught 125 trout. The honor of catching the largest trout ever brought into Durango fell upon Mr. Kephart, of that place, on this occasion. With the smallest of flies he hooked him, bringing his head to a gravel beach, when another of the party came to his assistance, wading behind the fish and lifting him out with both hands. This trout weighed five pounds, was just twenty-four inches long and well tucked away inside of him was found an entire frog the size of the hand of an ordinary full grown boy. This trout was exhibited for an hour or so on the marble slab of the counter in Mr. Ambold's market at Durango, drawing crowds to view it. I have read of single trout from lakes weighing three or four times as much, but this mountain trout I presume may be classed among those of maximum size.

FORT LEWIS, Col., Feb. 8.

Editor Forest and Stream:

In reply to your letter of inquiry dated on the 9th ultimo, I would say that there is very little game of any kind in the immediate vicinity of the post—say twenty miles—save quail, of which there is a greater abundance than I have ever witnessed before in any part of the United States. They breed here two or three times in the year, and as the settlements increase and the wolves disappear they appear to be multiplying more than before.

North of us, in the mountains and timbered country between this post and Fort Apache, thirty or forty miles, there are deer and turkeys, and plenty of trout in the mountain streams.

We have also the salmon trout here in the Gila, sometimes weighing thirty pounds.

If the grouse or prairie chicken were introduced here I think it would, like the quail, flourish better than anywhere else in the United States.

As to the Springfield shotguns, my opinion is that they proved a failure generally, the caliber being too small and too difficult to keep up a supply of ammunition, most of the shooting here being done with 10 and 12-bore guns.

Perhaps I am prejudiced against the Springfield, however, as it has long been my opinion that it would have passed out of use even by the conservative army, as it did long ago with everybody else, but for the all-powerful influence of the Ordnance Corps.

FORT THOMAS, ARIZ., Feb. 15.

Editor Forest and Stream:

The Springfield shotgun has been much used by the men of the company in hunting during the last year, and is considered by them a very good gun. The only game about this post are blue and mountain quail, jack and cotton-tail rabbits. A large number of quail have been killed by the men during the past three or four months, and also a large number of the jack rabbits, all of which assisted the company mess.

PHILIP WHEELER,

1st Sergt. Co. H., 10th Infantry.

FORT BLISS, TEX., Jan. 25.

Editor Forest and Stream:

The Springfield shotguns in Company D, 10th Infantry, are used constantly by the men of the company with considerable success. Blue and mountain quail and rabbits are secured in fair quantities, enough to feed those using the guns and a few others.

L. H. LEACH, 1st Sergt. Co. D.

GRIZZLY HINTS FROM SHASTA.

Editor Forest and Stream:

I may be a little slow about it, but I'm a long way from headquarters and I desire to tender my advice in regard to the disposition of the grizzlies.

I owned a bear for six months. He was a small little bear when I got him, but he grew and grew. Before six months he was quite a big large bear. He did not look so large as he really was. There was as much of him as I wanted.

He was rugged and healthy from infancy, his teeth and toe nails were always in an advanced stage of development, and he evinced great dexterity in the manipulation thereof. He looked like a small young bear, but when you came to feel of him you would be astonished. He felt like a swarm of young bees on a keg of hot nails, or something equally vivid. One trouble with him was his peculiarities. He wouldn't do anything except make trouble around, and when I chained him up he squalled. When he squalled he disturbed the entire population and created excitement. Crowds congregated, horses ran away and small boys yelled "fire!" He squalled as an animal much older and larger than he was ought to squall. But I merely refer to him casually to assure you that I know something of consequence concerning bears. Although my experience was confined to one bear it is sufficiently vast and comprehensive. One bear is as good as a dozen. One bear in the bushes is as good as two on hand, that is, of course, unless you have them in a cage.

If you have two bears, and have them caged, why of course you have got them. If, however, you have two bears and they are not caged, I don't know whether you have got them or not. If you have, I don't want them. Of course bears are bears, especially grizzly bears. The FOREST AND STREAM grizzlies are real, genuine bears beyond question. They are tangible taxable property, and if any one came along and desired to buy them you could sell them if you wanted to. You need not sell them, however, unless some one wanted them, and, of course, no one is expected to buy them unless you desire to sell them. That is, if you wish to sell the bears, and will do so, and some party desires to, and does buy them, the transfer of the property may be made if it or they are caged. But as you have the bears now I would suggest that you keep them until you can dispose of them. If you do not desire to keep them so long you could let them out. Perhaps if you keep them you may get others and then you would have several. After a year or two, if the bears thrive, they will be larger and probably older. The older and larger they become the more will they resemble larger and older bears. Then you could dispose of them either as suggested or as you might then desire, if you had the opportunity.

But really if the bears were mine, and I had them, and they were caged, I would sell them if I could, if I wanted to.

ESAU.

SHASTA, Cal., Feb. 14.

THE TRAJECTORY TEST.—*Editor Forest and Stream:* The London Field of the 13th inst. has a very excellent and exhaustive report of your late rifle trials. It embraces also many new things about the London Field trial in 1883. The report is made by "T." and when all things are taken together, as in the article, it becomes a very interesting and instructive one, and indeed nearly as much so as your own very fine report of this trial, which has everywhere among riflemen been read with so much interest. May I therefore ask you to re-publish in full the London Field report. I am sure the article will be read with eagerness if re-published. I have omitted to say that all riflemen and riflemakers should not fail to purchase one of your pamphlet reports of this trial, as it is much more correct and complete than as published in FOREST AND STREAM. It affords me much pleasure to indorse it as a work well executed, and very much wanted at this time to settle matters. Great credit is due to FOREST AND STREAM for this very valuable contribution.—MAJ. H. W. MERRILL. [The report will be given in an early issue.]

A ROSY GAME REPORT.—Pomona, Feb. 20.—The drawing on foreground of this sheet shows the nature of our forest, the large tree shown in back ground being the only one in 90,000 acres. Game in this section is unusually abundant, two cotton-tails having been seen since Jan. 1, and a track, which experts have, after much discussion, decided to be that of a gray fox instead of a cat, having been seen on the "Digits tract," which embraces but 30,000 acres of land. In November 1884, a deer track was seen that had certainly been made during the previous summer; and the man is still living who knows of a swamp in which a bear once was. The most enthusiastic and successful sportsman of this vicinity has hunted regularly for only three years, and yet in this short time saw, he is sure, an animal with fur upon it, and if it was not a fox must at least have been Valater's cat. Wood mice are also plentiful and tomcats remain in abundance notwithstanding the severity of the winter. There will be no scarcity of fish if the carp cultivators are sufficiently successful to raise a bountiful supply.—C. SCULL.

QUAIL IN VIRGINIA.—Frederick's Hall, Va., March 1.—I am gratified to be able to report that the partridges in this region were not hurt by the recent very heavy snow. I have made diligent inquiry as to the counties of Louisa, Goochland and Spotsylvania, and have not heard of a single dead bird, but on the contrary many coveys have been seen alive and strong since the snow. They were more numerous last season than for many years, and the stock left over for next year's breeding is larger than I have ever known. They subsisted during the snow (which was from twenty to twenty-four inches deep) principally on cedar and dogwood berries. This present abundance is in a very great measure due to the fact that the freedman can't kill a partridge on the wing. The game law as to them is very generally respected by the sportsmen.—P.

FOREST CONGRESS REPORT.—We have received advance sheets announcing the Report of the American Forestry Congress of its Boston meeting, to be issued shortly. The statistical parts of the volume and the general demands made for forest preservation, together with papers on utilization of timberman's waste in manufacturing charcoal, and the more novel proposition to use it as a fertilizer, and the discussion of means to diminish losses by fire, demonstrate that economy with present forest resources is first of all to be attained. The encouragement of the aims of the Society in this respect may well be considered a patriotic task. Requests for advance sheets or subscriptions of one dollar for the volume should be sent to B. E. Fernow, Secretary 13 Burling Slip, N. Y.

NEW JERSEY'S NON-RESIDENT LAW.—A decision has just been rendered by Justice Dixon of the Supreme Court, interesting and important to game protective societies of this State. On the 28th of November, 1884, a trial for violation of the State game laws came before Justice V. W. Nash of this city. The complainant was Lewis Wyckoff, who charged William L. Allen, an alleged non-resident, with shooting quail out of season. Jackson W. Coddington appeared for the complainant and Corporation Counsel Craig A. Marsh for the defendant. A law of April 4, 1878, enacts that non-residents of the State of New Jersey must comply with the by-laws of game protective societies of the State before they are allowed to kill game or fish within its limits under a penalty of fifty dollars fine. In the above case the jury rendered a verdict of guilty and a fine of fifty dollars in accordance with the evidence adduced. Defendant's counsel appealed the case on the grounds of unconstitutionality of law, and the matter came before the Supreme Court for argument on Feb. 18 last. Justice Dixon in delivering the opinion held, "that the act of April 4, 1878, for the protection of game and game fish was constitutional and valid in its application to the act of a non-resident of the State killing game on the property of persons who have formed an association under the laws of the State for the protection of game on their own property." The judgment of the lower court was affirmed.—*Plainfield Constitutionalist*.

WORK OF THE NEW HAMPSHIRE COMMISSIONERS.—North Conway, N. H., Feb. 23.—Albert Swanton, Richard Eastman, Joel Clay, Mortimer Burnham, J. A. Waterman, Elisha Dinsmore, Malven Dinsmore and Jake Day, all of North Conway and Jackson, Carroll county, were arrested on complaint of Fish and Game Commissioner E. B. Hodge, Feb. 15 and 16, and fined \$25 and costs each. Warrants were taken out for several others, but they got wind of what was going on and left for Maine. There have been 150 deer killed in Carroll county during the last six weeks. Most of the guilty parties are too poor to pay a fine, and if sent to jail their families must go to the poorhouse. While the Commissioner was here he made complaints against several parties in Chatham for catching trout in Mountain and Province Pond during the close season. Complaints were also made against parties in Maine for the same offense, some of whom, from the high position they hold in public and legal affairs, should have known better. It is to be hoped that they will be brought to justice, for there is no reason why a good man should pay a fine out of his hard earnings, while the rich law breakers go free. Both committed the same offense, with this difference—one violated the law to obtain food for his family that they stood in need of; the other, that he might display his trophies to his legal friends in Portland.—*KIERSARGE*.

"UNCLE FORDY."—William F. Barnes, or, as he was better known to all ducking men from Baltimore, Philadelphia and New York, "Uncle Fordy," dropped dead on Monday night Feb. 22, at Havre de Grace, Md. He was one of the charter members of Venus Council, No. 44, O. U. A. M., and had taken a very active part in their debates of last evening. He left the council in apparently the best of health. Mr. August Allen, on his way home about eleven o'clock, found him dead on the street nearly in front of Capt. W. E. Moore's residence. He had been stricken down with heart disease. He was in his seventieth year.

WAHOO, Neb. 27.—In coming from Omaha yesterday over the Union Pacific Railroad we noticed large flocks of ducks while crossing the Platte River. These are the first I have seen in this country this season. To-day we have a snow storm, which may delay their flight, but it won't be long now before there will be an abundance of ducks in that neighborhood.—*C. E. F.*

THE IRON-CLAD ANTI-HOUNDING BILL.—At Albany last Tuesday Senator Coggeshall introduced an iron-clad anti-deer hounding bill. It is the one prepared by the Utica Association and was printed in these columns last week. It fixes the open season from August 15 to October 15.

SHINNEDOCK BAY.—Just received advice from Atlanticville that geese have made their appearance on Shinnecock Bay.—*J. WENDELL, JR.*

QUOTATIONS FOR FURS AND SKINS.

THE following prices, supplied by Messrs. J. Macnaughtan's Sons, are for prime skins only, according to size, color and quality, as realized by the New York commission merchants:

Antelope—North America, raw, $\frac{1}{2}$ lb.	\$ 25@ 35
Dressed, as to quality, $\frac{1}{2}$ lb.	75@ 95
Deer—Florida, raw, $\frac{1}{2}$ lb.	25@ 35
Rocky Mountain, raw, $\frac{1}{2}$ lb.	25@ 35
Pacific Coast, raw, $\frac{1}{2}$ lb.	25@ 35
Elk—Pacific Coast hides, $\frac{1}{2}$ lb.	20@ 25
Western skins, $\frac{1}{2}$ lb.	25@ 30
Dressed, as to quality, $\frac{1}{2}$ lb.	50@ 60
Mountain Deer—Western, $\frac{1}{2}$ lb.	15@ 20
Reindeer—American, raw, $\frac{1}{2}$ lb.	30@ 35
Dressed, as to quality	50@ 60
Beaver—Labrador, large.	8 00@10 00
Lake Superior and Canada, large.	6 00@ 8 00
Upper Missouri, large.	6 00@ 8 00
Southern, large.	4 00@ 6 00
Badger—American, large and full furred, each	1 00@ 1 50
Bear—Hudson's Bay, black, large, each	20 00@30 00
United States, brown, large, each.	7 00@10 00
Southern U. S., black, large, each.	7 00@10 00
Cubs from $\frac{1}{2}$ to $\frac{3}{4}$ of the above.	
Buffalo robes, in bulk	12 00@15 00
Buckskin—Western, $\frac{1}{2}$ lb.	70@ 75
Pacific Coast, $\frac{1}{2}$ lb.	1 00@ 1 25
Cat—Wild, each	40@ 60
House, each	10@ 30

TIP-UPS FOR PICKEREL.

THE request for information on the mode of constructing "tip-ups" for signaling to the fisherman on the ice the fact that a pike (pickerel) has taken his bait, which appeared in our issue of Jan. 21, has brought us many notes on the subject. We will say for the benefit of those who are ignorant of this mode of winter fishing, that one man often cuts from ten to fifty holes in the ice at some distance apart, often in different portions of the lake or pond, and baits his lines, usually with a live minnow, and sets his tip-ups to notify him when his presence is needed at some particular hole. Here is the primitive tip-up of our boyhood:

We give below some other, and improved, forms used by our correspondents:

Editor Forest and Stream:

In reply to the inquiry of "Pickerel" in a former issue, I would respectfully submit that the most simple, quickly procured, and effective tip-up we have ever seen used were those taken from the tops of saplings. Where three sprouts spring out straight from the top, cut them off about 2 inches below the joint, lop off one branch about 18 or 20 inches above the joint, the other two 9 or 10 inches. The last mentioned will then form the legs or base. The line is tied to the extreme end of the long sprout, and of course a pull will set the crotch straight up in the air on the ends of the short legs

The above illustration will make the idea more clear perhaps to those who may never have seen this form.

Another very simple device is a piece of pine board, say $\frac{1}{2}$ an inch thick and 18 inches long, tapered from 3 inches to 1 inch. A trifle nearer the small end than the middle a $\frac{1}{2}$ -inch hole should be bored, and the large end painted red for about 6 inches of its length, to be seen the more readily. When in use a small sapling is cut and run through the hole with each end resting on the ice. The line is, of course, tied to the small end. We believe these simple tip-ups will give

better satisfaction than any more complicated ones can do, especially on long lines, where an accidental springing of a trigger or any similar contrivance would prove a grievous annoyance if at any distance from the operator and no fish was hooked. AMERICUS.

Editor Forest and Stream:

In your issue of Jan. 21, "Pickerel" asks for instructions in making tip-ups. This is the way I make them: For the standard take any good stiff wood $1\frac{1}{2}$ inches wide, $\frac{1}{2}$ inch thick and 2 feet long, make a slot in one end 6 inches long and $\frac{1}{2}$ of an inch wide. One inch from the end bore a small hole to take the wire on which the tip-up swings. For the tip-up take a piece of wood $1\frac{1}{2}$ inches wide, $\frac{1}{4}$ inch thick and 11 inches long, and shape it as shown in the accompanying drawing. Have it $\frac{1}{2}$ inch wide at the small end. Three and a half inches from this end cut a slot 3 inches long and $\frac{1}{4}$ wide, notch this small end to hold the line, paint the large end and put a pin through the hole in the standard and the slot in the tip-up, and all is ready. Here it is:

Set the standard in the ice at an angle of about 45 degrees, draw back the tip-up to the end of the slot, make a loop on the line and hang it on the notch, bait your hook and drop it through the hole already cut and you are ready for anything that comes along. When a fish takes the bait it pulls the loop from the notch and leaves the tip-up hanging perpendicularly, the line being fastened to the standard. If "Pickerel" does not understand this, let him come up and I will show him how to make them and how to catch the fish. As he does not live very far away, I more than half believe that he is fitting out for a visit to our town, for it is a favorite fishing ground for Springfield fishermen. W. J. C.

BECKETT, MASS.

Editor Forest and Stream:

The cheapest and best tip-up I ever saw (and about every fisherman has a style of his own) is made out of an oak strip, say 6 feet long and $1\frac{1}{2}$ wide by $\frac{1}{2}$ thick; now bore $\frac{1}{4}$ holes at every 22 inches. The strips will make three traps; saw so as to have half of the hole on the ends of each trap. Next saw off a strip $\frac{1}{4}$ wide two thirds the length of the trap, put in a screw just half the way of the length of the strip, saw off the strip on an angle, so it will turn only one way, saw in a slit at the lower end for the flag and a short slit at the upper for the line. Flag to be fastened on with small tacks, a washer or burr between the strap and the main piece will make it much better. If properly made and set up at an angle of 45° can be seen further than any trap I ever saw.

I have just finished fifty which make me an even hundred now, now will "Pickerel" tell us where to get the fish.

SOUTH SHORE.

SOUTH DUXBURY, MASS.

Editor Forest and Stream:

Please say to your Springfield correspondent that the tip ups used up here in fishing on the headwaters of Lake Champlain are made about as follows: Take four pieces of $\frac{1}{2}$ inch spruce or pine, board (spruce is the better as it is stiffer) about 12 inches long; in the center, on one of the edges cut a square notch $\frac{1}{4}$ inch wide and deep. Take another piece of the board $\frac{1}{2}$ inch square and 24 inches long and put into the notch so as to form a cross; fasten with a small brad. Have the crosspiece two-thirds of the distance from one end, fasten the line to the short end and place over the hole and when you get a bite it will tip up. The way we like best is to make a common reel 16 inches long out of a piece of board 2 inches wide and $\frac{1}{2}$ inch thick. After attaching the line place across the hole, leaving some slack loose on the ice. Then get a limber twig about 2 feet long and stick up be-side the hole, make a loop in the line and hang it over the end of the twig in the loop, put a piece of colored cloth (I use red flannel, as it shows well against the ice and snow) and when the fish bites he will pull the signal off the twig, and there being a plenty of slack line he is not likely to get off. NED.

Editor Forest and Stream:

In looking over the paper I observed an article on tip-ups, by which, I suppose, the writer means an arrangement for fishing through the ice.

The simplest and only kind that I ever saw is composed of two pieces of wood, a piece of red cloth and your line. Cut a piece about 1 inch by $\frac{1}{2}$ and 15 inches long, if the hole in the ice is 5 inches across, or make them in that proportion. Now, in the center cut a hole $\frac{1}{2}$ of an inch or so; cut another piece about 15 inches long and about 4 or 5 from one end. This piece should be about $\frac{1}{4}$ of an inch square. Cut this down to $\frac{1}{2}$ inch square for 4 or 5 inches from one end. Have fit tight in the hole. The following shows the two pieces and also the manner of setting them across the hole in the ice.

It will be seen that when the fish bites he will pull the sticks over, and if a red flag is attached it will be more readily seen. YAGER.

RACINE, WIS.

Wanted, a tip-up. Here is mine: A stake, a ribbon, a spool, a line, A bit of tough and sturdy wire, A hole—and near a crackling fire.

JOHN PRESTON TRUE.

[We have more communications on this subject.—Ed.]

EARLY OBSTRUCTIONS IN MAINE RIVERS.

Editor Forest and Stream:

I inclose a suggestive extract from an address delivered before the Genealogical Society at Portland, Me.:

"In 1739 the Indians were troublesome. Polin, the chief of the Presumpscot tribe (who was killed by one of the ancestors of John P. Anderson and others, at Windham in 1756), went to Boston and complained to the Governor of the State that in consequence of improvements on the Presumpscot River they could not pass down in their canoes with ease to get rum, and his tribe was threatened with starvation because fish could not pass up the river to the lakes."

Think of the antiquarian importance of this recorded fact, that the aboriginal Indian so long ago as A. D. 1739, began the protest against the principle of prohibition right here in Maine and complained to the General Court—"that in consequence of improvements in water ways, they could not pass down with ease to get rum"—and then note the better wisdom of the Indian when he complains that the fish could not pass up the river to the lakes. Is it not a strange combination of circumstances that here close to the home of Neal Dow the idea of prohibiting the poor Indian from passing easily down stream to rum, should have originated nearly a century before Mr. Dow's birth. And is it not stranger still that it is only within a few years that the improved white man has awakened to the wisdom of the savage of 1739, and provided a way for the fish "to pass up the river (Presumpscot) to the lakes."

At this late day there are no Indians on the lakes to come down to Portland for rum, although there is rum in Portland, but the fish can run up to the lakes, and the obstructions of 1739 have been surmounted by various ways. "There is nothing new under the sun." MAC.

WOODFORDS, MAINE.

A TRIP TO THE CANADIAN LAKES.

LAST August my father received an invitation from one of his friends in Montreal, to spend a few days at some lakes about 125 miles from that city. After a ride of ninety miles on the North Shore Railroad we got off at Trois Rivières, a little French town built on the shore of the St. Lawrence. At five o'clock the next morning, we were again on our way, on a buckboard, while the rain tumbled down in torrents. Our driver was a French Canadian, unable to speak English, and from whom but one expression came and that was to his horse, "Marche douc." The drive was long, and over an exceedingly rough road, obliging us at times to get out and walk. When eight o'clock came around, we found ourselves at the half way village called Shewanigan. While breakfast was preparing at the Maison de Pension, we saw quite a number of buckboards outside of the Catholic church across the way, and upon investigating found that a marriage had just been performed and we arrived only in time to see the happy couple drive off. The last twenty miles proved very tedious and it was half past two before we reached the lake near which the cabin was situated. The site was a smooth plateau of perhaps five acres and on this, two cabins and a barn were built. Two short walks from the cabins lead to two boat sheds, each well stocked with Peterborough and birch bark canoes. The lake on which the cabin is situated is nine miles long and one of a long chain, each emptying into the one lower down, thus forming huge steps with beautiful waterfalls. The water eventually forms the Shewanigan River and this in its turn empties into the St. Lawrence. Small portages from one half a mile to two miles in breadth enable one to fish over many miles of water. None of the lakes are very wide, few reaching half a mile and this only where bays have been washed out.

We found the keeper, his wife, two daughters and a son. They were decidedly French Canucks, but like all in that neighborhood, exceedingly kind, and in a short time had a dinner waiting for us. Afterward we secured the son's services and rigging up, started for our first trial at the trout. Many casts but no rises soon made us feel pretty blue, but at last reaching the mouth of a small stream emptying into the lake, we caught our first trout, and he was a beauty. Securing enough trout for tea (there were seven boys besides ourselves) we stopped fishing and returned home.

At half past four the next morning we were on our way to a small stream distant three quarters of a mile. This was soon reached, and pushing the boat up among some lily pads we stopped just on the edge of a mass of white foam. Having our rods already rigged we were soon at work casting little white miller flies upon the foam. The trout seemed to fairly boil after the flies. All around us among the lily pads the fish were jumping, but whenever a cast was made among the leaves a stem was sure to be caught and the cast prove a failure. For some reason unknown, the fish all at once stopped rising and we were obliged to stop fishing. For the few minutes we were there we took twenty-one, averaging perhaps one-half a pound. It may not be amiss to here state that all the fish taken were brook trout, although caught in a lake. Two trials at the same place that day yielded us fifty-three. That night while looking over the journal, I read of one day's fishing there in June in which two gentlemen caught sixteen dozen.

The next day we arranged to take a trip up the lake fishing whenever a suitable opportunity offered. Two canoes were used, a Peterborough and a birch bark. Having never before had a chance, I chose the latter, and in the bow of it I sat all day, with Henri the guide in the stern. The scenery all along the lake was beautiful, and rising right out of the water to a height of one hundred feet was a bluff a mile long, and gradually melting away as we advanced. On our left were hills rising into mountains in the distance. The cries of a bird or the echoes of our voices were the only sounds. We stopped at few places on the way up and when the shore seemed to inclose us on all sides, I thought the time had come to turn round, but pushing aside some tall grass we glided into a small stream. We proceeded along this for about two hundred yards when we were again ushered forth into another lake. There we took lunch and as it was growing late the home journey was with increased speed. The fishing that day had not proved very good and we only had thirty six.

The next morning it was too cold for me, (there was ice on the buckets in the kitchen), so the boatman was my father's only company. He soon found that casting flies with a cold stiff hand was not much fun and only staid long enough to supply all of us with breakfast. That day was our last at the club and making the most of it we each took a different post, both of which were at the mouths of small streams. First I tried a little bay but having no luck started across the lake. On the way over I let my flies drag in the water and when about half way had a terrible jerk on the line; turning round I was just in time to see the whirl of water made by a trout which had jumped after the flies. Thinking this rather queer, for the water was over one hundred feet deep, I again crossed the same place and this time caught the trout. I tried that little game several times and got four. Reaching the other shore at last, I got out and walked out on a log to cast in a little pool. Having taken three I was just beginning to get happy, when a mosquito bit me on the nose; I hit at him and losing my balance fell into the water. Pulling myself out I again tried to fish but the trout had disappeared. The other boat met with better luck and in the few minutes preceding sundown, casts could not be made fast enough, but the minute the sun disappeared so did the trout.

That day the grand total was fifty-five. The next morning after packing one hundred and twenty odd in a box, and bidding farewell to all of our recent companions, we started on our journey homeward. At two o'clock we reached the Pension and desired to stay there over night so that we might go to see the Shewanigan Falls, rivaling, we were told, our Niagara. A drive of six miles took us to the station at the foot of the falls and there we embarked in a large rowboat, with two rowers and a helmsman. A row of a mile brought us to the cliff underneath the falls where a landing was made. We expected to see a large volume of water falling over a ledge of rock, but instead we found a huge rapids. Above the river ran smooth, when suddenly losing its smoothness it was turned into a boiling, surging mass, first tumbling over large boulders and then running like lightning through a small passage twenty yards wide. This river is used as a passageway for logs on their way to sawmills further down the river. About a mile above the falls there is a way built for the logs to go. Nearing the falls this way grows smaller until it again opens into a slide, built of large heavy logs in the shape of a square trough. This trough is built over rocks at an angle of 45°, with

water four inches deep continually running through it. The need of this is evident, for if the logs were allowed to go over the falls they would split and break to pieces. For our amusement a dozen or two were shot through, but the time they took to come down is not worth mentioning. An hour was spent there very pleasantly and it was with reluctance that I departed. The falls and all connected with it belong to the Canadian Government. Our drive back to the inn did not take long and not many hours after tea we were fast asleep. All of the next day was employed in getting to Montreal, which place was reached by midnight. Monday at 10.30 A. M., we stepped on the platform at Highgate Springs, having been gone just seven days and two hours.

G. F. BLANDY.

READ IN A FLY-BOOK.

HOW pleasant it is of a winter evening while the storm dashes against the pane without, by the light of the lamp, fire burning brightly, to get out one's tackle and look it over, a pipe showing in its smoke wreaths pictures of hard won fights on lake and stream. How often has this been repeated in angling literature and yet what a comfort to repeat it again.

But of all these winter pleasures the greatest of all is, I think, that of looking over one's fly-books. To me they are not only a book for keeping flies, but one in which I can read many past adventures, many hopes and fears, some gone, some yet present.

Here, as I turn over the leaves, I see with a smile my first attempt at fly-tying. A bungling monstrosity, in green, red and gold. A pair of wings that would cause a decent fish to go into convulsions. Sadly was it tucked away, never has it been removed. Yet it still remains a landmark from which one can see the length of his journey.

Then here is the first fly on which I ever caught a trout. An alder, with wings bedrabbled and gut all worn and roughened with hard service. Well did that alder serve me, one cloudy July morning, breaking into vivid flashes of sunlight which checked the woods with the delicate tracery of the forest leafage above. How the spotted denizens of the brook leaped to its coy advances and how proudly I placed the first captive in the creel, a victim to my art from trying the fly to the cast. Ah! the angler who never makes any of his own tackle loses half the joy of the gentle art. What hopes and fears are then woven into rod, leader and fly and what a double thrill of joy attends a capture.

And here is a fusty red fly which took the first bass that ever fell a victim to my fly-rod. And as memory recalls that morning I turn over another page of the old book and note with satisfaction the stretcher that went with it. And thinking further I recall what a splendid double these two flies took for me that day. How they fought and leaped, and how the rod again and again nearly yielded to the strain. And what a shout of triumph as the landing net held them up to the admiring gaze of the party of patient still-fishers anchored near.

How aggravating it must have been to have seen these two fish taken from almost under their noses by a stroller coming idly along, when they had waited patiently with little luck.

And here in a corner I find nothing but a gut loop to tell me of that splendid fish who leaped into the air and then disappeared, carrying the fly streaming from his mouth to some dark rocky haunt beneath the wave.

And here I turn to another fly-book, a present from an old angler, one who has seen many famous streams and catches in his day, who has fished with Webster and has seen some of our most famous angling clubs in their faintest infancy.

It is an old English book of many vellum leaves and pockets, all stout and meant for service, no modern clips or springs. It is too bulky for the pocket, and one should have a keeper or gillie to carry it.

And as I turn over its pages, I note with wonder the myriad delicate flies, on gut almost invisible, tied in many and delicate shades. Here are dozens of duns and midges and spinners of varied hue and size.

And now I turn again the pages of another book and note with delight the varied colors, the straight and slender gut held by the clips. And here I see my latest efforts and my hope for the future. Here are a row of coachmen, when I tied them I had glimpses of a tumbling rapid, shaded by the declining sunlight into the dusk of a summer evening. I saw the trout leap as they skimmed the rippling water. And here are a row of sober alders and here another of brown leas. As the feathers turned beneath my fingers I saw the sunlight shining on the stream. The water was quiet, save where some veteran fish rose beneath the bank and sucked in an unsuspecting fly with a gentle dimple of the pool. And here are pages of glowing crimson, yellow gold and shining green, which seem to tell me of sparkling waves along the lake and some brouzed-back bass leaping madly above the water he so guily cleft a moment before.

And thus I go on turning the pages and recalling a thousand incidents by field and flood, many faces of familiar friends and all the old associations that double and endear the pleasure of an angler's reminiscences. PERCYVAL.

CODFISHING IN THE FLOOD.—The late flood in our city was not without its incidents. In addition to those which excite our sympathy for the suffering class were many ludicrous scenes and one at least that showed ingenuity and wit and which may puzzle many good anglers who always spit on their bait. As the incoming train on the B. & P. R. R. slowed up at Chickering station in the flooded district, the passengers saw a young man sitting on a fence near the depot surrounded by four to six feet of water, with his attention riveted on the fishing tackle which he held in his hand, for he was evidently having "a bite." Soon came the strike with a "twist of the wrist," and after "giving him the butt" and playing his fish in good Waltonian style a short time he landed and raised to the view of the wondering spectators an immense codfish that must have weighed eight or nine pounds. He had evidently struck a school, and the passengers failed to account for their being so far inland. Some thought it reasonable that such new feeding grounds as the back yards in the outskirts of the city should entice them, while one elderly gentleman thoughtfully suggested "they couldn't have come overland, they must have come up through the sewer." However, the cold fact stood before them—the boy caught the fish. M. (Noah's Ark, Boston, Feb., 1886.)

MILL, LOG, SAW, BASS.—In a mill at Milton, Pa., on the Susquehanna River, Sawyer-Hasler saw a fish in a hollow, water-soaked log, just as it was being pushed to the saw. Eight large bass were found in and taken from the log.

CANADIAN FISH LAWS.—The *Canadian Sportsman* publishes the following items which may be of interest to our readers. The last one bears upon this question of concurrent legislation between the State of New York and Canada and deserves to be considered: "The Dominion Government has issued an Order in Council amending the fish laws as follows: No person shall fish for, catch, kill, buy, sell, or possess any pickerel between April 15 and May 15, both days inclusive in each year; nor any bass or maskinonge between April 15 and June 15, both days inclusive in each year. Under the previous law the maskinonge and bass fishing season opened on the same day as for pickerel, viz., May 15. We have put ourselves on record many times within the past five years to the effect that a change was desirable, but we do not think it was necessary to prolong the close season for bass and maskinonge up to the 15th of June. In twenty years experience bass and lunge fishing we have, of course, like every other old fisherman, found fish on their spawning beds later in some seasons than others, but we cannot remember a single season when it would not have been proper to fish on the 1st of June. By reference to our Angling Department it will be seen that the Governor of the State of New York has also ordered certain changes in their fishery laws, and in looking over the provisions of the new law, we regret to see that he has made exceptions in connection with fishing in the river St. Lawrence. While the close season holds in all the waters of New York State up to the 1st of June, he has in the St. Lawrence, Clyde, Seneca, and Oswego Rivers, Lakes Erie and Ontario, and Niagara River above Niagara Falls, shortened it to May 15. The trouble now will be, especially along the St. Lawrence, that residents on the American side can start fishing for bass and lunge on the 15th of May while their Canadian brethren on the north shore are tied up for a month later. This is practically giving a month's exclusive privilege to American citizens, inasmuch as it is simply impossible to keep them south of the boundary line. There is also the danger that, owing to the close season in Canadian waters being prolonged so late as the 15th of June, there will be many more attempts to evade the law than if the date had been the first of the month."

STRANGE FISH.—Monakawaye, Conn.—*Editor Forest and Stream:* A week ago I shot a fish which I mistook for a duck. It was about 250 yards off and its fins were above water. I fired two rifle shots at it and both balls lodged in its back. It is a very peculiar looking fish, and we have never seen one like it. The color is dark brown; light fawn eyes as large as a calf's; mouth 14 inches wide and in shape of a horseshoe; a row of ivory white teeth all around and a row down the middle of the tongue. It is 4 feet 6 inches long, has a small fin of 5 inches on back, and two paws like hands; arms, 4 inches; weight, 96 pounds. What is it?—A. R. KYLE. [The description lacks many important particulars, such as scales, present or absent; character of fins and their position; comparative length of jaws, etc. It may be the "angler" or "fishing frog."]

GOOD FISHING IN MAINE.—Some of the favorite resorts of Maine's summer visitors enjoy two seasons a year. The second one is now at its height. Around the lakes in the center of the State the cottages and hotels are occupied by fishing parties, who find good catches and lots of fun. If anybody is cherishing the delusion that Maine, like Ceres's daughter, is underground half the year or buried under a snowdrift, he ought to take a trip to some of the busy places just now. Maine is not only a summer resort but a resort in winter.—*Leicester (Me.) Journal*, Feb. 25.

Fishculture.

AN OLD CARP.—The following from the *Fischerei Zeitung*, Stettin, tells of a carp which should have been retired on half pay long ago. The account says: "On the evening of Jan. 31, so says a reporter, the brothers Danhaus, fish masters, caught a mighty carp by the Kurtfürsten bridge, Berlin. On the under jaw it carried a ring on which was found an inscription. With difficulty there was deciphered through the rust the statement that this carp was liberated at Hazelhorst in the year 1618 and was consequently 268 years old. The fish weighed 38 pounds, was 102 centimeters (39 inches) long and 78 centimeters (31 inches) in circumference. The fish was living at Lipp's restaurant at the mill dam long enough for all to see it who wished, free of charge. The ring which the carp carried was deposited in the Markischen Museum." We regret having to accuse this reporter who wrote the above account of cheating this aged carp out of two years which rightly belonged to it. According to our figures the fish had lived 268 years after being planted, and as there is no way of telling how old he was when he was deposited in the waters at Hazelhorst we are inclined to be liberal with him and allow him 100 years more, we are not inclined to be ungenerous to a poor old carp in the matter of a century or two.

THE AMERICAN FISHERIES SOCIETY.—At the last meeting of this society (late the American Fishcultural Association) a committee was appointed to decide upon the time of the next meeting, which was voted to be held in Chicago, and to make such other arrangements as might be necessary. This committee, of which Mr. Frank N. Clark is chairman, have decided to hold the meeting on April 13, 14 and 15, in that city. The United States Fish Commission will have one of their transportation cars there on exhibition to show how whitefish and other fish are moved. The Michigan Commission will have a display of hatching apparatus in the exposition building, where other fishcultural exhibits will be open to the public. An interesting and important meeting is promised.

THE COLORADO COMMISSION.—Interest in fishculture in Colorado is rapidly awakening. Besides the State hatchery there are the following private ones: Land's hatchery at Nathrop, Chaffee county; Grant's, Smelter, and Bogart's, Central Park, besides four that are owned or controlled by Gen. John Pierce, the Commissioner of Fisheries for the State. These hatcheries have in the aggregate 1,000,000 brook trout eggs, and one has a few eggs of the lake trout. Many carp have been introduced by the U. S. Fish Commission and are doing well. The State appropriation is small, but much good work is done by the Lake Archer Fish Company and by individuals.

OVER ELEVEN MILLION DOLLARS has been paid to its policy-holders by the Travelers, of Hartford, U. Conn., since its organization. Present payments are over a million a year.—*Adm.*

FIXTURES.

FIELD TRIALS.

Nov. 8—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22—Eighty annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Cosier, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 16, 17, 18 and 19—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elbow, Secretary.

March 23, 24 and 25—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Berzen Point, N. J.

March 30 to April 2—Third Annual Dog Show of the New Haven Kennel Club, S. K. Hemingway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9—Second Annual Dog Show of the New England Kennel Club, Edward A. Fowler, Secretary, Boston, Mass.

April 13, 14, 15 and 16—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

May 4, 5, 6 and 7—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3333.

THE ALEXANDRIA FIELD TRIALS.

[From a Special Correspondent.]

ALEXANDRIA is located on the south side of Red River, in the midst of a fine section of country, which justly might be termed a hunter's paradise.

In the pine woods opposite Alexandria we found an excellent country for field trials, slightly rolling, with sufficient undergrowth to furnish cover for the birds, and yet not so heavy as to interfere with the dogs at work.

The interest in well-bred and fine field dogs has received quite an impetus from this meeting, and grand results may be looked for in the near future at their annual trials.

While this was an amateur meeting, yet it developed an unlooked-for knowledge of dogs and understanding of first-class field work that was surprising, and would reflect credit upon the oldest institutions of this kind. To the judges too much praise cannot be accorded. But one of them had ever attended a regular field trial, yet their decisions were most excellent and satisfactory.

Our week of pleasure was tastily rounded off with a grand banquet on Saturday night, given by the Alexandria Rod and Gun Club at the Exchange Hotel.

The first prize was won by Master Knight Renaud's black and white English setter Boyd. He is a good-sized dog, weighing about 50 pounds, with good speed, range and bottom.

The second prize was won by Mr. A. R. Starr's black pointer dog Watt. He is of medium size, and will compare favorably with any pointer I have seen in field trials.

The third prize was divided between Judge James M. Thompson's black, white and tan English setter Mark Twain and Mr. S. Cullen's black, white and tan dog Prescott. Mark Twain is of medium size and a very handsome dog, with fine style and dash on game. Prescott has good style and action.

The first consolation cup was won by Mr. W. B. Wells's lemon and white setter Kink. He is a large, fine-looking dog, with a splendid nose.

The second consolation cup was won by Mr. L. B. Baynard's blue belton dog Custer. He has good speed and style.

In the heats where Judge Thompson's dog ran Mr. J. M. Avenit judged in the place of Judge Thompson. In the heats where Mr. Starr's dog ran Mr. B. Waters judged in Mr. Starr's place.

The attendance was very large throughout the entire trials.

PATTI AND NELLIE B.

At 9:50 Mr. E. W. Condon's black, white and tan setter bitch Patti (Duke Gladstone—Grace Darling), handled by his owner, and Mr. V. T. Gray's black and white setter bitch Nellie B. (Bake-Meg-Merrillies), handled by Mr. Henry Fontaine, were cast off in a cornfield and worked toward a thicket. In speed, range and quartering Nellie B. had the advantage, but in style Patti was superior. Working the corn and cotton blank to the thicket a bevy was seen to flush and were marked down a short distance beyond in open sedge grass. Nellie was found dropped where the bevy got up; to order Nellie moved on. Patti, coming around only a few yards from where the bevy flushed, pointed several outlying birds, which flushed wild. Fontaine shot but did not kill. Patti broke shot. Nellie B. steady. Following birds marked down in the edge of briars and sedge. Patti drawing too close to a single bird flushed it and was steady to wing. About the same time, just above her, Nellie made a good point on a single bird, which flushed wild, and she dropped to wing. Working on down through the sedge several birds were flushed by the judges and spectators. They were then worked up on level ground, where Nellie pointed and Patti backed. Fontaine to order flushed, shot and killed. Nellie dropped to shot. Patti broke shot and made a fair retrieve. The dogs were then ordered up at 10:40, Nellie being awarded the heat. Down fifty minutes.

MINGO AND DOLPH.

At 10:50 Mr. W. B. Wells's black and white English setter dog Mingo (Druid—Star), handled by his owner, and Mr. C. E. Brughurst's black, white and tan English setter Dolph (Cyrus—Belle Gladstone), handled by his owner, were cast off in an open sedge field. Mingo was much the fastest and widest ranger of the two, but before the heat was ended Dolph got much better and Mingo slowed down somewhat. Mr. Wells just arriving from Canada with his dogs, which were entirely out of condition, not having had any work this season until a few days before the trials, which made them show up quite sore, still they made a game race and proved dangerous competitors. After working about three quarters of a mile through open cornfields down the bayou without finding birds, the brace were taken across the bayou and worked up in open sedge out into the corn where Mingo made game but failed to locate and was sent on by his handler. After drawing a weed-field blank, the dogs were then worked back to the cornfield, where Mingo made game before. Working out in open weeds near by, Mingo, drawing down wind, flushed two birds and dropped to wing, and the remainder of the bevy flushed wild. They were marked down in briars and thicket, which was so dense it was almost impossible for any dog to point scattered birds. Working the dogs in the thicket after them, Dolph made two flushes in rapid succession and chased each one. A little further on two birds flushed, one near each dog. Moving on slowly, Mingo flushed a single bird and was steady to wing. Working back to where the first birds were found, Mingo made a very stylish point on a single bird in very heavy cover. Dolph backed. Wells, to order, flushed, shot and killed, both dogs dropped to shot. Mingo, sent to retrieve, did

so in good style. Going on, Mingo made an excusable flush in briars down wind and was steady to wing. They were then worked out in open again through corn, cotton and sedgefield, toward the bayou, then down the bayou a mile without finding game. The dogs were then ordered up to cross the railroad and bayou, where the dogs were again put down in a cottonfield and worked through burnt weeds and sedgefield to heavy cover in a bottom, which was so dense that it was uncomfortable to ride through much less to work good dogs in. Going on some distance in this thick cover, the judges ordered the brace up until they could get around the thicket and cross the ditch into the road. Just a few minutes after they were ordered up and while Mingo was at heel, Dolph found and pointed a bevy in briars on the roadside; as the dogs were ordered up this point was not allowed. Mingo was ordered down for a back, but as the cover was so dense, it was impossible for him to see the pointing dog, which he passed and located some of the same birds in good style about forty yards further on. The handlers were then ordered to flush birds; both shot and both dogs were steady to shot. One bird was killed and Dolph was sent to retrieve, but failed to find, the bird being winged. Nothing was allowed either dog for this work. The dogs were then put down. Dolph soon made a flush, which was excusable; Mingo found and retrieved the winged bird. The dogs were then worked to where two birds had been marked down in thick weeds and briars, which were as high as our heads on horseback. It was thought impossible for dogs to point in such a place, but Mingo found and pointed a single bird in good shape. Wells flushed but did not shoot; Mingo steady to wing. The dogs were then ordered up at 12:45 and the heat awarded to Mingo. Down two hours.

MARK TWAIN AND BARON BLUE.

At 1:55, after lunch, Judge James M. Thompson's black, white and tan English setter dog Mark Twain (Coleman's London—True Laverack) and Mr. C. A. Schnack's blue belton English setter dog Baron Blue (Belton—Bramble) were cast off in an open cotton field. In speed Mark had a slight advantage, in range and quartering they were about equal. Both were very stylish on points, but Mark had a slight advantage. Mark was a beautiful, quick, easy way of going to his birds, always pointing with head and tail well up, and with a year's more experience and careful handling he will be a dangerous competitor in any stake. Working through cotton to a hedge Baron Blue made game and commenced roading. Mark backed, but quickly moved on and roaded with him, then made a cast to the left, on the other side of the hedge row, and located the birds in fine style. Baron established his point almost immediately, and both dogs were allowed a point. Judge Thompson flushed, shot and killed. Mark broke to shot and dropped to order. Baron dropped to shot. To order Mark Twain retrieved the bird. The birds flew to such a bad thicket it was impossible to work the dogs on them. They were worked around the thicket in cotton to the hedge beyond, where Baron pointed, moved on and commenced roading. Judge Thompson, being an old judge at field trials, showed very plainly that he had caught on to some of the tricks so often played by handlers in trials. He very skillfully threw Mark around to the thicket where Baron was roading, both dogs roading beautifully, but Mark being the quicker, located and pointed the birds in front of Baron, when Baron also pointed, the birds being flushed by the handlers but not shot at; both dogs steady to wing. Again the judges allowed both a point. Baron should have been entitled to more credit than Mark for the last two points, as he was first in both instances to commence roading. The birds were marked down in a bad thicket. Working down the hedgerow toward scattered birds, Baron pointed, moved on and flushed a single bird, after which several more rose wild. A little further on in a thicket Baron pointed, discovered his error and roaded on some distance without finding birds. In the meantime Mark had gone further into the thicket and was lost from his handler. After looking for him some time Baron was ordered up until Mark could be found. After about ten minutes his handler succeeded in getting him to come to whistle. After which the dogs were ordered down and taken back to a weed field where two birds had been marked down. Baron flushed one of them and was steady to wing. Working them through open country and cotton and corn fields, drawing several fields blank, the brace was ordered up for water. After which the dogs were put in wagons and taken to a large corn field near by, where they were again cast off, drawing this blank. After working a long way through several large weed fields the dogs were worked back to where several birds had been flushed by spectators and marked down in a weed field, where Baron made a beautiful point on a single bird, but moved on a step or two and the bird flushed. He scored a point, but it looked very much like a flush. Going on, several birds were flushed by the judges. Mark pointed on the scent, discovered his error and roaded on, when Baron came up in front and both backed each other. The dogs were ordered on by the handlers, and no birds were found. The brace was then ordered up at 3:30 to go south about 2½ miles on better grounds, where birds were found more plentiful. At 2:55 the dogs were again put down in open corn and sedge grass. Working toward a ditch, Mark pointed in fine style on the edge of the ditch in some briars. Baron backed well. Judge Thompson flushed a large bevy. Mark was a little unsteady to wing. Baron perfectly staunch. The birds flew to heavy sedge which was as high as the handler's head, where Mark scored a point. Baron backed, and his handler claimed a point, but failed to flush a bird in front of him. Judge Thompson then flushed Mark's bird, which was shot and killed by Mr. Schnack. Baron was then sent on to retrieve. Picking up the bird Mr. Schnack started to go to him when one of the judges had some doubt about Baron's retrieving from Mr. Schnack's actions, and he asked Mr. Schnack to walk back and let the dog retrieve the bird. Baron dropped the bird and refused to retrieve it. Mr. Schnack then very innocently remarked that Baron did not retrieve. The dogs were then ordered up at 4:08 and the heat given to Mark Twain. Down two hours and thirteen minutes.

CRIST AND LUFRA.

At 4:10 Mr. L. W. Murdoch's black, white and tan Gordon setter dog Crist (Nix—Daisy) and Mr. John W. Prescott's black, white and tan setter bitch Lufra (Cyrus—Belle Gladstone) were cast off in a large open cornfield. Lufra had the advantage in pace, range and style. This was one of the most amusing heats that it was ever our fortune to witness. Both dogs were handled by their respective owners. Mr. Prescott is an old gentleman whose head is as white as snow, nicknamed by his personal friends as Father John. He is by far the youngest member of the club judging by the great activity with which he pushed his competitor in this heat. It was mutually agreed that they should ride and handle their dogs. After the dogs started off through the cornfield the judges gave Father John permission to "go as you please." Knowing the locality of all the bevy on this ground, he soon had his old gray horse in a fast trot, distancing the judges and his opponent. It afforded much amusement to see the old gentleman so much excited that the judges did not stop his gait, but told his competitor to keep up if he could. Failing to find birds in the cornfield, Father John pointed to a thicket about a quarter of a mile off, saying that they would be sure to find a bevy there. He started in that direction across a good cornfield for birds, and soon had his horse in a gallop heading for the bevy, his dog following and leaving his opponent handler about seventy-five yards in the rear, followed by the judges, reporters and spectators at full speed to see what Father John was going to do. Sure enough, when he reached the thicket, Crist going in flushed a large bevy and dropped to wing. The bevy was marked down only a short distance in a rag weed field. Father John dismounted and followed very quickly. Lufra rushing on at rattling pace, wheeled and pointed in

beautiful style. Father John turned to the judges and claimed a point. While his back was turned she sprang at the bird, put it up and had a lively chase. Finding that she could not catch it she came dashing back and jumped on another point in grand style with head and tail well up. Again Father John turned to the judges and claimed a point, when the bitch repeated her former performance. Just then a bird was flushed by one of the judges which flew past Mr. Murdoch, who shot and killed it. Crist to order retrieved well. The report of the gun made Lufra turn back to see what had happened. She again made a beautiful point, Father John being only a few feet from her made her hold her point until he went in front to flush. Then she made a jump, but failed to flush it and wheeled to a point. Father John then flushed the bird, shot and missed it. Lufra broke shot and chased. Working on down the slant in heavy weeds, Crist pointed; Lufra brought around to back, not seeing Crist went in front of him and also pointed. The birds flushed wild and Lufra chased. Crist was a little unsteady to wing, but dropped to order. The dogs were then ordered up at 4:45 and the heat awarded to Crist. Down thirty-five minutes. Father John looked very much disappointed to think his favorite dog would go back on him so completely, and to my great surprise he did not even say a harsh word to her, but at once tried to explain to the judges and reporters that his bitch was not in the habit of behaving so badly. If Father John will break his bitch properly for next year's trials I think he will turn the laugh on some one else.

TANGIPAHOA AND JACK.

At 4:50 Mr. Henry Fontaine's black, white and tan English setter bitch Tangipahoa (Gladstone—Flossie) and Mr. M. F. Smith's liver and white pointer Jack (pedigree unknown) were cast off in an open weedfield, where the last brace were taken up. Tangipahoa had a great advantage in speed, range and style; in fact, she is a very fast bitch. Working around in a large weedfield back to the thicket without finding. The spectators flushed several birds of the last bevy, and the dogs were then ordered up to get out of the thicket. When the dogs were again cast off Jack soon made an uncertain point. His handler, not thinking there was anything there, ordered him on, and he flushed a single bird. He made a little cast and flushed again, and was steady to wing each time. Tangipahoa made a cast across the branch and pointed in the briars. Jack was brought around to back, but refused to do so; went in and flushed the birds; both were steady to wing. They were again cast off in the thicket, Jack making two flushes in rapid succession. The dogs were then ordered up at 5:05 and Tangipahoa awarded the heat. Down eighteen minutes.

HARRY AND PRESCOTT.

At 5:10 Dr. J. S. Fish's black and white English setter dog Harry (pedigree not given) and Mr. S. Cullen's black, white and tan English setter dog Prescott (Cyrus—Belle Gladstone) were cast off in a thicket down the branch where the birds were marked. Prescott had the advantage in speed, range and style. They were about equal in quartering. Working across the road, Harry pointed in sedge grass and Prescott backed. The judges asked Dr. Fish to flush and kill. He flushed the bird, raised his gun, but did not shoot. Both dogs broke in, but dropped to order. The Doctor's excuse for not shooting was that he had rheumatism in his finger and could not pull the trigger. Working on in open sedge grass, Prescott pointed and Harry backed. The handler to order flushed, shot and missed. Prescott broke shot. Harry remaining steady to shot and wing. Working around the hill the handlers flushed several birds. We then went back into the field where several birds had been marked. Prescott made a good point and Harry backed. The handler flushed, shot and missed the bird. Both dogs broke shot. The dogs were then ordered up at 5:45 and Prescott awarded the heat. Down in all thirty-five minutes. This ended the day's sport.

The next brace in the order of running was Boyd and Rip, but the handlers not being up with the dogs, the next brace was called.

WATT AND CUSTER.

At 9:05 Mr. A. R. Starr's black pointer dog Watt (Bronco—Fan) and Mr. L. B. Baynard's blue belton dog Custer (Blue Dick—Buckeye Belle) were cast off in a large open cotton field where both dogs showed good range and speed, Watt having the advantage; they were about equal in style. The handlers worked this brace from horseback, and in this heat will mainly be seen the evil effects of such handling. After drawing several corn and cotton fields blank, we worked toward a hedgerow, where Custer made a point. His handler rode up to him and stopped, and did not seem inclined to flush the birds, whereupon Custer jumped in and flushed but stopped to order. Going on to the single birds marked in some briars, he pointed a single bird, which flushed wild, and he was a little unsteady to wing. At about the same time Watt pointed in the edge of the thicket, and Custer was ordered to back, but refused, went around him several times and finally stopped to order. Watt also flushed a single bird and was steady to wing. Working around in the same place, Custer pointed and Watt backed, and several birds flushed wild. Moving up Custer flushed a single bird and dropped to wing. We then worked across open country about a half a mile without finding birds. Going into a briar thicket a bevy of birds was seen to flush, but the cover was so heavy it was impossible to see the dog. Custer being the only dog in the vicinity, it was natural to suppose that he put them up. These birds were not followed. Going west some distance, Watt pointed on the edge of the ditch. Custer refused to back and went in ahead, flushed and chased, Watt steady to wing. The dogs were then ordered up and the heat awarded to Watt. Down, one hour and ten minutes.

BOYD AND RIP.

At 10:20 Master Knight Renaud's black and white English setter dog Boyd (Brussels—Lowa Queen), and Mr. E. G. Hunter's black, white and tan English setter dog Rip (Cyrus—Belle Gladstone), were cast off in a large rag weed field where they had opportunity to show their speed and range, both being about equal. Boyd had a little advantage in quartering and largely the advantage in style. After a long tramp upward without finding game, we worked toward a heavy thicket, where Rip made a very stylish point. Boyd refused to back, went on and also pointed. The birds were running in the briars and both roaded on some distance before they were flushed. Fontaine shot and missed. Rip broke shot but stopped to order. Boyd steady to shot; both dogs were allowed a point. The birds were marked down only a short distance in the edge of a thicket where Boyd pointed a running bird, which his handler failed to flush. Ordered on, Boyd roaded some distance and located the bird, which flushed wild. Boyd steady to wing. About the same time Rip pointed a single bird in the briars, which flushed wild. Several birds were then flushed by the handlers and judges. Moving on, Rip flushed a single bird and dropped to wing. A little further on Boyd also flushed a single bird and was steady to wing. Out in the open where several scattered birds were marked, Boyd false-pointed in a brush pile. Working on through a cornfield, Boyd made a point on a single bird and Rip backed him. Mr. Fontaine going in to flush Rip broke in and ran around Boyd but stopped to order. Fontaine flushed, shot and killed. Boyd dropped to shot. Rip broke shot and refused to retrieve the bird. Boyd then to order retrieved fairly well. The brace were then ordered up and the heat awarded to Boyd. Down one hour.

KINK AND TRIGG.

At 11:25 Mr. W. B. Wells's lemon and white setter dog Kink (Druid—Star) and W. P. Flower's orange pointer dog Trigg were cast off in the thicket to work on scattered birds. In speed, range and style Kink had the advantage. They were about equal in quartering. Kink flushed a single bird and

dropped to wing. A little further on Trigg also flushed a single bird down wind and moving on scored another flush. Then toward the edge of the thicket both dogs flushed and were steady to wing, after which Kink flushed a single bird. They were then cast out in an open rag weed field where Trigg flushed a single bird and dropped to wing. On some distance further Kink made a wide cast and pointed and Trigg backed him. To order the handler flushed a small bevy, shot and missed, both dogs steady to shot. The birds were not followed. Going on near a hedgerow the handlers flushed several birds which Trigg had passed. The dogs were then cast back there. Trigg passed close to the remaining birds, not showing any nose whatever. Several birds were then flushed by the handlers which were marked down in an open cornfield. Kink pointed a single bird and Trigg backed him. To order Mr. Wells flushed, shot and failed to kill, both dogs steady to shot. Moving on Trigg scored two flushes in rapid succession. The dogs were then ordered up at 11:58 and Kink awarded the heat. Down thirty-five minutes. This ended the first series. This being about dinner time we went back to town. It was decided that the second series should be decided by running on different ground, the pine woods being selected to finish the trials.

Second Series.

After dinner we crossed the river, going north about a mile and a half from town.

NELLIE B. AND MINGO.

At 2:20 Nellie B. and Mingo were cast off on the east side of the road in open pine woods. Nellie had the advantage in speed and range. They were about equal in style and quartering. Working some distance over several hills they both commenced roading. Mingo located the birds just as they flushed wild, both dogs dropped to wing. The birds were marked down across a little creek in open woods on bare ground. Following them, Nellie made a good point. Her handler, Mr. Fontaine, accidentally struck a cypress knee, falling down, hurting himself so badly that it took him several minutes to recover so he could go to his dog. Just before he got to her she moved around in a new place and pointed again. Mingo came up and pointed the birds that Nellie had left and they flushed wild. Nellie's birds also flushed wild; both dogs steady to wing. A number of birds then flushed wild. Going back across a little creek, on hillside covered with sedge grass Nellie made a false point and was backed by Mingo. Going on up the thicket Mingo flushed a single bird and stopped to wing. The dogs were then ordered up for about five minutes until we crossed the creek and got out on the opposite hillside. They were again cast off, when Nellie B. soon pointed at the edge of the road and Mingo backed her. Fontaine flushed the birds to order, but failed to cock his gun and did not shoot. The birds flew across the road and were marked down in a pine thicket with very little grass. Following them, Mingo pointed, moved up and flushed his bird, and dropped to wing. Mingo soon flushed again and was steady to wing. Nellie then false pointed. Mingo failed to back and was stopped to order. After a few moments the dogs were ordered up to get out in open ground again. They were again cast off in open pine woods where they could show their speed and range to a good advantage. After working some distance north Nellie B. flushed a bevy down wind on bare ground. The birds were marked down in an open thicket, Nellie making a cast across the branch flushed several birds and dropped to wing. The judges not being in a position to see her when she flushed, Mr. Fontaine claimed a point, and before she moved on several birds flushed wild in front of her. The judges allowed her a point and did not penalize her with a flush. The dogs were at once ordered up at 4:05 and the heat awarded to Nellie B. Down two hours and five minutes.

MARK TWAIN AND CRIST.

Judge Thompson, one of the judges, owned and handled Mark Twain, and Mr. J. M. Avent judged in his place during that heat. At 4:10 dogs cast off in pine woods. Mark had a decided advantage in speed, range, quartering and style. Working around the hill in sedge grass Mark pointed. Crist was brought up to back, but Mark not being in a good place to be seen, Crist was stopped by his handler. Judge Thompson flushed a large bevy, shot, but did not kill. Mark dropped to shot. Crist broke in but dropped to order. Following the birds, Mark flushed a single on bare ground and was steady to wing. Mark then pointed, discovered his error and moved on. Several birds were flushed by the handlers. They were then worked back across the branch again, when one of the handlers flushed a single bird that flew over Crist, and he broke after it but dropped to order. Immediately after Mark made a flush in open ground and was steady to wing. We then had a long hunt, crossing the road on the east and back before finding. Mark made a beautiful point in sedge grass. Crist refused to back, went in and took the point. Judge Thompson flushed a nice bevy but did not shoot. Mark dropped to wing and Crist was a little unsteady. They were then ordered up at 5:25 and the heat awarded to Mark Twain. Down one hour and fifteen minutes.

TANGIPAHOA AND PRESCOTT.

At 5:25 Tangipahoa and Prescott were cast off. Tangipahoa had a decided advantage in point and range; they were about equal in style and quartering. They were worked down the hillside, where a bevy had been marked down in sedge grass some time before by the spectators. Both dogs did some beautiful roading and both established independent points at about the same time. Birds flushed wild in front of both dogs. They were both steady to wing. The dogs moved on, and Prescott soon made a beautiful point on a single bird that was left. Tangipahoa backed. Mr. Cullen flushed, shot and killed the bird. Prescott broke shot and made a very poor retrieve. Tangipahoa broke in and was dropped by handler. On the hillside in sedge grass Prescott flushed a single bird that flew up in a little tree near by. Prescott broke in and tried to climb the tree after the bird. Tangipahoa then scored a false point. Prescott, swinging around the hill in the sedge grass about 75 or 100 yards above Tangipahoa and made a beautiful point. Mr. Fontaine claimed that it was the bird his bitch was pointing and ordered her on. She made a cast and backed Prescott nicely. Mr. Cullen flushed the bird, shot and killed it. Prescott broke shot. Tangipahoa broke in but stopped to order. The dogs were ordered on over the hill and Tangipahoa made a cast and pointed the dead bird, then moved on and retrieved it well. The dogs were then worked across the ditch; Tangipahoa pointed a sparrow and was backed by Prescott. They were then cast off up the hill. The handlers then separated. Tangipahoa soon made a good point on a single bird that was flushed by Fontaine but not shot at; she dropped to wing. Prescott, in the meantime, had pointed and done some beautiful roading on a lot of larks. The dogs were then ordered up at 6:15, we thought to be put down again next morning, but to our great surprise, the next morning the judges announced the heat in favor of Prescott. We cannot agree with the judges in this decision, and can't see how they could figure it to make Prescott the winner, Tangipahoa having a decided advantage in speed and range; they were about equal in style and quartering. Tangipahoa made two good points, no flushes. One false point, two break ins and a good retrieve, both backed well. Prescott made three points, one flush, one break in, two bad break shots and a very poor retrieve. We think, however, that the dogs should have been run longer before deciding the heat. This is the only decision made in the All-Aged Stake that we do not agree with. We learn that Judge Thompson did not give his decision in this heat on account of having to run his dog with the winner in the next series. This finished the work for the day.

WATT AND BOYD.

Friday was beautiful and clear. The middle of the day it was rather warm. The character of the work throughout the
